Another possibility for employment is the repair of the Coast Guard icebreaker *Eastwind*, badly damaged in a collision last December. Officials of the Boston yard have indicated they will bid on the approximately $3,000,000 job when offers are asked on July 31.

Twenty Billion Idle Dollars Are Key to an Expanding Economy

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1949

Mr. GWINN. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD the text of a statement by Hon. Fred A. Hartley, Jr., president of the Tool Owners Union:

WASHINGTON, August 3, 1949.—A complete repudiation of any public works program as an employment panacea as embodied in the Murray bill was demanded today by Fred A. Hartley, Jr., president of the Tool Owners Union, who also called for:

1. Slashing Government expenses to conform to a more reasonable budget;

2. Removal of double taxation on dividends;

3. Liberalizing depreciation allowances; and

4. Strengthening the Taft-Hartley law in order to halt the monopoly practices of John L. Lewis and other labor leaders.

"Such bills as that of Senator MURRAY'S," said Mr. Hartley, "are mileposts along the road to the welfare state, and cannot accomplish its objectives. On the other hand, if the idle purchasing power in America could be put to work as 'venture capital' to provide new tools, create new jobs, and produce more goods and services, it would create many times the employment and pay rolls that any

Federal public works program or other forms of relief could ever possibly generate.

"This is a provable fact," said Mr. Hartley in releasing the tool owners union newly constructed index of distrust. "Out of a total of $27,500,000,000 in cash in circulation today, a little over $25,000,000,000 is cash money being held outside of banks. If you generously estimate $5,000,000,000 or $6,000,000,000 as this Nation's necessary pocket or till money for business, that leaves the appalling total of $20,000,000,000 lying idle in pocketbooks, dresser drawers, chimney corners, and the old sock.

"This," emphasized Tool Owners President Hartley, "is the index of public distrust in New Deal and Fair Deal socialistic policies."

Stating that these 25,000,000,000 largely idle dollars constitute a jump in the index of distrust of 743.3 percent over 1930, as based on the official figures of the Federal Reserve Board, Mr. Hartley said that, "this amazing condition of a $25,000,000,000 stock pile of largely idle money can have only one fundamental explanation—the distrust and fear of millions of thrifty people in the current policies of government. It dramatizes the great unwillingness of the man on the street to trust his savings in either United States bonds, or as venture capital in private business. It highlights the people's fear of the consequences of our Federal Government's deficit spending and confiscatory taxation policies.

"More than 3 years ago," said Mr. Hartley, "the tool owners union called attention to this huge pool of liquid but idle purchasing power. At that time (May 1946) the national advertising of the organization said: 'By safeguarding the right of the thrifty to receive competitive payments for the use of their tools, we shall lead them voluntarily to convert their liquid purchasing power into fixed investment in new tools * * * and in that way create new businesses, new jobs, and a flow of new goods. * * * Thrifty people will not take business risks when that means gambling with a stacked deck.'

"So that is exactly why we call upon Congress on the matters stated here," concluded Mr. Hartley. "Tool owners, and that means nearly everybody, must be free from the burden of confiscatory taxation, secure in his ownership of property and tools, and safeguarded in his right to legitimate, competitive earnings therefrom. Let these incentives be restored by an abandonment of current fantastic taxing and spending policies which are only adding fuel to the fires of fear and distrust, and then these twenty or more billions of idle dollars, the key to an expanding economy and our future material well-being, will come out of hiding and go to work."

Address of Hon. Forest A. Harness

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 4, 1949

Mr. HARVEY. Mr. Speaker, under leave of the House, I am privileged to place in the Appendix of the RECORD recent remarks of Hon. Forest A. Harness, former United States Representative of Indiana's Fifth District. Many Members of this body, from both sides of the aisle, will be interested in the address delivered by Mr. Harness when he appeared in Indianapolis, July 25, as guest speaker of the Republican citizens advisory committee.

The address follows:

It is a warm and stimulating experience for me to appear before this distinguished group of Indiana Republicans, and I appreciate most sincerely your cordial and generous reception. It is an added pleasure to appear before a group of fellow Hoosiers, to defend in the old and changeless terms of freedom and liberty, those principles of honest self-government which were the guiding inspiration of the founders of our country more than three centuries ago.

Today we find all the fundamentals of Americanism challenged by crass materialistic dialectics. The moral values and the spiritual truths of former generations we must now defend as if they had been discovered only yesterday. A weakened and tormented world has temporarily lost its moral bearings. After 10 years of service in Congress, I have gained one conviction above all others—if we are to regain our course and relight the lamps of freedom throughout the world, we must rediscover and reassert our basic and fundamental moral precepts and convictions. The glorious history of the American people, from Jamestown and Plymouth Rock, is but the symbol of a sacred flame of faith and moral purpose. If we are to prosper from this point forward, we must regain that bright faith and rekindle our moral purpose with a new zeal for freedom and ordered liberty under law.

During the past 16 years, under the guise of so-called liberalism of the New Deal Administration, we have expanded Federal Government to the point where it touches the daily lives of each of us. Bureaucracy has grown to the point where freedom in America has become a fiction. The average citizen is only vaguely aware that the Federal Government continuously touches and influences his daily thinking, but when he stops to reflect, he must realize that a host of Federal agencies and activities exert a constant and often decisive influence on his own and upon his neighbor's opinions. Yet, I doubt that any but the most thoughtful students of American Government understand how vast is the range of this influence—how tremendous is the machinery through which this influence is exercised. Every thoughtful person must be keenly conscious of the tremendous, immeasurable power of this Federal machine, and he must realize that the most powerful, the most persistent of them all is the Federal lobby. It works around the clock every day of the year.

The first instinct of bureaucracy is self-preservation. The second is expansion. Like any living organism, an administrative agency, once launched, seeks constantly to justify its existence, to perpetuate itself, and to expand.

Federal Government has grown and expanded to the point where our free economy and individual liberty is challenged. This brings us to a question of the most vital interest to everyone of us here. Can we, as individuals, working through the Republican Party, effectively counteract the propaganda activities of this huge government bureaucracy and turn the tide from statism, or collectivism, back to free American constitutional government? For my own part, I believe we can, if we are willing to devote the necessary intelligence and energy to the task.

There are now pending in Congress proposals which, if enacted into law, will completely and inevitably socialize the American economy. I mention only a few:

1. Compulsory health insurance, or socialized medicine.
2. Federal aid to education.
3. Expansion of Government control and ownership of public utilities.
4. Labor union-Government control over industry.
5. Demands for fabulous appropriations for public works, which would expand Government bureaucracy and increase the public debt.

Another proposal, a long-range public-housing program, has just been recently approved by the National Legislature. All of these proposals are dressed in the robes of noble purpose and have mass appeal. Apparently, too few of our people recognize in these proposals, grave threats to our liberty and freedom. It is a historical fact that wherever some form of dictatorship prevails in government, there we also find some manifestation of socialized medicine, public housing, centralized control of education and control of business and industry. The brand of dictatorship makes little difference—communism, fascism, nazism, socialism—all are alike, in that they enforce a system of state control. Whatever the name of the dictatorship, or whatever the pattern of the particular brand of collectivism in any country, the system is all pretty much the same. It is based on compulsion and regimentation.

Politically, we have reached the stage where we must stop this transgression of the basic fundamental laws of the Nation, or find ourselves completely engulfed in state socialism.

This brings us to the point of what we, as Republicans, can do to save this Nation from the fate of all other nations which have embraced this philosophy. First, what is wrong with the Republican Party today:

1. We have dismally failed as an opposition party to give the people a choice between a sound, liberty government, and New Deal collectivism.
2. It has not vigorously attacked and opposed New Deal measures, which deprive individuals of their basic rights.
3. It has not stood stanchly and unanimously against waste and extravagance and the expansion of Government.
4. It has been too eager to approve New Deal policies which are inimical to the best interests of the people.
5. It has blindly followed the Roosevelt-Truman foreign policy for reasons of political expediency.

To correct these errors, the Republican Party should:

1. Adopt a set of principles fashioned after those established by the founders of our party.
2. It should stand on those principles unswervingly and inform the people honestly and frankly why they are for the Nation's best interest.
3. It should formulate a program based upon true liberalism—liberty of the people.
4. It should proclaim its support of our free competitive system, and stand firmly against any Government control of private enterprise.
5. It should stand for the protection of individual rights and the encouragement of individual initiative.

The United States Is a Republic, Not a Democracy

REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 4, 1949

Mr. McDONOUGH. Mr. Speaker, of recent years we have heard a great deal of talk about the Government of the United States as a democracy. This is

wrong because this is a republic as guaranteed by the Constitution of the United States, right down to the villages, towns, counties, and States. I think we should impress upon the minds of the average citizen that the United States is not a democracy which, as a matter of fact, tends to create mass man government. It is an individual government of the people where the dignity of the individual is preserved by constitutional rights, and that applies ever to the States, and the counties, and the cities.

We should impress it upon the minds of the people more than we have in the past that the United States of America is a republic and not a democracy.

The strength, development, and progress of this great Nation lies in the fact that the United States is a federation of states, each with its own independence and autonomy under a constitutional form of government to protect and defend the rights of its citizens within the several States and all of the 48 States joined together in a peaceful and cooperative federation which has established the greatest nation on the face of the earth, the Republic of the United States of America.

The independence, self-autonomy, and dignity of the citizen of the United States are further strengthened within the States by local governments such as counties, cities, towns, and villages, each with its individual right of self-government within the prescribed limits of its State constitution. Not organized for the purpose of relying and depending upon one another, but for the purpose of preserving their separate integrity, dignity, and independence. This system of government with all of its human errors has proven itself over the past 170 years to be the best form of government to preserve the individual dignity of man better than any other form of self-government known to the world.

The glory, the power, and the struggle of the Republic of the United States stemming from the individual to the local government and then to the Federation of States thus creating the Republic of the United States has no equal and is unsurpassed by any other form of government man has yet devised to govern himself.

It must be zealously guarded, strengthened, and defended. It is the light and hope of the world.

It is evident in reading the Declaration of Independence and in studying the United States Constitution that this was the wise decision and conclusion arrived at by the founders of this Nation.

It is abundantly evident that all of the wars the United States has waged and participated in were fought to preserve these ideals. It is also evident that because the Republic of the United States has guaranteed and protected the freedom and dignity of the individual that we have become the greatest industrial producing nation on earth as well as the most intellectual, self-reliant, independent, and protector of the inalienable rights of man.

Benjamin Franklin, the wise counselor of our founding fathers, once said, "He who trades freedom for security will lose both." It took greater courage to say those words and mean them in Franklin's day when the United States was a weak struggling Republic among the great nations of the world than it does today. And still we have emphasized and magnified security at the sacrifice of freedom apparently forgetting that freedom of the individual, the State, and this Nation will bring about greater security than could be attained by sacrificing our freedom.

What are we doing today to strengthen and protect the freedom of this Nation?

In what direction are we going? What freedom are we sacrificing for false security? From the individual citizen up through the villages, cities, States, and as a Nation we must realize what sacrifice of individual liberty can mean to us. We must not allow the power, authority, and freedom of the several States to be taken from them by the all-powerful Federal Government.

The States of the Union must preserve and protect their freedom and integrity against a central control in Washington. If the several States, the counties, cities, towns, and villages subordinate their rights to a central power in Washington, we will lose our cherished right to freedom and autonomy at the level of local government, and thereby abolish the purpose and intention of the Declaration of Independence and the United States Constitution and allow the Republic of the United States, the last hope of freedom of mankind, to perish from the earth. This must not be permitted to happen. We must fight to preserve and protect our Republic at all costs. This is our present day challenge and our individual responsibility. Let us meet this challenge with courage and confidence. Let us apply the sound counsel of Benjamin Franklin to our present-day thinking. "He who trades freedom for security will lose both."

Following is an article by E. T. Leech which further illustrates the point of the danger of losing our individual liberty by our own indifference to the freedom we have inherited and have fought many wars to preserve and protect. The failure of the Republic of the United States, if it should fail, which God forbid, will be brought about quicker by our own faults and neglect from the inside than it will from enemies from the outside. The article which follows is deserving of serious thought and consideration:

Our country is a system of free individuals. That is what Lincoln meant when he called it a "Government of the people, by the people, for the people."

A lot of countries have claimed or now claim to be free. So long as a nation is not conquered and controlled by some outsider, that claim is true to a degree. But the real test is whether its individual citizens are free. Throughout history, most peoples have lost freedom not by conquest but to their own governments.

Outside governments may be dangerous, but none is so dangerous as the one at home. That is the one supreme lesson of political history. And the greatest wisdom of those who established our Government lay in the fact that they knew it.

They thought of freedom in terms of the individual, and they realized that government—including the one they were setting up—is the great enemy of personal liberty. So they tried by all sorts of checks and balances to put government in its place. The Constitution is, above all else, a document designed to restrain officials.

It is at this point—the emphasis on individual liberty—that the freedom established in America differs from the general definition of such freedom as has existed through most of history, and it is at this point that our liberty is now in danger.

We of this generation have worried a lot about losing our freedom to some outside system—personified first by the Kaiser, then by Hitler, and now by Stalin.

But the real danger is at home.

We can keep free from Stalin and any other outside dictator and still lose our liberty. We can lose it to Washington easier than any other way.

What we have had for 160 years is the right to mind our own business; to run our personal affairs; to succeed or fail, to gain or lose, according to our own personal merits, efforts, and desires.

These rights had to be curbed to bar excesses. One man's liberty must be limited when it infringes on that of somebody else. But, by and large, we have had the highest type of freedom—individual.

Those 160 years are just a minute in the long course of time. Yet no other nation has enjoyed such a minute of liberty. In that time we have achieved higher living standards, more wealth, a wider distribution of goods, greater leisure, better health, a bigger reduction of poverty and suffering, and larger opportunities than any other people ever knew.

The job isn't perfect or finished. Much that is good still is faulty or barely started.

So a lot of people become impatient. They want a short cut to utopia. And that short cut turns out to be the oldest, roughest, longest road in the world—worn by the tired feet of untold millions—the road to state control and lost liberty. It is strewn with promises never fulfilled and hopes which were dashed. It is littered with state planning which failed.

Yet, it is always tempting. Because there are always those who beckon us onto the road with promises that government will give something for nothing. They offer personal security at the cost of individual freedom.

That is the price which is always paid, and the security is never delivered. For government can't provide it. Government never created anything. It never built an industry. It never perfected an invention. It never created a moral code, produced a work of art, or made a dollar.

All progress has come from the personal efforts of individuals. Of a very few people—just a tiny percentage of the whole. Yet, by their hard work, inspiration, superior mentality or plain desire to forge ahead, they did something of benefit to their fellows. That is the only way mankind has progressed. Civilization is the sum total of many personal accomplishments.

Man has done best only when allowed to mind his own business. He had done worst when government tried to mind it for him.

Aid to Foreign Countries

EXTENSION OF REMARKS

OF

HON. JAY LeFEVRE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1949

Mr. LeFEVRE. Mr. Speaker, there are a good many Members of Congress who at

some time or other feel that the aid we have given to the foreign countries has not done any particular good. With this thought in mind I quote below from a letter recently received from a constituent of mine:

I should like to take this opportunity also to tell you about a letter I received from a relative in southern Greece, just a few days ago. He speaks in very happy terms of the great improvement that has taken place in the general condition in Greece. He notes that the Peloponnesus is just about back to normal; the harvests are better than they have had in many a year; people are joyous once again and finally looking forward with hope toward the future. What better proof could we in America have of the effectiveness of United States aid.

High Pool Level at Williston Is Dangerous

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 4, 1949

Mr. BURDICK. Mr. Speaker, when I advanced the theory that aggradation—or settling of silt in still water—would cause the overflow of any dikes that could be built to protect the city of Williston and the surrounding irrigation projects, I had good supporters in the Bureau of Reclamation and Eugene Burdick, my son at Williston. Since I advanced that theory, however, verifications and statements of approval are coming in from engineers and others who have seen aggradation do its work.

It might not be too much repetition to say that a 1,850-foot pool level will form a lake that will extend 12 miles up the river from Williston to a point touching the confluence of the Yellowstone River with the Missouri. Upon creation of a lake of still water, what will happen when the heavily loaded silt water from the Yellowstone hits this quiet lake? The silt will settle at once to the bottom of the lake, while if there were no lake the current would carry the silt, or most of it, along with it. At this point—Williston, N. Dak.—measurements show that 40,000 acre-feet of silt passes down the river annually. With a still lake in place of a river, the greater part of this 40,000 acre-feet of silt will settle immediately as soon as it enters this lake. Just how long it would take to fill up and cause overflowing of the dikes, I did not know. But applying common sense, it occurred to me that with this amount of silt it would not take over 3 or 4 years.

Now we can add something more definite and that is that the time it will take to fill up the river bottom is not long delayed, but can take place within a few months.

Here is what happened at the John Martin Dam on the Arkansas River as taken from the Rocky Mountain News and the Denver Post:

On April 1 this year the Rocky Mountain News announced the dedication and opening of the Army engineers' huge John Martin Dam on the Arkansas River in Southern Colorado. It would end floods and provide irrigation water, the News said.

On April 3 this year the Denver paper editorially hailed the dam as a dream come true, ending all danger of floods in the area, like the one in 1921.

On June 6 this year the floods came. Crop damage in the Holly-Lamar-Granada area was put at $4,000,000 by the Denver Post. Damage resulting from ruin of once fertile farmlands by silt was unestimated.

On June 15 this year the Denver Post announced an investigation of the dam's responsibility for the flood. Irrigation engineers say silt in the water flowing over the dam built a delta which diverted the flood over the farmlands and into the three communities, making hundreds homeless. The Army said if this proves true they will dredge the channel. This will provide another perpetual boondoggle for some contractor friends of the Army engineers—the typhoid marys of floods.

Remember that this dam was only completed this spring and dedicated on April 1 this year, but when the floods came in June aggradation did its work and the result was disaster. I was sure it—destruction—would come but I did not dream it would be almost immediate.

We should remember also that the silt discharge from the Yellowstone is very much more than that discharged by the Arkansas in the vicinity of the John Martin Dam.

It will be the blunder of the ages to let these unreasonable, obstinate and uninformed Army Engineers experiment further on Williston and the surrounding country. There is no reason, scientific or economic, why this pool level should be 20 feet higher than was intended or authorized by present law.

Aggradation will occur in a lower level but a 17,000,000 acre-foot pool will bring the lake of still water 12 miles below Williston in an area where there is no city, no railroad, and no operating irrigation projects.

Would it not be better judgment to try a low level first, as recommended by the Bureau of Reclamation, and let time justify either that level or a higher one? To this the Chief Engineer says, "I planned it myself and do not interfere with me." Governor Aandahl says, "me too", his water board, which is his own creation, says, "me too, too." They all shut their eyes to that which is obvious and I do not suppose the disaster at the John Martin Dam will in any way dull their enthusiasm in attempting to drown out Williston and the surrounding country.

Spain Should Have Been Included in Atlantic Pact

REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 4, 1949

Mr. SHAFER. Mr. Speaker, the noninclusion of Spain in the so-called Atlantic Pact, in my opinion, was stupid. I cannot, for the life of me, understand our State Department's attitude toward Spain, considering the importance of the need of Spain's cooperation in event of future war with our known enemy.

In this connection, Mr. Speaker, I include, under leave to extend my remarks, quotations from a speech made by the Portuguese Prime Minister, the Honorable Oliveira Salazar, before the National Assembly, July 25, 1949, on the need of uniting his country with Spain for an efficient defense of the Iberian Peninsula and of the need to look for means to this end. This speech should be of interest to every Member of Congress:

We may now make a reference to Spain, regarding her noninclusion in the pact, as well as the eventual forthcoming results of it on our covenants with that country.

Contrary to what is sometimes thought and often affirmed, our position in the Spanish case is not affected by any political compromise of regime or solidarity actually nonexistent, but we place ourselves on the ground of the paramount of the conciliation of the peninsular interests and the integration of these in the European interests. Simply, we enjoy the advantage of not feeling ourselves enmeshed in the emotional state of mind in which sometimes public opinions are lost when not well acquainted with the concrete data of a problem.

The common border, the affinity of blood, the parallelism of cultures, the geographic and strategic unity of the peninsula, that must necessarily be considered as a whole for the defense of the West and as a base on the European mainland, that explains not only the extant agreements, but also the position systematically defended by us regarding Spain in Europe.

Maybe others will not have our liberty of appreciation, but I suppose that today there are no statesmen left, European or American, that after serious pondering have not reached the same conclusions.

The Spanish-Portuguese Treaty of Friendship and Nonaggression of 1939, as well as the Protocol of 1940, its complement, must be considered as basis of the relations between the two peninsular states, and as such, condition up to a certain point the policy of each of them toward the other states. In other words, any commitments or activities that ignored them could not be understood, as they are the expressions of a solidarity imposed by geography and the community of moral interests.

In the long conversations with the Madrid government that preceded our joining the Atlantic alliance it was clearly defined that the treaty of friendship and its additional protocol between Spain and Portugal were in principle compatible with the Atlantic Pact. So we explained and stated opportunely in Washington. But it was equally clear to our mind that the commitments derived of the pact or taken up as a result of the same should be each time verified with the principles of the peninsular agreements. Actually the Portuguese possibilities vary according to the positions and attitudes of Spain.

In this line of thinking, and as I affirmed on another occasion, Spain should be included in the Atlantic Pact.

1. Because of the geographic and strategic vacuum created by her absence.

2. Because of the real importance of her eventual contribution and, finally, because the strategic value of the very Portuguese adhesion varies, depending on the fact that Spain be or not bound by the pact, and in the hypothesis of not being bound, according to the policy followed, if a conflict put the machinery of the pact in action. The smooth working of a western front against the possibilities of aggression is strongly con-

ditioned by a policy of the same aim in the Iberian Peninsula. Happily for the goal envisaged, the pact is flexible enough to be adaptable to more than a situation.

There are the ineludible realities obeying which Portugal insisted—even risking the danger of facing allied incomprehension—that Spain should be called to cooperate in the several international organisms concerned in European problems, and in Paris declared herself for the admission of Spain in sharing the benefits of the ERP and in the ECA. By the weight of the same realities we defend all the time the thesis in favor of the admission of that country in the Atlantic Pact; or that by means of another agreement be shortly bypassed that formal adhesion, if the political difficulties to her offered continue. I must emphasize the fact that the presence of Portugal may help a reasonable solution.

I also include in my remarks, under permission granted me, Mr. Speaker, an extract from a recent speech by General Franco, May 18, 1949, in which he refers to Spain's cooperation with American efforts to defend western Europe against Russian aggression. I quote General Franco:

This account of the most salient features of foreign policy with regard to Spain clearly explains the new stage we have embarked upon. Although it is not easy to distinguish the policy of States from the natural feelings of the people, who are often deceived by the malice and propaganda of their governments, if we have to speak so clearly we do not do so from the slightest feeling of hostility towards people, but only towards the policy that rules them at this stage. We find the countries of Europe so dull, so decrepit, and so divided, and their policies so full of Marxisms, passions, and malice, that they unwittingly drive us in the direction where our own heart impels us: to approach an understanding with the people of our own stock. America again attracts the historical destiny of Spain and towards her the hearts of our nation fly, answering the call of blood, faith, and language. The sea, conquered by science, is now a road that joins rather than a barrier that separates; distances between continents are shortened, and land separates more than water.

So that no one must be surprised if our policy of love toward the nations of America and of affectionate liking for the Arab peoples is a milestone in the new stage of policy which is beginning: a policy of friendship and understanding with the nations of Spanish origin which must necessarily lead Spanish foreign policy to greater understanding with the whole American Continent in which North America, by reason of her wealth and power, has come to occupy a post of leadership.

There are no conflicting interests between our two nations today. If so far our relations have been scanty and precarious, this has been due to the torpedoing carried on by some other countries which cling to that old concept of spheres of influence, and the weakness so far displayed by North American policy itself. But if we descend from affective speculations to practical matters, to scientific progress, and economic and industrial possibilities, the value of the American Nation becomes more striking and it is to her that our scientists and businessmen are turning when they need to check the results of their research work or improve their technique. Therefore, if our heart leads us towards Spanish America, the force of reality impels us towards North America. Then again, foreign policy is not the play of one will only; mutual correspondence is needed; there must exist a common interest among the nations to strengthen their natural inclinations; but, even where it exists, nowadays it is at the mercy of the speed with which situations change and often of the lack of vision and tradition in the public bodies responsible for guiding it.

And in considering these relations, it must be understood that we refer to honorable relations, to reciprocal sincerity, and frank friendship, those things so out of fashion in the world today but which we consider fundamental for our relations. In this, we may say in the words of the song: "He who does not feel thus, let him not make love to us."

Cost of Government

EXTENSION OF REMARKS

OF

HON. GEORGE J. BATES

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1949

Mr. BATES of Massachusetts. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include therein an article by Mr. William S. Felton, of Salem, Mass., a student of government and taxation, and which appeared in several Boston newspapers recently. Much more could be said about this important subject, but Mr. Felton's comments make good sense and good reading.

COST OF GOVERNMENT

The disastrous effects of the increasing load of taxation now being visited upon our National, State, and municipal economy demand our immediate attention and prompt action.

When the Thirteen Colonies became the American Union, Washington declared that the safety and security of this Republic would depend upon the enlightenment of the people; meaning, of course, upon a knowledge and understanding of the economic laws that control our welfare and of the responsibilities resting upon us in the choice of our public officers.

It was Marcus Aurelius, the Roman emperor, who told the world 2,000 years ago that the power to tax was the power to destroy. This is what happened in ancient Greece where all the powers of government were vested in the free citizens of Athens. Led astray by the fallacious reasoning of the demagogues, wealth was largely taxed out of existence and Greece fell an easy prey to the invading enemy.

The path of history is strewn with the wrecks of ill-fated nations which have come to grief upon the reefs and shoals of wasteful and extravagant government and the break-down of economic laws. The only guide for our footsteps, to quote the words of Patrick Henry, is the lamp of experience.

It cannot be questioned for a moment that the chief factor in the cost of living is the cost of government. The situation is nothing less than appalling. We must wake up before it is too late. In the end the ultimate consumer pays.

Calvin Coolidge said many times that no tax is ever paid that does not come from the toil of the people. No nation can stand up for long that takes 28 cents out of every dollar from the national income to be turned over to the tax collector.

This country doesn't belong to the farmer or the lawyer, the industrial worker or the banker. It belongs to all of us. We are all in the same boat. We stand or fall together.

Wealth isn't created by passing laws. It is produced by the labor of human hand and brain. We must heed the danger signals now. Efficiency and economy in our Government are as important as thrift and frugality in an individual. Let us impress this fact in no uncertain fashion upon those who represent us in city, State, and Nation. Self-preservation is the first law of nature.

Let the voice of the people be heard.

Wasteful Government Spending

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1949

Mr. WHITE of Idaho. Mr. Speaker, the extravagance and astronomical spending of the Army and Navy is appalling. Recently I read that the $15,000,000,000 appropriated for an enlarged Air Force had not resulted in increasing the Air Force at all, but had been used up in supplying the present organization.

The President and the Congress seem to overlook extravagance and give the Army all the money it asks for. To question the Army extravagance and waste is lese majesty.

In war days I sat here on the floor when an Army appropriation bill for $42,000,000,000 went through without question. On an amendment this bill contained one item of $1,500,000 for dog food when the cooks in every port and Army camp were dumping bones and meat in the garbage by the ton.

The appalling waste going on in the Army is brought to our attention in an illuminating article by Mr. David Lawrence in the August 2 issue of the Washington Post from which I quote:

SURVEY OF ARMS BUDGET GIVES SOME IDEA OF WASTE IN SERVICE DUPLICATIONS

(By David Lawrence)

Some idea of the waste in arms spending can be derived from a survey of the division of the $14,000,000,000 armament budget which has just been made by United States News and World Report and is published in its current issue.

The magazine points out that, of the total supply of dollars going to all three armed services, only about $6,300,000,000 are actually spent for military purposes. It says:

"Nearly $8,000,000,000 is to be spent for overhead and for things only remotely or indirectly connected with military functions. There are big outlays for education, civilian salaries, housing projects, printing, a worldwide air line, rent, research, and multi-million-dollar telephone bills. * * *

"The ratio of civilians to military men now is more than 1 to 2. In the Navy, about 40 percent of the total strength is in civilian employees at shore establishments and in fleet headquarters. * * *

"Air Force, with a strength of 420,200 men in uniform, has only 53,039 flying personnel, including pilots, navigators, bombardiers, and gunners. Number of men in combat units—including mechanics, cooks, clerks, and supply personnel—totals about 140,000 men. The other 280,000 are service, headquarters, school, or training troops. * * *

"Of 408,000 men now in the Regular Navy, about 246,000 are assigned to sea duty and less than half that number are on combat ships. The other 162,000 sailors are on permanent shore duty, most of them manning the 595 Navy installations within the United States.

"Army troops show an even larger proportion of noncombat-functions. With 658,000 men in uniform, the Army is able to maintain the equivalent of only 11 divisions. That means about 132,000 Army men in combat units, including troops who feed, supply, pay, and transport the fighting men in those units. Another 526,000 Army men are engaged in service functions, training, supply, and headquarters duties. Most are stationed at 169 Army posts and camps within the United States.

"In all, the United States is maintaining about 1,200,000 of its 1,600,000 military men of the Army, Navy, and Air Force within this country, with most of them assigned to noncombat units. Total strength of all combat units is about 518,000 men."

OTHER PROJECTS CITED

But even assuming that there must be a certain amount of this expense to support the actual combatant personnel, there are other projects which have little to do with actual fighting strength but which are under way in all three services.

Thus, construction alone, mostly for housing families of servicemen, is costing more than $500,000,000. A new radio communications scheme is slated to cost an additional $1,000,000,000. The bill for college subsidies, scholarships, research, and mobilization planning comes to $700,000,000.

Likewise, the armed forces are spending more than a third of a billion for moving civilians and freight around the country.

The trend of costs is steadily upward, and something more than a mere piece of legislation, ordaining that there shall be unification or economy, is going to be needed. The trouble lies largely in political influence, and the whole thing may really be placed on the doorstep of Congress, which thus far has failed to come to grips with the real problem of economy not only in Military Establishments but in other departments of the Government.

Scare Diplomacy—Will $1,400,000,000 Be Scared Out of Congress for the Atlantic Pact?

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include some excerpts from an editorial that appeared in the Detroit Free Press.

It seems that the American taxpayers are going to have another big bite put on them. This will be not a mere $1,400,000,000 for the Atlantic Pact, for this first appropriation is only the beginning of a much bigger raid upon the United States Treasury. General Marshall plainly stated this fact to the House Foreign Affairs Committee a couple of days ago. It would seem that the temperature of the cold war will be raised and is to be continued for many more years. In addition to the fifteen billions that we are now paying for our own military program, the American taxpayer is now called upon to pay for a European armaments race.

Up to this time the eastern European countries have been appropriating very small amounts of money for armaments and military preparation. Their cost has been only 7 to 8 percent of their national budgets, with the exception of the U. S. S. R., where it is reported that 18 percent of the national budget goes for armaments.

Now that we have encouraged the western European nations to launch expensive armament programs, it is bound to lead to a Russian increase in armaments, and also substantial increases for armaments in the eastern European countries.

This will mean that the economic systems of all the nations of Europe will be increasingly dependent upon the military. It will naturally follow that social legislation must be sacrificed to munitions and the military. It should be obvious that such an armament race can only lead to war. Freedom and democracy will have to be sacrificed to the military.

The recovery program in the various countries will be halted. More debts will be piled upon the people; discontent and dissatisfaction among the masses of working people is sure to follow. This will lead to strife and civil war among the people.

As for us in the United States, it may not be necessary to repair and remodel the White House, as the orders will come from the ruling powers in the Pentagon.

Surely another armament race is not the road to peace. History proves otherwise. We should be encouraging world trade and commerce. The artificial barriers and restrictions that have been placed on exports and imports should be lifted. The weapons for peace can be found in the International World Bank and in the International Trade Organization. These organizations are legacies for peace that were given to the world by Franklin D. Roosevelt. The munitionmakers, the international bankers and the militarists must be pushed out of the saddle, and the leadership must be taken by those who will work for peace, world trade and commerce, and better social and economic conditions.

We cannot get appropriations for old-age pensions, aid to education, and a broad national health program, but we appropriate billions for armaments. Next year, when we are faced with a $7,000,000 deficit, there will be many more editors and newspapers like the Detroit Free Press, who will have the courage to show that the pen is mightier than the sword. I am afraid that many Members of Congress will find themselves in an uncomfortable position in the elections at that time. The issue in the campaign will be taxation and high prices, and the wearied and tax-burdened citizens will ask many questions.

The excerpts from the Detroit Free Press editorial follow:

SCARE DIPLOMACY

The brief filed by Secretary of State Dean Acheson with the House Foreign Affairs Committee in support of President Truman's program for arming western Europe is a masterpiece of innuendo.

The only possible justification for this program is the assumption that war with Russia is not only possible but probable.

The most minute examination of Acheson's text fails to reveal a direct allegation that such a war is inevitable.

Yet the whole tone and substance of the document was designed to persuade Congress and the American people that Russia will embark upon war unless we spend $1,400,000,000 this year and untold billions in years to come, arming our European allies.

Acheson asserted, for instance, that behind the iron curtain exists "the greatest peacetime combination of military forces the world has ever known."

And then he added: "When political aggression fails, as it has failed so far in western Europe, totalitarian regimes are often tempted to gain their objectives by military means."

The employment of this scare technique to fool the American people into endorsing the administration's foreign and domestic policies is far more prevalent than many suspect.

Senator JOHN FOSTER DULLES, a member of the American delegation to the recent Paris conference on Germany, said in a speech on the Senate floor:

"At Paris last month there was discussion as to whether to accept at all the Soviet-proffered truce and to resume even on a tentative basis four-power consultations.

"The reason was that some feared any relaxation of east-west tension would bring a corresponding relaxation on the part of the American people and that, therefore, they need to be kept artificially alarmed."

Secretary Acheson subsequently confirmed Senator DULLES' statement.

The assumption that the people of this country are too damned dumb to understand and must be artificially alarmed into swallowing whatever is cooked up for them by the politicians did not originate at the Paris Conference.

The campaign for a peacetime draft and universal military training, as readers will recall, was backed by horrendous predictions of what would happen if they were not adopted. That time it failed.

The specter of a Europe completely communized was raised to put over the Truman doctrine and the Marshall plan.

A year or so ago a war scare swept this country. As a result of stories out of Washington the impression was widespread that Russia was about to launch world war III.

Afterwards it was explained that this scare was all a mistake—a consequence of someone in the Government misinterpreting intelligence reports from abroad.

Was that true or was this alarm artificially and deliberately created?

Who can say, when so many persons in high office in Washington have been caught putting fast ones over on the Nation they are supposed to serve?

We of the Free Press make no claim to the omniscience which underlies the megalomania that has seized the administration.

We don't know what the politburo has in mind to do or whether our arming a lot of little countries in Europe, which don't want to fight, will change its mind.

What we do know is that no good will come to this democracy from its public servants continuing to lie to the people.

Ours is a government of delegated powers. A Nation of 150,000,000 people can not run its affairs like a New England town-meeting.

We have to depend upon the officials we put in office to administer our public affairs and carry out the national will.

When we cannot trust them to do that, when we find them repeatedly and admittedly substituting artificial alarms for the considered judgment of an enlightened public opinion, what foundation is left for the democratic process?

We expect foreign governments to try to trick us. That's part of the game.

We don't expect to be tricked by our own Government.

The American people, who have to get the country out of the messes the politicians get it into, are entitled to something better than the hypocrisy and double-talk, concealments and deception, which have come out of Washington in recent years.

Resolution of Eighty-second Airborne Division Association

EXTENSION OF REMARKS
OF
HON. EDWARD deGRAFFENRIED
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 3, 1949

Mr. DEGRAFFENRIED. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD the following resolution which was adopted by the membership, third annual convention, Eighty-second Airborne Division Association, Cleveland, Ohio, July 5, 1949:

We, the veterans of America's first airborne division, viewing with alarm the present condition of world affairs, and further, the seeming lack of appreciation of the value of airborne units in the United States Army, do hereby affirm our intention to maintain the airborne aspect of national defense as paramount in importance, and therefore, worthy of better consideration in the plans of the Department of the Army concerning our national welfare.

We, therefore, submit to the President of the United States, to the Secretary of Defense, to the Congress of the United States—in particular to the Military Affairs Committee of the Senate and House of Representatives—to the Department of the Army, and to the Department of Air Force, the following resolution:

"*Resolved*, That the Eighty-second Airborne Division Association, representing more than 12,000 active veterans of the Nation's most distinguished and most decorated combat division do hereby support the principle of airborne warfare.

"As veterans of every airborne landing in the recent European war, the association members feel that it is not only their privilege, but now, it is their duty to express these opinions regarding the future of our Army.

"The success of airborne invasion and airborne warfare in Sicily, Salerno, Normandy, southern France, Holland, and across the River Rhine has proven ground operations initiated, transported, supplied, and then maintained completely by air, is not only possible, but most devastating and effective in its application, because the classic military elements of surprise, economy of means, and massing of forces are all contained in airborne envelopment."

The recoilless weapon, fired from the individual's shoulder make obsolete the tank; guided missiles will replace the bomber; and atomic weapons make beach assaults untenable. The modern answer lies in an Air Force with highly developed troop carrier and supply equipment, plus a highly skilled Army that can be transported completely by air, from widely dispersed assembly areas, converging on any objective within a minute's notice. Such an Army can only be an airborne army.

Unity of effort, unity in research and development, unity in training between the Army and Air Force is the only means of accomplishing the ideal striking force necessary for national security and world peace. As a stepchild, dependent on the Air Force and Army for its very existence, the airborne units of World War II know better than anyone else why instant and complete service unification is necessary for the military future of these United States. Only within such unity can the airborne striking force ideal be developed to follow with quick, decisive ground action, the guided missiles and atomic attack.

The nation which accepts and develops the airborne ideal first, will be the victor in any future conflict. Reluctance of the long entrenched services to support radical change is characteristic; but common sense, and bitter experience indicate the need for change. We, in the Eight-second Airborne Division Association, firmly indorse an immediate clarification of the armed forces stand on airborne training and development. We further urge that the Army try to maintain the high integrity and esprit de corps exemplified by the glorious airborne division troopers of World War II; we feel that economy moves to remove the highly prized and proudly worn insignia, airborne taps, glistening jump boots, and parachute-glider cap patches will constitute an effront to the morale necessary to continue the elite type of American's foremost fighting man—the airborne soldier.

As proud citizens of our own United States, as veterans of the Eighty-second Airborne Division, now world-renowned as America's guard of honor, as men scalded in the bitter cauldron of combat, we insist that immediate action be taken to reconcile any difference of opinion between the services, and that the Department of the Army and of the Air Force proceed with a sound plan for unity and security through the principles of airborne attack.

THE MEMBERSHIP, THIRD ANNUAL CONVENTION, EIGHTY-SECOND AIRBORNE DIVISION ASSOCIATION.
CLEVELAND, OHIO, *July 5, 1949.*

Resolution of Appanoose County (Iowa) Bar Association

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 4, 1949

Mr. LECOMPTE. Mr. Speaker, under leave to extend my remarks, I desire to include a set of resolutions adopted by the Appanoose County (Iowa) Bar Association, as follows:

Whereas there is now pending in Congress a proposal to amend chapter 73 of title 18 of the United States Code by adding at the end thereof the following new section:

"SEC. 1507. The picketing or parading in or near a building housing a Court of the United States or in or near a building or residence occupied or used by a judge, juror, witness or court officer, with the intent of interfering with, obstructing or impeding the administration of justice, or with the intent of influencing such judge, juror, witness or court officer, is hereby declared an offense and any such person or persons so picketing or parading shall be fined not more than $5,000 or imprisoned not more than 1 year, or both,"; and

Whereas the said section is necessary to enable the courts to prevent interference with the courts by picketing crowds and to allow all persuasion of the courts to remain in the hands to whom it properly belongs, namely, Counsel of the Parties' choice and in the place where it belongs within the court room; and

Whereas it is the sense of the Appanoose County (Iowa) Bar Association that such legislation is desirable and necessary and will, if passed, be beneficial and aid the court and promote the interests of justice: Now, therefore, be it

Resolved, by the Appanoose County (Iowa) Bar Association in regular meeting assembled, That the secretary of this association be instructed to send copies of this resolution, properly certified to the Honorable B. B. HICKENLOOPER and the Honorable GUY M. GILLETTE, United States Senators from Iowa, urging them to support an amendment, as is hereinabove set out, to chapter 73, title 18, which amendment is known as S. 1861, or any other bill seeking in principle to secure the same result; and that further, a copy of the resolution be forwarded to KARL M. LECOMPTE, Member of the House of Representatives for the Fourth District with the request that he support H. R. 3766 or such other bill that may seek to secure the same result.

That further, a copy of this resolution be forwarded to Charles S. Rhyne, chairman of a special committee appointed to represent the American Bar Association in support of S. 1861 and H. R. 3766 for the purpose of having this resolution filed with the Special Joint Subcommittee of the House and Senate Judiciary Committees which has under consideration the legislation to prevent picketing, etc., of Federal courts with the intent to interfere with the administration of justice.

CERTIFICATE

The undersigned secretary of the Appanoose County (Iowa) Bar Association does hereby certify that the foregoing is a true and correct copy of a resolution passed at the meeting of said bar association August 1, 1949.

Dated this 2d day of August 1949.

ROBERT VALENTINE,
Secretary, Appanoose County (Iowa) Bar Association.

H. R. 2969, Benzedrine Inhalers

EXTENSION OF REMARKS
OF
HON. GEORGE M. GRANT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 4, 1949

Mr. GRANT. Mr. Speaker, last year, during the recess of Congress, upon the invitation of Hon. Frank Boswell, director, Department of Corrections and Institutions of the State of Alabama, I visited Kilby Prison to talk with some of the inmates who had been misusing benzedrine inhalers. I also saw a large supply of these inhalers which had been confiscated from inmates of the prison.

Mr. J. Bruce Airey, director of investigation of the Alabama State Penal Department, contacted other prisons over the Nation in order to ascertain just how widespread these inhalers were being misused. Mr. Airey did an excellent job in assembling this data which was passed on to me. It appeared that this was a national problem which could not be effectively handled by the respective States, and this led to my introduction of a bill in Congress known as H. R. 2969, in order to cover the use of such inhalers under the Federal narcotics laws.

Wide publicity was given to this legislation by Mr. Drew Pearson, the columnist, and others, with the result that many people contacted me in regard to the subject. Subsequently, I received a letter from Mr. James J. Durr, of the firm of Durr Drug Co., wholesale druggists, of Montgomery, Ala., in which he stated that he had been informed that these inhalers had been used by prison inmates and others in Alabama for purposes other than the use intended, and that the manufacturers, being aware of this development, were greatly concerned over the abuse to which that product had been put, and in an effort to eliminate this evil, that they were making shipments into Alabama of inhalers which had been treated with a denaturing agency rendering them unfit for internal use. I replied to Mr. Durr's letter and advised him that I had received information that the condition was rather widespread, and he agreed with me that something should be done to curtail the reported widespread misuse of the inhalers. He also stated that the manufacturers of this product, Smith, Kline & French, of Philadelphia, was a fine old house, operated by high-minded men who certainly were seriously concerned over the misuse of these inhalers and that no doubt someone from that organization would seek an interview for the purpose of discussing the whole matter.

Mr. Durr further stated that he certainly would not oppose any program which it was felt would correct this evil and, at the same time make the product available to those who were using it for its intended medicinal value.

Shortly thereafter, I did have an interview with Mr. John L. Hammer, Jr., sales manager, and Mr. Carl K. Raiser, assistant to the vice president, of the Smith, Kline & French Laboratories, and these gentlemen offered in every way to cooperate with me and others who were interested in this problem. They advised me that their chemists were working with this matter and that they hoped within a short time to bring out for general distribution an inhaler which would answer the purposes for which the benzedrine inhaler was intended, and which would not contain any stimulating drug. These inhalers were first given a market trial test in California, with such satisfactory results that it is now possible for them to replace the old benzedrine inhalers. The new drug is known as Benzedrex.

I now feel that the purpose for which this legislation was introduced has been fulfilled.

I want to thank Hon. Frank Boswell for his great interest in this social problem, because it was he who brought this matter to my attention; to Mr. J. Bruce Airey, who assembled the report from other prisons; to the American Prison Association and its general secretary, Mr. E. R. Cass; to Mr. B. R. Reeves, warden of Draper Prison, in Alabama; to Mr. Drew Pearson for the publicity given in connection with it; to Mr. James J. Durr, of Montgomery, Ala.; and to Messrs. Raiser and Hammer, of the Smith, Kline & French Laboratories, who have cooperated with me and carried out every representation that they made concerning this matter. Also to Mr. G. F. Roll, of the publicity Department of Smith, Kline & French Laboratories, who some weeks ago showed me the advertising matter and statement which the firm was making in regard to the new inhaler, and which statement would be released on August 5.

I am glad to include in these remarks the statement which has today been released by the Smith, Kline & French Laboratories, which is self-explanatory:

BENZEDREX, NEW REMEDY FOR HEAD COLDS, TO REPLACE BENZEDRINE INHALERS—NEW NONSTIMULATING CHEMICAL COMPOUND FOUND IN SEARCH TO END MISUSE OF BENZEDRINE INHALERS

PHILADELPHIA, PA.—A new nasal inhaler called "Benzedrex," which gives relief to sufferers of head colds, hay fever, and sinusitis, was introduced today in this country and Canada by Smith, Kline & French Laboratories, pharmaceutical manufacturers. Simultaneous with the introduction of this new inhaler was the announcement by the Philadelphia firm that they would replace Benzedrine inhalers with Benzedrex. The new inhalers are nonstimulating, and unlike Benzedrine inhalers, are not susceptible to improper use.

Other forms of benzedrine, including benzedrine sulfate tablets, widely prescribed by the medical profession for a variety of conditions, will be continued to be sold as in the past only on the prescription of a physician. The discovery of 1-cyclo hexyl-2-methylaminopropane (benzedrex) by Dr. Glenn E. Ullyot, head chemist for the firm, culminated an extensive research program which was directed toward finding a chemical compound which would be capable of shrinking the nasal membranes as well or better than benzedrine, but at the same time would not stimulate the user. Following intensive and prolonged pharmacological and clinical trials, benzedrex was found to meet these requirements. The new product was first placed on a test market trial in California before being introduced nationally today.

Reports of misuse, particularly in penal institutions throughout the country, recently caused United States Congressman GEORGE GRANT, of Alabama, to submit a bill (H. R. 2969) in the present session of Congress, the effect of which would be to require a physician's prescription in order to obtain a benzedrine inhaler. When notified of the withdrawal of the benzedrine inhalers from the market and the introduction of the new nonstimulating benzedrex inhalers, Congressman GRANT stated: "I now feel that the purpose for which this legislation was introduced has been fulfilled. The replacing on the market of the benzedrine inhalers with this new product by Smith, Kline & French is certainly in the public interest and unquestionably solves a problem which was of major concern to penal institutions all over the country."

Although benzedrine inhalers have been on the market since 1933, it was not until several years later that the first reports of misuse by prison inmates and other delinquents came to the attention of the manufacturers. Improper use of the inhaler was made by breaking it open and removing the medicated, accordion-pleated paper inside the inhaler and either chewing it or dunking it in beer or soft drinks.

Knowing that the search for a new chemical compound might take years, Smith, Kline & French took immediate steps to solve the problem of misuse from all possible angles. The first thing they did was to print in large letters on the paper inside the inhaler the following: "Warning: For inhalation only. Made unfit for internal use. Dangerous if swallowed."

Shortly afterward experiments were begun on an inhaler that would resist attempts to break it open. Tests were made on an inhaler made of iron, but it was soon learned that the amphetamine—the chemical or generic name for benzedrine—was not compatible with the metal. As further reports of misuse came to the firm's attention, an effort was made to find a substance which, when mixed with benzedrine, would produce nausea if taken internally. First, capsicum, or synthetic red pepper, was tried, but was found too strong. Finally, picric acid seemed to be the answer. In seven States—Pennsylvania, Georgia, Arizona, Utah, Oregon, Washington, and Alabama—where misuse seemed more widespread denatured benzedrine inhalers containing the picric acid were put on sale and the conventional inhaler withdrawn. However, it soon appeared that prison inmates who drank such things as paint and perfume and chewed mace in order to get a "lift" were not to be deterred by a bitter substance such as picric acid.

Not Easily Explained

EXTENSION OF REMARKS
OF
HON. R. WALTER RIEHLMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1949

Mr. RIEHLMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Democrat and Chronicle, Rochester, N. Y., of July 19, 1949:

NOT EASILY EXPLAINED

Representative KEATING has been conspicuous in the Washington news the last few days for two matters which reveal his understanding and regard for some of the fundamentals of our National Government.

On Sunday a New York Times Washington correspondent reported that Mr. KEATING this week would introduce a bill in the House to forbid Justices of the Supreme Court to appear as character witnesses in any action in any court in the country.

His move was prompted by the (he understood unsubpenaed) appearance in the Alger Hiss perjury trial by Associate Justices Frankfurter and Reed to testify as character witnesses for Hiss. This he characterized as against the propriety considered proper for members of the Supreme Court and an action in which reliance on judicial proprieties seemed to have failed.

Representative VELDE, Illinois, Republican, commented that any such appearance by any Supreme Court Justice would necessitate their disqualifying themselves if the case in which they appeared came before them on appeal.

The other matter in which Mr. KEATING was quoted was the matter of Maj. Gen. Harry H. Vaughan, which is discussed at length today by Joseph Alsop in his article from Washington. Vaughan's suspension as Presidential aide has been demanded by Representative SHAFER, Michigan Republican. Mr. KEATING was quoted as demanding that Vaughan be compelled to testify before a congressional committee to explain his alleged remark that he knew some 500 "3 percenters."

Mr. KEATING is justified in being perturbed about Supreme Court proprieties. The unusual, in fact unprecedented, appearance of the two Justices in the Hiss case shocked the country and well might prove embarrassing in the performance of their duties.

The more we read of the Hiss case the more mystified we are. Certainly the antics of Chambers are unexplainable, and we still are loath to believe that Hiss was crassly guilty of betraying State Department secrets. An explanation that has not yet been given and which for security reasons it may be impossible to give suggests itself.

Congress Should Quit

EXTENSION OF REMARKS

OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1949

Mr. HORAN. Mr. Speaker, last week in a press release I outlined several reasons why the welfare of the country would best be served if Congressmen got out of Washington during the summertime and returned, if necessary, in the fall for further legislative activity. Under permission to extend my remarks, I wish to include an editorial from the Washington Post which bears out this same contention:

ADJOURNMENT

"When Congress will rise," Jefferson once complained, "no mortal can tell." Similar complaints are now coming from many congressional lips. The law says that adjournment shall come not later than the last day in July "unless otherwise provided by Congress." In an effort to satisfy at least part of the terrific demands upon it, Congress has provided otherwise, and if all the bills on the must calendar are to be disposed of, majority leader LUCAS' expression of hope that the wind-up may come as early as Labor Day appears to be very optimistic.

The experiences of the last two sessions suggests that it was a mistake to fix the adjournment date at the end of July. The business of legislating for a Government that is spending more than $40,000,000,000 a year and is constantly inaugurating new activities cannot be completed in the first 7 months of the year, as was contemplated under the Congressional Reorganization Act. Jefferson's complaint that the length of congressional sessions was "not from the quantity but from the dilatoriness of business" is no longer true. Anyone who has been on Capitol Hill with his eyes open knows that it is a hive of industry. Of course, a great deal of time is wasted in unnecessary bickering, but politics and human nature being as they are, we doubt that these controversies can be substantially curtailed.

Congress ought to recognize the fact that its duties as the board of directors for big government will not permit it to be away from Washington for 5 months every year. That being the case, it could properly adjourn for the summer in the odd years and take up its burden again in the early fall. In the even years the fall months must necessarily be reserved for campaigning. But when there are no political campaigns to be waged, it doesn't make sense to keep legislative noses on the grindstone throughout Washington's nerve-wracking summer so as to permit adjournment in the fall. Even the quality of legislation might be improved in some measure if Congress would give up the idea of feverish cramming in the hot-weather months, whenever that is possible, and come back for renewal of their grind some time after Labor Day.

Townsend Club Petition

EXTENSION OF REMARKS

OF

HON. WILLIAM S. HILL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1949

Mr. HILL. Mr. Speaker, following is a petition signed by members of Townsend clubs in Fort Collins, Colo., in the Second Congressional District of Colorado, and I wish to present this as evidence of the interest in the passage of H. R. 2136:

FORT COLLINS, COLO.

Hon. WILLIAM S. HILL,
Member of Congress,
Washington, D. C.:

We, the citizens of the State of Colorado, respectfully request your help in bringing on the floor of the House for debate and discussion H. R. 2135 and the passage of H. R. 2136 is respectfully asked:

E. C. Philibert, L. R. McColloum, Mrs. L. R. McColloum, Seny Greenwood, Mrs. T. H. Ruddick, Mrs. Charles Dixon, J. S. Nason, Mrs. Sarah J. Nason, Foster Salaz, Mrs. Tillie Salaz, Mrs. Alex Schaefer, Mrs. Lizzie Likens, Arlington Pearcy, P. R. Pearcy, Mrs. N. C. Pearcy, Mr. Elzie Willey, Alex Gallegos, Mrs. Virginia V. Gallegos, Mrs. Martha Gallegos, Mrs. Jess Mason, Mrs. Rosa Langston, Jesse W. Mason, Mrs. Jewell Tankersley, O. C. Tankersley, John T. Tankersley, H. E. Holcomb, Mrs. H. E. Holcomb, Mrs. Bessie Marpe, C. C. Stobbe, Mrs. C. C. Stobbe, C. Demuth, Mrs. Laura Demuth, Mrs. Ralph Bowen, Ralph Bowen, Theodore Hoffman, Raymond Becker, Mrs. Raymond Becker, Mrs. C. E. Larson, Mrs. Wm. Jepson, Mrs. Frank Bakken, B. H. Wombacher, Mrs. B. H. Wombacher, Joe E. Soderman, Mrs. Ellen Romero, Rudy Martz, Mrs. A. R. Desjardins, A. R. Desjardins, Mrs. T. N. Marsh, Mrs. Mabelle Parker, Wm. G. Oliver, Mrs. Wm. G. Oliver, F. R. Colgan, Mrs. Frank Colgan, W. A. Stansbury, George E. Chaffee, Robert B. Jessee, Mr. and Mrs. F. G. Downs, Mr. and Mrs. A. J. Pratt, Mrs. Edith M. Marek, Mrs. W. A. Stansbury, R. S. Tingey, Mrs. R. S. Tingey, B. K. Ward, Isabel Ward, Mrs. Y. R. Balmer, Mr. and Mrs. Ralph Kimble, M. I. National Service Life Insurance

EXTENSION OF REMARKS

OF

HON. FRANK B. KEEFE

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1949

Mr. KEEFE. Mr. Speaker, on June 20, 1949, the Administrator of Veterans' Affairs announced that national service life insurance dividends, aggregating approximately $2,800,000,000, will be paid to approximately 20,000,000 policyholders. Since that announcement, many people have requested information as to the character and status of national service life insurance. The law is found in title 38, United States Code. I desire to incorporate the pertinent provisions of existing law, section 805:

(a) There is created in the Treasury a permanent trust fund to be known as the national service life insurance fund. All premiums paid on account of national service life insurance shall be deposited and covered into the Treasury to the credit of such fund, which, together with interest earned thereon, shall be available for the payment of liabilities under such insurance, including payment of dividends and refunds of unearned premiums. Payments from this fund shall be made upon and in accordance with awards by the Administrator.

(b) The Administrator is authorized to set aside out of such fund such reserve amounts as may be required under accepted actuarial principles, to meet all liabilities under such insurance; and the Secretary of the Treasury is authorized to invest and reinvest such fund, or any part thereof, in interest-bearing obligations of the United States or in obligations guaranteed as to principal and interest by the United States, and to sell such obligations for the purposes of such fund.

Section 805A provides:

All cash balances in the United States Government life-insurance fund and the national service life-insurance fund on February 10, 1942, together with all moneys thereafter accruing to such funds, including premiums, appropriated moneys, the proceeds of any sales of investments which may be necessary to meet current expenditures, and interest on investments, shall be deposited with the Treasurer of the United States in the disbursing accounts of the Chief Disbursing Officer, Division of Disbursement, and shall thereupon be available for disbursement for meeting all expenditures and making investments authorized to be made from such funds without covering into the Treasury of the United States and withdrawal on money requisitions. All necessary bookkeeping adjustments of such

funds in the accounts on the books of the Treasury shall be made upon the basis of the settlement of disbursing accounts by the General Accounting Office.

Section 806 provides:

The United States shall bear the cost of administration in connection with this chapter, including expenses for medical examinations, printing and binding, and for such other expenditures as are necessary in the discretion of the Administrator.

From this reading of the law it is clear that premiums paid on all national service life insurance policies are deposited and covered into the Treasury to the credit of the permanent trust fund. It is clear also that the Secretary of the Treasury is authorized to make investments in United States Government bonds or in obligations guaranteed by the Government. The Treasurer is also authorized to sell such obligations as may be necessary to properly administer the fund.

The Administrator of the Veterans' Administration, under the law, shall make all awards directing payments from the national life insurance fund. Thus, it is clear that if the Administrator determines that a dividend payment shall be made to the holders of national service life insurance in amounts to be determined by him, his direction to the Treasurer of the United States in the form of such awards will require the Treasurer to raise the money necessary in order to liquidate such awards.

It will be noted further that section 806 provides for the administrative costs of the national service life insurance program, including medical examinations, printing and binding, and any other administrative costs required, in the discretion of the Administrator of Veterans' Affairs, shall be paid out of direct appropriations from the Treasury of the United States. No part of the administrative costs is charged to the premium income.

In view of the tremendous amount involved in the proposed distribution of dividend payments to national service life insurance policyholders, questions have arisen as to the reserves. I discussed this whole matter with Mr. E. F. Bartelt, Fiscal Assistant Secretary of the Treasury, who very courteously and graciously has provided me the answers to most of the questions that might be asked. I shall incorporate a letter dated August 2, 1949, from Mr. Bartelt, together with a table referred to which gives the information which I requested for the benefit not only of Members of Congress but for the benefit of veterans who hold national service life insurance policies.

TREASURY DEPARTMENT,
FISCAL SERVICE,
Washington, August 2, 1949.

Hon. FRANK B. KEEFE,
House of Representatives,
Washington, D. C.

DEAR MR. KEEFE: Following our telephone conversation of July 29, I am enclosing a table showing the status of the national service life insurance fund, as of June 30, 1949.

Your understanding of the handling of this fund, as you stated to me on the telephone, is correct. Premiums and other receipts are deposited directly into the national service life insurance trust fund; therefore, they do not enter into the budget surplus or deficit.

The receipts, expenditures, and investments of the fund are shown every day in the trust accounts section on page 3 of the Daily Statement of the United States Treasury. For your convenience I am enclosing a marked copy of the statement for the last working day of July (July 29), the totals of which are set forth below:

National service life insurance fund

Receipts:	
Interest on investments	----------
Premiums and other receipts	$27,660,049.04
Transfers from general fund	4,708,616.09
Total	32,368,665.13
Expenditures:	
Benefits, refunds, etc	$28,695,543.24
Investments	5,000,000.00
Total	33,695,543.24

To the extent that current receipts are not immediately required for current disbursement, the funds are invested in Government securities. Under the law, the Secretary of the Treasury is authorized to invest and reinvest the National Service Life Insurance Fund, or any part thereof, in interest bearing obligations of the United States, or in obligations guaranteed as to principal and interest by the United States, and to sell such obligations for the purposes of the fund.

The law requires that all calculations with respect to the fund shall be based upon the American Experience Table of Mortality and interest at 3 percent per annum. Since the fund has been established, there have not been available public marketable obligations of the United States that would yield an interest rate as high as 3 percent. Therefore, up to the present time all of the investments have been made in special issues of Treasury notes at an interest rate of 3 percent per annum.

The enclosed statement of the fund shows as of June 30, 1949, (I) Receipts and expenditures, and (II) Assets held by the Treasury. This statement shows that on June 30, 1949, the total assets of the fund amounted to $7,305,041,803.01, consisting of $7,287,685,000 of 3 percent special Treasury notes, and $17,356,803.01 unexpended balance to the credit of disbursing officers.

Disbursements for account of the fund (for benefit payment, etc.) are made by the Division of Disbursement of the Treasury Department upon vouchers certified by the Veterans' Administration. Administrative expenses of the fund are paid from appropriations made to the Veterans' Administration from the general fund of the Treasury, and are not charged to the trust fund. Expenses of handling investments and for making disbursements are paid from funds appropriated to the Treasury Department.

You will note that in the statement enclosed herewith the fund has received the sum of $3,687,278,053.04 as a transfer from the general fund of the Treasury. These transfers of funds represents the Government's contributions to the fund to meet the extra hazards of war. When funds are thus transferred they appear as a charge against the Federal budget in the period in which the transfer is made, and a corresponding credit is entered in the trust fund account.

On June 20, 1949, the Administrator of Veterans' Affairs announced that National service life insurance dividends, aggregating approximately $2,800,000,000, will be paid on approximately 20,000,000 policies. This dividend will be paid because mortality experience has been more favorable than was anticipated when the fund was established. The Veterans' Administration has indicated that the dividend payments will commence in January of 1950. At that time it will be necessary for the Treasury to redeem from the general fund some of the 3 percent securities which are now held for account of the National Service Life Insurance Trust Fund. Since these securities are held for a trust fund account the expenditures will not increase the budget deficit.

Very truly yours,

E. F. BARTELT,
Fiscal Assistant Secretary.

National service life insurance fund, June 30, 1949

I. RECEIPTS AND EXPENDITURES (EXCLUSIVE OF PURCHASES AND SALES OF INVESTMENTS)

	Cumulative through June 30, 1948	Fiscal year 1949	Cumulative through June 30, 1949
Receipts:			
Premiums and other receipts	$3,813,187,910.41	$392,782,902.58	$4,205,970,812.99
Interest and profits on investments	579,295,081.37	210,289,645.90	789,584,727.27
Transfers from general fund	3,600,299,065.84	86,978,987.20	3,687,278,053.04
Total receipts	7,992,782,057.62	690,051,535.68	8,682,833,593.30
Expenditures: Benefit payments and refunds	1,029,659,859.60	348,131,930.69	1,377,791,790.29
Balance	6,963,122,198.02	341,919,604.99	7,305,041,803.01

II. ASSETS HELD BY THE TREASURY DEPARTMENT

Assets	June 30, 1948	Increase or decrease (−), fiscal year 1949	June 30, 1949
Investments:			
3 percent special Treasury notes, national service life insurance fund series, maturing—			
June 30, 1949	$1,901,000,000.00	−$1,901,000,000.00	----------
June 30, 1950	2,044,500,000.00	----------	$2,044,500,000.00
June 30, 1951	1,223,000,000.00	----------	1,223,000,000.00
June 30, 1952	745,485,000.00	----------	745,485,000.00
June 30, 1953	1,020,700,000.00	138,000,000.00	1,158,700,000.00
June 30, 1954	----------	2,116,000,000.00	2,116,000,000.00
Total investments	6,934,685,000.00	353,000,000.00	7,287,685,000.00
Unexpended balance: To credit of disbursing officers	28,437,198.02	−11,080,395.01	17,356,803.01
Total assets	6,963,122,198.02	341,919,604.99	7,305,041,803.01

House Rejection of the Brannan Plan Is Good News

EXTENSION OF REMARKS
OF
HON. ALBERT M. COLE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 4, 1949

Mr. COLE of Kansas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address by Hon. Arthur Capper, former Senator from Kansas:

HOUSE REJECTION OF THE BRANNAN PLAN IS GOOD NEWS

One piece of news that came out of Washington last week reminded me, somehow, of a story I wired from Washington a few months more than 57 years ago. That was in the early spring or late winter of 1892, when I was in the press galleries as Washington correspondent for the Topeka Daily Capital.

I ran across that story the other day, while going through some old files of the Capital.

Believe it or not, I started out one of my stories with this sentence:

"Congress today disposed of the last Democratic postmaster in Kansas."

The story went on to tell that the Senate had confirmed the nomination of a Republican to replace the last Democrat hangover from the previous Cleveland administration.

DESPITE BIG DEMOCRAT MAJORITY

Reading the news dispatched from Washington last week, it seemed to me that some enterprising newspaperman might have wired his paper that the House of Representatives had disposed of the Brannan plan for promising high prices to farmers and low prices for consumers on the same commodities, through a resumption on a bigger and grander scale, of the wartime food subsidies, disposed of it at least for the time being.

That was good news to me, that the House had rejected the Brannan plan, and sealed its objections finally by a vote of 383 to 25 on the so-called Gore bill.

Really, I don't believe that is quite a fair statement. And I want to be fair. It was on a preliminary vote, on a motion to accept amendments to the bill, including omission of the trial run for the Brannan plan, that the House members were recorded against the Brannan plan. The vote on that specific issue was 239 to 170.

That vote of 239 to 170 is quite a sizable majority against Secretary Brannan's sell high and buy low, at Government expense proposal. Especially considering the top-heavy Democratic majority in the House.

And considering also that Speaker SAM RAYBURN failed in a last-minute plea to bludgeon the Democrats into supporting the administration-backed proposal. Actually, Speaker RAYBURN was not very suitable about it.

Addressing "My Democratic brethren," he pointed out that he had observed, during his many years in public life, that "people get along the best when they go along the most." Despite that admonition, some 75 or 76 Democrats joined all but 3 or 4 Republicans in recording their voices against the Brannan plan.

ALL KANSAS DELEGATES VOTED "NO"

Of course, our Kansas delegation in the House went on record unanimously against the Brannan plan, as all of us had felt confident they would. We ought to be proud of them for standing up to be counted on this issue: Representative ALBERT M. COLE, Holton, of the First District (whose constituent I am); ERRETT P. SCRIVNER, of the Second; HUB MEYER, of the Third; ED H. REES, of the Fourth; WINT SMITH, of the Sixth; and CLIFFORD R. HOPE, of the Fifth. CLIFFORD is ranking Republican member of the House Agricultural Committee. In the recent Republican Eightieth Congress he was chairman of the House committee—at the same time I finished my 30 years in the Senate as chairman of the Senate committee.

I remember quoting at some length a short time ago, over this radio station, from Congressman HOPE's very able analysis of the dangerous implications in the Brannan plan.

I will say, in addition, that from the reports I have received on the debate in the House last week, he did an even better job leading the fight against the Brannan plan than he did in the statement from which I quoted in my previous broadcast.

BOTH DANGEROUS AND DECEPTIVE

I consider it a very healthy thing that the House took the action it did.

As I believe I told you previously, I consider the Brannan plan one of the most dangerously deceptive ever made to the American people.

I said the Brannan plan was deceptive.

I said also the Brannan plan was dangerous.

It is deceptive in that on its face it seems to promise farmers a continuation of high wartime and immediate postwar incomes.

It is deceptive for consumers also that it seems to promise cheap food prices—prices much lower than the corresponding prices farmers would receive for the same commodities.

The deception lies in seeming to promise farmers they would receive more—in the form of Government checks—for their production than the things they produced would sell for in the market.

At the same time it would deceive the consumers by seeming to promise they would be able to buy their groceries for less than the cost of producing and marketing the same.

The plan is highly dangerous in several respects.

For one thing, if the plan worked, if the promises made both producers and consumers were really carried out, it would bankrupt the Treasury in not too many years—just as the food subsidies in Britain are threatening to do today. And of course the companion socialistic programs in Britain, promised free medical attention and supplies, nationalization, and government planning and controls, are speeding the process of demoralization and disintegration.

IMPOSSIBLE SUBSIDY PAYMENTS

If the plan did not work—

If the farmers did not get the continued high incomes they seemed to have been promised;

If the city consumers did not get the cheap food prices they seemed to have been promised;

Then farmers would probably be led to demand that the Government checks be increased until they were large enough to meet the promises.

And at the same time city consumers would demand the Government increase the subsidies enough to get them the cheap food they understood they had been promised.

And if the plan did work—

Then the farmers would be compelled and driven and coerced into reducing their production of commodities so that the law of supply and demand would operate to bring market prices high enough that the Treasury would not have to pay out billions of dollars a year in subsidies to meet the promised high incomes.

And then the consumers—if the production controls worked—would have to pay high food prices to buy the scarce food supplies resulting from scarcity production control programs that would of necessity accompany the food subsidy program.

In other words—

If the promises, explicit and implied, could be kept, both to farmers and city consumers, the Treasury could not long continue to stand the steady and increasing demands to pay the ever-increasing subsidy payments.

And when the time came that both farmers and consumers—and Government—faced the reality that the implied promises could not be kept, farmers would have become dependent upon Government payments for their income. While at the same time everybody would have become dependent upon Government to help pay the family grocery bill.

A RETURN OF WARTIME CONTROLS

The result would have been—the result will be if later on Congress feels compelled by pressure to revive the Brannan plan and put it into operation—that farmers and consumers would suffer terrific hardships before any degree of prosperity could be restored.

I sincerely hope—and wish I could feel certain—that the Brannan plan of Government subsidies and all-out Government controls to provide high incomes for farmers and cheap food for consumers, has been finally disposed of by action of the House last week.

But I am seriously afraid it has not been so disposed of, but instead will be more strongly urged in the congressional elections next year.

I was much interested in one line of argument made by Congressman HOPE. He seemed to feel that those he called the sponsors and defenders of the Brannan plan included few, if any, farmers. Instead, he quoted from those he called political labor leaders to indicate what is sought is a return, permanently, of the OPA price and other controls we had during the war.

He quoted the following, among others, from a recent publication of the American Federation of Labor League for Political Education:

"The new program is a direct payment to the farmer and lower prices to the consumer and is similar to the system used during the war under OPA and is similar to the British system which also uses direct payments of tax money to farmers."

CAPPER PREDICTION IS BORNE OUT

Congressman HOPE commented on that statement as follows, and I quote him:

"There you have the ultimate of the Brannan plan as seen by its sponsors and defenders."

Those two quotations bear out strikingly what I maintained and predicted during the war, when food subsidies were provided. I said then, and the Brannan plan seems to prove I was a true prophet in that respect, that once Uncle Sam started paying part of the family grocery bill, there would be strong pressures brought to make the subsidy program a permanent program—and with ever-increasing subsidies.

The Brannan plan is highly dangerous. The country should not fall for it.

H. R. 2136

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 4, 1949

Mr. HILL. Mr. Speaker, following is a petition signed by members of Townsend Clubs in Fort Collins, Colo., in the

Second Congressional District of Colorado, and I wish to present this as evidence of the interest in the passage of H. R. 2136:

FORT COLLINS, COLO., *July 28, 1949.*

Hon. WILLIAM S. HILL,
Member of Congress.

DEAR CONGRESSMAN: We, the undersigned residents of the Second Congressional District, are informed that a discharge petition has been placed in the well of the House. As to release H. R. 2136 from Ways and Means Committee and bring it to the floor of the House for debate and action. Now we are vitally interested in seeing this done and we ask your best efforts to bring this about.

We all know of your loyalty and cooperation in the past as to any aid you could render our aged citizens. We are hoping that we may get consideration in this session of Congress.

Mrs. Wm. Moore, Mrs. John O. Rich, Neva M. Hedges, Esther D. Moore, Mack Hedges, W. T. Harned, Mr. and Mrs. Wm. Podoll, Mrs. M. T. Harned.

Word to the Churches

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1949

Mr. HOLIFIELD. Mr. Speaker, under unanimous consent, I include in the RECORD an editorial which appeared in the Washington Post of July 26:

WORD TO THE CHURCHES

The groundwork for an unholy sectarian war has been laid by the attacks and recriminations that have been uttered in connection with the aid-to-education bill before the House of Representatives. Charge and countercharge have echoed from Sunday pulpits. Obviously if this chain reaction is to continue, the churches and their leading figures will be drawn into a free-for-all squabble that will gravely retard the cause of Christian brotherhood and spiritual growth.

Mrs. Roosevelt, in reply to Cardinal Spellman, has defended her own record by citing the work she did for the late Al Smith when he ran for the New York governorship and later when his presidential campaign provoked a bigoted anti-Catholic crusade. In this matter the former First Lady does not need any defense. The record plainly attests her lack of anti-Catholicism. There was never any warrant in attaching this label either to her or to anybody else who has taken a stand against the use of public funds for parochial schools. Some churchmen may be tempted to prolong the controversy as a means of drawing attention to themselves or their beliefs. Let them, however, be warned; in so doing they will be doing the cause of religion a profound disservice.

The God-fearing peoples of the earth need desperately to stand together in resisting the loss of faith, the spread of terrorism, and the worship of wit and power at the expense of character and moral conviction that are characteristic of our age. The apostles of atheism and totalitarianism would like nothing better than to see the churches of the United States at each other's throats. That is another reason to avoid it. The great majority of Americans of all sects and creeds, we are confident, want to see their churches stand above the battles of politics and aloof from any kind of sectarian fighting. They should insist on it. They cannot afford to have the great message of the brotherhood of man lost to sight in an undignified orgy of name-calling. Nothing is likely to do more harm to the spiritual welfare of the Nation and to the churches themselves.

New Capital of Europe

EXTENSION OF REMARKS
OF
HON. J. WILLIAM FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES

Thursday, August 4 (legislative day of Thursday, June 2), 1949

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very excellent article entitled "New Capital of Europe," by William Philip Simms, from the Washington Daily News.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW CAPITAL OF EUROPE

(By William Philip Simms)

STRASBOURG, August 3.—This ancient crossroads of the Old World where the houses and streets look like something out of a fairy tale is about to become the new capital of Europe, one of the most important spots on the globe.

Next Monday the new European Parliament will hold its first session here. The Consultative Assembly of the Council of Europe will begin to function. The hope is that it will become permanent; the beginning of a united—if not a United States of—Europe.

What happens at this and subsequent assemblies may well shape the future not only of this but our own continent as well.

"Europe," Prime Minister Clement Attlee warns, "must federate or perish." Winston Churchill agrees. Our State Department has officially endorsed the movement for a united Europe and so have Republican Party leaders like Senators ARTHUR VANDENBERG and JOHN FOSTER DULLES.

Here in Strasbourg, some 87 delegates representing France, Italy, Britain, Belgium, the Netherlands, Sweden, Denmark, Ireland, Norway, and Luxemburg will try to find a remedy for a traditionally divided Europe.

Europe has reached the point where it dare not continue its Balkanized existence. As Mr. Attlee indicates, it must change its ways or perish.

The billions United States taxpayers are pouring into European recovery are not going to do the job. At least, not alone. Something besides the Marshall plan is imperative if Europe is to get back on her feet and stay there. The United States cannot continue to support Europe in the style to which she has been accustomed. Not forever. She must do something herself.

Europe has made, and is making, what United States officials over here admit is a miraculous recovery—thus far. But we have been helping her to the tune of nearly $5,000,000,000, and the experts already are warning that we shall have to keep on dishing it out, in one form or another, for another 10 years or so. Otherwise, we are told, the good already accomplished will be wasted.

Chief reason is the political and economic fragmentation of Europe. Europe today is like what the United States would be if every one of the 48 States of the Union was "an unconnected sovereignty" seeking to develop its own national economy regardless of the other 47.

What could be more ridiculous, for example, than Europe importing coal from the United States when she has a surplus of excellent coal? This is due to the difficulties of trade and payments within the Continent.

The money situation over here is almost as bad as in China. The various currencies are interchangeable hardly anywhere. Most are overvalued, yet most countries—notably England—complain bitterly that their exports are falling off.

Europe's trouble is too many frontiers, trade barriers, money that's no good outside the country of origin, and low wages due to a faulty economy. This adds up to a low standard of living, limited markets, and poor wages.

The secret of America's success is federation and what goes with it. Lack of it is the principal cause of Europe's weakness, economic and military. Unless that is remedied, Marshall plan billions will be money down a rathole.

States' Rights

EXTENSION OF REMARKS
OF
HON. CLYDE R. HOEY
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Thursday, August 4 (legislative day of Thursday, June 2), 1949

Mr. HOEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter written by Tom Henderson, of Yanceyville, N. C., one of the leading Republicans of North Carolina, to the editor of the Greensboro (N. C.) Daily News. I believe the letter to be a very sensible and sane one.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

ANOTHER "A FOOL'S ERRAND"

EDITOR OF THE DAILY NEWS:

Ignorant, foolish, irresponsible and unprincipled agitators speak and write lightly and sneeringly of "States' Rights." They are either unaware of or unfriendly to the provisions of the Constitution of the United States which guarantee these rights to the separate and sovereign States. They seemingly think that either the President or the Congress can invade the South and take away our rights. These are fit feed for communism. They are the meat that Communists eat.

The Ku Klux Klan of the reconstruction era was born of the radicalism of northern "carpetbaggers" and southern "scalawaggers"—who unscrupulously and devilishly used Negroes, fresh from the jungles of Africa and newly freed from bondage, for their personal and political aggrandizement. The racial agitators of today are paving the road for either another klan or some other sort of organization which may make our creeks and rivers run red with human blood. They are sowing dragons' teeth. Nothing is more pleasing to communism.

A decent respect to color, customs, traditions and the Constitution is absolutely and imperatively necessary if the two races are to live together here in the South in friendliness, helpfulness and peacefulness.

TOM HENDERSON.

YANCEYVILLE.

Release of Vlasta Vraz by the Czechoslovakian Government

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES

Thursday, August 4 (legislative day of Thursday, June 2), 1949

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter written by the State Department to the chairman of the Committee on Foreign Relations relative to the release of Miss Vlasta Vraz, who was imprisoned by the Czechoslovakian Government.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DEPARTMENT OF STATE,
Washington, June 29, 1949.

Hon. TOM CONNALLY,
Chairman, Senate Committee on Foreign Relations,
United States Senate

MY DEAR SENATOR CONNALLY: Further reference is made to Mr. O'Day's letter of April 15, 1949, requesting the Department's comments on S. Res. 107 protesting against the arrest of Miss Vlasta Vraz of Berwyn, Ill., by the Government of Czechoslovakia.

The Department of State has been informed of the unconditional release of Miss Vraz by the Czechoslovak Government on April 16, 1949. In communicating this information to the American Ambassador to Czechoslovakia, the Czechoslovak Acting Foreign Minister, Dr. Zdenek Fierlinger, stated that this action was being taken by the Czechoslovak Government in order to improve relations between the United States and Czechoslovakia.

For the information of the Senate, the American Embassy in Praha intervened promptly on behalf of Miss Vraz who was arrested on April 9, 1949, and asked for an interview with her which was arranged on April 12. Subsequently, it presented a note to the Czechoslovak Foreign Office which, after reciting the facts known to the Embassy concerning her arrest and after reviewing her philanthropic work in Czechoslovakia contained the following concluding paragraphs:

"In the light of information obtained at the interview which Consul Parry had with Miss Vraz and of the fact that Miss Vraz's services to Czechoslovakia are a matter of public record, she having been awarded on December 7, 1946, in recognition of those services, the Order of the White Lion, the Embassy is surprised at the sudden and drastic action thus far taken in the case, particularly when Miss Vraz's presence here in Czechoslovakia for any necessary purposes of investigation, could easily have been assured by means more in keeping with generally recognized judicial procedure. Instead, the Czechoslovak authorities have added another case to the increasing number which are arousing public opinion in the United States over the treatment of American citizens in Czechoslovakia.

"Accordingly, the Embassy requests that the ministry provide, without delay, a complete report of facts and circumstances surrounding the arrest and detention of Miss Vraz, indicating clearly the specific charges against her and what steps have been taken, if any, to assure that she is being provided with legal counsel of her choice. Finally, if the grounds on which Miss Vraz is being held prove as unsubstantial as they now seem, the Embassy expects to learn at an early date of her release."

Upon her release, Miss Vraz stated that she was not mistreated, but was exhausted from questioning and confinement. She was advised of the substance of the resolution under reference before her return to the United States.

The Department has been advised by the Bureau of the Budget that there is no objection to the submission of this report.

Sincerely yours,

ERNEST A. GROSS,
Assistant Secretary
(For the Secretary of State.)

Basing-Point Legislation

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES

Thursday, August 4 (legislative day of Thursday, June 2), 1949

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a very excellent article on basing-point legislation, by W. K. Kelsey, which appeared in his column the Commentator, published in the July 22, 1949, edition of the Detroit News.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE COMMENTATOR
(By W. K. Kelsey)

Adolf A. Berle is a former Assistant Secretary of State, and is now professor of corporate law at Columbia University. Testifying Wednesday before a subcommittee of the House Judiciary Committee engaged in studying the question of business monopolies, Mr. Berle said:

"Monopoly eventually reaches the point, as has been demonstrated in Europe, where it must swallow the state or the state must swallow it. I think we have shown firmly in this country that the people do not want socialism."

Ellis G. Arnall is a former Governor of Georgia with a distinguished record in that office, and is now president of the Society of Independent Motion Picture Producers. Speaking of the motion-picture business—but his remarks may be extended to cover all big business in the United Statees—Mr. Arnall pointed to the delays in court procedure which are frustrating the antitrust laws, and the failure of those laws to reach back to controlling financial interests.

Recently an attempt was made in Congress to nullify what is perhaps the most important feature of the antitrust laws, and it came within an ace of succeeding.

On the excuse that the Federal courts by recent decisions had caused a state of confusion regarding the legality or illegality of certain business practices such as use of the basing-point system of fixing prices, absorption of freight rates by the seller, and lowering prices in specific cases to meet competition, bills were introduced in both House and Senate to clarify these matters.

These bills, however, went a long way beyond clarification. They would virtually have annulled the powers of the Federal Trade Commission to enforce free competition under the provisions of the Robinson-Patman Act, passed in 1936 to close a great gap in the Clayton Act of 1914, which in turn was adopted to bring down to date the antitrust philosophy expressed in the Sherman Act of 1890, when the trusts were young.

VICTORY FOR THE PEOPLE

One of the most numerous and potent lobbies ever organized in the history of Congress worked for the passage of these bills favoring the monopolists against the independent businessmen. In both the legislative and executive branches it succeded in creating such an atmosphere of confusion with its plausible arguments that men who should have known better surrendered to them.

The Justice Department's spokesman caved in, the Federal Trade Commission signified its willingness to give up the weapons which its lawyers had succeeded in getting the courts to uphold, and from the White House came word that the President was in favor of the bills.

But in the Senate, ESTES KEFAUVER, of Tennessee, pushed through that bewildered body amendments to preserve the powers of the FTC under the Robinson-Patman Act. The Senate bill then went to the House, whose Judiciary Committee promptly killed the Kefauver amendments, and without public hearings reported just the sort of bill the big business interests wanted. With equal promptness the Rules Committee granted way for consideration of the measure on the floor.

By this time, however, the independents had been aroused to the calamity which threatened them. They, too, descended on Washington. They alerted particularly the Congressmen of the Middle West and the South. Representative CARROLL, of Colorado, managed to have amendments adopted which were even stronger than those of Senator KEFAUVER, and with these included the bill passed.

The question now is whether any bill at all will be adopted. Defeated in both Houses, big business lies between the devil and the deep blue sea. If in conference the House recedes on the Carroll amendments, it must accept the Kefauver amendments; and if the Senate gives up the Kefauver amendments, it must accept those of Representative CARROLL. And if no bill is passed, the situation remains just as the courts have defined it, with the FTC still in the saddle.

The lawyers of big business have been knitting their brows day after day to find an escape. Being very smart men, they may succeed. But if they do, there will be a new issue in the 1950 congressional campaign which can split both major parties right down the back.

CONTROL BY BIG BUSINESS

That issue will be whether big business is to be given the right to drive small business to the wall, as it can do by pursuing without legal check the processes which it has evolved to regulate and control prices.

It has been shown that monopoly need not mean ownership by a single corporation. It can be brought about by group understanding, and without formal agreement. Any industry which is dominated by one corporation, or a group of corporations, can fix and regulate prices in any territory in a way to ruin a company that refuses to follow suit—unless competition is protected by law.

Now, the Robinson-Patman Act was designed to protect small business and independent business against the practices of big business by which they could be despoiled through price discrimination. Under that law the courts have held that it is illegal to grant a special low price to one or a few purchasers, thus giving them a favorable competitive position in the community. A price lowered to one purchaser must be lowered to all. There can be no discrimination. Big business must not be able to choose its pets, and whip them into line.

It was the purpose of both the Kefauver and the Carroll amendments to preserve competition under the Robinson-Patman Act as interpreted by the courts. That is why, with either amendments, the big business lobby is no longer interested in the bills passed by either House. It has been licked, if only temporarily.

IT MAY BE AN ISSUE IN 1950

What big business refused to see is that if it obtains and maintains monopolies, even for the beneficent purposes of eliminating waste and promoting efficiency, as it alleges, the time will come, as Mr. Berle has pointed out, when either big business will run the State, or the State will take over big business.

It does not seem likely that the people of the United States will permit themselves to be governed by big business, with no voice in its control. Neither does it seem likely to the commentator that they will vote, in the near future, for the operation of business by the Government.

The choice is unnecessary if big business behaves itself, and obeys the laws as passed by the representatives of the people and interpreted by the courts, without trying to change them for its own purposes.

To those who believe in our democratic system, it was a wonderful support to their faith when majorities in both Houses of Congress, composed of men who had had little time in which to study the bills, and impressed by the work of the lobby in getting the executive branch on its side, succeeded in seeing what was going on, and voted for the bills with the protective amendments included.

The House Judiciary Committee, prejudiced though it may seem to be, will do well to heed the words of Mr. Berle and Governor Arnall. They see the issue clearly and have expressed it well.

A Very Important Political Decision

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES

Thursday, August 4 (legislative day of Thursday, June 2), 1949

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article appearing in today's New York Times, written by Arthur Krock and entitled "A Very Important Political Decision."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A VERY IMPORTANT POLITICAL DECISION

(By Arthur Krock)

WASHINGTON, August 3.—The mimeograph machines in the national and State offices of the labor organizations were freshly inked, and their engineers, the clever young press-agents and ghost writers whom the unions have recruited from the colleges, were ready last night to turn out jubilant statements about the outcome of the Virginia Democratic primary. The numerous and very articulate spokesmen of the Americans for Democratic Action were similarly prepared. And many of the organizations which arrogate to themselves the worthy classification of "liberal" were all set to announce that Virginia would now "go forward" and was "free of the backward-looking Byrd machine."

At the White House there was hope that Francis Pickens Miller, who made Senator BYRD and his organization the issue in his contest for the Democratic nomination for Governor of Virginia, would win it and thus give entry for the claim that the State Democratic Party had directly rebuked Mr. BYRD for his record in Congress as well as for his leadership in the State. For, did not the President, in the midst of the hot campaign on this very issue, say to a visitor, who reported it, "There are too many Byrds—B-y-r-d-s—in Congress"?

But perhaps of more immediate importance than any of these preparations and expectations was an apprehensive attitude in Congress among Democrats who have followed Senator BYRD's leadership in trying to hold down the costs of Government, in challenging Presidential appointments he considers unworthy and in resisting the evolutions of the "welfare state" through the "Fair Deal." If the party in Virginia deserted its senior Senator and most distinguished citizen on the personal and political issue presented by Colonel Miller, some of these Democrats would have been open to the argument that there was no health in following Mr. BYRD thereafter and the best thing to do was to line up regularly with the administration.

THE ADVERSE FACTORS

The emphatic defeat of Colonel Miller by State Senator John S. Battle, who had the endorsement of Senator BYRD, was of great national importance for these reasons. And Mr. Battle's victory was the more striking because of the following adverse circumstances in which his campaign had to be made:

1. The State organization was divided for the first time in years, having been unable to agree on a slate or induce one of its two prominent members who wanted to be governor—Mr. Battle and Horace H. Edwards—to retire in favor of the other. This gave the best opportunity since 1937 for an antimachine candidate and a critic of Senator BYRD's national record.

2. Colonel Miller has much personal strength beyond that which naturally gravitated to him, and he is part of the same historic pattern the Senator is.

3. Virginia had a large influx of industrial workers during World War II; unionization is rising there; and Senator BYRD, because he has steadily attacked efforts to give organized labor a social-economic monopoly over other population groups through legislation and executive favoritism, was a shining target in these areas.

4. Northern Virginia in the vicinity of Washington is the voting-place for large numbers of Federal employees who increasingly remove there, and when they went to the polls they did not forget that Senator BYRD is a constant critic of the size and cost of the Federal civilian pay roll.

5. The union labor press bombarded the voters across the Potomac with such shells as the following from the AFL's League Reporter: "Boss BYRD is essentially an intellectual racketeer constantly preaching things he does not believe and which his record contradicts."

6. The State machine has many of the usual faults of political organizations, though scrupulous honesty in handling public funds differentiates it notably from others which Mr. BYRD's national opponents have found themselves able to belong to and work with. Colonel Miller was able to point to defects in the school system, to illiteracy, and to the poll tax which deliberately restricts suffrage, as contributions of the machine from which Virginia, he said, must be freed.

PERSONAL TRIUMPH FOR BYRD

Despite these handicaps, Mr. Battle won an impressive victory, in view of the conditions. And once more Virginia Democrats endorsed their senior Senator, rebuffing the indirect effort of the Truman administration, through its allies, to reduce or eliminate his State and national influence even more emphatically than they rebuffed open efforts by the Roosevelt administration to the same purpose. The verdict was especially a personal tribute because Senator BYRD was obliged for the first time publicly to endorse one organization member over another in the course of a campaign. This decision, with its obvious risks, was forced on him when Colonel Miller made him the issue.

Nowhere in the United States recently has the word "liberal" been rung more loudly through all its changes than in the campaign for Colonel Miller. Since its plain antonym is "illiberal," this was the label that was pressed incessantly on the Senator and his organization. But, as elsewhere, the implied distinction is largely a matter of dialectics. There are liberals and illiberals on both sides in Virginia. And recognition of the fact that Senator BYRD as Governor pulled Virginia out of the mud and kept it free of debt and graft has again been certified by the Democrat majority of the Old Dominion.

The Cooperative Movement

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Thursday, August 4 (legislative day of Thursday, June 2), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an article by former Representative Jerry Voorhis, now executive director of the Cooperative League of the United States of America, which appeared in the June 1949 issue of the Progressive magazine, published at Milwaukee, Wis. The Progressive magazine was founded in 1909 by the distinguished former Senator from Wisconsin, the Honorable Robert M. LaFollette, Sr.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

D-DAY FOR AMERICA'S COOPERATIVES

(By Jerry Voorhis)

The American cooperative movement is fast moving into the show-down phase of its existence. The period just ahead will determine for years to come whether cooperatives will permit inertia, indifference, prejudice, and factionalism to weaken and immobilize a great democratic movement, or whether they will close ranks and stride forward to play a really decisive role in the life of this country.

D-day lies ahead because the American cooperative movement is coming of age. It has been moving through a long period of great growing pains. It stands today on the threshold of a fruitful maturity. The days of the pioneers, the days when cooperative members were regarded as "a little strange but quite harmless," the days when some co-ops were content to be smug little clubby affairs—those days are gone forever. Before us now are days of conflict—of struggle to gain an accepted and significant place in the economic, social, and cultural life of the Nation.

The past few decades have seen healthy growth in the cooperative movement, especially in rural American areas.

Today it is estimated that upward of 10,000,000 American families are member-owners of some type of cooperative enterprise. In this estimate are included seven major groups of cooperatives. The membership of these groups may be roughly counted like this: 4,000,000 members of rural marketing, farm supply, and utility cooperatives, representing two-thirds of all the 6,000,000 farm families in America; 4,000,000 credit-union members; 850,000 members of consumer cooperative societies; 50,000 member families in housing cooperatives; 500,000 members of group-health cooperatives; 2,000,000 policyholder members of co-op mutual insurance companies.

Add to the above the indeterminate but fast-growing numbers of students who live in cooperative houses, eat in cooperative cafeterias, or buy their supplies at cooperative campus stores; the membership of cooperative burial associations, cooperative freezer locker plants, mutual irrigation companies, and other cooperative organizations, and you easily surpass the 10,000,000 families mark even if we make ample allowance for possible duplication of membership.

Slowly, painfully slowly in the opinion of many, cooperation in the last 50 years has had so healthy and steady a growth as to become an established and essential part of our rural economy. Dating from the 1929 depression, we can mark a great wave of interest on the part of city dwellers that is still mounting.

When I say that cooperation has come of age in America I do not imply that its period of adolescence has been completely outgrown. Doubts and fears, dogmatism and provincialism, jealousies and inferiority complexes still persist among cooperators. Such evidences of immaturity, however, are passing if for no other reason than that the movement, because of its progress and, more important, its enormous potentialities, now faces a determined, well financed, and implacable opposition.

To meet this all-out attack successfully, cooperatives must begin to work, think, and plan to the end that we may offer in these troubled times a democratic, practical, "middle-way" means of mutual aid for the maintenance of a free economy. In short, cooperators must cooperate. Holding to its original idealism, the movement must prove to the American people by its day-to-day performance that it can meet the pragmatic test of business success from the efficient management of a city grocery store to the operation of a large-scale refinery.

Carried away by enthusiasm, some cooperators still seem to believe that the cooperative patterns—consumer-ownership, patronage dividends, and the rest—will automatically bring success to any undertaking regardless of the human elements involved. This idealistic faith is most prevalent in the most difficult of all the cooperative fields—the city food and household supplies stores. Although the British and Scandinavian cooperatives have made their most notable progress in this field, over here progress has been slowest, good management most rare, the need for member-participation programs greatest. In this vital area co-ops have been longest on idealism and shortest on efficiency.

Yet the city food and supply store remains the center around which vigorous cooperatives of urban consumers must be built. Until our strong, rural cooperatives are balanced in the towns and cities with consumer enterprises large enough to carry on at least a sixth of the retail trade in town, we cannot hope to duplicate the Scandinavian or English way of contributing to stability of the economy.

It must be recalled that in the retail grocery field there are no high margins. Regularly, 6 out of every 10 commercial grocery stores fail in the United States after 4 years of heartbreaking struggle. Yet the failure of one cooperative store is blazoned abroad by our enemies as proof of the impracticability of the entire movement.

That there have been serious failures no honest cooperative will deny. As in the case of many other businesses, the war years of a seller's market gave our store managers a false sense that anything would go. Out-of-the-way, unattractive, sloppily run co-ops did a good enough business with customers who were not particular, so why bother?

It took some heavy losses in both eastern and national cooperatives, the failures of a number of local co-ops, and some down-to-earth reports by outside experts—suggesting that if urban consumer co-ops were to survive and grow they had to be run at least as efficiently as their rivals—to wake up our people from their dream of coasting along on a perpetual seller's market and return them to black-ink operations.

The early months of 1948 were troubled times. At the end of the year, however, the picture brightened. Though Eastern Cooperatives was still in the throes of reorganization and a number of the smaller local societies in its field had folded, the outlook was markedly brighter. And Central States Cooperatives, the Midwest regional organization serving most of the urban cooperatives in that area, showed after a hard year net savings of $2,800 for the month of December, due largely to a net reduction in costs of operation of no less than $57,000 per year. After great difficulty in unification and the closing of some outlets, the remaining Chicago retail stores were in the black at the close of the year.

The California Associated Cooperatives, blessed all along with good management, continued its healthy growth, with a jump in sales from $1,033,000 in 1947 to $1,463,000 in 1948, which was 25 percent better than budget estimates. The grocery department showed a sales increase of 64 percent over 1947.

So it can be done. Loyalty, enthusiasm, and idealism are characteristics devoutly to be wished for in any cooperator, but they cannot be substituted for good management, vigorous merchandising, sound personnel policies, and close relationship between the retail co-op and the wholesale. There must be common selling sense if the groceries are to be moved from the shelves to the consumer's market basket. City cooperators have learned some lessons the hard way.

Take the case of the important laboratory experiment in urban cooperative organization in eastern Michigan. For several years the United Automobile Workers of America, one of the largest and most progressive unions in the world, have kept a man on their educational staff to teach cooperative principles. In the fall of 1947, when prices reached their peak and wages lagged, local unions in Detroit began buying groceries at wholesale and selling them to union members in local headquarters at cost.

This promptly proved to be impractical, as the cooperators in the union had predicted, and a new device was worked out by the Council for Cooperative Development, on whose board members of the unions and of the cooperatives sit together. There were several cooperative organizations in the Detroit area. Why not, CCD decided, get them behind dramatic grocery sales (they were called food fairs) and use them as a means of selling shares in the cooperative and building up membership?

The plan worked. At all events, in Pontiac, Flint, and Detroit memberships were sold, capital raised; the idea of cooperation captured the imagination of the people. The fairs were well and cleverly advertised. In front of union halls, in vacant lots, at the food trucks themselves, people were told through loudspeakers what was being done to beat the high cost of living. The mayor of Pontiac gave his official blessing to the grand opening of the Pontiac Cooperative Distribution Center. A few months later Detroit opened another center, to be followed by Flint.

Certain methods laid down at the outset by the CCD planners went far in making this enterprise a success. A minimum of expensive fixtures, a maximum of self-service, low rents, and ample parking spaces kept capital investment and overhead down. Cooperative-labeled products were the rule. The result—4 to 8 percent average savings under chain store prices; volume at Pontiac $4,200 a week, Flint $7,000, Detroit No. 1, $5,500; all stores in the black, despite the fact that many other cooperative stores in the area were losing money; the grocery volume of Central States Cooperatives (the Chicago wholesale) doubled.

Of course, all the answers to the problems facing city cooperatives have not come out of Eastern Michigan. But at least the experiment proved that it is not necessary to write off urban cooperative stores as hopeless undertakings.

Given a cohesive group of people—a militant union membership, a church parish, or men and women with various common ties; given a good educational program, streamlined with plenty of drama; given some imagination about methods of operation with emphasis on the saving to the buyer rather than high-pressure merchandising frills—given these, we may yet have a proper balance of city and country co-ops.

Business success anywhere takes foresight and, of course, the present seeming prosperity of this country, whether due to inflation or disinflation, isn't going to last indefinitely. So, at the Sixteenth Biennial Congress of the Cooperative League held last November in Minneapolis, plans were laid to make the cooperatives of the Nation financially self-sufficient.

It was proposed that the savings of individual cooperatives be brought together in credit unions and cooperatively controlled banks, that all available funds in the hands of cooperatives be invested in the securities of cooperatives, that finance associations for the gathering of such funds and the making of necessary loans be organized in every region, and that the Cooperative Finance Association of America, a chartered organization, be made an agency to rediscount the paper of regional finance associations and provide a market for the cooperative securities.

II

What the congress had in mind was the unifying process of mutual aid, the forming of a common front today to meet a potential crisis tomorrow. I have stated what seems to be a truism, namely, that cooperators must cooperate. This needs to be repeated because the stubborn fact remains that in this country, unlike Canada, the cooperative movement has not yet learned to think of itself as a national movement.

Barriers of indifference, lack of understanding, and even downright prejudice separate some cooperatives from others. We have business-minded cooperatives whose sponsors, proclaiming they are an integral part of the system of private profit, declare that, far from desiring to help heal a sick world, they oppose all such idealistic foolishness.

We have large agricultural marketing cooperatives which keep loftily away from all other cooperatives and indeed try to soft-pedal their intrinsic cooperative set-up.

Then there are doctrinaire devotees of the more rigid Rochdale school who will have nothing to do with any farm marketing cooperatives, and scorn as being outside the circle of true cooperation even farm supply enterprises which in every essential follow the Rochdale principles.

Slowly the movement is finding its own middle way between these extremes. Alert-minded cooperators know that business success and idealistic integrity must go hand in hand if the full potentialities of cooperation are to be realized.

There is still, however, a considerable distance to go. On the business side there must be a whole-souled readiness to buy together, to seek sources of crude oil, for example, together, to acquire phosphates and timber land and other sources of raw materials together, to join in creating at least one outstanding laboratory for the testing and developing of better products for the benefit of all American consumers.

When credit unions and cooperative insurance companies, farm supply and city store cooperatives, and all the rest work together in the spirit of mutual aid, there can be a mighty movement which will give people control over their own economic destinies.

Along with the problem of effective unity remains the long standing one of administrative personnel. Leaders of the movement are quite literally run ragged by the demands upon their time and energy. These men and women could be in attendance at some sort of important meeting every hour of every day of every week and still miss many a gathering of eager cooperators. This is a sad reflection on the failure of co-ops to train and develop urgently needed administrative personnel.

Particularly for the local cooperatives, the scarcity of competent managers is alarming. A good cooperative store manager needs all the best qualities of good management in commercial enterprise, and a lot more besides. He must be both an efficient merchandiser and a leader in his community as well. Yet today only a few regional cooperatives have adequate programs of personnel training; there is none at the national level where it could be done most economically.

It is no easy matter for one brought up to believe that the way business is done in this country is either through cut-throat competition or iron-fisted monopoly to accept, without considerable study, the mutual-aid, cooperative way. Yet there can be no doubt that the cooperatives which do most to support a vigorous program of member participation and public information, directed by men and women well-grounded in cooperative principles and practices, are the ones which are building most soundly for the future, even from a purely business view.

In that future, if present growth continues, we can take for granted that the enemies of the movement will increase the intensity of their attacks and in all probability broaden the base of the assault. At the present, one of the cleverest and best financed propaganda campaigns is being carried on for the purpose of establishing in the public mind the idea that "co-ops don't pay taxes." Over and again on the radio, in the press, at forums and other public gatherings, this single point, false as it is, is being hammered at, so that large cross sections of people have come to believe that through some special dispensation nontaxpaying cooperatives have a great advantage over business.

Cooperative spokesmen should on every occasion point out and publicize these facts:

1. Cooperatives pay all taxes that other businesses pay and at the same rates.

2. While it is true that patronage refunds are not taxable against a cooperative, neither are they taxable against any other business.

3. As for the agricultural exemption for which a dwindling number of farmer cooperatives attempt to qualify, the National Tax Equality Association itself, the spearhead of the current drive against co-ops, is on record as saying that "the exemption makes practically no difference and its repeal would add only a drop of revenue to the Treasury."

III

It is doubtful, however, if a purely factual approach such as the above will be enough to stop the malicious distortions of the tax situation. The cooperatives can easily fashion an effective and constructive counter-attack by publicizing their now basic principles.

For cooperatives are legally obliged to pass on to their patron-members all margins between cost of doing business and total receipts from patronage. In other words, what would be reckoned as profit in a purely commercial enterprise never actually belongs to the cooperative. Instead it belongs to the cooperative's patrons. Consequently all savings of a cooperative must be paid in cash or assigned in ownership to patrons in proportion to their patronage. Whenever such funds constitute taxable income to anyone, cooperative members are liable for the payment of income taxes on their patronage refunds, in whatever form they may be paid.

Cooperatives operate on the very sound principle that the ultimate recipient of income, not a trustee through whose hands money passes, should always pay the tax. This is what takes place in the case of all the 86 percent of American businesses which are individually owned or owned by partners. None of these pays a corporation income tax because the partners have discharged their tax liability in full when they pay their taxes as individuals—since they have, in fact, received all the income. This is exactly the case of cooperative member-patrons who are in fact a group of partners in a business.

The present indifference or hostility toward the cooperative movement in many parts of the country is, in my opinion, the greatest single obstacle we have to overcome. The cooperatives must be about their public relations activities. They must win the battle of public opinion. They haven't won it yet.

It is the pressing business of cooperators to go out and tell the people why the movement got started, how it is functioning, what its true aims are, how it works to develop a genuinely free economy, and how rightly it can contribute to the welfare of the majority. Not cooperators alone but people generally must know that cooperation is a voluntary, nongovernmental organization of producers and consumers of goods and services for which there is a common need.

It must be made clear that cooperatives provide the means for decentralizing the present concentrated ownership of industry, making it possible for countless Americans in all walks of life to share in the ownership of such necessities for civilized living as oil wells, pipe lines, refineries, factories, mills, mines, electric power and light, clinics, banks, stores, and insurance companies. This is done by using and supporting these industries and institutions when they are organized as cooperatives.

It must be demonstrated that cooperators are not Utopian visionaries with any expectation of taking over the national economy. That never has happened in countries where the movement is strongest. It is the purpose of cooperatives to grow to the point where 15 or 20 percent of the Nation's business is on a cooperative basis. Then the people will have shown that they can supply their own needs, and there will be a yardstick of full production at reasonable cost which can be applied to industry as a whole.

Time and again the economic yardstick has proved its worth. Overseas it has broken the grip of private monopolies and cartels upon public necessities. Here, as in the case of REA, it has forced down high rates charged by private electric power companies and further forced these companies to enter fields long neglected because high profits were not expected there.

Cooperative spokesmen must show that abundant production of low-cost necessities is a natural process in an organization which belongs to the people whose daily needs it serves; that grass-roots, locally owned people's businesses are the antidote to the growing menace of gigantism which follows the concentration of economic power in the hands of a few and weakens the very roots of democratic life.

Cooperators have not taken attacks against them lying down. The movement has a public relations program and some agencies. The Credit Union National Association and the National Rural Electric Cooperative Association do effective jobs in their fields, as does the National Council of Farmer Cooperatives and the American Institute of Cooperation. Some of the most effective public information work today is being done by some of the more wide-awake regional co-ops.

Yet, while the attacks upon the cooperatives are carried on under a Nation-wide plan, the cooperatives themselves have yet to develop a well-coordinated, Nation-wide program.

This is the job now being tackled by the Cooperative League. The league is the only national organization which atempts to advance the progress of all types of cooperatives in all fields of human needs, from health care and housing to groceries and farm supplies. Its objectives are two—educational and promotional.

While a few of the stronger business cooperatives and a number of the more active smaller ones generously support the league's work, the organization must attempt, on the most modest of budgets, with less than a score of staff members, to carry on a national public relations program upon whose success so much of the future growth of all cooperatives depends. That the league has in its membership barely one-sixth of the total membership of the Nation's cooperatives is indication of the lack of consciousness of working together for a common cause and the absence of a well-coordinated national public relations program.

IV

Many cooperators complain of the lack of imagination which keeps the movement repeating tried and tested methods in the atomic age of overnight change. These critics want the cooperatives to make some dramatic contribution to national welfare or world peace. And, indeed, this could be done if within the near future competent leaders would forget differences and divisive regional barriers and work together on a national scale.

Everywhere there is a heightened interest in low-cost cooperative housing. If Congress would pass pending legislation for the encouragement of such housing, and if existing cooperatives would prepare themselves for guidance in such projects, we could start breaking ground for the new, mutually owned houses within the measurable future.

Similarly in the field of distribution, if efficiency is increased, greater imagination employed, and mutually advantageous relations are developed between producers such as the farm marketing cooperatives and consumers, new methods can be worked out which might well eliminate the present altitudinous costs of getting things to market.

Internationally, the challenge to cooperatives is tremendous. Presently there is world-wide discussion of plans for the revival of industry in Germany and the development of the so-called backward areas for the benefit of the masses of people there. As yet these projects are in the realm of debate, but if the schemes, to which the public as a whole is not privy, merely mean the handing back of the Ruhr industries to the cartelists who once controlled them or mean the

expansion of the power phases of American corporations into underdeveloped areas, so far as peace is concerned our last condition may well be worse than our first.

The one way to take the Ruhr out of the frame of fear, suspicion, and intrigue which now surrounds it would be to place control of its industries in the hands of a trusteeship participated in cooperatively by all western European nations having need of Ruhr products.

Co-op leaders have already made this suggestion, but selling the idea to military and diplomatically minded officials is no easy task. The same cooperative principles should be applied to the development of backward areas, where the people could own their own industries rather than become dependencies of private American corporations.

V

I am not implying that cooperative techniques supply all the answers to all the world's pressing problems. I am stating that from my experience with the movement, cooperators have adequate answers and tested, workable solutions to meet some of the most pressing economic problems of our times. Practical performance in many fields has proved this adequacy. The question is whether we, by sins of omission, will attempt merely to keep the cooperative answers to ourselves or whether we will find ways of contributing them to increasing millions of our fellow human beings on this distressed globe.

Un-American Activities

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Thursday, August 4 (legislative day of Thursday, June 2), 1949

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a statement regarding un-American activities by the H. A. Cameron Post, No. 6, American Legion, Department of Tennessee, Nashville, Tenn., in order that Members of Congress and world leaders may know just where loyal American Negroes stand.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Members of the H. A. Cameron Post, No. 6, American Legion, Department of Tennessee, heartily disapprove of organizations which participate in un-American activities and of individuals who endorse such organizations and advocate such activities.

Inasmuch as Post 6 is an organization with a membership exclusively of Negro veterans of both World War I and World War II, it behooves us to make it clear as to where we stand on such an issue. We would like to have it understood that we oppose and condemn such organizations or persons who participate in or endorse the same.

The membership of Post 6 is aware of the fact that such organizations have been very active in certain sections of these great United States of America, and it is our desire that such organizations be requested or forced to disband. It has been said and published by an internationally famous member of our race that we would not commit ourselves or take up arms against an aggressor nation should our great country be attacked. American Legion, Post 6, heartily disapproves the attitude of such statements made by such so-called Americans.

We pledge our support to the United States, and we want you to know that we vigorously oppose such unpatriotic and un-American demonstrations as recently have come to the attention of the public.

Military Aid to Foreign Countries

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Thursday, August 4 (legislative day of Thursday, June 2), 1949

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Chicago Bridge Doctrine" which appeared in the Chicago Sun-Times on July 28, in support of the program for military aid to foreign countries, showing the harmony of the Truman program in this respect with the speech made by President Roosevelt on the Chicago Bridge in 1937.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CHICAGO BRIDGE DOCTRINE

Congress is in for a rugged tussle over the ways and the costs of providing to other nations American aid to resist Russian aggression—if there is any more Russian aggression.

That's made plain by the early reactions to the President's special message asking for $1,450,000,000 to set up a global guaranty against fear of war which, in Mr. Truman's language, haunts the world. It is the global quarantine doctrine first announced by F. D. R. from Chicago's outer drive bridge.

Since there is no official end of World War II, Mr. Truman has asked for such extraordinary powers as a commander in chief would have. He wants to allocate military equipment to the nations, during the next 2 years, as circumstances require. The opposition things the President wants authority to do too much, too soon, all by himself.

Mr. Truman's proposals are timed to make good on American commitments under the North Atlantic Pact, with its special application to the nations of western Europe. But his program for defensive military grants penetrates to Korea, the Philippines, Iran, Greece, and Turkey. As for Canada and South America, he'd help them procure self-defensive equipment on a cash basis. Only China, among the hot spots, is passed by.

As Congress and the people make up their minds about the procedures to call Russia any place in the world there is bound to be a searching of souls as to why mankind is in a fix somewhat similar to that which prompted President Franklin D. Roosevelt's speech when he dedicated the outer drive in this city. That speech was made 12 years ago.

Since then we have had World War II and the organization of the United Nations to prevent world war III. How come, then, that Mr. Truman's special message to Congress is the pattern of F. D. R.'s quarantine address? Mr. Truman also makes a play upon the word "fear" recalling F. D. R.'s first inaugural admonition that "the only thing we have to fear is fear itself."

Mr. Truman says the fear of aggression haunts the world and prevents the stability that promotes social and economic progress. He lays this fear to the Russians with their undermining of the United Nations. Mr. Roosevelt, on the Chicago bridge October 5, 1937, talked about a haunting fear of calamity among the nations. He laid that fear to the Nazis, with their undermining of the Briand-Kellogg Pact under which 60 nations had pledged themselves to settle their differences peacefully and to avoid the force of arms.

Said Mr. Roosevelt in Chicago in 1937:

"Nations claiming freedom for themselves are denying it to others.

"The will for peace on the part of peace-loving nations must express itself to the end that nations that may be tempted to violate their agreements and the rights of others will desist from such a course. There must be positive endeavors to preserve peace."

This Roosevelt philosophy is the basis of Mr. Truman's address this week. But Mr. Truman can go further than Mr. Roosevelt was able to go. Time has marched on. Events have changed the world and the thinking of our people.

If the Russians move into the countries of western Europe we hope to have those countries prepared to maintain internal order and to resist the force of the first blows. We plan to move in to help them with positive measures that have evolved from experience since the Chicago bridge speech. In Mr. Truman's words, this is the warning to Russia:

"It must be made clear that the United States has no intention, in the event of aggression, of allowing the peoples of western Europe to be overrun before its own power can be brought to bear. The program of military assistance now proposed is a tangible assurance of our purpose in this regard."

And that will be the way things will stand until Russia, in good faith, is willing to make the United Nations function for world peace.

It is too bad that things have to be that way but it's the best method we have been able to find for a warning to Russia to lay off—or to desist, as F. D. R. put it, in his Chicago bridge doctrine.

Toward an Atomic Policy

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 4, 1949

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I would like to include a very timely editorial entitled "Toward an Atomic Policy," which appeared in the July 30, 1949, issue of America.

The editorial follows:

TOWARD AN ATOMIC POLICY

The Joint Congressional Committee on Atomic Energy met July 20 with officials of the State Department, the National Military Establishment, and the Atomic Energy Commission "to explore the continuing problem of our relations with the United Kingdom and Canada in the field of atomic energy." We are not going to join in the speculation about what happened. We do want to register our satisfaction over the fact that official Washington seems at long last to be taking the A-bomb seriously?

Even now is it taking the bomb seriously enough? Let us see. In his carefully worded statement announcing the July 20 conference, Committee Chairman MCMAHON said that the committee would "discuss with the three agencies most directly concerned the problems which lie ahead in our relations

with the United Kingdom and Canada in this field." Problems in the atomic field, life-or-death problems, lie ahead in our relations with the whole world, not merely with Great Britain and Canada. It is high time the United States gave serious attention to them.

On the very day the McMahon committee met to discuss a bilateral atomic agreement with Britain, the United States proposed to the UN Atomic Energy Commission that it abandon its attempts to establish international control. Has the United States abandoned hope of international control? If it has, what alternative course can it follow?

This is the time, we believe, while the question of our relations with the British and Canadians is under consideration, to widen the inquiry to take in our over-all atomic policy, both national and international. The situation certainly warrants a full-dress investigation.

Despite our admiration for the zealous devotion of Senator McMAHON as head of the joint congressional committee, we do not think his committee could handle the rather ambitious project we have in mind. For one thing, to achieve worth-while results, it would probably have to be continued for a year or more.

Our recommendation is that the President appoint a Citizens Commission on Atomic Policy similar to, but much larger than, his Commissions on Civil Rights, universal military training, and air policy. It should include the most highly qualified political and physical scientists, military strategists, psychologists, churchmen, educators, planning engineers, and publicists—a cross section of the best brains in America. The Commission should be empowered to hold closed hearings, and should have a large staff, one of whose duties should be to analyze and digest the already voluminous literature on the atomic problem.

As chairman of the Citizens Commission we recommend Thomas K. Finletter, whose experience as chairman of the Air Policy Commission would make him invaluable.

"It would be an unreasonable risk," reported that Commission, December 30, 1947, "and therefore a reckless course, to rely on other nations not having atomic weapons in quantity by the end of 1952."

There is at least a chance that the Commission we recommend could devise a national life-insurance policy by that time.

Potsdam Evacuation Atrocity and the Genocide Convention

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, last December the United States, Great Britain, and Soviet Russia entered into an agreement at the Genocide Convention in Paris denouncing the practice of genocide. These same countries, through Stalin, Atlee, and Truman, entered into a postwar pact—August 1945—to exile millions of persons of German ancestry from eastern Europe. This was a flagrant act of genocide. The Christian Century for July 27, 1949, says, "Future generations may brand it as the greatest postwar atrocity of our time."

Mr. Speaker, I include the editorial referred to:

LIGHT ON THE POTSDAM EVACUATION ATROCITY

Future generations may brand as the greatest postwar atrocity of our time the Stalin-Atlee-Truman decision of August 1945 to exile millions of persons of German ancestry from eastern Europe. The whole truth concerning this incredible action has not yet dawned on the people of western nations. When it becomes known, it should shock even our calloused generation. It will certainly be remembered against us by our descendents. How many lives did this Potsdam decision cost? Information recently published by the Evangelical Press Service of Bethel-Bielefeld gives a partial answer. The former population of the province of Silesia was between 4,600,000 and 4,800,000. Not more than 250,000 of these people remain in Silesia, says this source. Some 80,000 are known to be in other parts of what is now Poland. Over 600,000 Silesians are in lower Saxony, 450,000 are in Bavaria, around 400,000 in Westphalia north of the Rhine. Smaller groups are listed as scattered in a half-dozen other provinces of Germany. Some may be living in the Russian zone of Germany, but probably not a large number. All together the total that can be accounted for, including returned prisoners of war, is around 2,200,000. So over half the former population of Silesia has disappeared. Where are these people? The most likely supposition is that most of them are dead. If this proportion holds for people from other eastern areas, the Potsdam decision was an immediate sentence of death for many millions of people. That a slower but equally certain death awaits the 11,000,000 survivors from Silesia and other lands who are now in Germany was affirmed at the recent meeting of the World Council of Churches by Dr. Martin Niemöller. The German church leader said that unless the victors move soon to undo as much as possible of the damage done at Potsdam, few of the Volksdeutsche can survive more than a decade. These people cannot be absorbed in Germany unless that nation is permitted to build far more factories than it had in 1939. That will not happen soon. But something has to be done if these millions are to survive. Since the victors seem incapable of agreeing on a German peace treaty, they should convene an international conference to decide on what they are going to do with these people whom just 4 years ago they decided to uproot.

Preserve the Peace

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1949

Mr. MULTER. Mr. Speaker, the declared policy of the United States is to restore permanent peace in the Middle East. The present negotiations at Lausanne can only be successful if both Israel and the Arab states show sincere willingness to reach a general peace settlement. It is most disturbing, therefore, that the press and radio in many Arab states have continuously been expressing threats to resume hostilities against Israel as soon as their countries feel capable of doing to.

These threats can hardly be ignored in view of the present large-scale rearmament of the Arab States. Under these circumstances the possible lifting of the United Nations embargo on shipment of arms to the Middle East may constitute a most serious danger to peace in that area of the world.

ARAB THREATS TO RESUME WAR

The first anniversary of the proclamation of the State of Israel last May gave rise to a fresh wave of warlike utterances and promises of coming Arab revenge. In the following a few typical excerpts are given:

(a) In his broadcast in English on May 19, 1949, Azmi Nashashibi, the director of the radio station of Ramallah, which is located in the Transjordan-held part of Palestine, said:

Thousands of boys are receiving military training and the girls are learning first aid. He asked for the return of all the refugees to their homes and added: We have been attacked, murdered, robbed, ruined—but we shall carry our burdens and when the time comes, we shall show what material we are made of. We, the Arabs of Palestine, shall neither forget nor forgive.

(b) As recorded by the Palestine Arabic newspaper Al Difa'a of May 8, 1949, Omar Saleh al Barguthi, a well-known Palestinian Arab leader, in a speech made on May 6, 1949, at Ramallah stated:

We lost the first round but we must not lose the second round. It is my hope that we will make Palestine a grave for the Jews, as was done to other invaders before them.

(c) Falastin, another Palestine Arabic paper, recently reported that thousands of Palestinian youths are now being trained by the Arab Legion, and will soon be prepared for the resumption of the Palestine war.

The largest training camp, the paper said, has been set up at Beit Iba near Nablus, where hundreds are being trained under the supervision of senior British and Arab officers of the Second Arab Legion Regiment.

(d) On June 27, 1949, Damascus Radio voiced the opinion that—

The Arabs lost the first round of the Palestine war because they listened to the advice given them by the British and the Americans.

In the second round, which will begin soon, we shall not be so foolish—

The radio said—

We must ceaselessly increase our military strength and construct a large number of new arms factories; then we shall be successful and the Jews will be thrown into the sea.

(e) According to a Baghdad radio broadcast of June 28, 1949:

The Arab have been showing lamentable weakness lately, hinting that normal relations will be restored with the Jews as soon as Israel has allowed the refugees to return.

The Jews are our enemies—

The broadcast continued—

and no matter how conciliatory they may be, we shall never cease our preparations for the day of revenge and for the expulsion of the Jews from our soil.

LIFTING OF THE EMBARGO

In May of last year the Security Council of the United Nations imposed a ban on shipment of armaments to the Middle East. If, as it has recently been suggested in various quarters, this embargo

were to be suddenly lifted, the Arab States would immediately receive heavy armaments from the United Kingdom under their treaties with that country and would also be free to replenish their stocks by purchases in other countries.

It may be assumed that Israel would under no circumstances allow itself to be placed in a situation of decisive military inferiority. Thus the lifting of the Security Council's embargo would open a swift and disastrous armament race in that sensitive area.

Israel has reason to fear that if the Arab countries were to find themselves suddenly possessed of superior military strength, they would be strongly tempted to renew the attack on Israel. Moreover, the Arab countries are at present so deeply divided among themselves that any increase of their military power may lead to hostilities between the Arab blocs.

The rearmament of the countries of the Middle East would be of no real value for their defense against the attack of any major power from the outside. On the other hand, it would postpone the vitally necessary economic and social reconstruction of the Middle East by unduly strengthening the military class and draining the limited national budgets of those countries.

In view of all these facts it might, as suggested by the New York Times of July 29, "be the better part of wisdom for the Security Council expressly to continue this restriction as a precautionary measure at least until a political settlement is finally agreed upon."

CIO Advocates Strike Against Future Reclamation Projects in Idaho

EXTENSION OF REMARKS
OF
HON. JOHN SANBORN
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 4, 1949

Mr. SANBORN. Mr. Speaker, I am in receipt of a letter from John Brophy, director of CIO industrial union councils, and chairman, CIO committee on regional development and conservation. The letter is also signed by Nathan Cowan, CIO legislative director. This letter is short and I will have it inserted at the end of my remarks.

The import of the letter is astounding, coming from such a source, and I feel sure that if its full meaning was understood by that great organization the CIO would not subscribe to it. This letter means that the CIO wants all development work by the Government to stop in the great Columbia River Basin until such a time in the indefinite future if and when a Columbia Valley Administration can be established and given time to reexamine the proposed projects before they be considered for authorization by Congress. If that proposal were followed it would undoubtedly mean the stoppage of Federal participation in Northwest development for many months, if not for years. It would amount to a congressional denial of a proper share of Federal help for that region; in other words, a congressional strike or coercion of the people out there to force them to accept a Columbia Valley Authority or Administration, whichever you want to call it.

Of course, the statement that "many of these projects will be harmful to industry, labor, and the general public in the Northwest" is of little weight because these projects must be justified at hearings before the proper committees of Congress, now, before authorization, just as they would have to be under an authority, and opportunity is afforded to present such facts at these hearings.

The letter follows:

CONGRESS OF INDUSTRIAL ORGANIZATIONS,
Washington, D. C., August 1, 1949.

DEAR CONGRESSMAN SANBORN: The CIO is completely opposed to the inclusion in the pending rivers and harbors bill of any authorizations of Army or Reclamation Bureau projects in the Columbia River Basin.

Many of these projects will be harmful to industry, labor, and the general public in the Northwest. They should be reexamined by a Columbia Valley Administration.

We are urging the Senate Public Works Committee and all Senators and Congressmen from the Northwest to support this position.

Sincerely yours,

JOHN BROPHY,
Director, CIO Industrial Union Councils, and Chairman, CIO Committee on Regional Development and Conservation.

NATHAN COWAN,
CIO Legislative Director.

A World Federation?

EXTENSION OF REMARKS
OF
HON. CHARLES R. HOWELL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 4, 1949

Mr. HOWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial published in the Trentonian, Trenton, N. J., on Monday, August 1. The editorial, entitled "A World Federation?" calls attention to House Concurrent Resolution 64, the World Federation resolution, and stresses the need of going all the way to insure world peace. My thinking on this subject is in accord with the editorial, which follows:

A WORLD FEDERATION?

Seven New Jersey Members of Congress—including CHARLES R. HOWELL, from Mercer County; HUGH J. ADDONIZIO, PETER W. RODINO, JR., CHARLES A. EATON, CLIFFORD P. CASE, HARRY L. TOWE, and JAMES C. AUCHINCLOSS—have joined with more than a hundred other Members of the House of Representatives in sponsoring a resolution which would commit the United States to the principle of a world federation as a means of promoting international understanding.

Identified as House Concurrent Resolution 64, and more readily known as the world federation resolution, it reads as follows:

"*Resolved*, That it is the sense of the Congress that it should be a fundamental objective of the foreign policy of the United States to support and strengthen the United Nations and to seek its development into a world federation open to all nations with defined and limited powers adequate to preserve peace and prevent aggression through the enactment, interpretation, and enforcement of world law."

At the behest of Gov. Alfred E. Driscoll, the New Jersey State Legislature recently passed a concurrent resolution urging Congress to call a convention to amend our Federal Constitution in order that the United States might legally join such a federation. United States Senator HENDRICKSON, of New Jersey, is also known to favor the idea.

Our original sponsorship of the United Nations and more recent ratification of the North Atlantic Treaty indicate clearly that we are heading toward an ultimate goal along the lines of the proposed resolution. It is obvious to most authorities on international affairs that neither the UN nor the treaty will be unilaterally sufficient to insure world peace, and there is no doubt but what we would be inconsistent if we failed to go all the way.

So long as our thinking is centered in this direction, the chances of world war III ever materializing will remain but a remote possibility.

Rural Rehabilitation Trust Funds

EXTFNSION OF REMARKS
OF
HON. HENRY O. TALLE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 4, 1949

Mr. TALLE. Mr. Speaker, several months ago, on April 8, to be exact, I prepared and extended in the RECORD a brief summary of farm credit operations under the Farmers Home Administration and its predecessor agencies. I pointed out that in the years since 1935 rural rehabilitation loans have been made to about a million farmers, in an amount exceeding a billion dollars. I pointed out, too, that almost 90 percent of the matured principal of these loans has been repaid, plus more than $100,000,000 in interest. In this connection, I want to reemphasize that the Farmers Home Administration is doing a first-rate job in promoting owner-operation of farms and in providing operating capital to farmers who cannot get the credit they need from other sources.

As you know, however, Mr. Speaker, the act of August 14, 1946, which created the Farmers Home Administration also provided, in section 2 (f), that the Secretary of Agriculture shall liquidate, as expeditiously as possible, trusts under the transfer agreements with the various State rural rehabilitation corporations. But the act does not specify how this liquidation shall be accomplished or what disposition shall be made of the assets.

Consequently, I have introduced a bill, H. R. 5832, to provide for the disposition of these assets, which are presently held in trust by the Secretary of Agriculture pursuant to transfer agreements with the various State rural rehabilitation corporations.

Briefly, my bill proposes to use the unexpended balance of the emergency relief funds appropriated some years ago

in creating in the United States Treasury a revolving fund for each of the 43 States which transferred assets to the Secretary of Agriculture, and to utilize these revolving funds for extending operating credit to farmers. Specifically, my bill contains the following provisions:

Section 1: This section declares that the emergencies to be met with funds appropriated or made available by Congress under the Federal Emergency Relief Act of 1933, the act of February 15, 1934, providing additional funds to carry out the purposes of the Federal Emergency Relief Act of 1933, and the Emergency Appropriation Act of 1935, have terminated, and that such funds and the proceeds thereof can no longer be used for the purposes for which the funds were originally appropriated and made available. The assets of the various State rural rehabilitation corporations, which are now held in trust by the Secretary of Agriculture, were acquired with funds appropriated or made available pursuant to said acts, consequently, they can no longer be used by the Secretary of Agriculture for emergency relief purposes or for the rural rehabilitation purposes specified in the trust transfer agreements.

Section 2 (a): This section creates in the Treasury of the United States, a revolving fund for each State for which rural rehabilitation corporation assets are held in trust by the Secretary of Agriculture. It also provides that each revolving fund shall be used only within the particular State for which it is created, and only for the purposes of carrying out the provisions of the act.

Section 2 (b): This section provides that the cash in each trust account on the effective date of the act, and all sums received by the Secretary of Agriculture from the liquidation of the trust assets of each trust, shall be covered into the revolving fund for use in that particular State. Likewise, that all collections from loans made out of the revolving fund for each State as authorized by section 3 of the act, shall be added to and become a part of the revolving fund of that particular State. An exception is made that in the case of joint investments of corporation trust assets with other Government funds, only that portion of collections attributable to the investment of the trust assets, as determined by the Secretary, shall be added to and become a part of the revolving fund.

Section 3: This section provides that the revolving fund for each State may be used by the Secretary of Agriculture, first, for making, servicing, and collecting production and subsistence loans in the particular State under and consistent with the provisions of title II and the related provisions of title IV of the Bankhead-Jones Farm Tenant Act, as amended; second, for servicing and collecting loans and otherwise liquidating the corporation trust assets attributable to that particular State; and, third, for administrative expenses in connection with such loan making, loan servicing, loan collecting, and liquidating activities, including the cost of personal services and rentals at the seat of Government and elsewhere, provided that the funds expended for such purposes at the seat of Government shall be equitably apportioned by the Secretary among the several revolving funds.

Section 4: This section authorizes the Secretary of Agriculture, first, to bid for and purchase at any foreclosure or other sale, or otherwise to acquire property securing any loan or other indebtedness owing to or acquired by him under the transfer agreements with the various State rural rehabilitation corporations; second, to accept title to any property so purchased or acquired; and, third, to sell or otherwise dispose of such property and other tangible trust assets in a manner consistent with section 43 of the Bankhead-Jones Farm Tenant Act, as amended, except that the 18 months' limitation prescribed in said section shall not be applicable. It is provided, however, that the Secretary of Agriculture shall not be required to liquidate any such real property which he determines to be suitable for transfer for national forest purposes, and that such lands when so transferred, shall be administered in accordance with the laws, rules, and regulations applicable to lands acquired under the act of March 1, 1911, as amended. It is further provided that the corporation trust assets which have been used in water-conservation and utilization projects shall not be required to be liquidated by the Secretary of Agriculture, except that if any reimbursable costs of such projects are recovered, the Secretary shall place the proportion thereof, as he determines to be equitable, in the revolving fund of the particular State.

Section 5: This section makes the compromise, adjustment and cancellation provisions of the act of December 20, 1944, and section 41 (g) of the Bankhead-Jones Farm Tenant Act, as amended, applicable to indebtedness arising from loans and payments made under the transfer agreements.

Section 6: This section authorizes the Secretary of Agriculture to make such rules and regulations and such delegations of authority as he deems necessary to carry out the purposes of the act.

Section 7: This section saves the Secretary of Agriculture harmless from any personal liability he may incur in carrying out the provisions of the act.

Section 8: This section repeals section 2 (f) of the Farmers Home Administration Act of 1946, which directed the Secretary of Agriculture to liquidate, as expeditiously as possible, the trusts under the transfer agreements with the various State rural rehabilitation corporations, and authorized and directed him to negotiate with responsible State officials to that end.

Mr. Speaker, the total value of the assets involved is approximately $50,000,000. These assets are derived from the emergency relief acts passed in the 1930's, which provided financial assistance by which the States were enabled to relieve hardship in stricken agricultural areas. The funds were first handled by the State emergency relief administrations; subsequently, they were turned over to the State rural rehabilitation corporations. In 1935, when the Comptroller General of the United States ruled that these State corporations could no longer be financed by Federal funds, the corporations transferred these assets to the Federal Government for use in their respective States. The ultimate disposition of these funds has been hanging in the air for the past 3 years—since passage of the Farmers Home Administration Act of 1946 which provides, as I said before, that the trusts under the transfer agreements shall be liquidated as expeditiously as possible, but does not specify what disposition is to be made of the assets.

As a practical matter, the corporate funds cannot be returned to the State corporations for the simple reason that most of them have long since ceased to exist. Moreover, the purposes for which the money was originally appropriated cannot be carried out now because the economic depression and widespread agricultural distress which Congress sought to alleviate during the 1930's no longer exist. My bill, H. R. 5832, recognizes the changes that have taken place and proposes to make practical use of the remaining money—within the respective States to which it was granted—for purposes which are already authorized in the Farmers Home Administration Act: that is, for the making of production and subsistence loans to farmers and stockmen who cannot secure the necessary financing elsewhere for livestock, seed, feed, fertilizer, farm equipment, supplies, and other farm needs.

The money would constitute a revolving fund for each of the 43 States which had a rural rehabilitation corporation, and would be added to the amount now available to the States through the annual appropriations for production and subsistence loans under title II of the Bankhead-Jones Farm Tenant Act as amended by the Farmers Home Administration Act. As the loans are repaid, the principal and interest would be applied to the appropriate revolving funds; and, since title II loans have a maximum maturity period of 5 years, with annual payments thereon, the money would turn over frequently and be in relatively constant use.

Today, Mr. Speaker, there are many farmers seeking operating credit whose needs, for want of adequate collateral, cannot be taken care of by local banks. Among them are thousands of war veterans who have not yet been able to achieve the most efficient agricultural production of which they are capable. Through the Farmers Home Administration some of these young farmer-veterans are being helped to build up their production and, thereby, to provide better homes, improved living conditions, and wider educational opportunities for their families. This program has been working out well indeed; the loans are being paid back; soil conservation is being promoted; rural communities are benefiting because of the increased incomes. But the demand from farmers for this type of credit is far greater than can be met with the funds appropriated annually by the Congress for title II

loans. At this point I should like to mention that the Congress has generously provided for on-the-farm training of veterans under the so-called GI bill of rights, which program is being carried on extensively throughout the agricultural areas of the Nation. However, unless we also provide adequate credit facilities which will enable these young veterans to start farming, we will have largely wasted the funds expended in training them.

My bill will help to rectify the situation without requiring additional appropriations. It simply provides that funds already appropriated, and funds from current liquidations, be used for extending operating credit to a greater percentage of farmers who need and who are eligible for this service. It does not set up any new organization, but proposes to utilize the existing machinery of the Farmers Home Administration. It can be put into effect without any delay whatever. It can be administered in conjunction with the existing program with virtually no additional expense and without confusion to the farmers. It will bring an end to the uncertainty as to the disposition of Federal funds which obviously cannot now be used for their original purpose.

Mr. Speaker, H. R. 5832 is in line with grassroots thinking on the subject. Last month the Iowa FHA advisory committee, composed of substantial farmers and other citizens, none of whom is on the Federal pay roll, unanimously recommended that such legislation be enacted. It is practical, economical, and in the best interests of our farming population. If passed, it will remove the necessity of establishing State agencies parallel to the existing Federal agencies—with the attendant expense, delay, and duplication of work—as would be required if either H. R. 2392 or S. 930, which have been approved respectively by the House and Senate Committees on Agriculture, were enacted. I urge prompt and favorable consideration of my bill, Mr. Speaker, and I include in support of my remarks the following letter addressed to me under date of July 18, 1949, by Mr. John R. Holland, chairman of the State FHA advisory committee, Milton, Iowa:

MILTON, IOWA, *July 18, 1949.*

Hon. HENRY O. TALLE,
House of Representatives,
Washington 25, D. C.

DEAR MR. TALLE: This letter is going to all the members of the Iowa delegation because we would like to enlist your interest in a legislative matter that vitally affects the Farmers Home Administration program in Iowa, and, in fact, all the other States.

The FHA Act of 1946 (Public Law 731) under section 2 (f) provides for the liquidation of the State Rural Rehabilitation Corporations and as I understand it there are two pending bills, one to turn this money back to the United States Treasury and another to turn the money back to the States.

In 1934 and 1935 these funds, $1,078,000 in Iowa, were given as a grant to the Iowa Rural Rehabilitation Corporation out of Federal Emergency Relief Administration funds for the purpose of carrying on a rural rehabilitation program in Iowa. Early in 1936, the Iowa Rural Rehabilitation Corporation was dissolved and the assets of the corporation turned over in trust to the then Resettlement Administration for carrying on the rehabilitation work. The Resettlement Administration was succeeded by the Farm Security Administration and then on November 1, 1946, by the Farmers Home Administration.

Since early 1936 these funds have been administered by these agencies under the trust and have revolved just about four times. In addition to paying the losses and some administrative expenses the interest collections have been sufficient to add to the original $1,078,000, just about $300,000. In fact during the past 24 months we have actually loaned in Iowa $1,010,000 of these funds. Our loans have averaged about $2,000 so you can see that through the use of these funds we have helped about 500 families during that period alone.

In our advisory committee meeting at the time of the Farm Ownership Achievement Day at Ames, July 7, the committee went on record as follows:

"Moved by Richard Stephens (Washington County) and seconded by H. H. Kildee (Ames) that we recommend that the corporation trust funds continue to be used as provided for under the original trust agreement. Motion carried unanimously."

In order to accomplish this it would of course be necessary to revoke that part of Public Law 731 which requires the liquidation of the corporations. Iowa and all other States have simply not had sufficient funds to meet the demand for operating loans. On June 30 of this year we had on hand 1,367 active applications and during the entire previous fiscal year we could only make 567 new loans with the funds available, that is appropriated funds plus corporation trust funds.

Should the funds go back to the States they could only be used for rural rehabilitation purposes and that would mean the States would have to set up a parallel agency to do the same type of work FHA is doing. We do not believe that would be in the best interests of anyone. Our State Secretary of Agriculture has advised our State Director informally that he sees no need for establishing a duplicate agency. We believe that this whole matter is one of those things that has "slipped through" without anyone fully realizing the effect it would have on the people concerned.

Am sure that the recommendation made by our State committee is sound and that if these funds can continue to be used as they have been for the past 13½ years, they will aid many deserving farm families.

Your help in keeping these funds available for loans to our lower income farm families will be deeply appreciated.

Sincerely yours,

JOHN R. HOLLAND,
Chairman, State FHA Advisory Committee.

WCAU, Philadelphia, Public-Service Programing

EXTENSION OF REMARKS
OF

HON. WILLIAM J. GREEN, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1949

Mr. GREEN. Mr. Speaker, WCAU, Philadelphia's only 50,000-watt clear channel station, is now in its twenty-eighth year.

While radio's primary functions are to educate, inform, and entertain, WCAU has always maintained that radio also exists to serve the community and the public. With its clear channel, WCAU is able to give its listeners a signal which is free of much of the interference so common in broadcasting today. Because it is a clear channel station, WCAU, during the daytime, is protected to a great degree from interference from other stations and at night it is the only station to operate on 1210 kilocycles in the United States and most of North America.

WCAU, long a believer in good public-service programing, proves that a large city station can be more than an outlet for network programing when it has a purposeful understanding of the usefulness of radio in service to the community. Under leave to extend my remarks in the RECORD, I include the following statement of tribute to WCAU:

WCAU's understanding of its responsibilities to radio listeners is best measured by its great record of public service.

Through its 28 years on the air, WCAU has been keenly aware of the needs of the area it serves—its traditions, culture, institutions, industry, and population characteristics. From its location in Philadelphia, the birthplace of American liberties, WCAU has been through the years a beacon light of public service to its listeners in Pennsylvania and nearby States.

In this period the men and women in the WCAU listening area—those who make their living in the factories, on the farms, or by the sea, have benefited from the station's adherence to a policy of devoted public service. A keen program of philosophy at WCAU permits all different types of populations in the station's listening area to benefit from the daily schedules of farm and market information, marine weather service, news, and entertainment.

WCAU has always maintained preeminence in the field of public service broadcasting. The vitality and scope of its programing are evidenced by the public's enthusiasm for the station's leadership in this field.

WCAU's historic on-the-scene coverage of the caucus at the Republican convention, June 23, 1948, attracted Nation-wide attention. Recordings of this great, moving document of political action, were made available to universities and colleges by Leon Levy, president of WCAU. Institutions of higher learning in 39 States and the District of Columbia requested copies and used them in political science classes and forums.

Below is a letter of appreciation, typical of those received by WCAU:

BUCKNELL UNIVERSITY,
DEPARMENT OF POLITICAL SCIENCE,
Lewisburg, Pa., October 12, 1948.

Mr. JOSEPH T. CONNOLLY,
Program Director, WCAU,
Philadelphia, Pa.

DEAR MR. CONNOLLY: I should like to acknowledge the receipt of the recording of the Pennsylvania caucus.

We have already used this recording at a regular meeting of our Honorary Political Science Fraternity on the campus, and the students enjoyed the program immensely. Also, we plan to use it as a regular part of our courses on political parties and American Government. This recording fits a need which we were not able to supply outside the kindness of you and your station.

We want to express our sincere thanks to you and WCAU for the fine service you have rendered in helping us educate our students—and making our material more alive than ever.

Sincerely yours,

JAMES A. GATHINGS,
Chairman, Political Science Department.

Another example of WCAU's understanding of its responsibilities to its listeners is the series, Speaking Freely.

Speaking Freely is a 5-minute program broadcast over WCAU every weekday night at 6:10 p. m. As its name implies, Speaking Freely is an invitation to WCAU's listeners to express their views on whatever thoughts come to mind.

All contributions received are referred to that agency, city, county, State or Federal Government, charitable or service organization, business or industry which would most likely be interested, in the opinion of the editors of Speaking Freely. When contributions are broadcast, mention of the agency to which the letter is being referred is made on the air at the conclusion of the letter.

Speaking Freely has become an institution with many Philadelphia area residents because of its growing reputation for getting things done.. The program has become an outlet of individual self-expression on the weighty problems of the world, and a handy device for giving some slow-moving public officials and public utilities a shot in the arm.

WCAU's active interest in community service is a continuing one and embraces many levels. Currently WCAU is producing and broadcasting among others the following series of programs in the public interest:

Your United States Senator, 1–1:15 p. m. Sunday: Senators FRANCIS J. MYERS and EDWARD MARTIN alternate appearances on this weekly public-service feature.

Your Congressman Reports, 1:15–1:30 p. m. Sunday: Each week two Members of Congress appear on this program to present both sides of controversial issues of the day.

The WCAU-University of Pennsylvania Forum: Outstanding national and local authorities discuss topics of immediate interest to listeners in Philadelphia and the three-State region. A typical letter of gratitude for this program service follows:

"DEAR MRS. MILLER: The splendid services which are being rendered to this community by radio station WCAU should not pass without a word of commendation.

"The Philadelphia Home and School Council is particularly pleased about the program known as the University of Pennsylvania Forum.

"The topics chosen for discussion are timely and informative, and each participant well qualified to speak on the selected subjects.

"Of special interest to the parents represented by the Philadelphia Home and School Council was the discussion yesterday, Sunday, December 14, entitled 'Our Schools, Are They as Good as They Used To Be?' The program gave parents an opportunity to hear both sides of the current controversy about our Philadelphia schools.

"Judge Ladner was especially well chosen as a speaker because of his prominence in the press in the last 2 months on the subject of Philadelphia schools, as was his able opponent, John Patterson.

"Congratulations to a fine radio station for a splendid series of community service programs.

"Sincerely yours,

"ETHEL H. HOTENSTEIN
"(Mrs. Fred Hotenstein),
"Radio Chairman, the Philadelphia Home and School Council."

The WCAU Career Forum, 9:15–9:45, Saturday: Youth learns the rules for success from leaders in industry and the professions.

This is a series of 26 seminars giving young people the inspiration of meeting and hearing successful American men and women. Young America receives practical information concerning the demands of American business and professional life, and how they should prepare themselves to meet those demands.

Ever since it has been on the air, the WCAU career forum has proved to be a rich source of information and counsel to teachers in the Philadelphia area in their work with the young people who will one day guide America's destiny.

The WCAU career forum, by including in the series a wide variety of careers and jobs, speaks to the student who will become President—the youngster who will practice a skilled trade. Emphasis is on the dignity of every job and its importance to the whole fabric of American business and professional life.

Each week the WCAU career forum brings to the microphone some outstanding personality, someone who captures the imagination of young people, someone who embodies their ideals. This series is the answer to a genuine need on the part of young people, a need for answers to their fundamental questions.

Community agencies actively concerned in this program series are: Public, private, and parochial schools; Philadelphia Chamber of Commerce; Pennsylvania State Employment Service; and Vocational Guidance Association.

Guidance counsellor and teacher recognize in the WCAU career forum a valuable supplement to case studies and interviews, aptitude tests, and preference records.

Planned to be used in vocational guidance, the WCAU career forum is used by teachers of social studies as up-to-the-minute commentary on economic trends, by teachers of distributive education classes as practical illustration.

Transcriptions of all programs are made available to teachers by WCAU.

The list of daily public service program contributions of WCAU does not stop with the features mentioned here. For example, WCAU broadcast the first army training camp entertainment programs, organized the first radio-sponsored aviation ground school with the cooperation of the CAA, stimulated interest in small war plant conversion by dramatizing the need for teamwork by American industry and the War Production Board and presented the most effective of all highway safety compaigns, a drama series, "Murder on the highways," hailed by safety officials all over America.

Since 1940—the year radio awards started—WCAU has received national recognition no less than 13 times from such organizations and publications as Variety, Billboard, Ohio State University, College of the City of New York, etc., for the excellence of its programs, civic consciousness, and public service.

Day in and day out, the voice of WCAU plays a major role in the lives of residents of Philadelphia, the State of Pennsylvania and nearby States which rely on WCAU's clear channel for much, if not all, of their radio service—farm and market information, marine weather reports, news broadcasts, and entertainment. To its millions of listeners, WCAU is, indeed, a most willing public servant.

China—Monkey Business in the State Department

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am inserting a copy of a letter from Alfred Kohlberg to newsman Robert S. Allen. It contains many relevant facts concerning China, Philip C. Jessup, and others. It may also explain some phases of the white paper on China that has just reached our desks, a 2-inch document which seeks to explain the indifferent attitude by our State Department to the fall of China.

OPEN LETTER

AUGUST 1, 1949.

Mr. ROBERT S. ALLEN,
New York Post Home News,
New York, N. Y.

DEAR SIR: On returning from a trip to the Far East last week, I found clippings of your July 1 column referring to me.

While I greatly appreciate your undeserved references to me as a mastermind, I am somewhat puzzled by your statement that I was the real author of the recent round-robin letter signed by 21 Senators assailing State Department policy on China. What was that letter and when written? I've been out of the country and must have missed it.

Some of the other statements puzzle me, such as that I instigated a number of attacks on General Marshall; and launched a drive to smash the Institute of Pacific Relations (I only tried to clean out the Communists and feel sure you would have done the same, if a member); and am very close to T. V. Soong (whom I have never met); and that I am assiduously shunning the limelight. This latter is too undeserved. Hiss, Currie, Abt, Coplon, Silvermaster, and others, revealed when Congress peered under some unturned stones, are the real limelight shunners. Pearson, Allen, and Kohlberg put out everything over their own signature, and while one of us has had three letters attached to his name by the President, we have never before been accused of undue modesty.

Your statement that the State Department's forthcoming white paper will make me one of its chief targets is most interesting, because I feared they never seriously intended to issue it at all.

Inasmuch as you seem to have a pipe line to the State Department, I wonder if you could give me the inside dope on Ambassador-at-large Philip C. Jessup? Is he just a confused liberal who has been used by more sinister subversives like Henry Wallace? Although I understand he has never been in China, it is reported that the forthcoming white paper was prepared under his direction, and Secretary Acheson has announced that Jessup and two outsiders will puzzle out a new China policy to replace the scrapped open door without waiting for the dust to settle.

The two outsiders named by Secretary Acheson, President Case of Colgate, and Mr. Fosdick, of the Rockefeller Foundation, do not, to my knowledge, have public records as Far East authorities. For some reason or other, the Rockefeller Foundation is recorded as contributing a paltry few millions, out of its many millions expended in good works over the years, to Communist-front and pro-Communist organizations—especially in the far eastern field. President Case is recorded as a member of the Institute of Pacific Relations and of the Council on Foreign Relations whose Far East chairman is Owen Lattimore of the IPR inner ring and whose study of the Chinese Communists (published in Foreign Affairs, October 1945) was made by Guenther Stein, named as a Soviet spy by the United States Army. A conference on Far Eastern policy at Colgate just last week was arranged by the pro-Chinese Communists of the IPR, though their work must have been upset by Governor Dewey's fine speech on China at the closing session.

Please do not think I am implying that either Mr. Fosdick or Mr. Case are Communist sympathizers. They may have been ignorant of what was going on around them. But as choices to save the oriental world from communism, they seem less than ideal. Why not select Americans of distinction, courage, and knowledge, to whom service on

Jessup's committee would be a sacrifice and not an honor, such as Walter Judd, William C. Bullitt, Roscoe Pound, Representative Vorys, Henry Van Dusen, Maj. Gen. David Barrows, etc., under the chairmanship of General MacArthur instead of Jessup? I'm sure you will agree.

AMBASSADOR PHILIP C. JESSUP

Over a period of years up to 1944, Professor Jessup was successively chairman of the American Council of the Institute of Pacific Relations, chairman of the Pacific council of same, and vice chairman of the American council and concurrently chairman of the research advisory committee of the same. In these capacities he was in close association with Mr. E. C. Carter, Owen Lattimore, Maxwell S. Stewart, Frederick Vanderbilt Field, Guenther Stein, Anna Louise Strong, Harriet Lucy Moore, Theodore A. Bisson, Andrew Grajdanzev, and other left wingers cited as Communist or pro-Communist by the Un-American Activities Committee and other governmental bodies.

Under Professor Jessup's direction, in the Far Eastern Survey of July 14, 1943, the first blast in the campaign against the Nationalist Government of China was published. Referring to what it called the two Chinas it said, in an article signed by T. A. Bisson: "One is now generally called Kuomintang China; the other is called Communist China. However, these are only party labels. To be more descriptive, the one might be called feudal China; the other democratic China."

This theme song of democratic Communist China and feudal, Fascist, reactionary Nationalist China was taken up the following month by the Daily Worker, the New Masses, and others. Although the Chinese Institute of Pacific Relations was associated with the American IPR and maintained a representative in New York, he had not been consulted and first learned of this blast against his government when he received his copy by mail. He immediately protested to Mr. E. C. Carter, who referred him to Professor Jessup as the responsible official. Professor Jessup agreed to print an answer by the Chinese representative (now Chinese delegate on the UN) and did so in August. Before publication, however, he submitted this answer to Bisson, whose answer to the answer was printed in adjoining columns.

Professor Jessup must therefore be honored by our State Department as the initiator of the smear campaign against Nationalist China and Chiang Kai-shek, and the originator of the myth of the democratic Chinese Communists. An amusing sidelight on Bisson and Jessup's knowledge of China is the fact that feudalism ended in China about 200 B. C.

Professor Jessup's connections with Alger Hiss also exhibit his slant. He was deputy to Alger Hiss as Secretary General at the UN in San Francisco in 1945; he is at present a fellow trustee of Hiss on the IPR and Carnegie endowment boards. To top it all he appeared as a character witness for Hiss at his trial in New York last June, although all the data and evidence on Hiss in the FBI files was available to him.

Other Communist fronts sponsored by Professor Jessup (some listed by Attorney General Tom Clark as subversive) included the American-Russian Institute; the National Emergency Conference (organized to protest the deportation of aliens who advocated changing our form of government, 1939); the American Law Students Association; National Emergency Conference for Democratic Rights; and the Coordinating Committee To Lift the Embargo (on Spain); signer of letter in the New York Times, February 16, 1946, urging the cessation of atomic-bomb production.

When charges of Communist-line activities were made against the IPR in 1947 he signed a letter denying the charges and questioning the motives behind such charges. When the question of appointing a committee to investigate came before a membership meeting, he voted against any investigation. As recently as last spring he presided at a testimonial dinner to E. C. Carter to honor him for 25 years' leadership of the pro-Communist IPR.

All this may not prove anything one way or the other. That's why I'm asking you.

Last month in Formosa Chiang Kai-shek said to me: "Tell the American people that if we defeat the Communists you will have 450,000,000 friends in China. If the Communists win, you will have 450,000,000 enemies." Which does the State Department and Professor Jessup really want?

I await your answers with interest.

Sincerely,

ALFRED KOHLBERG.

Federal Controls Follow Federal Dollars

EXTENSION OF REMARKS

OF

HON. ERRETT P. SCRIVNER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1949

Mr. SCRIVNER. Mr. Speaker, the following editorial from the Kingman (Kans.) Journal clearly and concisely points to the fact that when Federal dollars go out Federal controls can be expected to follow, sooner or later.

It also shows what happens when farming activities are directed from Washington.

IT HAD TO COME

The expected has happened. Although it was announced a month ago that on account of the poor wheat yield this year, no acreage allotment would be necessary, last week Secretary of Agriculture Charles F. Brannan announced an allotment of wheat acreage to be seeded this fall. The reduction for Kansas as a whole is 17 percent, or a little more than 2,000,000 acres. For Kingman County the reduction will be about 45,000 acres below the crop harvested this year.

It has been quite evident for some time that if the price support on wheat is to be continued, there must be some control over production. It makes no difference what line of business it is, if a profit is guaranteed, everybody will increase production and it is bound to collapse. There are some who claim that the real reason back of the so-called "planned economy" is so that the Government will have an excuse to exercise control. Whether this statement is right or wrong, any person or community or State which accepts Federal aid of any kind is going to have to surrender some rights to a bureau at Washington and will be told what and what not to do.

This allotment order comes after most of the ground in this section had been plowed for wheat this fall. It will be necessary that the surplus ground be planted to some other crop or otherwise worked to prevent it from blowing next winter. In a way it may be beneficial in causing more diversification. This order could have been issued earlier but for the stubbornness of Secretary Brannan in trying to foist his visionary subsidy plan on the country, but which Congress threw out the window. Brannan even put on the pressure to be allowed to make a trial run of his plan on two or three products, but again Congress refused to let the camel get its nose under the tent. However, we have made some progress since the halcyon days of Henry Wallace. Henry let the wheat grow until the next spring and then paid to have it plowed under.

F. J. C.

Repeal the Excise Tax on Furs and Create Employment and Save an Industry

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1949

Mr. MULTER. Mr. Speaker, the following letter received by me from Ben Tucker, dated August 2, 1949, is a very fine resumé of the ill effects caused by continuance of the wartime excise taxes on furs. Not only is the retail industry affected but the trappers and all of the allied industries are adversely affected.

I again urge the Members to sign my Discharge Petition No. 6 to bring before the House my bill H. R. 2324 for the repeal of the wartime excise taxes on retail sales.

BEN TUCKER'S HUDSON BAY FUR CO.,
Brooklyn, N. Y., August 2, 1949.

Hon. ABRAHAM J. MULTER,
House Building, Washington, D. C.

MY DEAR CONGRESSMAN: As president of the Metropolitan Fur Retailers Association of New York, I personally, and in behalf of the members of this group, wish to take this occasion to commend you for your valiant endeavors aimed at repealing the wartime excise tax upon retail sales of furs and other articles.

In particular, we earnestly support your initiation of a petition in the House of Representatives, of which you are an esteemed and leading Member, to discharge the Committee on Ways and Means from further consideration of your bill in order to bring it before the House for consideration. I have no doubt that once the bill is brought before the full membership of the House, it will be passed.

Such passage would culminate the long efforts of the Metropolitan Fur Retailers Association to get the unfair tax erased.

The tax has long been economically unsound.

As president of the association, I pioneered in the effort to get the tax erased from the books. In September 1944, 5 months after the imposition of the levy as a brake on consumer purchases, the association's many fur merchants, particularly those in Brooklyn, petitioned me to seek redress in Washington, which I did then and on subsequent occasions.

The unemployment situation in our fur goods industry has deteriorated so much that it now is worse than in any of the other industries affected by the stranglehold of the unfair excise tax. That is why we seek your aid, and you may make any use of this letter as you see fit.

Latest figures reveal that there has been a 50-percent reduction in employment in the fur-goods industry in the past year, and this increase will grow progressively worse unless the tide is turned soon.

The facts are these: Unemployment was 20 percent in 1947, and 30 percent in 1948. Besides, the fur industry normally works a 35-hour week, but in no one recent period has it achieved this level. There is much work-sharing, which decreases the rolls of the permanently unemployed. The average weekly work hours totaled about 31.1 during the past year. Almost all fur manufacturing firms have had long periods of lay-off recently. Many have gone out of business.

Conversely, employment in the manufacturing and marketing of furs would increase by 53 percent with the removal of the excise tax, according to a detailed, conservative study made by the American Management

Counsel, a group of economists who engage in business surveys for industry and government. Other industry-wide surveys have placed the figure at 75 percent.

The detailed study also indicates that some 250,000 farmer-trappers will not be able to engage in their trade if the tax stays on the books.

The time is long past due to reverse this unhealthy economic unemployment trend, and fast. Repeal of the fur excise tax now would bring into the market immediately buyers of wholesale and retail establishments who would anticipate the consumer demands that would arise in October, November, and December of this year. But delay in erasing the tax would knife the benefits that would accrue this year. Thus it can readily be seen that continuation of the excise-tax imposition is unprofitable for everyone, including the Government, and likewise is both unwise and unjust. The extent of the recession in the industries affected is clearly revealed by the sharp reduction in the amount of excise tax receipts lately.

The argument that removal of the excise tax would deprive the Government of revenue that could not be replaced just does not make sense. It does not add up when the full facts are ascertained. The stimulus from increased business activity not alone would more than make up for the loss of the excise-tax revenue, but at the same time would make the country's economic situation more stable and healthy. When unemployment arises, mental depression and fear grow in the minds of a great many persons, and the economic ball rolls downward faster and faster as most of us pull in our horns, fearing to expand here and cutting down there.

Clearly this, then, is the pattern for the great American recession, unless the trend is reversed by erasing the excise taxes. The formula is so simple that it adds up to common sense. Do we want make-work, a new WPA, or do we wish to give the American economy its needed shot in the arm to reverse the downward trend?

People who do not work cannot buy goods, and such inability to make consumer purchases reflects in ever-widening circles into all industries and trades, from United States Steel to the corner grocery store. It is a well-known economic axiom that what affects one business ultimately affects all.

On the other hand, if all business picks up, the Government will get much more in taxes than the mere excise tax dribble it receives now.

May I please point out again that you may make any use of this letter as you see fit.

Very respectfully yours,

BEN TUCKER.

Need for Segregation in Prisons

EXTENSION OF REMARKS
OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1949

Mr. KEATING. Mr. Speaker, under leave to extend my remarks, there are included below, editorials from the Mobile Press-Register of Mobile, Ala., and the Gloversville (N. Y.) Herald, expressing approval of legislation designed to provide separate treatment for youthful offenders from that accorded hardened criminals who violate Federal statutes:

[From the Mobile (Ala.) Press-Register of June 11, 1949]

NEED FOR SEGRETATION IN PRISONS

The advisability of segregating youthful first offenders from hardened adult criminals has been frequently and widely stressed in prison reform discussions.

Representative KENNETH B. KEATING, Republican, of New York, is sponsoring a bill aimed at establishing greater segregation in Federal prisons. Without undertaking at the moment to give an opinion on the practicability of Mr. KEATING's particular plan, we call attention to some of his observations about crime among the young and the treatment of youthful offenders.

"The period in life between 16 and 21 years of age is a focal source of crime," he said. "Thus, although those in this age bracket only constitute 15 percent of our population above the age of 15, they are responsible for about 36 percent of our robberies, 42 percent of our burglaries, and 53 percent of our automobile thefts. * * *

"Our existing methods of treating the criminally inclined youths are inadequate. Altogether too large a percentage of those released from existing reformatories and penal institutions ultimately become hardened criminals. Indeed, one sometimes wonders whether such institutions are not breeding places rather than burial grounds for criminal tendencies. Youth mixes with maturity, the novice with the old hand, the impressionable with the hardened."

Mr. KEATING recognizes substantial strides toward more scientific treatment of youthful violators of Federal laws but he sees a need for doing much more in that direction.

A major need in the Alabama State prison system is effective segregation to protect young offenders from the harmful influence of mature criminal elements.

[From the Gloversville (N. Y.) Herald of June 17, 1949]

FOLLOWING NEW YORK'S LEAD

A bill to provide a comprehensive correction system for Federal juvenile delinquents has been introduced in Congress by Representative KEATING, of Rochester.

Its provisions are patterned along the lines of New York State's law, which has proved outstandingly successful in 85 percent of the cases. Only 15 percent of those judged as youthful offenders again have become involved in criminal activities.

As against this, a study of the inmates of one Federal reformatory shows that 80 percent of those paroled, whose conduct records could be traced, repeated as offenders and that 44 percent committed such serious crimes that they were sentenced to penal institutions.

In sponsoring his bill, Representative KEATING provided some startling figures.

Although those between 16 and 21 years old make up only 15 percent of our population, he told his colleagues in the House, they are responsible for about 36 percent of our robberies, 42 percent of our burglaries, and 58 percent of our automobile thefts.

He added that youths from 17 to 21 inclusive are arrested for major crimes—homicide, robbery, assault, burglary, larceny, and rape—in greater numbers than those of any other 5-year age group.

In brief, the Keating measure would establish classification centers and agencies, under the Department of Justice, to make complete studies of juvenile delinquents.

It would provide for segregation of juveniles from hardened criminals in institutions, and confessions made by juveniles would be barred as evidence against them.

We believe it will be the consensus of opinion throughout the Glove Cities section that the bill would constitute an important step in the right direction, and that it should be enacted.

Federal Health Program

EXTENSION OF REMARKS
OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1949

Mr. BLATNIK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement on the administration's health program made by the Honorable Thomas R. Amlie before the House Committee on Interstate and Foreign Commerce on May 20, 1949. As a follower of Fighting Bob La Follette, Tom Amlie represented Wisconsin's First Congressional District in the Seventy-fourth and Seventy-fifth Congresses where he made an outstanding public record in the best Progressive tradition. I know that Members of the House will appreciate having an opportunity to learn his views on the health issue.

Mr. Amlie's statement follows:

When I first learned of these hearings on Wednesday, May 18, I contacted the clerk of the committee and was pleasantly surprised when I was asked whether I would wish to testify before the committee on the 20th. The shortness of time has not permitted me to look up details in the manner that I might have wished, but then I know that other witnesses will furnish the details, and it would perhaps be better if I confined myself to those things that I have learned as a result of 20 years of interested observation in this field. This interest on my part is based upon my own personal experience in trying to raise a family.

In the period between 1929 and the end of 1946, I paid out over $13,000 for medical expenses for members of my family. The illness of one of my boys in Washington in 1935 cost over $2,500. Some of the incidental facts showing the low medical standards that prevail in Washington, were set forth in a letter that I wrote to Dr. Parran, of the Public Health Service, which was printed in the CONGRESSIONAL RECORD, July 26, 1937, Appendix, volume 81, part 10, at page 1887. Incidentally, this boy served in the armed forces for 4 years in World War II.

Congressmen who advocate private health insurance as an adequate alternative to a far-reaching Federal health program do not fully appreciate the nature of serious illness in a family or the very limited range of the protection that is furnished by these policies. It is my impression that it must have been serious family illness that led the poet to write: "When troubles come, they come not one by one but in battalions."

During the past 7 years, I have carried one of the standard private hospital insurance policies. In a recent illness of a member of my family, I collected $300 where the total cost was about $2,000. Legal objection to the payment of this amount was raised, and if I had not been a lawyer, it would have been necessary for me to have hired a lawyer. People who have tried to collect on any of these private health-insurance policies usually have the experience of finding that

they are full of a great deal of very fine print that they had never paid any attention to. Had I carried the standard type of hospital insurance since 1929, I might have collected $1,200, but after deducting premiums, it is plain that I should only have had about 10-percent protection. Protection of this kind is just slightly better than nothing.

It might be argued that I was not paying the premium for any more protection than I was getting. To a large extent, such a contention would be valid. Sight should not be lost, however, of the fact that the policies sold by private insurance companies to individuals pay back to the policyholder an average of only 50 cents on the dollar or less for the premiums paid. If the coverage given by a private insurance company were to be adequate, it is plain that the cost would be prohibitive for practically everyone. It is my understanding that the administrative cost of the British health program is only 2 percent. Even if the administrative cost of the President's program were to run as high as 10 percent, the overhead would be small compared with that of private companies.

There is an even more fundamental objection to private health insurance than the fact that the policyholder pays a dollar for 50 cents' worth of protection. This is the fact that these various types of private and cooperative health insurance programs merely tend to distribute the cost amongst people who are trying to raise families. These are the very people who are faced with the heaviest medical expenses. In a time of national emergency, such as we have just gone through, it is the people who have raised families who are called upon to make the real sacrifices. It is not the bachelors, old maids, or childless couples. Already the cost of adequate medical care has gotten so high that it is beyond the reach of a large proportion of all families, as witness the large number of boys of military age who were unfit for military duty. Even if an adequate insurance program were available for families, with administrative costs at 10 percent rather than at 50 percent, the cost would be several times as great as if it were equally distributed through the whole population.

In his Medical Insurance Message to Congress, President Truman called attention to the fact that our 190,000 active physicians are only 80 percent of what we require. With 25,000 medical students and 5,400 graduating each year, the shortage is not being lessened. The restriction of the number of doctors is a cardinal point in the program of the American Medical Association. I well recall that about 30 years ago Professor X, of the University of Wisconsin economics department, used the medical profession as the outstanding example of the "closed shop" in the United States of America. The policy and practice that was apparent to economics professors 30 years ago has become painfully apparent to the average head of a family at the present time. While the population of the United States has increased by 42.3 percent during the past 30 years, the number of physicians and psychiatrists has increased by only 13.4 percent. At the University of Wisconsin Medical College there are in attendance for the school year 1948–49 some 280 students. In 1928–29 the number was 291. In 1933–34 the number was 317. Other witnesses will no doubt be able to furnish detailed information as to what these "closed shop" practices have done to the incomes of physicians. It is my impression that where doctors earned substantially more than people of comparable ability in other professions 30 years ago they are now earning several times more. This would not be too important but for the great number of American families that feel that they cannot afford medical care. In conclusion on this point, I should like to suggest that the average income of physicians is considerably higher than reported. In the Internal Revenue Department of the Treasury it is a truism that "no profession is investigated as much as the medical profession and in no other profession does investigation yield such rich returns." A mere reading of newspapers would confirm this observation.

While I am for the President's medical program, it does not seem to me that all parts of this program are of equal urgency at this particular time. As practical men, I should like to urge you the general proposition that if the bill, H. R. 4312, cannot be passed in its entirety, it is important that an effort should be made to save that portion of the measure that calls for the training of an adequate number of doctors, dentists, and nurses. The shortage of trained personnel would be the principal obstacle in the way of a successful health program at this time. A program that might be highly successful if we had an adequate number of doctors, might not succeed if its administrators had to contend with a 20-percent shortage in essential personnel. In checking this point with several physicians who are in favor of the President's program, I have found that they are particularly apprehensive about the problems that might arise because of the shortage of doctors. They agree entirely that the shortage of medical personnel is the real bottleneck in the present situation and that it is the part of the whole problem that ought to be given priority.

At the University of Wisconsin Medical College, it is estimated that it costs the State $1,500 a year for each student over and above what the student pays for tuition. Costs at Wisconsin are much below the national average. It would perhaps be a close estimate to say that the cost per student in medical colleges would average $2,500 a year in an expanded Nation-wide program. Since there is nothing that the Federal Government can do to increase the number of doctors, dentists, nurses, etc., other than to encourage existing medical colleges to expand—a program ought to be entered upon that would pay these schools $2,500 a year for each medical student, over and above the number now in attendance.

The CONGRESSIONAL RECORD shows that a group of four Senators introduced a bill on March 29, 1949, which proposed that medical colleges be given a grant of $300 a year for students presently in attendance and $1,700 for each new student. I doubt that this inducement would be sufficient. A well known midwestern medical college, in a State which adjoins Wisconsin, has a capacity that would permit 121 first-year medical students. However, there are only 90 students in the first-year class this year. The failure to admit a larger number is generally attributed to the pressure of the State medical society. If the State medical society is able to exert such pressure on the management of this school, would not this school under the Senators' program, merely accept the $300 per student now in attendance and pass up the $1,700 for additional students?

The success of a program of this kind will depend not only on the program being generous in its grants but it must be adequate in its scope and the period for which it is to run. For instance, in Wisconsin we have the University of Wisconsin Medical School and the Marquette University Medical School. I doubt that the University of Wisconsin Medical School would expand even if considerable financial inducement were offered—other considerations being absent. But the Marquette Medical School is already expanding and would perhaps expand even more if Federal aid were available. Under circumstances such as these, the University of Wisconsin Medical School would perhaps feel that it would not do to be left far behind the other medical college in the State.

When I lived in North Dakota as a boy, some 40 or 50 years ago, there were 840 practicing physicians in that State. The number is now less than half of this figure and most of the remaining doctors are old men. North Dakota has a 2-year medical college but does not have a hospital that would make possible a full 4-year course. With financial help for hospital construction and expansion of school facilities, most of the medical schools now providing 2 years of medical training could be expanded into 4-year medical schools. The President's program calls for the construction of hospitals where needed. The proper place to begin the construction of these hospitals would be in conjunction with the 2-year medical schools, for the reason that increasing the number of medical-school graduates would provide the internes that would be needed in these and in other hospitals. At the present time there is a shortage of 2,000 internes in the hospitals of the country. This shortage of internes for existing hospitals, points up the fact that the real bottle-neck in any kind of an adequate health program is the shortage of trained medical personnel and suggests further that something must be started by this Congress to remedy this situation even though it may not be possible to pass the President's whole program at this time.

It seems to me that it would be highly practicable for Congress at this time to embark upon a 10-year medical-training program and offer a flat $2,500 a year per additional medical student. Even if this should cause our medical-school enrollment to go up from 25,000 to 40,000 students, the cost would only be $37,500,000 per year. The cost of training additional dentists, nurses, and medical technicians would be in proportion. The only condition that would have to be insisted upon would be the maintenance of standards as set by the American Association of Medical Colleges. The cost of constructing hospitals and other facilities could be provided in part by Federal grants as recommended by the President and as contemplated by the bill introduced by the four Senators. The remaining cost might be covered by a 2-percent RFC loan to be repaid out of subsequent advances for tuition such as the $2,500 per medical student.

There are at the present time somewhere between ten and twenty thousand veterans who are not only anxious to go to medical school, but who have the capacity that would in normal times have enabled them to have gone through a first-class medical school without any difficulty. They have been given rights under the GI bill of rights but the whole thing is just on paper. In normal times, a good B student could go through medical school without trouble. At the present time, an applicant must be a high A student in order to get into a first-class medical college. During the war, when the able-bodied young men were in uniform, our medical colleges were largely filled with IV–F's who were able to get by with a C average. Now the boys who spent 1 to 4 years in the service have gotten their premedic work out of the way and are trying to achieve their life ambitions to become doctors. A great majority of these boys, who in normal times would have had no difficulty, now find that they are unable to get into any medical college since there are from 15 to 20 applicants for every vacancy. If there is an obligation owing to these boys, it must be discharged now and not 2 or 5 years hence.

Recently a University of Wisconsin professor complained that his classes had increased from 40 or 50 to seven or eight

hundred and that the only consideration that he could get was a larger classroom and a loud-speaker system, but on the other hand, the medical school could reduce the size of classes despite unprecedented need.

I do not believe that doctors should be turned out as indiscriminately as lawyers are now being turned out. The program that has been outlined merely contemplates that the present acute shortage of doctors ought to be met in the course of the next 10 years. It was my impression 25 years ago that doctors because of their closed-shop policies were able to earn substantially more than people of comparable ability in other professions. The public has an interest in the maintenance of ethics by the medical profession and for this reason, I think that most people would feel that doctors ought to earn more money than other professional people. At the present time, doctors are perhaps earning more than twice what people of comparable ability are earning in other professions and the AMA has apparently set a goal of $20,000 a year for its members—perhaps realized in one State. It is doubtful if the great increase in doctors' incomes during recent years has increased the interest of the average doctor in his patients. Certainly the people with whom I have discussed this matter are of the opinion that in the case of middle-age and old doctors, the result has been to make them highly income-conscious.

Reference has been made to the income of doctors, because these incomes result from scarcity of doctors and refute the contention of the various State AMA's that there is no scarcity of doctors in a particular State. Also, these incomes explain why so many families feel that medical care must be dispensed with—the result being the appalling number of our young men who are physically unfit for military service. Against the restrictionist philosophy of the AMA is not only the welfare of a great majority of our people but more specifically the rights of the young men with GI bill of rights certificates who in normal times would have become doctors and whose services as doctors are needed.

Happenings in Washington

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, August 5 (legislative day of Thursday, June 2), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the RECORD the text of a broadcast entitled "Happenings in Washington — Program No. 4," made by me on August 1, 1949.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

HAPPENINGS IN WASHINGTON—PROGRAM NO. 4

This is ED MARTIN speaking to you from the Nation's Capital and bringing you another discussion of happenings in Washington.

In my broadcast 2 weeks ago I discussed the North Atlantic Pact, designed to maintain peace in the world.

Since then, as you know, the Atlantic Treaty has been ratified by the Senate. The vote was 82 to 13.

Let me point out that 95 or the 96 Senators were present and voting. The other Member was in Europe on official business of the Senate.

I think the overwhelming vote reflected the sincere desire of the American people for a defensive agreement with the other peace-loving nations against armed aggression aimed at western Europe, Canada, and the United States.

Before the Congress ends the present session it may have to make another vital decision. It is whether we will spend billions of American dollars to rearm our partners in this defensive pact.

In my opinion, based on informal discussions with many of my fellow Senators, that proposal will meet determined opposition.

Before voting on this proposition some Members of the Senate will want to know if we have entered into secret agreements to provide arms. Others are deeply concerned over the cost to the American taxpayer.

As I stated to you in my last broadcast, I cannot see how I can support such a program with our country in its present financial condition.

Recently I had the honor of addressing the Pennsylvania State Convention of the Veterans of Foreign Wars in Philadelphia. In my remarks I warned against three dangers threatening our country—state socialism, depression and national bankruptcy, and a bungling foreign policy.

At this time I want to talk to you about the first of these dangers—state socialism or what has been called the welfare state.

It can destroy our American system of government. It would mean dictatorship and the loss of our individual freedom.

I can best illustrate this trend in our Government by discussing a bill which has been favorably reported by the Agriculture Committee of the Senate. It may soon come before the Senate for action.

It is a bill introduced by Senator THOMAS, of Oklahoma, and known as the Agricultural Adjustment Act of 1949.

It is more often referred to as the Brannan plan because it was proposed by the Secretary of Agriculture, Hon. Charles F. Brannan. It has the support of administration leaders.

This Brannan plan is dangerous to the people of Pennsylvania. It strikes at the independence of every farmer in Pennsylvania and will be costly to every taxpayer.

Most people think of Pennsylvania as a great industrial empire. Many forget that we rank among the highest as an agricultural State. Pennsylvania has more than 171,000 farms, and more family-sized farms than any other State of the Union.

The farms, buildings, equipment, machinery, and livestock on Pennsylvania farms represent an investment of more than $2,000,000,000. That is a larger capital investment than either mining or the manufacture of primary metals within the State.

Our farm marketing income in a single year exceeds $750,000,000. More than 850,000 citizens of Pennsylvania are engaged in farming and among them are the best farmers in the world.

In Pennsylvania we have some farms that have been cultivated for 200 years and they are more fertile today than when the first settlers arrived.

Love of the soil is an outstanding characteristic of the Pennsylvania farmer. He is an independent citizen who knows the value of self-reliance, hard work, and thrift.

He wants to build his security on his own efforts—his own skill. He wants no handout from the Government.

All he asks is a fair price at the market for his products and a fair price when he buys the things he needs.

Raised in that independent, self-reliant spirit, many sons and daughters of Pennsylvania farmers have achieved great success, not only on the farm but in business and industry, in the professions, in education, in the churches, in the armed services, and in government. In fact, many have reached leadership in every walk of life.

It is generally agreed that a sound farm program is essential to the welfare of the whole country. The initiative and incentive of the farmer must be encouraged as the best insurance that the consumer will have an adequate food supply.

My fellow Pennsylvanians, the Brannan plan would destroy all of this. During debate in the House last week, it was charged that this plan was originally prepared by Henry Wallace, Rex Tugwell, and Alger Hiss, when Wallace was Secretary of Agriculture. That alone should serve as a warning to put on the brakes and stop, look, and listen.

Of course, the Brannan plan deals with farms and farm income and therefore appears to be of principal interest to the farmer. But, I assure you, if adopted, it would affect every taxpayer, every household, and every family in Pennsylvania and the Nation.

Now what is this Senate bill, known as the Brannan plan? Well, I wish I were able to give you a clear and detailed statement of its provisions. The bill is 86 pages long. Even a Philadelphia lawyer would have to burn the midnight oil trying to figure it out.

I have the bill in my hand. Let me give you a sample of its language.

Here's the first paragraph of title I:

"'The term 'income support standard', as of any date means the average annual aggregate purchasing power of cash receipts from all farm marketings, including production payments made under title II of this act, during a period consisting of the first ten of the preceding 12 calendar years (except that during 1950 such period shall consist of the calendar years 1939 through 1948, inclusive), computed as follows: (1) Divide such cash receipts for each of such 10 years by the parity index for such year; (2) add the amounts obtained under (1) above for each of the 10 years and divide by 10; (3) multiply the amount obtained under (2) above by the most recent parity index."

I hope that was all very clear to you.

No wonder one Congressman, an able member of the House Agriculture Committee, told me that he sat through 12 days of committee hearings on the Brannan plan and he wound up more confused than when he started. I'm not surprised at that.

The purpose of the plan, as announced by Mr. Brannan, is to guarantee the farmer a high income and at the same time give the consumer lower food prices.

The Secretary of Agriculture would figure out by the complicated formula which I have just read how much each farmer's income should be.

There would be no Government supports to keep prices up. The farmer would sell his product at whatever price it would bring in the market. That would tend to keep prices down.

But where does the farmer get his high income?

Under this proposal the Secretary of Agriculture, Mr. Brannan, would figure up the difference between what the farmer received and his income as fixed by Mr. Brannan's formula. At the end of the year Mr. Brannan would send the farmer a check on the Treasury of the United States for the difference.

Now that sounds very simple. But when Mr. Brannan was before the committees of Congress he was unwilling or unable to place any estimate on the cost of his program.

Reliable agricultural economists have estimated that it will cost at least seven to eight billion dollars a year.

Who will foot the bill? You know the answer. It will be taxed out of the earnings of the consumers of America. This means everyone—including the farmer.

Figures just released by the Bureau of Internal Revenue show that 45 cents of each dollar collected by the Federal Government last year was paid by individual taxpayers. Corporations paid about 28 cents of each dollar.

The balance came from excise taxes, customs receipts, post-office revenue, and other sources.

But keep it in mind, that corporations are really only tax-collecting agents of the Government. Taxes paid by corporations are included in the cost of production. They are passed along to the consumer in the form of higher prices.

It is clear that in the end the consumer would have to pick up a seven or eight billion dollar check for something he thought he was getting for nothing.

This plan is so detailed and so complicated that the cost of administration alone would be staggering. It would require an army of snoopers, investigators, inspectors, bookkeepers, accountants, supervisors, lawyers, and experts, all on the Government pay roll.

It would create another force of bureaucrats with authority to direct, control, and regiment the 6,000,000 farmers of America.

It would create black markets and bring back the confusion of the OPA war days on a vastly expanded scale.

This program could bankrupt the Nation.

At the beginning of this broadcast I said it could destroy the freedom and initiative of every farmer.

In order to participate in Mr. Brannan's program the farmer must submit to regulations covering "acreage allotments, production goals, marketing practices including marketing quotas, and conservation and good land practices" as directed by Mr. Brannan.

That means the farmer would be told how many acres to plant, what crops he could raise and how much. He would be told where and how to sell his product and how to cultivate his land.

Furthermore, the Secretary of Agriculture could require farmers to "furnish proof of acreage, production, yield, storage, and marketing in the form of records, marketing cards, reports, storage or sale receipts or otherwise as the Secretary may prescribe."

And to check on the accuracy and honesty of the farmers' reports similar information and records could be required from everyone doing business with the farmer. That includes buyers, processors, warehousemen, and transportation companies.

Time does not permit discussion of the many details of the bill. But I want to say this to the Pennsylvania farmer: If this plan should go into effect it would be wise to have one member of his family an expert accountant.

It is apparent that the American farmer would be placed in a government straitjacket. He would be living in a socialized, welfare state, his livelihood depending upon his ability to get a handout check from the Government.

To my mind this is not a partisan political issue. Last week in the House of Representatives an effort was made to pass a watered-down version of the Brannan plan. The bill provided for a 2-year trial covering only three commodities.

I am happy to report that Democratic Members of the House, ordinarily administration supporters, joined the Republicans and the attempt was overwhelmingly defeated.

It is difficult to understand why the Secretary of Agriculture is so determined to put through this fantastic, socialistic scheme.

Hitler tried rigid control of agriculture in Germany. The government dictatorship in the Argentine tried it but decided it couldn't work. Socialistic Britain has a somewhat similar scheme and you know what is happening over there.

But Mr. Brannan fights on for his program. The Department of Agriculture has been converted into a propaganda machine to sell the Brannan plan to America at the expense of the taxpayers.

What do the farmers say about Mr. Brannan's proposal?

The National and State leaders of the recognized farm organizations have been outspoken in their opposition. They have denounced the plan as a dangerous step toward socialism.

They have charged that it makes the Secretary of Agriculture a dictator over the 6,000,000 farmers of America.

Among the organizations fighting the plan are the Grange, the American Farm Bureau Federation, the National Cooperative Milk Producers Association, the National Livestock Association, and many others.

No doubt they are familiar with the warning given by that great champion of individual freedom, Thomas Jefferson, when he said:

"Were we directed from Washington when to sow and what to reap we should soon want bread * * * when all government, in little as in great things, shall be drawn to Washington as the center of all power, it will become venal and oppressive."

In this broadcast I have discussed only one of the many bills now before Congress that would greatly increase the size, power, and cost of the Federal Government.

These proposals, if enacted into law, would mean the destruction of American freedom.

This is ED MARTIN speaking to you from the Nation's Capital.

I will be with you again in 2 weeks.

Thank you for your attention.

Are We Serious About the Marshall Plan?

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, August 5 (legislative day of Thursday, June 2), 1949

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Are We Serious About the Marshall Plan?" published in the Saturday Evening Post of November 22, 1948.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ARE WE SERIOUS ABOUT THE MARSHALL PLAN?

Those who read Europe the riot act for not bringing her economy back to normal should remind themselves that, to some extent at least, the blame for Europe's backward condition belongs to the United States of America. The level-of-industry agreement for Germany, which implemented the so-called Morgenthau plan, and has, up to now, destroyed any substantial hope that Germany would be able to contribute to European revival, was an American idea.

In recent months the level of industry has been revised upward, but, despite the need for industrial equipment in Europe, plants in the American-British zone of Germany are still being dismantled. Felix Morley, writing in Human Events for October 1st, cites the Committee on European Economic Cooperation to show that tractors, which the American people are now asked to supply for European agriculture, could have been manufactured in Germany. But by the level-of-industry agreement Germany was prohibited from manufacturing any of these indispensable instruments of production, in spite of the fact that they were not built in any other country of western Europe. * * * The illustration is only one of many. The report points out that there are not now enough locomotives in Europe to break a steadily worsening transportation bottleneck. On American insistence, German industry, producer of Europe's finest engines, was prohibited from building any locomotives before 1949.

Lewis Brown, chairman of the Johns-Manville Corp., in his able report on the German situation, declares that "in the Russian zone factory after factory has been stripped, the machinery loaded on flatcars and left on sidings without protection from the weather, to rust and disintegrate. Sugar-processing machinery that might have converted the sugar beets of Germany to help supply a product of which all Europe is short goes to ruin while sugar is brought in from Cuba at the American taxpayer's expense." Despite the supposed relaxation of JCS 1067, the directive under which the Morgenthau plan was to be carried out, this industrial mayhem continues.

As former Secretary of State Byrnes shows in his book, Speaking Frankly (Harper & Bros.), the Morgenthau plan, from which the level-of-industry concept grew, was put over while the late President Roosevelt and former Prime Minister Churchill were looking out the window at the Quebec conference. At a later date, acording to Mr. Byrnes, "the President agreed with Mr. Stimson—on the folly of a peace of vengeance—and told the Secretary of War that he did not know how he had initialed that particular language in the Quebec agreement. It must have been done, he said, without much thought." At Yalta, Prime Minister Churchill said, again quoting from Byrnes, "If our treatment of Germany's internal economy is such as to leave 80,000,000 virtually starving, are we to sit still and say, 'It serves you right,' or will we be required to keep them alive? If so, who is to pay for that?" It would seem that Churchill, too, initialed the agreement "without much thought."

Stalin, of course, knew the answers to the Prime Minister's questions. While urging on his Allies a policy toward Germany which would only ruin western Europe, Stalin in his propaganda to Germany has capitalized on our error by blaming the western allies for all Germany's ills. It seems to us that the first step in carrying out the Marshall plan ought to be for America to remove illogical controls which have no bearing on preventing German rearmament, but do prevent an important element in Europe's economy from helping itself.

The Longshoremen's Strike in Hawaii

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Friday, August 5 (legislative day of Thursday, June 2), 1949

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article

entitled "Women Appeal to Solons for Speedy Strike End," published in the Honolulu Advertiser of recent date, containing the text of a speech made by Mrs. Napua Stevens Poire, spokesman for more than 1,000 women, in connection with the opening of the special session of the Hawaii Legislature.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WOMEN APPEAL TO SOLONS FOR SPEEDY STRIKE END

"Lift from Hawaii the curse that has fallen upon us."

That was the plea which Mrs. Napua Stevens Poire presented to members of the legislature on behalf of women of the islands when she spoke to them Tuesday morning, just before opening of the special session.

Mrs. Poire had been chosen as spokesman for the more than 1,000 members of the women's broom brigade, which conducted a brief program in front of Iolani Palace.

The text of her talk follows:

"At no time in the history of Hawaii has a session of the legislature ever been called to consider matters of greater importance to the lives, welfare, and happiness of every resident.

"Speaking on behalf of the mothers, wives, and daughters, on behalf of the women whose job it is to keep the homes of Hawaii running; whose responsibilities are directly to the children of Hawaii as well as to the men upon whose efforts to earn a living, we are all dependent.

"On behalf of the homes, big and little, rich and poor alike, we are deeply grateful to you honorable gentlemen for according us the courtesy of meeting here with us these few minutes before your legislature convenes.

"As you enter upon your deliberations of those proposals of law, which, if passed, we sincerely hope and pray, will be a means of returning peace to Hawaii, we wish you to know that we are back of you, and will do everything in our power to help.

"We know that in discussing legislation that will take away the rights of those unscrupulous leaders to force their desires, their ulterior purposes on us, the innocent women of Hawaii, you will be subject to the most bitter attempts on the part of those subversive leaders to do everything for which you have been called in special session.

"Trained in tactics which will incite unthinking people to blind allegiance, we know they will use every strategy and method, in which they have been carefully schooled, to affect your thinking, your discussions, and your decisions.

"We ask God's blessings on each and every one of you. May you be given the wisdom to see the path that is right. May you be given the courage to go firmly ahead to help the people of Hawaii.

"May you be given the vision to see through the subterfuge of those whose only desire is to see that the laws are kept on our books which will protect them in their unholy schemes to exploit not only those who blindly follow them, but to advance their ultimate desires to subject all of the business, all of the people of Hawaii to their absolute control.

"Hawaii is at the crossroads. Your families, your wives and children, are at the crossroads. Upon what you do in this legislature lies the future happiness of all Hawaii, the future happiness of your own homes.

"Lift from Hawaii the curse that has fallen upon us. Guarantee by sound legislation that honest men and women, regardless of nationality, race or creed, that they will be provided with the opportunity of living decent lives, as friends, one with the other to the end that peace and contentment will once more return to our Hawaii nei.

"All of this, we, all the women of Hawaii, do beseech you. God bless you in your every effort. Aloha."

Samuel Wahrhaftig

EXTENSION OF REMARKS
OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, August 5 (legislative day of Thursday, June 2), 1949

Mr. HUMPHREY. Mr. President, on April 1, 1949, a statement by me was inserted on page A1969 of the CONGRESSIONAL RECORD on the case of Samuel Wahrhaftig. This statement included excerpts from letters which I had written to Hon. Kenneth C. Royall, who was then Secretary of the Army, on January 17, 1949, and February 15, 1949, expressing dismay at the manner of investigation and objecting to the summary suspension of Mr. Wahrhaftig an American military government official in Germany, without due process of law.

I am happy to report that this week Mr. Wahrhaftig was acquitted and finally vindicated by the Department of the Army. In this connection, I ask unanimous consent to have printed in the RECORD an editorial which appeared in the New York Post of August 3, 1949, and the wording of the statement issued by the Department of the Army in connection with Mr. Wahrhaftig's appeal, which was released on August 2, the text of which appeared in an article in the New York Post of August 3, 1949.

There being no objection the editorial and statement were ordered to be printed in the RECORD, as follows:

WHO FRAMED WAHRHAFTIG?

After 7 months of exile Samuel Wahrhaftig has finally won vindication. The Army review board has admitted the cruel and fantastic error committed by the unnamed military strategists who branded Wahrhaftig "subversive." We have had no wish to deprecate this retreat; the sordid story at least reaches a comparatively happy ending. But the broader questions stirred by the Wahrhaftig case transcend his private fate. The questions remain unanswered.

Last January 10 Wahrhaftig, an American military government official employed in the civil affairs division in Berlin, was suddenly ordered to return to Washington at once "on suspicion of disloyalty." He was informed he would be subjected to "further investition" in the United States. Forty-eight hours later he was on his way home, stunned and baffled by the crack-down. On his arrival he found his name smeared across the front pages, tarred with the label of "subversive."

At that juncture this newspaper interviewed a number of Wahrhaftig's former AMG associates. All of them voiced amazement and disbelief at the disclosure that he was under fire for alleged "disloyalty." Their reactions to the news were published in the Post Home News on January 12.

But it took the Army 7 months to clear Wahrhaftig.

When he reached Washington in January he pleaded for a hearing. His plea was rejected. Under the Army's strange loyalty procedures, he was told, he would first be "investigated."

If the inquiry sustained the still undisclosed charges, he would be formally fired. Then—and not until then—would he be told the accusations against him. Then—and not until then—could he obtain a hearing.

On March 10, after this so-called investigation had allegedly occurred, the Army announced that Wahrhaftig had been found guilty. It said the FBI had participated in the probe which led to the verdict. It cryptically reaffirmed his dismissal.

At no time during this supersecret inquiry did any agent of Military Intelligence or the FBI interview the top Government officials whom this newspaper quoted in Wahrhaftig's defense on January 12. At no time during the inquiry was Wahrhaftig himself interviewed or examined.

But now it was official. He was subversive. Once again his name was tarnished in newspapers throughout the land.

A lot of men would have abandoned all hope at that point. A 33-year-old ex-GI, Wahrhaftig had no lavish financial resources. He was unemployed and, as he quickly learned, virtually unemployable. He had hit bottom and the cards seemed hopelessly stacked against him. Only a handful of men raised their voices in protest. Senator HUMPHREY, Democrat, Minnesota, forthrightly denounced the procedure under which Wahrhaftig was suspended, smeared, investigated, convicted, dismissed—and then offered a hearing. Thurman Arnold volunteered legal aid. Most men were too busy or too timid. They looked the other way. The loyalty issue was too explosive.

Nevertheless, Wahrhaftig fought back. He flew to Germany to collect affidavits. German political leaders, including spokesmen for the Social Democratic Party and the Christian Democratic Union, came to his defense. Mayor Ernst Reuther, of Berlin, visiting Washington on an Army-sponsored tour, was one of those who spoke out most eloquently. All of those who testified knew Wahrhaftig as a courageous, outspoken liberal with deep anti-Communist convictions who understood that Communist totalitarianism cannot be effectively fought with weapons of reaction.

The evidence demolishing the Army's still unspecified case piled up. On May 19 Wahrhaftig finally got his day in court—a hearing before the Army Review Board at which the contradictory, undocumented, and absurd charges compiled by the intelligence agencies were finally presented. Wahrhaftig was simultaneously accused of pro-Communist activity and of following the doctrines of Leon Trotsky; it was ludicrously alleged that, on the recommendation of a Communist, he arranged the appointment of a Socialist to government office; he was accused of associating with three Communists, all of whom turned out to be members of the extreme right wing of the Social-Democratic Party.

The long-suppressed case against Wahrhaftig collapsed in the hearing room.

But not until 2½ months later did the Army hand down the verdict which cleared Wahrhaftig yesterday.

Why did all this happen in the first place? Why was a conscientious, informed, liberal Government servant suddenly ousted from his post, railroaded back to the United States as if he were a dangerous criminal, forced to endure 7 months of humiliation, and untold private suffering? Who were the intelligence agents who put the finger on Wahrhaftig? Who covered up for them in the initial inquiry that upheld their charges and whitewashed the brass? What assurance does the Army offer that this won't happen again—that it is not happening now to men, who lacking the resilience and tenacity of Wahrhaftig, may be disposed to give up without a fight? What reforms, if any, does the Army contemplate in the loyalty

program which permitted and perpetuated this wretched episode?

We will keep on asking these questions until they are answered by the Army or until a congressional body undertakes an independent inquiry.

The beating Wahrhaftig has taken is a gruesome horror story and its enormity isn't dispelled by the belated confession that it was all a mistake. The acknowledgment is a decent and praiseworthy act. We hope it is significant that the suspension occurred under ex-Army Secretary Royall and that the vindication was signed by Secretary Gray. But this long-delayed action doesn't answer the big questions that should shock and sicken the country. The Army's blunder, whether born of stupidity or venom, cost a man 7 months of his life?

Who framed Wahrhaftig?

The Secretary of the Army's Security Review Board, as the result of an administrative hearing on charges against Samuel L. Wahrhaftig resulting in his removal under Public Law 808, Seventy-seventh Congress, has unanimously recommended to the Secretary of the Army that Mr. Wahrhaftig be reinstated. The Secretary has concurred in the Board's recommendation.

The effect of the Secretary's recommendation in the removal action against Mr. Wahrhaftig will result in his reinstatement to the same or a similar position in Germany if such still exists.

If the rapidly changing situation with respect to military government in Germany leaves no suitable position available for Mr. Wahrhaftig, he will nevertheless be reinstated for the purpose of reimbursing him in accordance with the provisions of public law for loss of salary during his period of suspension and removal.

Notification of the Secretary's decision with respect to Mr. Wahrhaftig has been transmitted to the headquarters of the Office of Military Government, United States Zone, Germany, and that headquarters will deal directly with Mr. Wahrhaftig concerning the remaining steps to be taken in disposing of this case.

The Discovery of Progressive America

EXTENSION OF REMARKS

OF

HON. KENNETH S. WHERRY

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Friday, August 5 (legislative day of Thursday, June 2), 1949

Mr. WHERRY. Mr. President, in accordance with the consent granted to me, I offer for printing in the Appendix of the RECORD a pamphlet entitled "The Discovery of Progressive America," by Henri Pierre.

There being no objection, the pamphlet was ordered to be printed in the RECORD, as follows:

[Translation]

THE DISCOVERY OF "PROGRESSIVE AMERICA"

(By Henri Pierre)

(M. Henri Pierre, in charge of American affairs at the newspaper Le Monde, has just returned from his journey to the United States. Our readers had a chance to read in Le Monde his testimony regarding American syndicalism. In the articles which we start publishing today he will give us some revealing information on liberal movements and progressive America. The testimony of M. Henri Pierre who bears complete responsibility for it should contribute to a better understanding of the complex and little-known world—the United States of America.)

I. FROM HIS GRAVE AT HYDE PARK, WHICH HAS BECOME A PLACE OF PILGRIMAGE, ROOSEVELT STILL CONTINUES TO INFLUENCE PUBLIC LIFE IN AMERICA

In spite of Christopher Columbus, America remains an unknown land for masses of Europeans who see her only through their prejudices or political convictions. For some, America remains the fortress of reaction and of the most uncompromising capitalism; for others, the "trans-Atlantic barbarians" became champions of the good cause of the owner's class which is anxious to uphold its privileges. In fact, America cannot be presented in such general terms. America is a world influx, which has reached a mature age and is confronted with problems known to us. Yes, the image of American capitalism has evolved in the last few years. The 1929 crisis, the war, the difficulties of reconversion, have contributed to the growth of the American people to such an extent that one of the major preoccupations of the workers of this country is to secure protection against the convulsions and jolts of the system. Mme. McCormick was right in stressing in one of her recent articles in the New York Times that American capitalism no longer resembles that described in Das Kapital by Marx.

What perhaps is most often ignored by European observers is the strong progressive traditions which continue to inspire the great majority of the American people. It was this America which I wanted to explore, the America of the common man, of the common people (of whom one speaks less than of the stars of Hollywood, or of the big-business men) who in fact represent the foundation of the country.

The liberal tradition

There exists in the United States a strong and authentic liberal tradition which is based on a dynamic concept of democracy and which claims the superiority of the rights of man. This egalitarian spirit, inherited from the founding fathers and incorporated in the Declaration of Independence of 1776, was also the spirit of the farmers of the East who were hostile to the industrial monopolies and to men of finance. This liberal tradition has led in the course of history to the farm-labor coalitions which were quickly concluded and again dissolved, and which were joined by the intelligentsia and intellectual elite of the large cities. Using our own terminology we would like to call these liberals "people of the left." But this expression would not be 100 percent exact because the American liberal possesses an ideology which surpasses the limited horizon of a single party. Both the Democrats and the Republicans include representatives of, what one calls there, progressive thought, which represents the American dream of abundance and liberty for all. These liberals have taken over from our eighteenth century the faith in man, the feeling of human dignity, to which they have added a certain scientific approach: they firmly believe that education and information would enlighten the common man.

In the course of many years, Franklin Roosevelt is the most outstanding representative of this tradition and that is why I wanted in the first days after my arrival to make a pilgrimage to Hyde Park where the father of the New Deal is buried.

The pilgrimage to Hyde Park

The large estate, which dominates the Hudson Valley, is situated a few miles from Poughkeepsie in the State of New York, and encloses farms and gardens. The chief house is built in colonial style, very popular over there; the front porch immediately gives the feeling of the patrician atmosphere of the whole house. Wandering through the rooms open to the public one is impressed by the quality of the furniture and also by the great number of collections, photographs, and reproduction of ships, and so forth. One of the President's friends told me that decades would be needed for assembling everything that the Roosevelts have scattered over the world.

On the first floor of the left wing I discovered the library; over the mantelpiece was a portrait of the great-grandfather of Franklin, Isaac Roosevelt. To the right was a large armchair of red velvet which was given to him by New York State; here also was his desk where he liked to spend hours with his collection of stamps. Everywhere one found books and photos. The family used to assemble at night in front of the big fireplace. It is from here that Franklin Roosevelt spoke to his fellow citizens, with his warm and deeply human voice. Nobody here has forgotten his "fireside chats" which always began with the famous words "my friends." However, one is particularly moved when one enters his bedroom over his library. On the walls numerous sea pictures bear witness of the interest which Roosevelt always demonstrated in naval affairs. Everything here is left as it used to be when he was alive. His dressing coat is on the sofa, his slippers are also here. Here on a small chair to the right of the bed, have been left lying the collar, the chain, and the little coat of Falla, the dog particularly loved by F. D. Roosevelt. One has the impression that the President would enter the room any moment and speak directly to the White House using the special instrument installed on the night table. Next is the Dresden room named in honor of the candlesticks and candelabra and of the clock made from Dresden china; the autographs of the King and Queen of England, Queen Wilhelmina, Princess Juliana of Holland, and Mme. Chiang Kai-shek put on the piano reminds one of the fact that the most outstanding people of our time used to stay in the building.

The presence of Roosevelt

I wanted to find out what causes Americans to undertake this pilgrimage to Hyde Park which has become as traditional as visiting the Lincoln Memorial or the Washington home at Mount Vernon. Already, more than 1,000,000 people have come to give homage to the humble grave of Franklin Roosevelt. Very often, one of the guides told me, the people who came could not put into words what they felt. Some said that they had desired for a long time to see Franklin Roosevelt's house; others, more cautious, said "you know what I think of him." Very many confessed that they were moved by some unknown, disquieting force. Some felt they were under personal obligation to Roosevelt because he saved them from unemployment and misery; children also came guided by their parents.

Back in New York I thought that the memory of a President was never so impressively preserved, and yet Roosevelt is far from being a political figure acclaimed by all. While millions of people come to render homage to him, there are millions who do not come because they detest him. But what is certain is that his grave continues to influence political life. At the last November elections, those people who opposed each other were those who were for or against the New Deal. And as soon as another Roosevelt is elected in a borough of New York then immediately in the United States and in the world one begins speaking of a new candidate for the presidency of the Republic.

In fact, the Roosevelt era has influenced public opinion because it was inspired by a great American progressive movement and because the economic situation makes the concept of the New Deal once more very real.

What has become of the spiritual inheritance of Roosevelt and where are the people who legally claim to be his heirs? In order

to answer this question we have to go to New York, the liberal fortress of America.

II. THE "LIBERALS" OF NEW YORK, WHAT DO THEY REPRESENT?

It has often been said New York is not America, and this is true. It is a world for itself that has nothing in common with thousands of small towns which greatly resemble each other in their main street, their drugstores, and their one-story houses, and which convey a more truthful impression of America than the skyscrapers of the big cities.

But New York is also America in the sense that it is a symbol of the genius of American assimulation. Here is the melting pot of the various races and nationalities which produce a new type of man, molded in the American way of life. New York is, therefore, no doubt the only place in the world besides Paris where a foreigner feels somewhat at home. And therefore it is also not astonishing that in New York political life is much more intense than in other places. Generations of immigrants have brought with them from the old country interest in political discussion, and one finds in New York whole families of leftist European origin, anarchists, more or less revolutionary Socialists, Trotzkyites, and Communists. People there like the battle of ideas. They fight each other on ideological grounds and in this respect New York is different from the rest of the country where people remain faithful to tradition, to the system of two big parties, and where personal questions play always a very big role.

Power of assimilation of the American environment

But even in New York there are only a few who are inspired by European concepts of socialism. The only Marxists are represented by a handful of Communists. The assimilative strength of the American environment is so strong that the majority of the leaders of the American left, in spite of the fact that they come from central and eastern Europe and are petrified by Marxist and revolution ideologies, become rapidly absorbed by the environment and become more American than those of earlier migrations. If one believes Gompers, founder and first president of the American Federation of Labor, the New York of 1870 was full of Italian followers of Garibaldi, of German and Austrian liberals, of Russian revolutionaries, who all turned the town into the nursery of the American labor movement. With the appearance of Eugene Debs, the Knights of Labor, the International Workers of the World, a revolutionary syndicalist movement in the European sense of the word seemed to begin to develop. In fact, however, developments proceeded in the opposite direction. One knows the reasons for this development. At the time that the frontier was moving constantly toward the West, during the period of endless possibilities when everyone had reason to believe he had a chance, which he really did, there was no room for the development of class consciousness among the masses who were permanently on the move. However, what deserves to be said is that even during the later crisis no revolutionary tendency of the masses could be observed either among the trade-unions or among the progressive circles of New York.

As a rule, the emigrant wants to forget Europe and its ideologies and to become part of the American people. Furthermore, it is not from European socialism that the liberal and socialist groups of America wish to draw their lesson.

They dread all isms; they are practical and pragmatic and they try to make full use, and constantly extend the rather unique formula of mixed economy realized by the famous Tennesse Valley Authority.

Henry Wallace has divided the liberal family

What do the American liberals represent politically? They never became organized as a party, with the exception of a small group in New York. Nevertheless, they were in charge of national affairs during the long years of the Roosevelt administration. This kind of intelligentsia consisted of personalities which came from all possible camps, economists and artists, writers, trade-union leaders, and journalists. In this motley company the Democrats predominated. But it also included technicians with political convictions and even Republican opponents who were charmed by the personality of the President.

It was, therefore, unavoidable that after Roosevelt's death the great liberal family should disintegrate. Today two rival sections fight each other for the spiritual heritage of Franklin Roosevelt. Henry Wallace and the Progressive Party claim to represent the authentic Roosevelt tradition. I found Henry Wallace, at the time of his stay in Paris 2 years ago, to be in good shape physically and morally. In his office on Park Avenue I found a man who was obviously tired and dispirited. The last national elections have not produced the number of votes which he expected. He asserted, however, that Mr. Truman secured a victory for himself by robbing him of his program. Mr. Wallace is certainly most pleasant and does not lack courage. His opponents were forced to recognize this during his electorial campaign when he carried his challenge singlehandedly to his opponents in the South. However, one must consider him as a hazy spirit, as a confused and obstinate man. It is therefore not astonishing that he was once inspired by theosophic ideas and spiritualism.

Still, with all his sincerity and his gift as a speaker, he influences only certain groups. His peace propaganda meets the approval of some university circles, of certain churches and of the pacifists. Unfortunately, Henry Wallace undertakes to criticize unilaterally the policy of the State Department and tries to justify the policy of the Kremlin. This attitude has alienated many of his sympathizers. Supported exclusively by Communists and fellow travelers he is disavowed today by a great majority of his old friends of New Deal days and particularly by the large trade-unions.

What are the aims of the ADA?

It was Wallace's attitude toward communism which contributed (in January 1947) to the formation of the Americans for Democratic Action (ADA) a few days after the establishment of the group called the Progressive Citizens of America, the embryo of the present Progressive Party. The ADA is not a party but a collective group in the work of which participate the majority of liberal groups, the old New Dealers, and the trade-unionists, but not the Communists and their friends. The desire to free the liberal movement from Communist infiltration led to the beginnings of the ADA. The ADA unites all the anti-Communist left and reminds one in many ways of our Reassemblement Democratique Revolutionaire (RDR). However, they have more money and less ideology. Its leaders are convinced that only a constructive social policy makes American laborers immune against totalitarian promises. At the last congress of the organization in Chicago last April its president, the new Senator from Minnesota, Mr. HUMPHREY, once more stated that the ADA should unite on a common basis all liberal elements in order to establish a close relationship between the administration and the liberal forces.

It is obvious that the ADA was disappointed by the turn the debate in Congress has taken regarding the economic and social program of the President. Perhaps they are also preoccupied with the elections of 1950, which should stabilize the victory of last November.

Still the ADA wishes to establish its independence with regard to the parties. To be sure, in the majority of cases they have supported the Democratic candidate. At the convention in Philadelphia they succeeded in incorporating the civil-rights program into the official program of the Democratic Party. But the ADA does not intend to support without discrimination this party, in which, according to the ADA, there are many elements which are more reactionary than the Republicans. We should remember that lately the ADA supported Franklin Roosevelt, Jr., against the official Democratic candidate, and that last November they had only with hesitation given support to the Truman candidature.

In the foreign field, the ADA is openly anti-Communist. Their ranks include a large number of immigrants who consider the Soviet Union as a new form of dictatorship which they have experienced once and which they don't want to confront again. This, however, does not mean that they are prepared to give unconditional support to the official policy of the Department of State. The liberals of the ADA insist that a democratic policy should be adopted with regard to Germany, the Ruhr problem, and particularly the occupation of Japan and carried out with the assistance of the left and of the trade-unionists.

To sum up, the American liberal movement has gained strength since the unexpected victory of President Truman. However, the movement suffers from the fact that the bulk of its force is centered in New York and in California. As one goes deeper into the country one notices that most of the American people remain indifferent to political quarrels in New York. Whatever one may say, the intellectuals do not possess a direct contact with the country as such. This indispensable link is assured today by the powerful trade-unions, and their political apparatus which has given to the progressive movement a solid basis in the whole of the United States.

American Policy Toward China

EXTENSION OF REMARKS

OF

HON. ROBERT A. TAFT

OF OHIO

IN THE SENATE OF THE UNITED STATES

Friday, August 5 (legislative day of Thursday, June 2), 1949

Mr. TAFT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the weekly Sunday night broadcast by George E. Sokolsky on July 17, 1949, dealing with the subject of China.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

Good evening. This is George Sokolsky speaking on the forces and events of these days. But first, may I present your announcer for a moment.

THE WHITE PAPER

I have not, for some time, reported to you on developments in China. From the long-term standpoint, Asia will most seriously affect American history. Most of us are of European origin and such countries as China, Japan, Malaya, Indonesia, Siam remain strange to us, and their people are even stranger. We, therefore, let what happens across the Pacific fade from our interest.

Yet, it should never be forgotten that the most startling defeat in our history was at Pearl Harbor when a Japanese Air Force flew across the Pacific and knocked out our Navy. No European enemy was ever able to do anything like that.

For a century, the American policy toward Asia was fixed. It was incorporated in all our treaties with China. It was reiterated in the nine-power treaty in 1921, in the Stimson doctrine of 1931, and in the Cairo declaration of 1943.

This policy may be summarized as follows:

1. That we would maintain the territorial and administrative integrity of China; and

2. That we would not recognize territorial changes effected by force.

To that policy we adhered, I repeat, from 1843 to 1943. Then it was reversed at the Tehran conference, at which Roosevelt, Churchill, and Stalin agreed that if Soviet Russia entered the far eastern war, which Stalin did 6 days before Japan was actually defeated, all Japan's rights, privileges, interests, and claims in Manchuria should revert to Soviet Russia.

This was a frightful blunder and paved the way for a Russian conquest of China. The excuse was that we dared not risk a separate peace between our ally Russia and our enemy Germany. At Tehran, the United States sacrificed millions of human beings, Poles, Bulgars, Rumanians, Czechs, Chinese, Japanese, Koreans, Germans—a good part of the human race.

On December 5, 1948, Dr. J. Raymond Walsh said in New York:

"In 6 to 12 months when Chiang Kai-shek is dead in his grave and the Kuomintang is scattered in the rubble of history and the liberation forces have taken over in China and we must recognize them in the United Nations; and all the colonial areas of Asia have also been liberated, then, when the representatives of the Soviet Union in the UN rises and says he speaks for more than half of mankind, we Americans will have to hang our heads in shame."

Although every American should be ashamed that such words as Dr. Walsh's conclusion ever be true, the fact remains that today Soviet Russia is in a position to make it come true—and soon. When Dr. Walsh speaks of liberation, he actually means enslavement. He means that all these human beings are and will to a greater degree and over larger area, be enslaved to Soviet Russia.

Since VJ-day, our State Department has been covering up the mistakes at Tehran which were continued and amplified at Yalta. Mr. Roosevelt's adviser on far eastern affairs at the Crimean Conference at Yalta was Alger Hiss.

The State Department had, for many years, a large corps of trained experts on Chinese affairs. Most of them knew the language, history, customs, traditions of that country. There was a language school at Pekin where State Department, Army, and Navy officials were trained. Some of these men have spent all their adult years working in that country.

Beginning in 1934, such men were progressively relieved of their posts and the old, trained corps was scattered. By the time of the war, far eastern affairs were in new and very young, untrained hands. Such men as Alger Hiss, Lauchlin Currie, Charles Kramer in the Treasury Department, had had no China experience at all. Our greatest authority in that field, Dr. Stanley Hornbeck, was sent to the Netherlands, as our Ambassador there.

In 1945, the Communist infiltration into the Far Eastern Office of the State Department suddenly exploded in the Amerasia case. The FBI discovered that a large quantity of State Department files were in the office of a publication in New York called Amerasia, which devoted itself to the affairs of Asia and which was known to have a Communist slant. In this connection, six arrests were made: John S. Service and Emmanuel Sigurd Larsen, of the State Department, Philip Jacob Jaffe and Kate Louise Mitchell of Amerasia, Mark Julius Gayn, a free-lance writer, and Lt. Andrew Roth, of the United States Navy. In the Amerasia office was found considerable photographic equipment.

This case was hushed up. Philip Jaffe paid a fine of $2,500, and nothing more was done in the matter.

The Amerasia case was bigger, more important, and historically more significant than the Alger Hiss case, but times were different. Had it been explored openly in a court of law, in 1945, the history of our relations with China would have been altogether different.

In its effort to avoid a full analysis and scrutiny of our far eastern policy, particularly the failures of Generals "Vinegar Joe" Stilwell and George Marshall, to effect a union between the Chinese Nationalists and the Chinese Communists, the State Department pursued several lines:

1. That the Chinese Communists are not Communists at all but agrarian reformers.

This, of course, was never true. The idea blew up in the State Department's face when the Chinese Communists came to power, for they immediately declared that they are true Communists and that their loyalty is to Soviet Russia.

2. Then our State Department engaged in a sophistry that really was silly, namely, that Mao Tse-Tung, the head of the Chinese Communist Party, is a second Tito.

Mao Tse-Tung declined to get involved in anything like that. For one thing, he feared that the Russians might believe it. That would mean exile from China and maybe his death. Besides he knows that the Russians have his successor ready, Li Lih-San, the boss of Manchuria.

3. So nothing is left the State Department but to call Chiang Kai-shek, the Soong family, the Kung family, the Chen family, crooks, thieves, grafters.

The State Department proposes to issue a "White Book on China," in which the following points will be made:

1. It is impossible to cooperate with Chiang Kai-shek because he is incompetent, inefficient, noncooperative, and does not understand China.

The fact is that Chiang Kai-shek began to lead the Chinese Revolution in 1925, conquered most of China against the opposition of the feudal warlords, Communists, and foreign powers; he established the Nanking Government in 1927; he prevented Soviet Russia from conquering his country by infiltration; he fought Japan from 1931 to 1945; he lost to Russia after American deals with Stalin at Tehran and Yalta; and now when it was expected that he would be as dead as a door-nail, he is still fighting, with bases at Formosa, Canton, and Chungking.

2. State Department will contend that aid to China will be wasted because the Soongs, Kungs, and Chens will steal the aid.

The State Department has the facilities to get at the facts. The Soongs, Kungs, and Chens, if they stole millions of dollars, put the money somewhere. They must have deposits in American banks or investments in American stocks, bonds, or real estate. Although it is possible to put liquid assets in Switzerland, Holland, Brazil, and the Argentine, the safest place during the past 10 years has been the United States.

Every financial activity by an alien here has to be reported. He can, of course, hire American lawyers to cover up for him, but it is the business of the State Department and the Treasury Department to uncover and record the transactions.

So it is up to the State Department to list names, figures, facts. If the white paper publishes some more hearsay, it will only bring ridicule on itself. It has to prove a charge of wholesale thievery.

I do not doubt that there has been corruption in China. But the State Department, when it bases a great historic policy on the charge of corruption, must prove, beyond a reasonable doubt, that the corruption is of such proportions as to justify an acceptance of the conquest of China by Soviet Russia.

If it does less, it will only strengthen Russian imperialism throughout the world and weaken our position.

In just a moment, I'll be back with you.

* * * * *

Dean Acheson objects to lending Spain $50,000,000 because he says such a loan would be a gift.

That is correct. It would be a gift. Is not the $50,000,000,000 we have given or loaned to Great Britain a gift? Is not the $11,000,000,000 we have given to Russia a gift? Is not all the Marshall-plan money a gift?

Why should Santa Claus disguise his true character? We Americans have been giving gifts since World War I.

Only little Finland called it a loan and paid. The rest of the world accepts our loans as gifts and even looks the gift horse in the mouth to see whether it will hold out long enough to provide some more.

The Problem of Unemployment

EXTENSION OF REMARKS
OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, August 5 (legislative day of Thursday, June 2), 1949

Mr. MYERS. Mr. President, there recently came to my attention an article written by the Reverend E. Marcellus Nesbitt, of the First United Presbyterian Church, of Beaver, Pa., which appeared in the issue of July 3 of the Christian Union Herald of Pittsburgh, Pa. The editorial is entitled "The Problem of Unemployment."

I ask unanimous consent to have the article printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE PROBLEM OF UNEMPLOYMENT

(By E. M. Nesbitt)

After enjoying the luxury of plentiful employment for nearly a decade, it seems incredible that Americans could be confronted again by the question of work scarcity. But the grim fact is with us; men by the million are experiencing either complete lay-offs or else are having their workweek cut in two, and the whole unhappy crisis is currently reflected on the Nation's buying front. Real estate, notwithstanding a universal housing shortage, is moving slowly; used-car exchanges have reached a standstill; and professional people, who sell their services to the public, report both a dropping off in patronage as well as an increase of difficulty in collecting bills. Nobody likes to admit the source of this buying slowdown, of course, but the truth is that people have less money to spend than they had a year ago, and that is because the problem of unemployment has reappeared.

There are those who say that this shortage of work is artificially created by management. They point out that union contracts are soon to terminate and employers, certain that labor will demand new contracts with higher wage provisions, are attempting to cow the worker by showing that he is lucky to have a job on any income terms. That explanation no doubt has some validity, but since unemployment is a permanent rather than temporary phenomenon in our American economy, we must seek a deeper reason for millions losing their jobs, today or at any

time. The trouble, so economists tell us, lies in the use of modern machinery. Mechanical devices by the thousand have reduced the need for human labor; therefore, myriads of workers who once had some assurance of steady employment, have that assurance no more. Henry Ford used to claim that the problem of mechanically created unemployment would solve itself eventually, because men who are replaced by machinery would be needed to build and service the machines. That theory, however sincerely the great auto magnate may have advocated it, is not supported by the facts. Everyone knows, either by experience or by observation, that fewer jobs are available in a mechanized than in an unmechanized society.

No all-out effort has been made to solve the problem of American unemployment because, during the whole era of modern machinery, our country has been favored with the temporary advantage of a war economy. Two global conflicts, requiring the creation of fighting tools as well as the replacement of property destroyed by war, have kept the wheels of industry more or less in motion, so that for nearly 40 years (the great depression excepted), there has been a little work for most of those who wanted it. This fortunate (?) situation, of course, was not prearranged by American leadership. We did not go to war, calculating coldly that armed conflict would put our country's unemployed to work. We have, however, allowed war's economic benefits to take the urgency out of dealing drastically with the question of unemployment. No adequate attempt has yet been made to conquer the machine, or to create steady jobs for men on a permanent peacetime basis.

President Truman, in my opinion, put his finger on one important means for overcoming employment in his inaugural address several months ago. He did not say that America should abandon her machine economy, or that she ought to revert to primitive ways of creating consumers' goods; he did insist, however, that we develop markets for factory products by cultivating the backward peoples of the world. It was claimed by the President on good authority, that to raise the living standards of Asiatics, Africans, and Pacific islanders by as little as 1 percent, would mean that the wheels of American industry might be kept humming for a century. If space permitted, I should like to defend Mr. Truman's dream of expanding markets on political as well as economic grounds. Russia is making friends among the backward nations, and capitalizing their physical distress to promote the communistic cause. Only as democracy does something of the kind, offering impoverished countries more economic advantages than Russia can offer them, may we expect to offset the threat of communism in tomorrow's world. That is political reasoning, of course, and therefore outside the scope of my discussion here. In the present treatise I am only concerned about putting Americans to work on steady jobs in a peace economy, and I second the Truman motion to try to do it by creating markets among the underprivileged millions overseas.

Must Our Boys Again Pay for the Folly of Arming Possible Enemies?

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1949

Mr. REED of New York. Mr. Speaker, the death of every American boy in the armed services in the Pacific during World War II was caused as a result of the New Deal administration arming Japan. There would not and could not have been a war waged by Japan against either China or the United States except for the war materials and implements of war furnished to Japan by our country. Protests against these shipments were ignored by the administration.

The New Deal also suffered and permitted war materials to be shipped to Italy to build up Mussolini's war machine to murder the Ethiopians. How many of our boys died as a result of the shipment of war materials to Hitler cannot be estimated. The amount of scrap iron, copper, and other essential war materials so exported is a matter of public record. What a disgrace!

Now the Commander in Chief wants power to arm every nation, take part in every revolution and every civil strife in every nook and corner of the globe. Must our boys eventually face the countries which we have armed? The strutting warmongers are on the march, deluding the people by singing "Peace on earth, good will toward men."

Under leave to extend heretofore granted, I am inserting as a part of my remarks an article by Walter Lippmann, together with my comments thereon, which article appeared in the New York Herald Tribune of August 2, 1949.

Had Mr. Acheson brought in a bill to carry out the military-aid program which he and General Bradley had described, everthing would be much simpler. But the bill goes far beyond the program. It is not merely a bill to implement the Atlantic Pact and to fulfill our known and recognized commitments to certain countries outside the pact. The bill is all that. But, in addition to all that, it is a general license to intervene and to commit the United States all over the globe, as, when, and how the President and his appointees decide secretly that they deem it desirable to intervene.

I agree heartily with the first paragraph of Mr. Walter Lippmann's statement that the bill goes far beyond the program. I also agree that the legislative proposal "is a general license to intervene and to commit the United States all over the globe, as, when, and how the President and his appointees decide secretly that they deem it desirable to intervene."

Not only has Mr. Lippmann stated the problem in the first paragraph of his article with great clarity and candor but his second paragraph raises a strong presumption against the bill because of the withholding of information with respect to these extraordinary powers attached as a rider. Mr. Lippmann says:

It is disquieting that these extraordinary powers should have been attached as a rider to—one could fairly say as a joker in—the authorizations which are needed to carry out the declared program. It is remarkable, to say the least, that Mr. Acheson did not explain them, or even mention them, in his formal statement to the committee, and that in the State Department booklet they are referred to only obscurely and indirectly. Yet, if they were enacted into law, the Congress would invest the President with unlimited power to make new commitments which Congress would have to support but could not control.

I am astounded, as I know others must be, and as Mr. Lippmann seems to be, that—

Under section 3 of this strange bill, "the President is authorized, upon the request of any nation, to furnish assistance to such nation through grants, or payment in cash, or through any other means and upon such other terms as he deems appropriate, whenever he deems that the furnishing of such assistance will further the policies and the purposes of this act as set forth in section 2."

I am inserting at this point Mr. Lippmann's article in its entirety:

TODAY AND TOMORROW

(By Walter Lippmann)

A STRANGE AND IMPOSSIBLE BILL

Had Mr. Acheson brought in a bill to carry out the military aid program which he and General Bradley had described, everything would be much simpler. But the bill goes far beyond the program. It is not merely a bill to implement the Atlantic Pact and to fulfill our known and recognized commitments to certain countries outside the pact. The bill is all that. But in addition to all that it is a general license to intervene and to commit the United States all over the globe, as, when, and how the President and his appointees decide secretly that they deem it desirable to intervene.

It is disquieting that these extraordinary powers should have been attached as a rider to—one could fairly say as a joker in—the authorizations which are needed to carry out the declared program. It is remarkable, to say the least, that Mr. Acheson did not explain them, or even mention them, in his formal statement to the committee, and that in the State Department booklet they are referred to only obscurely and indirectly. Yet if they were enacted into law, the Congress would invest the President with unlimited power to make new commitments which Congress would have to support but could not control.

Under section 3 of this strange bill "the President is authorized, upon the request of any nation to furnish assistance to such nation through grants, or payment in cash, or through any other means and upon such other terms as he deems appropriate, whenever he deems that the furnishing of such assistance will further the policies and the purposes of this act as set forth in section 2."

The grandeur and magnificence of this grant of authority is spelled out in section 13, near the end of the bill. There we learn that "the term 'nation' shall mean any foreign government or country or group thereof; or any representatives or group of the people, however constituted, designated as a 'nation' by the President for purposes of this act."

So under this bill, as written, the President can arm anybody. He can arm not merely the Atlantic allies, not merely Greece and Turkey and the Philippines, not merely recognized governments, but even groups, committees, factions, individuals. He can conclude military agreements with any "representatives * * * however constituted" which he decides to designate as a nation.

He can do all this without further consultation of Congress as and when he decides that it is in the "national interest" of the United States to arm somebody. He is the sole judge of what is the national interest of the United States. And every 6 months he must report to Congress "expenditures and activities authorized under this act"—but he need not report information "the disclosure of which he deems incompatible with the security of the United States".

Can anyone pretend that these powers are needed for, or have anything to do with, the program for Western Europe which Mr. Acheson and General Bradley outlined? Under this bill, to be sure that program can and

would be inaugurated. But all sorts of other programs, which have not been described, could also, and most probably would, be inaugurated.

It is difficult to believe that the authors of the bill did not know this and did not intend it. That they did not hope to make the western European military aid program, which has substantial support, the vehicle for other policies which—if they were candidly presented for debate—would not command general support.

It is not clever to be too clever and, therefore, if the avowed program of military aid is to be enacted, this bill had better be abandoned, and a new bill written which says what it means and means what it says.

The administration ought never to have offered this bill. Had it consulted the leaders of Congress it would never have offered this bill. It could not defend this bill successfully if it were brought to debate.

Indeed the administration ought not to want a bill which, because it grants such unlimited and undefined powers, would only expose the Government to unlimited and undefined pressure from every quarter of the globe. This bill is an invitation to everyone who says he is anti-Communist to apply for arms and for money. Were this bill made the law, the State Department and the Pentagon would be put in the position of having to say "Yes" or "No" to requests for arms from all the countries, and from factions within them, where men are intriguing and contending for power.

Under this bill our Ambassadors and our military attachés all over Asia, the Middle East, and Latin America would find themselves pressed, cajoled, and beseeched to urge Washington to supply arms or money for arms. The State Department and the Chiefs of Staff would in turn be under perpetual pressure from our missions abroad, most of them—as we know from experience—the impassioned advocates of the government, or the impassioned opponents of the governments, to which they happen to be accredited.

Before long, military aid would have become a diplomatic slush fund and a military pork barrel. As arms were doled out to governments, or their opponents, our honor and interest would be engaged. Then it would be well-nigh impossible to disengage ourselves again. For once we started arming a government, or a group, we should be committed to that government or group, and we could not decently withdraw our support.

Therefore, the commitments should never be made, as they could be under this bill, casually, secretly, and without full public debate. It should be stated plainly in the law that arms will be supplied to countries named in the law, and to no one else without specific authorizations from the Congress of the United States.

Straight Talk on Health Care

EXTENSION OF REMARKS

OF

HON. GLENN R. DAVIS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1949

Mr. DAVIS of Wisconsin. Mr. Speaker, I would like to include the following editorial from the Milwaukee Journal in today's RECORD:

STRAIGHT TALK OF HEALTH CARE

Dr. Paul Hawley, head of the Blue Cross-Blue Shield Commission, is bluntly candid when he talks about the present shortcomings of the voluntary health service prepayment plans that have developed and spread so rapidly in America.

He is frank to admit that these plans are not yet available to millions of Americans who want some protection of the sort, and that most of the voluntary plans are not offering nearly as complete coverage as a good many people may need. The whole voluntary health service prepayment program is still suffering from growing pains.

That sort of candor is refreshing. It is also reassuring, for it is in sharp contrast to the extravagant promises, the sweeping claims, the double talk, and the evasiveness of some of the chief advocates of governmental compulsory health insurance.

The Blue Cross and Blue Shield voluntary plans have grown from the grass roots, all over the country. They were founded on what realistic laymen knew was needed and what local hospitals and doctors knew could be provided in the way of service for a given cost.

In the last few years they have gained experience and, through constant contact with the public and subscribers, have learned how the voluntary plans could be expanded and improved and still be kept financially sound. They are controlled, locally and nationally, by practical men and women who are in earnest, like Dr. Hawley.

That is why it is so much safer—even if a little slower—to develop America's health-care program through these flexible, voluntary, proven methods rather than to rush into some untried and bureaucratic scheme of state medicine.

The Image of Victory

EXTENSION OF REMARKS

OF

HON. FRANK B. KEEFE

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1949

Mr. KEEFE. Mr. Speaker, I have recently read a most thought-provoking article written by Lt. Col. Chester D. Seftenberg, of Duluth, Minn., entitled "The Image of Victory." In my judgment this article should be read and carefully studied by every Member of Congress and by thoughtful students throughout the Nation. I therefore ask unanimous consent that this article be incorporated in the Appendix of the RECORD as part of these remarks, even though the excess cost, in accordance with an estimate of the Public Printer is $184.50.

The article follows:

THE IMAGE OF VICTORY

"The best informed one wins the final victory."—Disraeli.

"Geopolitics" is a coined word, not susceptible of positive definition. Geopolitics is not an exact science, nor even a science. Some men have referred to it as a synthetic science. Others have looked upon it with suspicion, and called it a hoax. In reality it is an artificial, manufactured title for a theory, or rather a group and complex of related theories, which attempt to wed world geography to world political strategy. And in that marriage, he who has the will to see can trace the related reasons for two world wars and discern the tragic genesis of a possible third world war in the making.

Geopolitics can ennoble as readily as corrupt. It can foster hope as easily as breed suspicion. It can insure peace as effectively as cause wars. It can bring freedom to all mankind as surely as enslave. But to achieve the higher virtues, the choice must be made between the value of power and the power of values. For as Shakespeare once wrote, "It is excellent to have a giant's strength, but tyrannous to use it like a giant."

There are those who believe that the possibility of averting the third world war lies in a truly coordinated political, economic, and military strategy for America. Such coordinated strategy can come only from an intensive study and comprehensive understanding on the part of our policy makers of that complex of factors which are grouped into the concept known as geopolitics. That is the challenge which faces the United States on this threshold of a new epoch in the history of the human race.

As the scientist and engineer well know, all factors of an unknown equation must be carefully studied, analyzed, identified, weighed, and related. Now the air age has caused our physical world to shrink. But it has shrunk faster than human nature and human understanding have improved. This air age shrinking of the world is a new factor in the as yet unknown equation of the formula for future world peace—and that new factor requires vital application of today's air-age geography to the politics and strategy of the United States as a leading partner in the rebuilding of a shaken and suffering world.

To discern the future, one must know the past. Let us then examine three events which took place in the opening years of this century. They were unrelated, then, and the actors were unknown to each other. But the threads of history which they represent came to be woven into a pattern of history which today shapes all our lives and future.

On December 17, 1903, two American brothers named Wright ushered in the air age when they achieved the world's first flight by man in a heavier-than-air flying machine. On January 20, 1904, an English professor of historical geography by the name of Mackinder unveiled the "Heartland" theory of world historical destiny when he read his paper on "The Geographical Pivot of History" to the Royal Geographical Society in London. Over in Germany, a retentive-minded Bavarian artillery officer named Haushofer was preparing for an assignment as military observer in Japan, where he was to acquire a new conception of the destiny and potentials of Germany, Russia, and the Orient in world politics.

Haushofer ultimately was to adapt and twist Mackinder's theory into a blueprint for Hitler's attempted domination of the world. The "air age," grown to maturity, in turn was to defeat that blueprint and add a corollary theorem to Mackinder's theory, but was to constitute a potential threat to the future peace and freedom of the world.

In his 1904 lecture, Sir Halford J. Mackinder held that world history has always been made and always will be made by the pressure of the landlocked peoples of the plains of eastern Europe and western and central Asia upon the peoples living on the littorals of the land mass of Europe and Asia.

Nine-twelfths of the surface of the globe is covered by the sea. Of the remaining three-twelfths the "world island," as he called the land-joined continents of Europe, Asia, and Africa, covers two-twelfths. The Americas and Australia barely occupy one-twelfth and are, said Mackinder, merely smaller islands detached from the world island. Fourteen-sixteenths of the world's population occupy the world island; one-sixteenth the adjacent islands and one-sixteenth the remainder. Germany, Mackinder warned, was strategically better placed than any other European power in the contest for the domination of the "heartland" of the world island.

Mackinder's "heartland"—the pivot state—is the heart of the world island, stretching from the Volga to the Yangtze and from the Himalayas to the Arctic Ocean, a wholly continental, self-contained and self-sufficient area not open to the control of sea power, a vast land area rich and as yet unexploited in oil, iron, coal, minerals and food potentials. Isolated from the seas, the progress of civilization had touched it but lightly. Mackinder argued that organized domination of that immense sweep of territory by a virile people would shift the balance of power for the entire world. A strong, self-contained, inland power with impregnable interior lines of communication and defense with a self-sufficient economy and a powerful military organization would form the nucleus of continental supremacy.

May I quote directly from Mackinder's paper:

"The pivot region of the world's politics is that vast area of Euro-Asia which is inaccessible to ships, but in antiquity lay open to the horse-riding nomads, and is today to be covered with a network of railways. Outside the pivot area, in a greater inner crescent, are Germany, Austria, Turkey, India and China, the rimlands of the world island. In an outer crescent are Britain, South Africa, Australia, the United States, Canada and Japan. In the present condition of the balance of power, the pivot state, Russia, is not equivalent to the peripheral states.

"But the oversetting of the balance of power in favor of the pivot state, resulting in its expansion over the marginal lands of Euro-Asia, would permit the use of vast continental resources—and the empire of the world would then be in sight. This might happen if Germany were to ally herself with Russia.

"I have spoken as a geographer. The actual balance of political power at any given time is, of course, the product, on the one hand, of geographical conditions, both economic and strategic, and on the other hand, of the relative number, virility, equipment and organization of the competing peoples. In proportion as these quantities are accurately estimated, are we likely to be able to adjust differences without the crude resort to arms."

As an antidote he advocated an Anglo-Russian understanding. After nearly a century of estrangement, such alliance was concluded in 1907, and served to block Germany's adventure in World War I. During the peace negotiations in 1919 Sir Halford again sounded his warning and he gave this counsel to the peace conference then in session:

"When our statesmen are in conversation with the defeated enemy, some airy cherub should whisper to them, from time to time, this saying: 'Who rules east Europe commands the heartland; who rules the heartland commands the world island; who rules the world island commands the world.'"

As early as 1908, when Haushofer first went to Japan, he had grasped what the rise of new forces in the East meant to the destinies of Europe. For him Japan became the nucleus of the revolution in the East, a Japan whose great spaces in the East were to be linked with the small spaces of Germany. Haushofer was later to work for years on the task of persuading Japan to come to terms with China and the U. S. S. R., and on the other side of the world of convincing Hitler that he should live in peace with Soviet Russia. In 1940 he wrote, "It is destiny, alike for Japan and Germany to come to terms with the U. S. S. R."

Following World War I, Maj. Gen. Karl Haushofer led his division homeward to a nation defeated, discouraged, bitter. Demobilized he was pensioned off, dropped his military title and become Herr Dr. Haushofer. He spoke and understood well at least six foreign languages, including Japanese and Russian. In 1911 he had written his doctoral thesis on a subject dealing with the geographic bases of Japan's military power. Thus he came to occupy the chair of geography and military science in the University of Munich and began to organize and mobilize an encyclopedic amount of factual information stored up against the day when Germany would be prepared to strike again. No scrap of world-wide political, economic, industrial, geographic or social information was too small for his organization's attention, analysis and file.

Haushofer adapted Mackinder's theory to the opposite German point of view and concluded that the path to German world power lay along the lines that had frightened the English, i. e., the consolidation of the German and Russian greater areas. For him the heartland was a strategic area containing all the advantages indispensable for a Germany at war against any great power or combination of powers—a gigantic citadel. But the Treaty of Versailles thwarted Germany's quest for the heartland by having drawn along Germany's eastern frontiers a belt of small states.

Rudolph Hess was General Haushofer's military aide in war. In peace he became Herr Doktor Haushofer's disciple. He had also fallen under the spell of an agitator named Hitler, and with him was imprisoned in Landsberg Fortress for their part in the Beer Hall Putsch in 1923. Haushofer visited Hess in prison and through Hess became acquainted with Hitler. Out of these visits came the blueprint for action outlined in chapter XIV of Mein Kampf—Mackinder's heartland theory twisted to Germany's ends. In the person of Haushofer, Mackinder's airy cherub had whispered, it seems, in the impressionable Hitler's ear: "He who rules east Europe commands the heartland; who rules the heartland commands the world island; who rules the world island commands the world."

Mackinder wished to warn England of the dangers of a German-Russian alliance; Haushofer welcomed the theory as the heaven-sent exegesis from Germany's world political dilemma.

Upon access to power, Hitler promptly appointed Haushofer to the presidency of the German Academy and magnificently housed, staffed and subsidized his research organization in Munich. Haushofer became not alone a person—he became a school, a movement, a symbol, a driving force, a channel of unification between theory and action. And it is significant, though not surprising, to note that Haushofer's faithful aide and understanding pupil had risen to become Hitler's deputy, his heir to power, when in the midst of war he flew to England in an abortive attempt to have England make peace with Hitler and turn on Russia.

Fortunately for the world, Japan and Hitler failed to heed fully Haushofer's warnings. He had counseled Japan to strike first against the British Pacific empire, and the other European colonies in the Pacific. Instead of turning south, Japan started her drive on the continent toward China and India. At the other end of the Berlin-Tokyo axis the clash with Russia became inevitable. nazism and communism included an identical objective—world revolution. They were the two most dynamic forces in the European balance of power and were inexorably destined for eventual collision. Both secretly understood the nature of the breathing spell afforded by the Russian-German nonaggression pact of August 1939. They knew it to be merely a breathing spell to prepare for the inevitable struggle between the two ideologies of political and economic life most concerned with the domination of Mackinder's heartland. Russia was thrown, not so much into the camp of the allies as back into her original domestic defensive position respecting Hitlerite Germany. She was fighting a common enemy, not guaranteeing nor underwriting the common objectives of other United Nations.

So today Russia garrisons, occupies, and controls the heartland and is in conflict with her erstwhile allies for control of east Europe as well as of east Asia.

For the first time in history, the heartland is garrisoned by a government and a state strong enough in military, industrial, scientific, economic, and political potentials to exploit its geopolitical position to the fullest. These figures, for the year 1938, illustrate the strength of some of those potentials. In that year Russia produced more wheat, barley, oats, rye, and sugar beets than any other country in the world. This was true, also, of manganese. Russia was bracketed with the United States in first place as to iron, and stood in second place in production of petroleum. As for coal, the Kuznetsk and Krasnoyarsk coal basins are each estimated to be capable of supplying the requirements of the whole world for 300 years to come. Russia emerged from World War II as the greatest land power on the globe, and as the power in the strategically strongest defensive position. "The oversetting of the balance of power in favor of the pivot state" which Mackinder foresaw and feared 45 years ago is in process of achievement. There can be little doubt that the geopolitical blueprints for world conquest are spread upon her planning tables. Every Russian move to date gives evidence of that. Perhaps the "airy cherub" is now whispering in Stalin's ear: "He who controls east Europe * * *."

Our understanding of MacArthur's policies in Japan, of our awakening cognizance of Arctic importance, of our persistence in remaining in Berlin, in western Europe and in the rimlands, and of the potential magnitude of our mistake in abandoning China, becomes clearer with the benefit of this background of history.

Now to our third thread of history—the Age of Air Power. When Mackinder finished his lecture in 1904, a Mr. Amery arose and said, "* * * both the sea and the railway are going in the future to be supplemented by the air as a means of locomotion and when we come to that * * * a great deal of this geographical distribution will lose its importance and the successful powers will be those who have the greatest industrial bases * * *." A commendable feat of prophecy this was, considering that the Wright brothers had first flown their airplane only one short month before.

This Mr. Amery had caught a discerning glimpse of the corollary, to Mackinder's theorem and formula, which was brought into being by the potentials of the air age—the heartland's immunity to sea power and land power dissolved into a potential vulnerability to air power. But this brought into being the need for bases, in the rimlands, from which to deliver striking air blows at the heartland. That Russia has recognized the deficiencies in Mackinder's theory is apparent—her frontiers in western Europe have been pushed 600 miles westward, while her eastern boundaries, particularly in the polar regions, acquire new significance. It is patent she is seeking bases for sea and air power.

Before Columbus, to get to the East, they traveled east. Before the airplane, to get to the East, they traveled east or west. Today, to get to the East, we may travel east, west, north, or south.

In 1904, Mackinder was handicapped by the distortion of the flat Mercator map. From such a map you would judge that the Orient is located west and Europe east of the United States. Looking down at the world from the vantage point of the North Pole, Asia and Europe are found really to lie to the north.

As between America and Russia, the north polar regions are our mutual front yard.

The north polar region has aptly been called the "Mediterranean of the air." In many ways Russia leads the United States in polar development. Already there are more than half a million Russians living and working north of the Arctic circle. More than half the Arctic Ocean shore line flies the Russian flag. Dutch Harbor could well be our next Pearl Harbor. It was Gen. Billy Mitchell who declared, "Who holds Alaska, holds the world."

Mackinder termed the areas adjacent to the heartland the "inner or marginal crescent." It is in that crescent, or rimland, area that are located those frontiers and those air bases we need to obtain and maintain in order to command, or to neutralize military power in, the heartland—and today Mackinder's "airy cherub" whispers to America: "Who has access to the rimlands has surveillance of the heartland; who has surveillance of the heartland can neutralize the world island; who can neutralize the world island is in a position to insure and assure the freedom of the air and thus the freedom of the world and of peace-loving free men." It is significant to note that those nations to whom we extend and to whom we propose to extend economic and military aid today are inner-marginal crescent countries—the rimland states. Uncle Sam has laid his bets on the rimland corollary as the key to world peace and freedom.

Beyond that, there is another critical element in the security equation which must receive our adequate attention, as a weak link in our chain of defense—namely, the location of vital strategic materials indispensable to our survival.

In hostile hands, the European-Siberian land mass forms, for us, a barrier to the resources of the regions beyond, effectively blocking our access to them. They are in the aerial backyard of Russia, just as South America lies in our backyard, out of aerial reach of Russia.

For all our amazing natural riches, we still are a have-not Nation in strategic materials such as crude rubber, additional oil, tungsten, cobalt, manganese, and many others. As has been pointed out, the heartland, plus its backyard, is naturally self-contained and self-sufficient. To fight a modern war—to defend ourselves—we must develop and protect our own backyard, the natural resources of South America, actual and latent.

On every transoceanic flight, there is a point beyond which the pilot can't turn back if something goes wrong, but must set his stick and press on toward the far shore. Airmen call it "the point of no return." The immutable impact and implications of air-age geopolitics on America have caused her to pass the point of no return in her flight toward the twenty-first century.

From now on, transoceanic, interhemispheric air warfare is not only possible, but inevitable. Today the B–29 and its striking range of 2,000 miles is already officially considered only a medium-range bomber. Last December 7 the United States had a dramatic preview of things to come when a B–36 flew nonstop from Texas to Hawaii and back—over 8,000 miles with a full military combat load.

In the early years of the air age we thought of the airplane as a new gadget—an automobile that flew. The airplane was simply another gadget in a gadget universe, a new convenience. We do not think that now. We know that the airplane is capable of altering the geography of the world and therefore the history of the world. We know that the world which the airplane dominates will be a different world from the world which went before. The ages of human history are not created by mechanical inventiveness, but there have been in the history of our race mechanical inventions which have changed the possibilities, and thus the minds, and thus for better or for worse, the men.

We must learn to think as the airman has learned to think—to comprehend the time-space factors of power. The airman, when he pictures the world in his mind's eye, visualizes a complete globe and a geography untrammeled by the conventional barriers of land and sea, mountain and desert. He thinks of nations as being disposed over a continuous curved plane, of which the most remote point is less than 40 hours from any other point—at the B–29's comparatively slow speed. This mobility of the airplane has revolutionized the whole methodology of war. It has opened a direct path to the centers of an enemy's means and will to fight, to the very heart of his society.

It must be plain to us all that the only nation in the world with military potential to challenge the United States in the foreseeable future is the U. S. S. R.—now the sole commander of the heartland of the world island. It is also apparent that a state of cold war exists between these two nations.

The problem before us was, and is, not to prepare for war, but to prepare to avoid war.

Cold wars take cold nerves. There is reason to believe that the appearance of B–29's in number in England and the air armada now blanketing Berlin has created an impression of purpose, resolution, and strength on our part far beyond their numbers. Indeed it is difficult to understand what restrains the Russians from seizing Berlin, unless it is their respect for American air power. And Russian success in China has been marked by total lack of opposing air power.

We live in explosive times when the entire technology of war is in flux.

The Finletter committee's report, Survival in the Air Age, divides the near future into two phases, with the construction of atomic bombs by the Russians automatically providing the division day between the two phases. This has been authoritatively estimated at a minimum of 3 to 4 years. In any case our monopoly is fast running out.

In phase I, we would be the sole possessor of the bomb and master of our own outlying airspace. In phase II, the potential enemy would possess a weapon that could bring the myriad machines of our society to a stop. And by that time, it is a fair assumption, he would have evolved an air force capable of delivering it.

Look at the vast spaces of the heartland. How can sea power or land power alone come to grips with such a colossus? They cannot. To the formula must be added superior air power plus dominance of heartland air. Air power offers the only relief from a bloody interminable war waged on land against a self-contained heartland power like Russia, with its 8,500,000 square miles of maneuver ground.

But here again geopolitics bobs up, for as General Spaatz has said:

"When our force is revalued in terms of the atomic multiplier it is potentially by far the most powerful striking force in the world—provided we can fit it into the right geography."

Thus, facing cold realities, it is inescapable that without the forward bases from which to deliver the absolute weapon, our monopoly of the atom bomb is a frozen asset.

Two facts have been established. One, the air offers the only tolerable counter to Russia's vast manpower and space. Two, until airplanes of greater range than the B-29 are available in number, the United States could fight such an air war only if we were able to obtain intermediate bases. The supreme merit of air power is its flexibility. But before it can be flexible it must first be based securely on the ground, with airfields, gasoline and bomb dumps, repair shops, and so forth. And to secure, stock, and defend such bases, our air power is dependent upon the cooperating action of our sea and land power. Here, then, are the primer facts in American strategic geography in phase I, as an airman sees them.

These are hard truths. But let us measure them calmly. Even if a potential enemy should presently produce the bomb, it is scarcely likely to start a war until it has stocked up enough to trade blows upon equal terms. And even if it has achieved a good copy of the bomb carrier, it is not going to find it easy to copy a good strategic air force.

In the interval of grace that remains to us in phase I, we would be well advised to ponder the American position in the period beyond. We who profited so much from the airplane and atomic bomb now stand to lose most by it. An era impends during which an enemy, preparing in secret, may wound this Nation terribly with a single blow. That is the emerging hazard of phase II—a period destined to test our institutions to the breaking point unless statesmen have meanwhile found the long-sought political equivalent or substitute for war. Let us hope and pray they do, for in the event of another war the only victory the victor can expect is mere survival, and because of the weapons which might be used, it might be such a victory that even mere survival might be lost.

And there is yet hope and possibility of peace—real peace—in our generation. For the masters of the Kremlin are not monsters. They are simply cynical realists. If they find themselves confronted with a free half of the world which is economically healthy and full of hope and, above all, too strong to attack, there is every reason to believe that these men will come to terms. Appeasement they understand, and will defeat. Strength they recognize and will respect and honor.

In conclusion, may I reiterate that the mastery of the air created a different world. The air age did not change the shape of the world. It changed man's conception of the world as a single globe.

If those who have mastery of the air are freemen and imagine for themselves as freemen what their world could be, their world will be the full completed globe—a single sphere, a round earth in which all the directions eventually meet—an equal earth which all men occupy as equals—the final image of victory men have moved toward for so long and never reached.

Freemen must be ever alert to prevent an inimical aggressor air power from dominating the world island and from the shores of the world island dominating the seas. For hundreds of years, thousands of years, the sea was the great symbol of freedom, and men struggled in many wars over many centuries to keep it so. Now it is the freedom of the air.

And the question squarely before us is, will the air be a new symbol and a new practice of ever greater freedom; will the air be to the sea what the sea was to the locked-land; will the air be an instrument of freedom such as men have never dared to dream

of or an instrument of slavery such as men had never thought to feel—an instrument of slavery by which a single nation could enslave the earth and hold the earth in slavery forever without the hope or possibility of rebellion or revolt?

To win this struggle for freedom is not to win a doubtful victory. To win it will make our image of victory a reality. To win such victory and such freedom is to win the greatest triumph any nation, any people, ever won.

It is therefore suggested that the best prophylaxis in the field of external strategy will be an American geopolitics based on international justice, international honor, the sanctity of the given word, and the mutuality of international respect. Until such motives influence aggressor-minded powers, America must continue too mobilize her striking power and falter not in using it fearlessly in the service of freedom and the inalienable rights of human personality.

CHESTER D. SEFTENBERG,
Lieutenant Colonel,
U. S. Air Force Reserve.

Which Shall the Command of the House of Representatives Be Next Monday to the Lesinski Minimum Wage Bill, H. R. 5856—Forward March or Fall Back?

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 5, 1949

Mr. O'SULLIVAN. Mr. Speaker, I am very happy indeed that the Lesinski bill, H. R. 5856, respecting minimum wages, will be up for hearing before the House of Representatives at the beginning of its session next Monday. I shall support this legislation.

The thought is therefore appropriate, I believe, at this time, and on Monday next and throughout the consideration of this bill by the House of Representatives, for each and every one of its membership to be seriously mindful of the Biblical injunction that the laborer is worthy of his hire, and that it is an old and well established religious principle that there are four sins which cry to heaven for vengeance, and that they are as follows:

First. Willful murder.

Second. The sins of Sodom.

Third. Oppression of the poor.

Fourth. Defrauding laborers of their just wages.

People never had any luck after committing these sins. They seemed to be accursed.

I know that no Member of the House of Representatives will line up with those age-old repudiated apostles of greed who believe that the laborer is not worthy of anything but slave hire, and the No. 4 sin afore-mentioned which cries out to heaven for vengeance. They will do their full part, I know, for their country and its wage earners.

No man in public or private life can afford to put himself in the ignoble position of being an aider and abettor of the dopesters of anti-Biblical thought, or any of the No. 4 sin clique, or any of the other four sins which cry to heaven for vengeance.

I do hope that religious promptings and decent thinking will produce unanimity of thought among the membership of the House to do the just and right thing by American labor who are engaged in work involving interstate commerce, and thus set a noble pattern for the States of the Republic and the world to follow.

A great lamenter of old might well say today, woe be to him who treads in the wake of willful murder, the sins of Sodom, and the oppression of the poor, and who spreadeth himself like a green bay tree and whose power he thinks is supreme to ignore the thought that the laborer is worthy of his hire. For him the wages of his deeds should be something less certainly than worldly and eternal happiness.

Brannan Visits Wisconsin

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, August 5, 1949

Mr. DAVIS of Wisconsin. Mr. Speaker, my district in Wisconsin was visited last Sunday by the Honorable Charles Brannan, Secretary of Agriculture, who extolled the Brannan plan which this House has not seen fit to adopt. Since one of our colleagues on Tuesday inserted Secretary Brannan's speech in the RECORD, I believe the Members will be interested in learning the reaction of the people in Wisconsin to this speech.

Under leave to extend my remarks, I am including an editorial from the August 2 issue of the Milwaukee Journal, my State's largest newspaper:

CONFUSION COMPOUNDED

If Secretary Brannan knows what his much publicized Brannan plan for American agriculture is all about, he certainly didn't tell the Wisconsin farmers gathered to hear him at Juneau on Sunday.

That's been one trouble with the Brannan plan from the start. Congressmen couldn't understand it, farm leaders couldn't understand it and, pretty generally, it seemed that Mr. Brannan himself didn't understand it.

The Secretary of Agriculture talked about a lot of things at Juneau, such as the need of higher prices for milk, the Hoover Commission, and his critics, but he didn't get around to either a comprehensive discussion of his plan or to answering criticisms of it.

He didn't tell what the program would cost, passing a question off with the casual rejoinder: "No one can tell what a program will cost in advance."

He didn't explain how the Brannan plan is going to provide the farm aids that are pledged without putting each benefiting farmer in a Government strait-jacket of rigid controls, his every move dictated by a Washington bureau.

He didn't tell how the plan, as first promised, would mean a real saving to the housewife. This is a part of the program that is rapidly being forgotten by Brannan and his fellow Fair Dealers. They have found no answer to the contention that the only way the plan can help the consumer is to inaugurate not only rigid control of production but equally rigid price controls. If such controls are not used, then farm production may be so heavy that the cost of the benefits will break the back of the taxpayer.

The Brannan plan, from the very beginning, has seemed like the dizzy dream of a bureaucrat. Secretary Brannan did nothing at Juneau to make it seem anything different. It is no wonder that the House of Representatives recently rejected decisively a plan to give the program even a trial run.

Separation of Church and State—Some Light Without Heat

EXTENSION OF REMARKS
OF
HON. HARRY. J. DAVENPORT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 5, 1949

Mr. DAVENPORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very fine article written by the Reverend Father Thomas Coakley, pastor of Sacred Heart Church, East Liberty, Pittsburgh, Pa. "Some light and less heat" is the purpose of this message concerning the highly controversial Federal aid to education bill. There are some pertinent facts contained herein that have not as yet been injected into the aid to education arguments; and I believe that Reverend Coakley's statement can be read with interest and profit. Only a few years ago through the efforts of Father Coakley and the members of his parish, of which I am proud to be a member, a fund of several hundred thousand dolars was raised to finance the building of one of the finest and most modern schools in the United States. If anybody is entitled to speak out on this important issue, it is the Reverend Father Thomas Coakley, who has done so much to forward the cause of better education, both grade and high school, in the city of Pittsburgh; and I take this oportunity of congratulating the members of Sacred Heart parish, both for their loyal support of their able pastor and for their militant opposition to any aid to education legislation which would discriminate against parochial and other private schools.

SEPARATION OF CHURCH AND STATE—SOME LIGHT WITHOUT HEAT

For almost 240 years after the Pilgrims landed at Plymouth, in 1620, scarcely a word was heard in America about the separation of church and state. Two hundred and forty years is rather a long span in American history. To claim that this relatively new and modern phase in American life is a tradition as old as America, that it is the sacred cornerstone of our American way of life, and that it is the badge of our American freedom, is simply to write one's self down as a monumental ignoramus in American history.

If you talked about the separation of church and state to any of the passengers on the *Mayflower*, he would laugh at you. He never heard of the thing, nor did any one else in America for 240 years afterward, or along about the time of our Civil War, around 1860, and this is not yet 90 years ago.

There has been a great amount of heat generated in discussions concerning the separation of church and state and specifically about Federal aid to education. May I endeavor to throw some clear cold white light on the doctrine which is disturbing millions of Americans? No statement will be made that is not susceptible of documentary proof from any American history.

In eight of the Original Thirteen American Colonies—Massachusetts, Connecticut, New Hampshire, Maryland, Virginia, North Carolina, South Carolina, and Georgia—laws were enacted requiring every village to provide public schools for all children and youth at the expense of the entire community. They were supported by public taxation, and there was no objection from the colonists. These schools were emphatically religious in their whole attitude, religious in spirit, religious in administration. Even their teachers were selected on the basis of their religious character, their orthodoxy, their piety, as well as their learning.

Not only the public officials but the rank and file of the American colonists well realized that religion is not something in a vacuum, something like an extra suit of clothes that you can get along just as well without, something set apart from the rest of life. They were deeply convinced that religion is something that penetrates through the whole area of life's experiences; that religion concerns itself with the interests and the activities of daily existence, and is involved in every decision of a practical nature throughout the entire day. Therefore, religion should be an essential part of the curriculum of every educational institution. Hence, religious education is the genuine American education; it was the original American way of life.

The first amendment to the Constitution of the United States declares: "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof." This expressly forbids the establishment of any church as a national religion, to be supported by the state. This amendment was adopted not because the framers of the Constitution were hostile to religion; just the contrary. All of them were religious men, soundly educated in religious schools. There were no other schools.

The first amendment was adopted because at the time of our war for independence in eight out of the Original Thirteen Colonies certain churches were established by law. The Congregational Church was so recognized by legal enactment in three of the Colonies, and the Episcopal Church in five of them. Only five of the Original Colonies had no law respecting religion on their statute books. The first amendment proclaimed that henceforth no particular church was to be declared the official religion of the country. It was the exclusion of sectarian churches that was aimed at, not the exclusion of religion.

Indeed the founding fathers in the Ordinance of 1787, which provided for the development of our great Northwest, clearly associated religion with education. The ordinance reads: "Religion, morality, and knowledge being necessary to good government, and the happiness of mankind, schools and the means of education shall be forever encouraged."

The whole American tradition of public education from its very beginning was that education should be moral and religious. The Constitution wisely left the various religious groups free to carry out whatever educational undertakings they desired, while the state, being impartial but not hostile, could favor no particular church. Nonetheless it would welcome religion, for the authors of the Constitution had a strong conviction that good citizenship was founded upon religion and morality and that such virtues should be an essential part of every educational system.

It is for this reason that all the early colleges of the United States, now grown and expanded into our great universities, were founded with a distinctly religious atmosphere, with religion and morality forming part of the curriculum.

Harvard College, founded in 1636 by the Reverend John Harvard, had as its purpose to save churches from an illiterate ministry.

William and Mary College was founded in 1693 for the purpose of giving the country an educated body of ministers of religion.

Yale College was founded in 1701 by the Reverend John Davenport, and its declared purpose was to prepare young men for public employment, both in church and state, hence its strong early religious atmosphere.

Columbia College was established in 1753 with its chief objective to teach and engage children to know God in Jesus Christ."

It was the same with Princeton, Pennsylvania, Brown, Rutgers, and Dartmouth. Of the 119 colleges founded east of the Mississippi, 104 were Christian, and all of them were established primarily for Christain purposes, and they were maintained and supported in a religious environment.

Of the 260 colleges founded by the year 1860 in this country, only 17 of them were State universities. All of the remainder, 243 of them, were definitely religious in character. In other words, public education, education of the whole people, was definitely and emphatically religious in tone. Secular education, education from which religion was excluded, was unthinkable in this country until sometime around our Civil War.

All of our great American institutions are based upon religion. Our courts of justice, our family life, our education, our banking and currency systems, indeed, our money bears upon it the imprint "In God we trust." Every one of these cherished institutions, of which we are so justly proud, reposes upon the great eternal truths of religion and morality.

Hence if the people of this country are not instructed in the teachings of religion and morality, making known to them a comprehension of their origin, their destiny, their duty to God, to themselves, their fellow citizens, their country, then they simply cannot have a thorough understanding of the origin and development of our American institutions, and our American way of life.

Yankee "Suckers"

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, August 5, 1949

Mr. PATTERSON. Mr. Speaker, an extremely thought-provoking editorial entitled "Yankee 'Suckers'," from the August 3 issue of the Ansonia (Conn.) Sentinel, has come to my attention. The purport of the editorial is that we, in New England generally, and Connecticut particularly, have long been the donors of tremendous sums of money issued in various forms of subsidies to the so-called poorer States. It is somewhat inconsistent to my point of view for the States which are the recipients of so many Federal grants and subsidies to be wealthy enough to offer many inducements for New England industries to locate there.

Serving my second term in the Congress of the United States, I have become increasingly aware of the many measures enacted by the Congress which are of benefit to Southern and Southwestern States. These take many forms but have one thing in common—the money which is appropriated comes, in great measure, from the hard-pressed taxpayers of the so-called wealthy States in the northern half of our country.

I want to address myself to a pressing problem in the State of Connecticut in this connection. Many Members of Congress are familiar with the relocation of the Chance Vought Co. from Stratford, Conn., to the outskirts of Dallas, Tex. This relocation was largely due to the efforts of the Federal Government. It resulted not only in a loss of revenue to the municipality of Stratford; but a consequential loss of employment for many thousands of skilled laborers in that entire area.

In the not too distant past, the United States Tire Corp., of Waterbury, saw fit to move many of its operations to a location in Arkansas—with a resultant decline in employment and loss of tax revenue to the community.

We are now faced with another threat in my own Fifth District. The Eagle Lock Co., of Terryville, is considering an offer from a Southwestern State to locate there. It is contended that the main inducement is a total relief from real-estate taxes for a 10-year period.

I have no direct knowledge of the truth of this statement; but also have no knowledge of its being denied. The relocation of this plant would result in a tax loss of approximately one-half of the town's grand list assessment, and a loss of employment to hundreds of workers.

This is neither a temporary nor a recent dilemma. There have been many more instances of industries in the New England area moving to the South and Southwest for a variety of reasons. I am certain that one of the reasons is the inducement of tax-free operations for a period of years.

We, in Connecticut, are proud that we have a very high per capita pool of skilled workers, and contribute proportionately more to the Federal Treasury than most other States of the Union. This pleasant combination of circumstances will very shortly come to an end if the raids on our stable industries continue. It can readily be visualized that, as I contend, the unemployment situation in Connecticut is not one predicated solely upon the ups and downs of business economics. The many thousands out of work in the Stratford-Bridgeport area, for instance, are almost permanently unemployed unless some other industry fills the void created by the loss of Chance Vought to that area.

A similar situation exists in the other areas mentioned. Thus we see that in these three lone instances over 10,000 skilled workers in Connecticut face the prospect of continued unemployment even if business prospects should become brighter. These are people who have settled in Connecticut over a long period of years and who have created families and become outstanding and worth-while citizens in the Nutmeg State. They have permanent ties there, and have no wish to lead a nomadic existence by following any particular industry to other sections of the country.

The seriousness of this problem cannot be overstated. The people of Connecticut and New England cannot long endure continued Federal subsidies to other sections of the country and see economic ruin staring them in the face because of the dislocation of their industries.

For this reason, I think it particularly pertinent that the Members of Congress from the New England section of our country, whether they be Republican or Democrat in party affiliation, should examine very closely any further programs of subsidies or Federal grants, of which the chief beneficiaries are the Southern States.

I believe in the principle of Federal-aid-to-education, as ignorance is not bounded by State lines; I believe in a prosperous agriculture, as it is necessary for the continuance of high standards of living in all sections of our country; I believe in navigation and flood control because these also exert favorable influences in sections other than those where they are located. But I cannot, in good conscience, continue, as a Member of this body, to vote time after time for the appropriation of money which is siphoning off the wealth and the strength of New England.

Only last week the House completed action on a bill which would give Federal grants to communities in so-called defense areas, to make certain that there are adequate educational and health facilities for their swollen population. Here is a very direct instance of money taken from the pockets of our New England citizens to help pay the increased cost of maintaining the Chance Vought factory in Texas for example. These are laudable purposes; but we must not forget the fact that communities in the State of Connecticut maintained these facilities for many years without requesting aid from the Federal Government.

I am sincerely convinced that this subject is of the utmost seriousness, and I intend to continue my efforts on the floor of the Congress, and bring to the attention of its members many other ways in which New England is contributing to its own economic dislocation by being a substantial donor in the Federal subsidies of which the South and the Southwest are the chief beneficiaries.

The editorial follows:

YANKEE "SUCKERS"

The Eagle Lock Co. of Terryville, it is said, is contemplating pulling up stakes and moving to the South where it has reportedly received a tempting assurance of exemption from taxes for an attractively long period.

The Chance Vought Co., once a large-scale employer of labor in the Stratford-Bridgeport area, has moved to Texas, taking not a few Connecticut residents with it, and leaving others to seek employment elsewhere. That move, it has been said on good authority, resulted from prodding at Federal levels.

It ought to noted that these poor Southern States which are offering subsidies to industries are also clamoring loudest for vast Federal aid to education. Viewed strictly from the economic viewpoint, what this means is that Connecticut's Federal taxpayers are to be taxed in order that the South may be able to exempt new industries from taxes, thereby inducing industry to leave this State for the South. When an industry moves down, it takes some of its workers with it, creating in Southern States a need for more schools. Uncle Sam is now supposed to supply that need. The proportion of Federal taxes that come from New England in comparison with the yield in the South is relatively high. We are being asked to pay through the nose to subsidize the poor States so that they may subsidize industry and snare it away from Connecticut, leaving us poor indeed.

It would appear that areas of the South or Southwest which can afford to exempt going industry from all taxes ought to be well able to afford to meet their own school building requirements without using the taxing powers of the Federal Government to get the people of Connecticut to pay their freight. This is a very pertinent angle of the Federal equalization of education proposals which deserve to be considered by New England's Senators and Representatives in Washington from the viewpoint of intelligent self-interest. Putting two Connecticut dollars into the Federal kitty for every dollar Connecticut will get back from Washington and then having those dollars used to snare away our bread and butter is adding insult to injury any way you look at it here in New England, and if we Connecticut Yankees fall for such buncombe there's a good slang term for us. We're just plain "suckers," waiting to be taken.

Where Do We Go?

EXTENSION OF REMARKS

OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1949

Mr. HÉBERT. Mr. Speaker, several weeks ago, with the consent of the Members of this body, I caused to be inserted in the RECORD a series of splendid articles by William H. Fitzpatrick, editor of the New Orleans States.

Mr. Fitzpatrick was my successor as city editor of the New Orleans States when I resigned to come to Congress. Since then he has successively become managing editor and editor and during the war years served with dictinction in the Pacific as a member of the Navy.

Mr. Fitzpatrick's series of articles on the so-called universal declaration of human-right program, attracted national attention and justly so.

Recently Mr. Fitzpatrick appeared before prominent New Orleans civic organizations in support of his editorials on the subject. The address which he made is equally as thought provoking and important to our future as his editorials in the New Orleans States. For that reason I have obtained permission to insert the speech. We cannot talk too much about this subject and we cannot sound too often the dangers which lurk in the wake of such a program.

Here is Mr. Fitzpatrick's speech:

WHERE DO WE GO FROM HERE?—THE UNIVERSAL DECLARATION OF HUMAN RIGHTS PROGRAM

Mr. Chairman, members, and ladies and gentlemen, I am glad to be here today because what I want to talk to you about may be of some importance to everyone in this country. I believe it to be important to you because you are businessmen and Orleanians, and mostly because you are Americans.

For if what I want to discuss comes to pass, as its proponents plan, there may not be any organization such as yours, or even any America as we know it now.

I doubt if many of you here had ever heard, 2 months ago, of a universal declaration of human rights. It would be immodest of me to assume, simply because we have had editorials about it in our paper, that you know very much about it now.

You may not know much about it, but as Americans you are on record as favoring it. The United States delegation to the United Nations voted for it, and last January 27, President Truman published a resolution on National Freedom Day in the Federal Register, and I quote:

"Whereas the Government and the people of the United States wholeheartedly support the universal declaration of human rights approved by the General Assembly of the United Nations on December 10, 1948."

I wonder if the American people know that they wholeheartedly support this declaration, particularly when it is recalled that Mr. Frank E. Holman, president of the American Bar Association, said recently:

"When the declaration was passed last December in Paris there was no copy of the final draft available in this country. I was advised that not even the State Department of our own Government had a final draft of a document which as to our basic American rights is nebulous and ambiguous and the latter portion of which sets up a collectivist concept of government for all the peoples of the world, including ourselves."

The declaration contains 30 articles. Our vote for the declaration has no legal effect upon this country. But our vote for it is considered a moral obligation and we will be expected to implement this declaration by a number of covenants.

The first of these covenants has not been completed. But the paths to be followed are already charted in the declaration. And the Senate of the United States will be asked to adopt treaties as covenants on human rights.

If the Senate adopts these treaties, they will become the supreme law of the land and will supersede all State constitutions and laws and all city and parish ordinances.

This is so, because the United States Constitution provides, in article II, section 2, paragraph 2, that:

"He (the President) shall have power by and with the consent of the Senate to make treaties, provided two-thirds of the Senators present concur."

And because article VI, section 2, provides that:

"This Constitution and the laws of the United States which shall be made in pursuance thereof and all treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land and the judges in every State shall be bound thereby, anything in the Constitution or laws of any State to the contrary notwithstanding."

If the Senate should implement this declaration by treaties, it may lead to an International Court of Human Relations.

This Court of Human Relations would have jurisdiction over each and every one of us who will be answerable to it for alleged violations of the covenant.

Mr. Holman has written of this declaration:

"In order to enforce the provisions of a bill of rights, the United Nations will have to interfere continually and minutely in the internal affairs of member nations. It will have to establish standards, and determine when and where those standards have been violated, and to take steps to correct or punish such violations."

This is among the studied conclusions of the president of an association of 40,000 lawyers in the United States.

Now let me discuss a few of the rights which this declaration would provide.

Article 22 of the Declaration says:

"Everyone, as a member of society, has the right to social security and is entitled to the realization, through national effort and international cooperation, and in accordance with the organization and resources of each state, of the economic, social, and cultural rights indispensable for his dignity and the free development of his personality."

This language is plain enough.

It can mean social security for all the world, with Uncle Sam—through international cooperation in accordance with our resources—footing most of the bill.

What sort of social security does the declaration contemplate?

Article 25 says:

"1. Everyone has the right to a standard of living adequate for the health and well-being of himself and of his family, including food, clothing, housing, and medical care and necessary social services, and the right to security in the event of unemployment, sickness, disability, widowhood, old age, or other lack of livelihood in circumstances beyond his control."

These two articles are typical of much of the social and economic program planned for us on an international scale.

How revolutionary it is in concept was adequately expressed by John P. Humphrey, director of the Division of Human Rights of the United Nations, who wrote in the January 1948 issue of the Annals of the American Academy of Political and Social Science:

"What the United Nations is trying to do is revolutionary in character. Human rights are largely a matter of relationships between the states and individuals, and therefore a matter which has been traditionally regarded as being in the domestic jurisdiction of the states. What is now being proposed is, in effect, the creation of some kind of supernational supervision of this relationship between the state and its citizens."

Should the Senate ratify as a treaty a covenant containing article 14 of the declaration, the Congress need no longer be concerned with legislation regulating admission of displaced persons.

All any will need is passage to America.

Our immigration laws will be useless.

Article 14 of the declaration says:

"1. Everyone has the right to seek and to enjoy in other countries asylum from persecution."

Discussing this far-reaching program, Mr. Holman has this to say:

"This provision, if respected in the United States, would appear to nullify immigration laws and open the gates wide to anyone claiming persecution. Certainly the majority of Americans will not favor unrestricted immigration or the making of this country an unrestricted asylum for the persecuted from all over the world."

The declaration is not only socialistic in its implications, but if implemented in treaty form, it would strike down laws of many States and social customs of wide acceptance among the people.

Article 7 says:

"All are equal before the law and are entitled without any discrimination to equal protection of the laws. All are entitled to equal protection against any discrimination in violation of this declaration and against any incitement to such discrimination."

Article 16 reads:

"1. Men and women of full age, without any limitation due to race, nationality, or religion, have the right to marry and found a family. They are entitled to equal rights as to marriage, during marriage, and at its dissolution."

In the statute books of 29 States are laws forbidding miscegenation or marriage between different races. In most other States which do not by law ban such unions, the social customs of the people forbid it.

Seventeen States and the District of Columbia have laws enforcing segregation in either education or public places or public conveyances, or all three.

In addition, six States give discretionary powers to school boards to establish segregation. These are Arizona, Indiana, Kansas, New Mexico, New York, and Wyoming.

Article 16 of the declaration would obliterate such laws.

Should any mother try to prevent the marriage of her child because of objections to a suitor on racial, national, or religious grounds, that parent would be answerable to an International Court of Human Rights, wherever it might be sitting, for under article 7 she would be guilty of incitement to discrimination.

The declaration is of a piece with President Truman's so-called civil-rights program. The Comittee on Civil Rights, established by President Truman under Executive Order 9808, has been working hand and glove with the Human Rights Commission of the United Nations, of which Mrs. Eleanor Roosevelt is chairman.

The report of the President's Committee on Civil Rights was published in 1947. In January 1948, President Truman, in a special message to the Congress, demanded passage of his committee's recommendations in his force bills which so recently resulted in the Senate filibuster.

Many students of constitutional government believe his force bills to be unconstitutional. Apparently his Committee on Civil Rights is also dubious of their legality. For, on page 110 of its report to him, it is suggested that under the Supreme Court ruling in the Missouri against Holland case in 1920.

"That Congress may enact statutes to carry out treaty obligations, even where, in the absence of a treaty, it has no other power to pass such a statute. This doctrine has an obvious importanec as a possible basis for civil-rights legislation."

The committee further reported:

"The Human Rights Commission of the United Nations is at present working on a detailed international bill of rights designed to give more specific meaning to the general principle announced in article 55 of the Charter. If this document is accepted by the United States as a member state, an even stronger basis for congressional action under the treaty power may be established."

The composition of the commission which drafted the Universal Declaration of Human Rights is worth noting. Of it Mr. Holman has written:

"It is revealing to note the 'make up' or personnel of the commission.

"Mrs. Eleanor Roosevelt is its chairman and the sole United States representative. She is not a person in any sense trained in legal draftsmanship. She is primarily a social reformer.

"Australia's representative is Col. William Roy Hodgson—by training a military man and from his biography a person whose experience has been largely confined to government service.

"The United Kingdom's representative is Mr. Charles Dukes—a trade unionist by profession.

"These three are the only Anglo-Americans or representatives of English-speaking peoples on the commission of 18 members."

The other 15 members comprise three from the Soviet and one from Yugoslavia, and one each from Belgium, Chile, China, Egypt, France, India, Iran, Lebanon, Panama, Uruguay and the Philippines.

This is the commission which has drafted a document that, in the words of Mr. Holman: "* * * might be held to impair, or be a substitute for, our own cherished Bill of Rights, which protects the individual citizen."

"Plot" is not too strong a word for this undermining of our American laws, customs, and rights.

The United States Senate ratified the Charter of the United Nations because this Nation wanted to become a party to an international pact, the purpose of which is to insure peace in the world. The Senate did not intend the Charter to become a vehicle for socialization and law abrogation.

Article 55 of the Charter contains this language:

"With a view to the creation of conditions of stability and well-being which are necessary for peaceful and friendly relations among the nations based on respect for the principle of equal rights and self-determination of people, the United Nations shall promote:

"(c) Universal respect for, and observance of, human rights and fundamental freedoms for all without distinction as to race, sex, language, or religion."

Senate bill 984, the FEPC bill, introduced in the Eightieth Congress, has this language in section 2 (c):

"This act has also been enacted as a step toward fulfillment of the international treaty obligations imposed by the Charter of the United Nations upon the United States as a signatory thereof to promote 'universal respect for, and observance of, human rights and fundamental freedoms for all without distinction as to race, sex, language, or religion.'"

Note that article 55 says that these idealistic endeavors shall be promoted. There is nothing in the Charter which says any signatory shall force or demand that this millenium come about. The language is "shall promote."

The United Nations is specifically forbidden by the Charter to interfere in domestic affairs of any signatory. Article 2, paragraph 7 of the Charter reads:

"Nothing contained in the present Charter shall authorize the United Nations to intervene in matters which are essentially within the domestic jurisdiction of any state or shall require the members to submit such matters to settlement under the present charge."

The statement in Senate bill 984 that we are obligated to impose upon this country such force bills as the FEPC is therefore not only misleading but actually untruthful. There is no obligation under the Charter to do any such thing.

The question whether acceptance of covenants for the Universal Declaration of Human Rights in treaty form by the United States Senate would conflict with the United States Constitution is one which the American Bar Association is presently studying.

The covenant's authority over all State laws and county, parish, and city ordinance is unquestioned.

Proponents of the declaration and its revolutionary proposals point to the United

States Supreme Court ruling in the *Missouri* v. *Holland case* when the State of Missouri attacked a treaty signed by the United States and Canada protecting migratory birds.

The Supreme Court held then:

"Acts of Congress are the supreme law of the land only when made in pursuance of the Constitution, while treaties are declared to be so when made under the authority of the United States. It is open to question whether the authority of the United States means more than the formal acts prescribed to make the convention. We do not mean to imply that there are no qualifications to the treaty-making power, but they must be ascertained in a different way. * * * We may add that when we are dealing with words that are also a constituent act, like the Constitution of the United States, we must realize hat they have called ino life a being the development of which could not have been foreseen completely by the most gifted of its begetters. It was enough for them to realize or to hope that they had created an organism; it has taken a century and has cost their successors much sweat and blood to prove that they created a nation. The case before us must be considered in the light of our whole experience and not merely in that of what was said a hundred years ago. The treaty in question does not contravene any prohibitory words to be found in the Constitution."

Those who would enact such civil-rights legislation as President Truman has called for have pointed to the *Missouri* v. *Holland case* as the basis for such laws under treaty powers.

Their plea will be that to foster peace and justice in the world such a document as the covenant should be considered in the light of our whole experience and not merely in that of what was said a hundred years ago.

Lawyers and students of constitutional government believe that such a covenant would conflict with our Constitution in a number of ways, but mainly in article 1 of the Bill of Rights:

"Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech or of the press; of the right of the people peaceably to assemble and to petition the Government for a redress of grievances."

Article 30 of the Universal Declaration of Human Rights reads:

"Nothing in this declaration may be interpreted as implying for any states, groups, or persons, any right to engage in any activity or to perform any act aimed at the destruction of any of the rights and freedoms set forth herein."

In other words, if the Senate ratifies a treaty containing this dictatorial restriction, and the Supreme Court upholds it, the newspaper I work for could no longer criticize it; I could not appear here to speak against it, and the people—among them you—could not assemble to petition our Government for a change in it.

Now here will be those who say:

"But these are only idealistic proposals for the future. Perhaps some day we can all live in this world safely and happily, and even perhaps have one world, one government, one nation. They will say, we must have idealists and I agree. I believe we must have realists, too, who will know the danger signals in the dreams of others which they themselves cannot or will not see.

These are the people who will say, all this is much ado about nothing. They will say we are building up a straw man so we can take it apart.

To refute this argument, let us put on the stand witnesses for the defense. I propose to let them convict themselves.

Last December 28 in an analysis notable for its emotional approach, but entirely evading the dangers implicit in the plans of the Human Rights Commission, James Simsarian of the Department of State spoke before the American Political Science Association. First witness, Mr. Simsarian, who said:

"The next step in the field of human rights will be the completion of the drafting of an international covenant on human rights in treaty form at the meeting of the United Nations Human Rights Commission at Lake Success scheduled for April 1949. This covenant, being in treaty form, will be legally binding on the countries which ratify it."

And he said:

"As I pointed out earlier, the draft covenant on human rights is concerned with only basic civil rights, with the expectation that conventions will be drafted later with respect to certain of the other rights set forth in the declaration."

Second witness:

The Fact Sheet, issued by the Office of Public Affairs in the United States Department of State, carried on October 11, 1948, this statement:

"It is not intended that the covenant will be the only treaty on human rights to be presented for ratification to the members of the United Nations. Additional treaties and conventions to guarantee specific rights are already being composed."

So you can see that it is not a straw man. And it isn't in the future. It is here now, already, today.

As you have heard, the United States signed the declaration on December 10, 1948. Since then we have three times been accused of violating the human rights of Communists.

Three times it has been used as a propaganda vehicle against us and Britain.

"The latest instance occurred at the General Assembly of the United Nations last month when the Polish delegate, Julius Katz-Suchy, filed a written protest claiming that Great Britain had violated the human rights declaration when it removed Gerhart Eisler from the Polish liner *Batory*. The same day, May 19, Katz-Suchy, launched a vituperative attack on Britain on the floor of the General Assembly for the removal of Eisler.

"A day or so previously, the Polish Embassy in London took the same position that Eisler's human rights had been violated when Britain removed Eisler at the request of the United States after he jumped bail and fled this country.

"On March 4 a complaint was filed by a deputation from the International Association of Democratic Lawyers of which Professor René Cassin of France is president. Professor Cassin is a prominent member of the human rights commission which drafted the declaration which we signed."

The complaint charges that the trial of the 11 top Communists in New York violates the articles of the declaration covering freedom of thought, freedom of expression, and freedom of peaceful association. This complaint can be placed on the agenda of the United Nations for action by the Soviet Union if it so desires. That's how far we've got already.

What can we do about it?

Well, the Supreme Court will have the final say on the constitutionality of any such treaty, if the Senate ratifies it.

And it should be remembered that Charles Evans Hughes, a former Chief Justice of the highest Court of the land, once said:

"The Constitution is what the judges make it."

We all know that economic philosophy and political ideology often seem as important in Supreme Court decisions as legal interpretation.

The people of this Nation, however, have it in their hands to relieve the Supreme Court of ever having to decide whether this covenant would or would not supersede our Constitution and Bill of Rights.

The people of this Nation have this power through their elected Senators. The President can only commit this Nation to such a collectivist program by ratification by the Senate.

If this plan is adopted as treaties by the Senate, this country may no longer be as we have known it. We will have instead a world-wide social and economic system with Uncle Sam paying the bills. We will have an International Court of Human Rights to which every one of us may be held responsible. Our immigration laws will become ineffective. Laws of many States will be thrown out. The customs of the people will be disregarded.

It invades the rights of the people to choose their own intimates and fellow workers and it would strike a serious blow at religious beliefs and tenents.

It is a far-reaching, revolutionary document which could easily drive this country to the poorhouse and its people to totalitarianism.

It is up to you, the people, to do something about this. If you favor this plan for world government, then write your Senators and write your friends to write their Senators to pass any such treaties unanimously.

But if you are against these derogations of your rights as free-born Americans, then get busy and let the Senate know how you feel.

Report on Arab Threats To Resume War and the Rearmament of the Countries of the Middle East

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 18, 1949

Mr. CELLER. Mr. Speaker, the declared policy of the United States is to restore early peace in the Middle East. The present negotiations at Lausanne can only be successful if both Israel and the Arab states show sincere willingness to reach a general peace settlement. It is most disturbing, therefore, that the press and radio in many Arab states continue to express threats to resume hostilities against Israel as soon as their countries feel capable of doing so.

These threats can hardly be ignored in view of the present large-scale rearmament of the Arab states. Under these circumstances the possible lifting of the United Nations embargo on shipment of arms to the Middle East may constitute a serious danger to peace in that area of the world.

First. Arab threats to resume war: The first anniversary of the proclamation of the State of Israel last May gave rise to a fresh wave of warlike utterances and promises of coming Arab revenge. In the following a few typical excerpts are given.

(a) In his broadcast in English on May 19, 1949, Azmi Nashashibi, the director of the radio station of Ramallah, which is located in the Transjordan-held part of Palestine, said:

Thousands of boys are receiving military training and the girls are learning first aid.

He asked for the return of all the refugees to their homes and added:

We have been attacked, murdered, robbed, ruined, but we shall carry our burdens and, when the time comes, we shall show what material we are made of. We, the Arabs of Palestine, shall neither forget nor forgive.

(b) As reported by the Palestine Arabic newspaper Al Difa'a of May 8, 1949, Omar Saleh al Barguthi, a well-known Palestinian Arab leader, in a speech made on May 6, 1949, at Ramallah, stated:

We lost the first round, but we must not lose the second round. It is my hope that we will make Palestine a grave for the Jews, as was done to other invaders before them.

(c) On June 27, 1949, Damascus radio voiced the opinion that—

The Arabs lost the first round of the Palestine war because they listened to the advice given them by the British and the Americans.

In the second round, which will begin soon, we shall not be so foolish—

The radio said—

We must ceaselessly increase our military strength and construct a large number of new arms factories; then we shall be successful and the Jews will be thrown into the sea.

(d) According to a Baghdad radio broadcast of June 28, 1949:

The Arabs have been showing lamentable weakness lately, hinting that normal relations will be restored with the Jews as soon as Israel has allowed the refugees to return.

The Jews are our enemies—

The broadcast continued—

and no matter how conciliatory they may be, we shall never cease our preparations for the day of revenge and for the expulsion of the Jews from our soil.

Second. Arab rearmament: (a) Dr. Khalil Totah, executive director of the Institute of Arab American Affairs in New York, stated, on August 1, 1949, that—

The Arabs have begun to arm. Lebanon, Syria, Transjordan, and other Arab states are introducing compulsory military service. (New York Times, August 2, 1949.)

(b) The June 1949 issue of the Egypt News, a bulletin published by the Royal Egyptian Embassy in Washington, says:

The Egyptian Cabinet has approved and sent to Parliament the largest budget for purposes of national defense in Egypt's history. From the 1949 total budget of 193,000,000 Egyptian pounds ($772,000,000), the Cabinet recommended that 52,000,000 pounds ($208,000,000) be set aside for the Ministry of War and Marine. Saneh Moussa Bey, chairman of the Chamber of Deputies appropriations committee, stated that the huge military budget will be adequate to establish, as part of the militiary program, a heavy-ammunition factory, a light-ammunition factory, and will enable the Egyptian Government to open plants for the manufacture of airplanes. In addition, present plans call for a modern motorized brigade, an additional air squadron, and the purchase of large quantities of arms and ammunition. The budget provides for the maintenance of troops stationed at Gaza and El Arish, defense posts near Israel.

(c) The Beirut correspondent of the New York Times reported on August 1 that an additional sum of $7,000,000 has been granted to the Syrian Army, an allocation which, in the correspondent's words, "represents a considerable strain on the national economy."

The same news item mentions that the Syrian Ministry of Defense has been empowered to requisition sections of the population for road building and other construction of importance to the national defense.

On July 11–12, 1949, Damascus radio stated that the Syrian Cabinet has decided to impose new taxes on trade and industry and that the money raised will be used to increase Syria's military strength.

Mr. Lawrence Griswold, correspondent of the North American News Alliance, recently reported:

A few weeks ago the port of Latakia (Syria) was closed to all foreigners and, quite suddenly thereafter, Syrian airports bloomed with French jet aircraft, French tanks rumbled over Syrian roads, and French artillery and caissons choked the narrow road between Latakia and Aleppo. Fighters and bombers flew overhead, piloted by French airmen, and fields from Aleppo to Deraa became, within the space of a few days, beehives of activity.

Third. Lifting of the embargo: (a) On May 29 of last year the Security Council of the United Nations imposed a ban on shipment of armaments to the Middle East. If, as it has recently been suggested in various quarters, this embargo were to be suddenly lifted, the Arab States would immediately receive heavy armaments from the United Kingdom under their treaties with that country and would also be free to replenish their stocks by purchases in other countries.

(b) Israel has reason to believe that, if the Arab countries were to find themselves suddenly possessed of superior military strength, they would be strongly tempted to renew the attack on Israel. It may be assumed, therefore, that Israel would not allow itself to be placed in a situation of decisive military inferiority. The assurances that the new flow of arms is merely intended to assist the Arab Governments to maintain their internal security can hardly assuage Israel's apprehensions. The invasion and warfare launched last year by the Arab States in an attempt to destroy Israel were conducted with armaments supplied for defensive purposes only. Thus the lifting of the Security Council's embargo would open a swift and disastrous armament race in that sensitive area of the world.

(c) In these circumstances the promise of renewed arms supplies to the Arab States will be a blow to the prospects of peace and a gratuitous obstacle to the success of the Lausanne talks at a particularly delicate stage.

(d) The rearmament of the countries of the Middle East would be of no real value for their defense against the attack of any major power from the outside. On the other hand, it would postpone the vitally necessary economic and social reconstruction of the Middle East by unduly strengthening the military class and draining the limited national budgets of those countries. Moreover, the Arab countries are at present so deeply divided among themselves that any increase of their military power may lead to hostilities between the rival Arab blocs.

(e) In view of all these facts it might, as suggested by the New York Times of July 29, "be the better part of wisdom for the Security Council expressly to continue this restriction as a precautionary measure at least until a political settlement is finally agreed upon."

Panama Canal—Security of Transit in World War II

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1949

Mr. THOMPSON. Mr. Speaker, for many months highly instructive articles relating to the operation and defense of the Panama Canal have been appearing in the CONGRESSIONAL RECORD. Most of these have mentioned the Army or the Navy, but there are other elements of the armed forces which have played important parts in the security of the Canal, in World War II, for example, the United States Marine Corps.

To the end that the important work of the Marine Corps in protecting the Panama Canal may become better known to the Congress, other branches of the Federal Government, and our people, in general, under leave granted, I am extending in the RECORD, as a part of these remarks, a most informative article by Master Sgt. Frederick W. Hopkins, United States Marine Corps, formerly lieutenant colonel, who from 1944 to 1946 served as executive officer, and later as commanding officer, of marines in the Canal Zone, published in the U. S. Naval Institute Proceedings, March 1949.

Sergeant Hopkins, as will be noted, like a number of the other writers on the subject, confirms the obvious deduction that the security of any type of canal depends upon the combined power of the armed forces and their industrial support, and that any canal which may be constructed—of whatsoever plan or construction—will require adequate, over-all defense.

The duty of guarding ships in transit at Panama from February 1942 until after the end of the war was performed by the United States Marine Corps. Hence, those who, like Sergeant Hopkins, served with effective distinction in and about this protective effort in such a great crisis, are very well qualified, indeed, to speak with authority on the subject.

SECURITY OF THE PANAMA TRANSIT IN THE WAR

(By Master Sgt. Frederick W. Hopkins, U. S. Marine Corps)

The part played by naval forces in the security of the Panama Canal constitutes a little-known but interesting fraction of the war effort during the recent period of hostilities. It is probably assumed by anyone who cares to give the matter thought that the security measures of the Navy in regard to the Canal Zone consisted of the usual mine and net activities, of both off-shore and inshore sea-borne patrols, and the usual close and distant aerial reconnaissance. The Army is, and was, charged with the shore defense and the security of the Canal from attack and from sabotage. It is not the purpose of this essay to examine these activities, although they contributed greatly to the security of the transit. They meant to the

personnel involved long and fruitless hours of standing watches, of black-out alerts, and of isolation on wild and lonely mountain tops. The dreary hours tossing on plunging decks, the tedious flights, and monotonous billets in small coastal villages and the garrison duty amounting almost to exile in the Galapagos meant to those so occupied an entirely negative participation in the war.

Appropriate measures have been taken to secure the Canal from hostile sea, and/or air attack, and provision having been made by adequate guard establishments to prevent saboteurs reaching the works, it became necessary to avert the possibility of sabotage emanating from transiting ships, either from the agency of the ship itself or from personnel aboard. This duty was assigned to the commander, Panama Sea Frontier (Commandant, 15th Naval District) by the over-all Caribbean Defense Command; and it was further delegated to the district marine officer who in his dual capacity as commanding officer of the marine barracks carried it out. It was necessary to coordinate and accomplish the wishes of the Naval and military authorities with those of the Governor of the Panama Canal and of the marine superintendent by working harmoniously with the captains of the port at either terminus.

The methods and activities of the security forces so employed were developed through trial and error over a period of time. It is the purpose of this article to discuss the operation of the ship guard organization for the last 18 months of its existence.

It was obvious that the greatest and most recurrent hazard to the transit was from ships using the waters of the area, and especially when passing through locks and narrow cuts. The possibility that a hostile crew might cause their vessel to blow up or sink in these places was great. If such an event occurred, the passage of vessels engaged in the war effort could be delayed from weeks to many months. The long and dangerous passage around South America, where submarines could lie in wait, adds over 7,000 miles to the voyage from ocean to ocean. There was also the constant danger of the fanatical individual who might blow up ship, crew, and himself, damage gates or installations by explosives, or cause a collision which, whether by accident or design, would achieve the same result.

Prevention of such an eventuality was assigned to the naval forces, consisting of two companies of Marines with attached naval ratings: The Second Guard Company operating from the naval base at Rodman (then called Balboa, west bank) and the Third Guard Company (located at Cristobal) from the naval station at Coco Solo. A field officer on the staff of the commanding officer, Marine Barracks, Balboa, was designated "coordinator, ship's guards" and served as the general administrator of the activity. Each of the two companies consisted of from 5 to 6 officers and of about 350 men. Twenty-five to thirty bluejackets were attached to each in the ratings of machinist's mate or quartermaster. These sailors worked in pairs, one of each rating to each guard sent aboard a transiting vessel. Additional machinist's mates, after special instruction, served as inspectors of vessels coming to anchorage which were laden with explosives or hazardous cargoes.

Over 11,000 vessels were passed through the Canal or anchored in adjacent waters, under guard. That many flew the flags of countries under Nazi domination, or dubiously neutral, without any successful attempt against the Canal proves at least in a negative way that the measures established and the organization employed were successful. It is of interest, therefore, to examine in not too great detail that system and organization.

From Limon Bay on the north or Caribbean coast of Panama, whose sheltering breakwaters provide a safe and ample anchorage, the Canal traverses the Isthmus in a generally southeasterly direction. Six miles from the northern entrance and up a dredged channel are the Gatun locks, which in three successive lifts elevate a ship to the surface of Gatun Lake, where a secondary anchorage is provided. The buoyed route of the Canal is thence across the lake by a series of tangents to Gamboa, a distance of about 20 miles. Here begin the reaches of Gaillard Cut, extending through the hills and Continental Divide about 10 miles to Pedro Miguel locks. There a vessel is let down one lift into mile-long Miraflores Lake. After stepping down two more lifts at Miraflores locks, about 8 more miles remain through dredged channel to the Gulf of Panama. There is no terminal lake at the Pacific end, the inner anchorage being along the route of the channel and sheltered by the mole extending out to the fortified islands in the bay. The outer anchorage was in the open gulf, offshore from Taboga and Taboguilla Islands, and outside of the mine fields. The principal danger areas in the Canal, where maximum damage or interruption could be effected, were obviously in the locks themselves, or in the long and winding cut, especially at points opposite slide areas or where there were changes of direction. A vessel sunk at these points might effectually block the channel until removed. Undoubtedly, a tremendous explosion in the Culebra reach would bring down much of the old and persistent Cucaracha slide, which has been in slow movement and under constant excavation for 30 years. Had this happened, the Canal would have been closed as far as this war was concerned. The ramming of a miter gate or a sinking or explosion in a lock chamber would have resulted in long closing of that passage. No replacement for lock gates was available nor could one have been installed if it were, as they are so huge that they must be constructed in place.

Complicating the physical problem was the administrative and legal one. By Executive order and by proclamation, the President of the United States had declared the Zone waters to be military areas, and broad powers were given the military high command and the Governor of the Canal Zone. Our various treaties, however, guaranteed to all nations not actually belligerent to us the right of passage. With the Baltic nations generally under Nazi control, and with others sympathetic with Germany, the flag and registry was no sure guaranty that a vessel's personnel or mission were not as hostile as that of an enemy battleship. On the other hand, vessels, property, and personnel of nonbelligerent and neutral nations were entitled to all treaty rights and all of the legal rights of peacetime, as curtailed only by measures most imperative for safety. This implied the necessity of coordinating the guard activities with many agencies. Officers of the Coast Guard, under the Navy, had the jurisdiction over maritime laws. The Canal Zone police enforced the local civil law. The United States Maritime Commission had cognizance of American personnel on United States registered vessels, and the consuls of England, France, and the South American and other countries were interested in the ships and crews under their respective flags. Customs officers of both the United States and Panama expected some cooperation from the guard in the control of smuggling. Naval Intelligence was required to investigate, clear or detain, and the port captains of Cristobal and Balboa directed the harbor and Canal pilots and were responsible to the marine superintendent for the schedules and transits.

The most workable arrangement was to place each ship guard company under the operational control of the appropriate port captain, coordinating their activities through the officer detailed as ship guard coordinator. The tactical control remained with the company commanders, thus placing upon them the responsibility for successful completion of each specific mission.

The operation developed into two separate categories, the first being aboard ships at the anchorages, where some lay for a week or more under investigation, awaiting orders, or pending transit, if classed as hazardous—that is, laden with ammunition or with inflammable liquid cargo. They were most dangerous if, after having carried high-octane fuel, they had been emptied and were full of the residual, easily detonated gas-air mixture. Hazardous cargo and anchorage guards usually consisted of two marines who were accompanied aboard by a machinist's mate-inspector; the latter verified that port regulations and safety precautions were carried out or were completed by the ship's company before the vessel was cleared to the port captain. On numerous occasions more than 30 vessels lay under this form of security guard, either at terminal anchorages, in Gatun Lake, or at Gamboa. The necessity of this activity was frequently illustrated in the guard reports of instances of careless attempts at smoking, open lights, welding, and so forth aboard vessels carrying dangerous and even fused ammunition, explosives, or containing dangerous volatile oils or explosive gas mixtures in their holds. This duty was the most uninteresting and least inspiring, as well as the most arduous, and it met with the least cooperation on the part of the captains and crews, who occasionally resented the presence of marines aboard. They frequently considered it an invasion of their personal rights or national sovereignty. Clashes occurred infrequently, but the marines were well trained in their duties, inflexible in their execution of them, and fully supported by the authorities. Not over five persons were shot by marines—none fatally—in the execution of this function, the sentry in each instance being sustained by the local board of inspectors as well as by the naval command.

Vessels to transit and time of departure from moorings, or the hours for arrival and departure of ships, were designated by the captain of the port affected, who notified the guard company assigned, and designated the forces required. The terms "full guard," "modified guard," "A" or "B" guard, etc., were used according to a table and code to describe the various strengths and compositions. For example, a full guard consisted of an officer, a staff noncommissioned officer, and about 14 men; a modified guard was smaller and was commanded by a senior noncommissioned officer; and so on down to a corporal and 4 men. Each of the above had, in addition, two naval ratings assigned, a machinist's mate and a quartermaster rate. Probably the details most frequently called were either "modified" or "type A" guards. No guards were placed upon combat vessels of the United States Navy. Special honor guards were placed aboard combat vessels of friendly or allied powers, these consisting of one or more officers and staff noncommissioned officers, as a courtesy, to give information and possibly to establish visibly the ultimate sovereignty of the United States in these waters. Honor guards always wore full khaki uniform and were unarmed; occasionally khaki was prescribed for full guards when particularly appropriate, but otherwise the duty uniform of the ship guard companies was utility clothing. Experience established that the nature of the work and the filthy condition of so many ships made the wearing of khaki impracticable, just as it was necessary to secure and authorize the wearing of low cut, dress shoes, the field shoe proving not only clumsy but dangerous on slippery decks and wet sea ladders. As the duration of a single one-way transit was from 8 to 12 hours, men occupied in this second category of the work carried light packs con-

taining personal articles, liberty uniform for wear at the other terminal if desired, and a lunch put up in a standard workingman's lunch box with vacuum bottle; this lunch was specially procured by the quartermaster for this duty.

All members of the guard were forbidden to eat or drink anything from the ship's supply, this to prevent the possibility of a detail becoming poisoned or drugged while aboard. It became necessary to adopt a standard procedure for wearing the pack in small boats and while boarding. It was not generally worn while aboard, but was usually stowed at the place on deck designated by the commander of the guard as a rendezvous. To facilitate removal if the wearer went overboard, it was slung by the straps over one shoulder only, in an unmilitary but safe and easily discardable manner. At first the Reising gun was the standard arm, but the pistol and nightstick replaced them as more satisfactory, since all ship-to-shore and boarding movements were made by small boat and sea ladder.

Bearing in mind that over 11,000 vessels were handled, including those lying at anchorages, and allowing for changes of the guard, etc., it is safe to assume that about 200,000 individual embarkations and disembarkations were made. Only one loss was sustained, a blue-jacket who fell overboard from a launch and was apparently swept under a float by propeller wash. This infinitesimal casualty rate indicates a high degree of discipline and practice, as such movements were usually made at night or early morning, and very frequently in streaming tropical rain.

Each guard detail boarding a vessel scheduled for transit accompanied the pilot and did not leave the ship until dismissed by him, since under the law and regulations the pilot was the supreme authority while the vessel was under way in the Canal. The marine commander of the guard, upon coming aboard, officially presented to the captain of the ship a form letter authenticated by authority of the Governor, advising the master that the zone pilot had sole jurisdiction over navigation of the ship, and summarizing the duties and authority of the guard. All small arms were required to be turned over to the guard's keeping while in transit, and the ship's master was advised that it was the duty of the guard commander to enforce every order of the pilot and to prevent any interference with him or with his navigation of the ship. The crew was mustered and informed of the requirements and orders, to prevent any mistakes or regrettable accidents. On occasion there would be aboard one or more persons about whom Naval Intelligence had advance information, and these persons were removed or confined in a stateroom under guard in accordance with instructions received in each case. In not over half a dozen cases did a captain refuse to recognize the full authority of the pilot, and in these cases he was promptly locked up in his cabin, with no interruption to the transit. On several occasions it was necessary to confine an entire ship's company with the exception of essential engine room people, who were more heavily guarded than usual; this was possible because the Panama Canal always placed on board a crew of deck hands to handle lines and work the vessel through the locks.

Once aboard, the ship's guns would be unloaded, the breeches opened and a sentry placed over them, the anchor catted ready to let fall, and a tow cable bent to the forward bitts with a sentry placed on the forecastle—a post established to prevent any interference with the steering engines. A deck patrol was also assigned, as well as such others as might be required by the circumstances, the orders, and the character of the vessel in question. A member of the guard was always detailed to accompany the pilot to protect him and enforce his orders, and another was posted in the wheel house. Meanwhile, the naval ratings had set up a field telephone outfit they had brought aboard. The deck rating manned an instrument in the wheel house, the engine room rating being at the other end and protected by a sentry; this established independent communications from bridge to engines and precluded the possibility of any "mistakes" in transmission of orders over the ship's telegraph. Every order of the pilot in regard to speed or change of direction, or affecting the navigation, was repeated over the field 'phone, the naval deck rating and his marine partner insuring that it was executed correctly by the helmsman while the engine room pair insured prompt compliance at the controls below. Orders were to shoot instantly at any apparent attempt to carry out a pilot's order in reverse, but occasion for this treatment never occurred. It is believed that crews were convinced that the marines would do it. Compliance was so strict by engineers and helmsmen that during the period fewer than average honest errors were made, in consideration of the volume of traffic handled. Even these errors resulted in only minor mishaps and plainly were without malicious intent.

All guards were alerted and kept stations during passage through the locks and Gaillaird Cut. They were permitted to secure and to relax through the reaches of Gatun Lake, unless the ship or the personnel aboard her were suspect. Upon completing a transit and being released by the pilot, the detail reported in to the company at the terminus of arrival, were fed, quartered, and permitted to go on liberty if there was sufficient time before 10 p. m. They were returned to their "home" company next day, either on a return guard trip, or by rail if the exchange of men did not approximately balance. The Panama Railroad carried one coach on each of the two daily round trips for this purpose. The men, often dishevelled, weary, and in dirty garments, could thus travel in privacy during the 2-hour rail trip.

Except at peak periods, the usual practice was for a man to make two round trips a week (entailing a total of from 4 to 5 days' time) although frequently they were called on for more. In consideration of this, and of the long hours entailed, the disturbed sleeping conditions, and irregular meal hours, the training periods of the ship guard companies were limited to schools and instruction pertaining to their specific duties. There were classes in first aid, swimming in full uniform, rescue from drowning, practice with weapons, and similar subjects. Courtesy not only in its military application but as appropriate to this particular duty was stressed. Some instruction was given in regard to ship architecture, nomenclature, and practices, and in recognition of foreign flags. No training period was ever permitted to be conducted in a perfunctory manner. The district marine officer supervised very closely the instruction given and was particularly insistent that no man's time be wasted. He required that men have as much free and liberty time as the conditions of the service would permit. There was in effect a local rule applying to the entire marine garrison on the Isthmus, permitting men to apply for a change of station within the command every 6 months. It is notable that few if any such applications were received from members of the two companies engaged in the ship and transit operation during the period under discussion. It was pretty well understood that these requests did not have to go through official channels but could be laid on the executive officer's desk or slipped under his office door, so it is believed that the administration of the activity was successful in regard to the personnel involved as well as in the results obtained.

Some ingenuity and imagination was required, and much cooperation on the part of the post supply officer, in operating the mess halls of these companies as short-order houses, as it was manifestly impossible to have men present for meals at the conventional hours. Most of the accepted ritual of service messes went overboard in the effort to serve satifying meals to small groups of men at all hours of the day and night, and in catering to the tastes and appetites of individuals whose duty hours were long, arduous, and often irritating. Subsistence upon the Navy ration aided materially in this, as it was policy that no man was to go to bed hungry, no matter what time he was relieved; this policy resulted in many cases with four meals a day, if the box lunch was counted as a full meal.

The redeployment period after the collapse of Germany was particularly difficult, and the total tonnage handled through the Canal reached a tremendous relative peak. The volume of hazardous cargoes increased immeasurably as the sea-borne operations became concentrated in the Pacific. This was followed almost immediately by a further postwar task upon the defeat of Japan. The anchorages and Canal were almost choked with tankers arriving, departing, or awaiting orders. Laden with explosive liquids or dangerous residue gasses, unquestionably they were the most dangerous of the entire operation. It was definitely the dullest and most undesirable period to the men who were so anxiously awaiting demobilization. The more interesting transit duty had been reduced to a minimum by the port captains, and the marine superintendent cooperated to the fullest extent by removing category after category from the types of cargoes and ships requiring guards. As the year 1945 drew to a close the operation was dwindling away, and by consent of the Caribbean defense command it was turned over to the provost marshal and to the Canal Zone police authorities. This ended the participation of the naval forces in the wartime security measures for the protection of the Panama Canal.

The Mass Movement of Europe's Displaced Persons and the Possibilities of Colonization in Other Parts of the World

EXTENSION OF REMARKS
OF
HON. CHAUNCEY W. REED
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 5, 1949

Mr. REED of Illinois. Mr. Speaker, under leave to extend my remarks, I include herewith a newspaper article by Constantine Brown appearing in the Washington Evening Star in its issue of August 4, 1949, which contains a discussion of the possibilities to be realized as the result of the investigation of the displaced-persons problem by the Committee on the Judiciary of the House of Representatives.

THIS CHANGING WORLD—HOUSE GROUP STUDIES PLANS TO SHIFT SURPLUS POPULATION FROM EUROPE

(By Constantine Brown)

Under authority granted by Congress late in June a special committee headed by Representative WALTER, Democrat, of Pennsylvania is investigating the possibilities of a mass movement of surplus population from two parts of Europe to provide manpower for

the fulfillment of President Truman's plan to aid underdeveloped areas as contained in point 4 of his inaugural address.

Under the President's plan steps would be taken for the economic and social development of underdeveloped and underpopulated areas of Latin America and South Africa, the two remaining major frontiers between civilization and the wilderness.

The purpose of the plan is to open up new areas for human settlement in order to relieve population pressures, principally in Europe, where the natural inability of the people to support themselves on a high standard is aggravated by maladjustments arising out of World War II and its disturbance of population and economic patterns which permitted surplus populations to exist, at least.

COST THUS FAR PROHIBITIVE

Some countries have become interested in the acquisition of settlers from various parts of Europe, chiefly as a means of strengthening their own economic and social structures. Their sought-for immigration is selective, however, and in some cases the cost of moving whole families from the Old World to the New has been prohibitive.

The United States has been taking displaced persons under an act of Congress which permits 205,000 to come in by June 1950. Australia is taking other large numbers, and Argentina and Brazil have been active in seeking immigration from Europe.

The United States, however, does not provide a substantial possible outlet for the large numbers who are cluttering up Europe's economy right now, and the bill which created the Walter committee was motivated by the desire to find some other outlet than the United States for the millions who are now a drag on Europe's resources.

Effective accomplishment of President Truman's aims under point IV depends to a great extent on transfer of a sufficient number of skilled European workmen to the countries involved. Brazil, Argentina, Australia, Guatemala, Venezuela, central and southern Africa, and other retarded areas together must take not thousands but millions of workers and their families if the pressure is to be taken off Europe.

Two areas in Europe provide ample numbers of skilled workers. In the western zones of Germany are almost 14,000,000 persons of German ethnic origin who have been expelled from Czechoslovakia, Yugoslavia, Hungary, Poland, and Rumania under the terms of the Potsdam agreement. The Soviet satellite countries refuse to take them back and there is no place for them in Germany, whose responsibility they are. They constitute a terrific burden on the German economy and are the strongest single deterrent to Germany's rehabilitation. Many of them are young people and the great majority of them are highly skilled technicians, factory workers, and farm workers, familiar with every type of modern machinery.

ITALY IS GREAT RESERVOIR

The other great reservoir of skilled manpower is Italy, where there is a surplus of at least 3,000,000 persons, who also are skilled farmers, tailors, and textile workers, etc.

Representative WALTER starts work with his committee with some definite ideas of what can be done to accomplish the President's point 4 and at the same time relieve Europe's population problems. He aims to—

(1) Alleviate the pressure on American immigration quotas by looking for areas of settlement other than the United States.

(2) Obtain the participation of the World Bank in the financing of this mass transfer of populations. The cost is estimated roughly at $1,200 for a family of four.

(3) Relieve the American taxpayer of expenses being borne now for all types of relief provided for homeless expellees in the three western zones of occupation.

(4) Make certain that the private investments which President Truman suggested for the underdeveloped areas be helped to succeed by sending to the recipient countries persons who would know how to operate tools for agriculture, mining, lumber cutting, road building, etc. The present sparse native populations in those areas do not possess the necessary know-how, and in some cases are too lethargic to learn.

It is expected that any legislative proposals that arise from the Walter committee's studies will be submitted to the second session of the Eighty-first Congress.

The Officers Make Us Trouble

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, the Congress recently authorized the appropriation of a lot of money to increase the pay of those in the armed services. The officers were the greatest beneficiaries.

With the country running behind, that is, each month spending more than it receives, the folks at home are becoming more and more insistent that the Congress cut down expenses. But the Congress so far has not paid any attention to the economy orders except to talk.

The Congress and especially the Senate, just keeps on hiking pay. And in the meantime, some of the officers—just a few of them—and some of the top-notch boys just go on using Government facilities, spending Government money, without any regard to the Nation's financial condition.

I am attaching hereto a statement from the Washington Daily News which came out on the 21st of July, which shows the way Secretary of Commerce Sawyer has joined the generals and some of the other brass in the spending program.

According to this article, Secretary Sawyer has been flying back and forth between his home in Cincinnati and Washington on week ends at Government expense. And he has not traveled the cheapest way, either.

Just how he can justify it, I do not know. I do know that Congressmen get one mileage for each session of Congress. That barely gets them from home to Washington and back home again. If they make other trips home—and most of us do and are required to by our official duties—we pay the cost.

I am not finding any fault with that. If we are not satisfied with our salaries and our expense allowances, we do not need to stay here. But it is neither fair nor just for top-ranking Government officials to chisel on their expense accounts.

The news article follows:

CALL FOR 92 TAXPAYERS

Secretary of Commerce Sawyer likes to spend these summer week ends at his home in Cincinnati. It's really very convenient. All he has to do is to phone for one of the two DC-3 planes which the Civil Aeronautics Administration maintains for official travel. The CAA is an agency under the Commerce Department, so there's no trouble about it.

The pilots, of course, like to spend their week ends at home, too. They live in Washington. So after they fly Mr. Sawyer to Cincinnati they fly back to Washington and then return to Cincinnati to haul the Secretary back to the Capital.

Mr. Sawyer has made five such trips since June 1. But that's 10 trips for the plane—5 hours each way at $100 an hour to keep a DC-3 in the air. The 10 round trips have cost the Government $5,000. That is, the taxpayer picks up the tab—it took the total income tax of 92 married men (wife and two children) earning $3,000 a year to pay for Mr. Sawyer's trips so far this summer. He could have done it by commercial air liner for $280.

Apparently no sum is too small for the Truman government not to save.

Business Need Fear No Depression if It Will Go To Work

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1949

Mr. MULTER. Mr. Speaker, on many sides we hear distressing talk about a possible depression. Those who have closely studied the situation know that we have no reason to fear a depression.

Business must wake up, however, to the fact that we have left the sellers' market and are back in the buyers' market, which means going back to the old American spirit of competition. You can sell your product if you make a good one and if you tell the world about it.

The following article, which appeared in the New York Post of August 4, 1949, excellently illustrates my point:

LITTLE SHOE STORY

(By Sylvia F. Porter)

Let me tell you today a wonderful little tale about a small manufacturer who almost went out of business a couple of weeks ago—but didn't. Let me tell you how he was catapulted from despair to delight in 48 hours—and the way it came about. It's such a cheerful little story, so fundamentally American. I think you'll like it.

My tale concerns two long-time friends: one, Max Goldbach, is a former German who fled from Hitler to America and who is now a manufacturer of women's playshoes; the other, Willard Golovin, is a former department store merchandise manager who is now head of a New York advertising agency.

Probably you never heard of either of them—but that's one of my points. This is a typical "little business" story.

It begins in early June when Golovin met Goldbach, noticed he was glum and asked the trouble. Goldbach was blunt; for the past 3 months, his five salesmen had been combing the country looking for business and all they'd run into was "No! No! No!" everywhere.

"I can't take it any longer," said Goldbach. "I can't maintain my pay roll without some more sales. I'm going out of business before I lose everything."

Golovin looked over Goldbach's product, decided it was well made, properly priced but needed improved styling. He told him so, but Goldbach replied:

"What's the use? We can't fight the trend. Everyone says business is bad and growing worse, so I'm getting out before I'm bankrupt."

At this point, says Golovin, "his loss of faith in himself and his business suddenly struck me as a symbol of the discouragement enveloping our country. I realized the average man is prone to give up and await a miracle or a government panacea to pull him through.

"Because of my merchandising experience, I was able to suggest a correction in shoe styling. I also asked him to give me 48 hours to think over his problems and to take any action deemed necessary before he closed shop. He agreed. I went into action."

And here is what Golovin did:

That same evening he redesigned the play shoe into a Greciah-type sandal. A sample was in his office the following morning.

At 9 a. m. he was on the telephone asking appointments with buyers of leading New York and Brooklyn department stores to demonstrate the new sandal and show how it would bring immediate traffic into the stores. He got six appointments.

By 5 p. m. he had shown his sample to all six stores and "I guess my enthusiasm caught hold with four of them because I came back with bona fide orders for 3,000 pairs."

By 6 p. m. he had sent out 31 telegrams to key stores across the country, giving the same sales talk. Twelve orders were received the next day, asking for air-mail shipment of samples. Two stores wired their New York representatives to answer in person.

At 7 p. m., after the telegrams were out, Golovin briefed his staff on the urgency of the problem and his office went to work on a selling broadside to go to 5,000 prospects all over the land.

At 8 p. m. copy and art work were assigned. By 10 p. m. that part of the job was finished and a night-shift typographer was put to work. At midnight proofs were ready. By 1 a. m. a lithographer had the stuff and the broadsides were set to roll. The next afternoon they were in the mail—5,000 hand-picked retail shops.

And, then, the returns started coming in. Some extracts from Golovin's diary:

"Footwear News reports B. Altman ad in Sunday Times causes sales sensation"; "Gilchrist & Co., Boston, wants exclusive sale in city"; "Detroit phoned in order for 800 pairs"; "Stern Bros. called, want more shoes"; "Long-distance phone from Higbee, of Cleveland, reordered 10 cases." And he continues:

"The manufacturer is now a new man, revitalized. He, too, was imbued by this 48-hour accomplishment. He is now hiring more workers, training operating teams in his methods, ordering additional shoe machines, looking for another factory and planning a general expansion for the fall season ahead."

It is a wonderful little tale, don't you agree? And it carries a message that American business, small or large, well may ponder. That pace need not be duplicated; the will to succeed is the key thing.

Golovin, I salute you. Goldbach, good luck.

China "White Paper" Whitewashes State Department Blunders

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, August 5, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, the editorial in the Washington News today clinches the story on the China white paper just released by the State Department. Gen. George Marshall must assume a large measure of responsibility for the debacle of free China. Along with him we place the original injustice upon Roosevelt and Churchill in a deal made by them with Stalin at Yalta in 1945. Yalta, Yalta, Yalta—what a crime was committed there under the guise of liberty and freedom.

Mr. Speaker, I insert the editorial at this point:

THE CHINA "WHITE PAPER"

The State Department finally has answered the questions of exactly when and why the United States abandoned its historic position as an ally of Nationalist China and assumed an attitude of neutrality between that government and the Communist rebels.

That course was decided by Gen. George C. Marshall in July 1946.

According to the white paper on China, "General Marshall was being placed in the untenable position of mediating on the one hand between two Chinese groups while on the other the United States Government was continuing to supply arms and ammunition to one of the two groups, namely, the National government."

So in order to let General Marshall continue his efforts American financial assistance was withdrawn from our wartime ally, and an embargo was placed on arms shipments to China.

Unfortunately, however, the general's decision did not prevent Russia from supplying the Chinese Communists with Japanese arms captured in Manchuria.

When the Marshall decision was made, Chiang Kai-shek was winning the war against the Communists. Later that same year, 1946, the white paper admits the Nationalist government reached the highest point of its military position after VJ-day. But in 1947 the strategic initiative passed from the government to the Communists. When we began again to supply arms to the Nationalists, late in 1948, it was the old question of too little and too late—North China and Manchuria had fallen in the interim.

Details on how the Marshall mission in other respects aided in this transition are not supplied by the State Department. But they can be had by reading George Creel's recent book, Russia's Race for Asia.

President Roosevelt and Winston Churchill gave away Chinese territory in exchange for Russia's intervention in the Pacific war, and the white paper remarks that it was unfortunate that China was not previously consulted. This deal was made at Yalta in February 1945, and Chiang Kai-shek wasn't told about it until the middle of June.

The Department comforts itself with the observation that at no time did President Roosevelt consider that he was compromising vital Chinese interests. Of course, FDR was not Chinese, and it was Chinese territory which was given away.

Most of the story of what our secret diplomacy did to China is in this white paper—when it is pieced together.

The long suppressed report made by Gen. A. C. Wedemeyer also is made public. But the explanation that it was withheld for 2 years to avoid doing injury to China's prestige doesn't hold water. The white paper itself reveals none of this reluctance. Yet China's situation today is more desperate than it was then.

A better explanation why the report was kept buried in the archives while General Marshall headed the State Department is suggested by its conclusions and recommendations. They were in direct contradiction to General Marshall's position.

General Wedemeyer knew more about the Chinese military situation than any other American. It was his view, as of September 1947, when he made his report, that it could be saved. He submitted a program, conditioned on China's accepting American advisers in military and economic fields to insure that our aid was properly used. This condition was agreeable to the Chinese Government, as its spokesmen repeatedly declared. But the report was suppressed, and nothing was done until Congress intervened in April 1948. Then the first of the military supplies weren't delivered until last November, by which time the Communist forces had reached the Yangtze Valley.

The white paper does not explain how this arms program was sabotaged by Washington bureaucrats, but it devotes page after page to the alleged inefficiency and corruption in Chinese officialdom. It passes quickly over the Stilwell story, not telling how "Vinegar Joe" used Chinese troops to recover his own lost face in Burma.

Nor does it explain why the Department ignored the repeated warnings it received from the American Embassy in Moscow on Russia's aspirations in China.

Fortunately most of the gaps in the white paper can be filled in from books written by on-the-ground witnesses, books not subject to editing by men interested in defending their own mistaken policies.

An All-Faith Memorial

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, August 5, 1949

Mr. MULTER. Mr. Speaker, our distinguished colleague from Illinois [Mr. O'HARA] recently initiated the movement in our House for the establishment of an all-faith memorial. At his suggestion many of us introduced similar resolutions in order to show our support of the movement. I want to take this opportunity to compliment our distinguished colleague for his diligence and thoughtfulness not only in this matter but in the performance of all of his congressional duties. I am pleased to submit herewith a copy of a letter received by me on the same subject, from the National All-Faith Memorial Committee:

NATIONAL ALL-FAITH
MEMORIAL COMMITTEE,
Chicago, Ill., August 2, 1949.

Hon. ABRAHAM J. MULTER,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN MULTER: We have just been informed by your associate, Congressman O'HARA, of Chicago, that you have introduced House Joint Resolution 312 in regard to the establishment of an all-faith memorial.

Please accept the gratitude of our committee.

You will be interested to know that governors of 18 States of the Union have now endorsed this proposal. These States are: Florida, Georgia, Illinois, Kentucky, Iowa, Louisiana, Michigan, Minnesota, Mississippi, Montana, Nevada, New Mexico, New York, Rhode Island, South Dakota, Tennessee, Washington, and Wyoming.

The city councils of 25 leading American cities have endorsed Senate Joint Resolution 43 by resolution.

The same action was taken by the general assembly of the State of Illinois. Local posts

and chapters of such organizations as the American Legion, Mothers of World War, the Elks, and the National Conference of Christians and Jews, have all endorsed this measure. We have received enthusiastic letters from men high up in such organizations as Rotary International, Kiwanis International, the Loyal Order of Moose, etc. Our advisory committee contains the names of leading Catholic, Protestant, and Jewish religious and lay leaders—even John Dewey, who is sometimes referred to as America's leading philosopher, has endorsed our proposal. So has Henry Steele Commager, of Columbia University, the noted author and authority on constitutional law and democratic government. The committee is gratified to know that in you it has such an able champion of a project which, we believe, will prove a powerful blow against bigotry and in favor of true democracy.

Sincerely,

BARNET HODES, *Chairman.*

Washington Reporting

EXTENSION OF REMARKS
OF

HON. HARRY. J. DAVENPORT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1949

Mr. DAVENPORT. Mr. Speaker, under leave to extend my remarks I include my weekly column from the East Liberty Tribune, Pittsburgh, Pa.:

WASHINGTON REPORTING

In these days of high Government expenditures—over $40,000,000,000 a year—we as American citizens and taxpayers must make certain that we get the most out of every dollar spent for public service. This does not mean that we must necessarily spend less, unless such cuts are warranted, but it does mean that we get a dollar's worth of public service for every dollar of our money we let the Government spend.

Back in the mid-thirties, our total national income was only $42,000,000,000. You would have been considered out of your mind if you had predicted that in less than 15 years your Government alone would be spending more than the whole country was then getting in wages, salaries, and profits. But that has now come to pass. As American citizens we must keep close watch or else the bigness of Government will overwhelm us.

There is one way we can all help keep the public-service dollar on a workable level and that is to learn how to manage this immense Government we have. You and I must learn how to make this dollar responsible to us. Back in July of 1947, President Truman established the Commission on Organization of the Executive Branch of the Government to show us how. This Commission, more commonly known as the Hoover Commission, was made neither anti-New Deal or pro-New Deal, but was purposely made bipartisan so that it would be interested solely in finding ways to improve our Government service. Twelve experts and their working staffs investigated everything our Government did.

The Commission set up task forces which examined the various Government agencies and Government functions and came up with more than 300 major recommendations for improving our Federal service. I have seen these recommendations, and it is my opinion that, in general, their acceptance will save the American people about $4,000,000,000 a year. They may make dry reading to some people, but they are vital to all thinking Americans.

A savings of $4,000,000,000 a year for Americans now concerned with what lies ahead is substantial. Equally important, this saving will actually improve the workings of our Federal Government.

The Commission's recommendations do not call for curtailing vital services now performed by Government, nor do they ask that necessary functions be eliminated.

Part of the Hoover Commission recommendations have already been acted upon, but much work is required before the main body is enacted into law. Some of the recommendations led to the establishment of the General Services Agency recently passed by both Houses. We, who worked on this legislation, were appalled to discover that without such an organization as the General Services Agency an unnecessary $500,000,000 was being spent each year on Government procurement and disposal of Government property.

The OSA consolidates the Bureau of Federal Supply, War Assets Administration, Federal Works Agency and National Archives. Each of these agencies had gone along on its own merry way before, duplicating each other's work and squandering money as it went.

Other Hoover Commission recommendations now before Congress call for the reorganization of various Government agencies; the establishment of a Veterans' Life Insurance Corporation, a Federal Personnel Service, a National Commission on Intergovernmental Relations; and the unification of our defense services.

It is every American's duty to interest himself in the proper operation of his Government. If he does not the Federal Government will continue to operate along the bumbling lines laid down a century ago. Americans in business would not tolerate such methods for a single moment. Yet many of them cannot work up any interest in the biggest business in the world—the Government of the United States. We must all lend our active support to this fine nonpartisan effort to improve the government service.

A Day of Mourning

EXTENSION OF REMARKS
OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1949

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of Thursday, August 4, 1949. As this editorial points out, the Democratic administration officially launched its deficit financing program when the Treasury invited subscriptions to a new billion-dollar bond issue which is $200,000,000 in excess of the amount needed to retire maturing indebtedness.

THE DEFICIT HABIT

In addition to its long-term debt, the United States Treasury has a "floating" (short-term) debt, consisting mainly of so-called certificates of indebtedness and discount bills, which is constantly being "turned over." In the past 3 years the practice has been that as one outstanding series matured it was refunded with a new issue of the same kind and the same amount. This week, however, we are witnessing a departure from that pattern. Today an issue of $800,000,000 in three-month bills matures, and in anticipation the Treasury invited subscriptions on Monday, not to a new $800,000,000 issue, but to one of $1,000,000,000. The excess $200,000,000 represents "new money" being raised by the Treasury—the first of the kind it has sought (except in connection with its savings-bond campaign) since the time of the Victory Loan in November 1945.

This borrowing operation, resulting as it does in the expansion of the Government debt, is far more important than the mere $200,000,000 figure suggests. It may be said to mark today more or less officially as the day when the Government turned back to deficit financing after a brief 2 years of budget surpluses.

After the First World War the United States returned promptly to the ways of fiscal probity. The period 1920–30 saw the budget balanced unfailingly each year. By 1930, moreover, the Federal debt, which had been swollen by the war to $25,244,000,000, had been reduced to $16,185,000,000. But in 1931 these surpluses gave way to a series of annual deficits that was not to be interrupted until 16 years later.

In its early stages this deficit financing was associated with the depression of the thirties; later, of course, its continuance was made necessary by the war emergency. But it is a good deal less easy to produce a plausible single explanation for its resumption at the present time. The depression argument, on which it was defended in the years immediately before the war, is hardly applicable now. In 1931 when the budget first became unbalanced the national income stood at only $59,000,000,000. Today it is of a magnitude of approximately $225,000,000,000.

Figures released yesterday by the Census Bureau show unemployment in July at slightly more than 4,000,000. But in 1931, with the economy in a precipitate tailspin, there were more than 8,000,000 out of work—and this at a time when the total labor force was 20 percent smaller than today. (A year later the figure was over 12,000,000.) In short, as the President himself put it in his recent economic report, the economy today is "operating at high levels of employment and production * * *. We are not in a depression."

Neither, of course, is the "war" argument germane to the present situation, although expenditures flowing from the recent fighting war and those necessitated by the cold war with Russia make the picture decidedly different than that presented in the era of the twenties.

The President has attributed the resumption of deficit financing to the "untimely tax reduction of $5,000,000,000 during the height of the inflation." We agree—and agreed at the time—that this course of action was ill-advised; we do not, however, attach the importance to it that Mr. Truman does. Actually, individual income-tax receipts fell less than $3,000,000,000 between fiscal 1948 and fiscal 1949. Federal expenditures meanwhile have been steadily rising. They have expanded from $34,000,000,000 in fiscal 1948 to an estimated $42,000,000,000 for 1950, and the latter figure does not allow for the proposed military-aid program nor for a number of other items, such as higher farm-support costs.

The truth of the matter is, as the experience of many other countries testifies, that deficit financing is a habit-forming drug, and that we in the United States have never really got it out of our system since we first turned to it in the thirties. Even the surpluses of 1947 and 1948 were not the result of calculated austerity but a fortuitous incident of the postwar inflation. Some measure of the hold that spending has on the administration at the present time is to be seen in the President's observation that "we

cannot achieve a budget surplus in a declining economy." If we cannot achieve a budget surplus in an economy represented by a national income of $225,000,000,000, then when, it may be asked, can we hope ever to achieve it?

Shocking Evidence of Fraud in War Contracts Verifies Ugly Rumors and Reports

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 5, 1949

Mr. VAN ZANDT. Mr. Speaker, on May 26, 1949, I called to the attention of the House certain ugly rumors and reports in connection with the B–36 bomber, and offered a resolution calling for an investigation for the purpose of clearing the air.

This morning's Times-Herald carries a story headed "Warren Discloses Evidence of Fraud in War Contracts—Bribery of Former Army Officers and $6,280,000 Overpayments Reported."

This story is based upon the report to Congress by United States Comptroller Lindsay Warren, a former Member of this House from North Carolina with whom many of us served and for whom we have the highest respect.

The article by the United Press follows:

United States Comptroller General Lindsay Warren disclosed yesterday what he termed "shocking" evidence of "fraud, collusion and/or bribery" on the part of former Army officers in the award of wartime Government contracts.

Warren reported to Congress that the General Accounting Office, in addition, has found $6,280,000 in improper payments "induced by fraud" in connection with the settlement of Government contracts.

He said these represented only a "sampling" and that he hesitated to guess the "entire extent of fraud and overpayments."

FRAUD IS CHARGED

Warren said that his investigations of contracts awarded to New York firms for preparation of Government technical manuals disclosed "beyond reasonable doubt" that contract awards in the first instance were based on "fraud, collusion and/or bribery on the part of certain Government personnel (military and civilian) and others." And he cited these instances:

1. An Army officer "divulged to one of the bidders" the prices quoted by other firms on preparation of the manuals. The bidder received a $40,375 contract—later canceled—and as an "aftermath" the officer became employed by the company and was paid $7,600 for services.

STOCK GIVEN OFFICERS

2. Two former Army officers, while on active duty, "received shares of corporate stock valued at $2,000 in return for purported 'part-time services' to a firm which shortly thereafter received Government contracts at prices totaling in excess of $100,000."

3. "Numerous instances" were reported involving acceptance by Government employees of "entertainment, lunches, dinners, liquors, etc., from contractors who, in return, seem to have been favored with Government contracts and liberal termination settlements."

"FEATHERING OF NESTS"

4. Other cases of a "feathering of nests" by officers and employees of the Government who subsequently were given jobs by the contractors.

5. A firm received three Government contracts shortly after its representatives were "intoduced to two Government employees," and concurrently the company's books reflected "liabilities to these employees" of between $1,175 and $2,029.

6. Another firm asked a Government employee to increase its contract price, and after receiving the increase "paid the sum of $500 to that official who then was employed by one of the firm's competitors."

7. An "apparent scheme" whereby 20 percent of contract prices was to be "kicked back" to certain Government representatives, either directly or to their relatives or through "dummy" corporations. The corporations were owned by Government employees who veiled their identities, Warren said.

COMES IN MIDST OF PROBE

Warren's report to Congress covered his Office's activities under the Contract Settlement Act of 1944.

It was made public in the midst of a congressional investigation of so-called "5 percenters," agents for Government contracts who got 5 percent of the value of contracts obtained for their clients. Warren did not say anything about such agents specifically.

Union of the Free

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 5, 1949

Mr. REES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an interesting and well-written editorial, that appeared recently in the Emporia Gazette, of Emporia, Kans. The editorial is by the editor, Mr. W. L. White. Mr. White, as most of you are aware, is a leading and nationally known writer and author. I commend your reading the editorial:

UNION OF THE FREE

Readers of the Gazette will remember that this newspaper was not only an early supporter of the League of Nations but a last-ditch one. We favored America's entry first into the League itself, then into the World Court and, when both of these proposals failed, urged America's active cooperation with the League from the outside until that organization finally blew up in the 1939 explosion of the war.

Careful readers of this editorial column may also have noted that when the present United Nations was proclaimed in San Francisco in 1945 the Gazette, while supporting the idea, did not proclaim to its readers that the millenium had arrived. It supported, then as now, the United Nations idea. But its editor felt strongly then and says openly today that this idea is not enough and may be dangerously inadequate. The weaknesses in the United Nations are already revealed. Any positive action necessary to preserve the peace can be blocked by the veto of a single power. The United Nations was unable to enforce its decisions even in that petty squabble between the Arabs and the Jews. In spite of all the talking at Lake Success, in spite of a plan carefully formulated by United Nations' experts, this little squabble broke into open warfare and the fighting dragged on for months.

The basic trouble with the United Nations idea is that it tries to combine a number of people who have almost nothing in common. Therefore these nations will not agree to any effective unity.

The United Nations is, of course, better than nothing. But it is dangerous to pretend that this unity is more powerful than it really is. Furthermore, the fact that this loose and limp organization exists need not stop us, together with other truly free peoples of the world who think as we do, from searching for that kind of solid and powerful unity which really would keep the peace.

For all of these reasons the Gazette hereby nails to its masthead the banner of the recently formed Atlantic Union Committee, an organization which is calling for a federal convention of the democracies to meet in the near future.

Heading this organization is former Supreme Court Justice Owen J. Roberts, and its vice presidents are Robert Patterson and Will Clayton, while its board of directors includes Herbert Agar, Gardner Cowles, Harry Scherman (of the Book-of-the-Month Club), Clarence Streit, Harold Urey, the atomic scientist, and the writer of these lines.

And what is their idea? Briefly to call a convention made up of delegates from America and the other five democracies which sponsored the North Atlantic Treaty to see if we can get not just a shaky military alliance, but a true federal union of the free.

For the people of these six nations have just as much in common as did the Original Thirteen Colonies which broke away from England in 1776. In 1787 these Colonies, finding that if they were to avoid petty disputes and keep the peace, they would need a more perfect union, called a federal convention to see what could be done about it, and out of this 1787 convention came our present Constitution of the United States. For exactly these reasons we are asking the President and the American Congress to invite the democracies who sponsored the North Atlantic Treaty to name delegates, representing their principal political parties, to meet this year with delegates of the United States in a federal convention to explore how far their peoples, and other democracies whom the convention may invite to send delegates, can apply between them, within the framework of the United Nations, the principles of free federal union.

Out of our American convention of 1787 came a free Federal Union, the principles of which have since been copied by Switzerland and Canada.

All these six countries are firmly democratic—they have maintained free institutions and free government for at least a century. They have roughly the same outlook on life, the same standard of living, the same love of liberty, and the same definition of what liberty really is.

Together these six nations could form one federal republic of 300,000,000 people, a mightier union than any nation or combination of nations which ever could be arrayed against them. Working together in one government they could keep the peace of this world as Rome kept it for a thousand years. Such a union is not and should not be a union against any other group. It would have no mission to start a crusade against any other world group which has a different definition of freedom or any peoples who are too backward to have achieved free institutions.

We of the six Federal democracies would desire to preserve only our own liberties against any possible aggressor.

Now just how far would each of the six nations be willing to go in surrendering their present independence of action to this new group?

That American Federal convention which met in 1787 had to solve all such problems and it succeeded. New York State was proud of its militia—should that fine little fighting force be put under the command of a foreigner from Virginia? Connecticut, in addition to its original boundaries, also laid claim to lands by royal grant in the Ohio valley. Should these lands be opened to settlers from the other 12 colonies? Again the answer was "Yes." How much power should be left to the individual States and what powers turned over to the new Union?

The same problems are posed today when we face a task of union with the other democracies. If Connecticut then had her public lands beyond the mountains, today France and England have colonies. But the problems of a union of the free are no more difficult today than they were in 1787 and the need for that union is much greater because without it, and depending only on the shaky straw rope of unity provided by the present United Nations, this world will in the next decade or so explode into a terrible conflict, the outcome of which will probably be the end of freedom everywhere and a deepening twilight of civilization.

In asking President Truman and the Congress to call such a convention, we bind ourselves to nothing. It might be only a union for foreign affairs and the armed forces. It might be extended to a customs union of the kind we adopted in 1787 and which accounts for our present prosperity and industrial might.

Surely within this union each of the present States could retain their present cultures and customs—after all, the southern States in America were allowed to keep their "peculiar institution" of slavery for many decades.

So this year, let us call the delegates from these six democracies together and see to what extent we can agree to pool our strength, compromise our little differences, retain our individual peculiarities, so that out of it may come that union of the free which will preserve our basic liberties for generations yet unborn.

The UN—An Appraisal and Forecast

EXTENSION OF REMARKS
OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1949

Mr. JAVITS. Mr. Speaker, the appended address by a distinguished American and international civil servant is an excellent review of the United Nations in action, of its successes and failures, and of its vitality and essentiality to world peace. It is indeed mankind's best—perhaps last—hope for a world of order and law, and it is an international guarantor of the rights of man:

THE UNITED NATIONS—APPRAISAL AND FORECAST

(Address by A. H. Feller, general counsel and director of the United Nations Legal Department. Delivered at opening of the New York University Institute for Annual Review of United Nations Affairs, July 18, 1949)

During the year 1948 more than 4,000 meetings of organs of the United Nations were held in Lake Success, Paris, and Geneva. Add the meetings in the Far East, Latin America and elsewhere, add the meetings of the specialized agencies of the United Nations and the figure climbs into the many, many thousands. All indications are that in 1949 the number of meetings will be even more.

There are many people to whom these figures would, or should, come as a distinct shock. These are the people who have heard over and over again that the United Nations is dead, or at any rate, a failure, washed up, and impotent. Why should the nations of the world in a time when hard money is so scarce and troubles so plentiful send their representatives around the globe to spend so much time with a moribund institution?

The answer is simple; the United Nations is alive, growing, and above all indispensable.

It is true that the United Nations has not yet become what its founders envisaged at San Francisco. While they knew that the wartime coalition of the great powers was not likely to continue unimpaired, they proceeded on the assumption that some semblance of unity would be preserved, that peace with Germany and Japan would soon be made, and that the United Nations would be free to develop in an atmosphere of relative calm. None of these assumptions have proved valid. On the contrary, instead of unity and calm we have lived in a bitter conflict of ideologies and interests, and in a state of world-wide tension.

If the basic conception of San Francisco, the conception of the necessity of a world-wide international organization to insure international peace and economic and social progress, had been invalid, then the United Nations would long since have foundered. It survives because the very conflicts and tensions which make its existence difficult, demonstrate that it must survive and grow or the world will founder with it.

The United Nations system is a complicated one; it has numerous features which have been hotly debated—the rule of sovereign equality, the great power veto, the distribution of functions between the General Assembly and the Security Council, and in the economic and social fields between the central organization and the specialized agencies.

There are, however, three salient features which are the sources of its strength and the expression of its essential necessity for the world:

Global membership.—59 nations are members of its central organization and 13 others seek admission; it comprises every kind of political, ideological, and economic society.

Inter-relationship of world problems.—It can and does deal with every problem of an international character, whether it be the threat of war, the incidence of tuberculosis or illiteracy, the lack of housing, the fostering of human rights, the protection of dependent peoples, or the improvement of the gathering of statistics.

Continuity of effort.—The United Nations is on the job every day and every hour; it keeps working at its problems, big and little; almost never has it confessed failure; almost never has it refused to grapple with a world problem with which it has authority to deal.

The most controversial and troubled phase of the work of the United Nations has been in the maintenance of international peace and security, and it is here that its vitality and shortcomings can best be judged. It is in this connection that the notion of the importance of the Organization gained currency among so many people. Time and experience are now beginning to give us perspective; we are ready, I believe, for a sort of interim stock-taking of what the United Nations can and cannot do in the world as it is today.

The Security Council dealt with the presence of Soviet troops in Iran and British and French troops in Lebanon and Syria. The Council was unable to make final decisions, but the moral force of world opinion was behind its deliberations, and today there are no foreign troops in Iran or in Lebanon or Syria.

The Security Council dealt with the Corfu Channel dispute between Albania and Britain. It did not solve the dispute directly, but through its recommendations the International Court of Justice disposed of it through a legal decision.

The Security Council had many a troubled meeting over the question of Indonesia, but its commission kept at the problem with patience and tenacity, and now the question appears well on the way to a just and peaceful solution.

The Security Council has worked long over the problem of Kashmir and the terrible strife between Pakistan and India. The problem is still not settled, but fighting has long since ceased and the slow process of final peace-making goes on.

The General Assembly and the Security Council labored on the problem of Palestine. There was much criticism of indecision and inconsistency, crises appeared and reappeared. The problem is still not finally settled, but the new state of Israel sits with the nations of the world and a web of armistice agreements holds the peace under the aegis of the United Nations.

These are measurable, perhaps even monumental achievements for a young organization working under the handicaps of contemporary international life. They demonstrate that, despite the existence of the veto, the system of pacific settlement provided in the Charter is viable. They demonstrate the potency of the voice of international conscience which is embodied in the United Nations. The exact details of the machinery for peaceful settlement were not important. In one case the Court was called upon, in another the Assembly appointed a single individual as mediator reporting to the Council, in other cases commissions composed of governmental representatives worked on the problem.

There was one detail of procedure which proved to be of considerable significance in several of the cases—the tacit agreement that abstention by a permanent member of the Council does not constitute a veto. Lawyers can dispute the strict consistency of this interpretation with the language of article 27, but it is a fortunate circumstance for the world that it has become firmly embodied in the constitutional practice of the United Nations.

The lesson which these successful efforts teach is more than a lesson in procedure—they show that whatever the procedure the essential thing is to keep working. Pacific settlement can only occasionally be achieved by a quasi-judicial judgment handed down by the Security Council after a hearing around the table. Much oftener it needs painstaking scrutiny on the ground, careful, patient, and long-drawn-out negotiations with the parties. Above all contact between the parties and with the international organization must never be permitted to be broken irrevocably.

These lessons appear also from cases which cannot be called undoubted successes of the United Nations, such as the Greek, Korean, and Berlin questions. These are all cases directly involving the central East-West conflict. The first two are still unsolved, although the intervention of the General Assembly Commissions and their constant labors have certainly been an influence in these areas. The Berlin question is perhaps the best illustration of both the scope and limitations of the United Nations machinery and idea when called upon to deal with a grave and exceedingly dangerous problem.

Here the only resolution on which a majority of the Security Council was able to unite was vetoed by the Soviet Union. Yet the debate in the Council brought the problem from the semidarkness of bilateral nego-

tiation to the light of general international concern. Despite the veto in the Council, the General Assembly was able to secure unanimity for a call to the great powers to compose their differences, and the President of the Assembly and the Secretary-General issued a specific appeal under this resolution. The President of the Security Council set up a committee comprising the so-called neutral members of the Council and a representative of the Secretary General, which over a period of months made a careful study of the currency problem in Berlin. It is true that the final lifting of the blockade was agreed upon outside the United Nations and that the airlift was a prime factor in bringing that about. But, it was no casual accident that the decisive conversations were initiated between the Soviet and American delegates to the Security Council and that they began on United Nations premises.

This then is the lesson of Berlin: So long as the great powers are deadlocked the Security Council cannot coerce one or the other into a settlement; when the possibility of agreement exists the United Nations machinery can focus the attention of the world and provide the way to work out the settlement; above all the constant application of the principles of conciliation embodied in the Charter can operate to prevent the irrevocable and disastrous rupture of negotiations.

While the United Nations has been able to keep the peace in many corners of the world despite the East-West conflict, that conflict has obviously affected and impeded many facts of the Organiaztion's work. Most serious have been the failures to achieve agreement on the control of atomic energy, disarmament, and the creation of armed forces under article 43 to enforce the decisions of the Security Council. These are real and bitter failures, and the United Nations system will never be complete until these measures have been achieved.

Probably only a few of the delegates at San Francisco could foresee the extraordinary development of the General Assembly. When Senator VANDENBERG christened it the "town meeting of world" it seemed that he had assigned to it a most worthy and difficult role. In a short 3 years the Assembly has already surpassed and outgrown this fond designation. The size and variety of its agendas have been amazing. The quality of representation (Spaak, Aranha, Arce, and Evatt, to mention only the Presidents) has been and remains on a high level. Although it has no power to enact legislation or make decisions binding upon governments, it is evident that even the most powerful governments consider it an indispensable forum for the debate and consideration of international problems. Indeed the problem now is not whether nations will abstain from bringing matters to the Assembly, but how to reduce the number of matters which it is called on to consider and to shorten the debates.

Not everything which the Assembly considers is of vital importance; it must of necessity spend much time on housekeeping details. Yet it has not evaded the most difficult problems. It has dealt with Palestine, Greece, Korea, the world food shortage in 1946, refugees, human rights, the freedom of news transmission, the regulation of armaments, atomic energy, the veto, the fate of the Italian colonies, and dozens of other knotty issues.

There were some who thought that the Charter had set up a grandiose elocution society and that all we would get from the Assembly's rostrum would be a series of windy and eloquent generalities. That certainly has not happened; the speeches may often be too long and repetitious but they are about real things and serious controversies. Moreover, the Assembly has shown itself capable of making decisions on the most intricate matters. Whether one agrees with them or not the scope and detail of its resolutions on such matters as Palestine, gemocide, the declaration of human rights, and refugees are impressive examples of its legislative efficiency.

The Assembly has been a great educational experience, both for the public and for statesmen. It has operated in the open through the traditional democratic processes of debate and compromise. The influence of the great powers has not been negligible, but they have not run the Assembly. If this is not quite the international parliament of man, it is something more than a town meeting. Nothing exactly like it has appeared in world history; even the Assembly of the League of Nations was only a shadowy forerunner. There is every indication that the influence and standing of this new world forum will continue to increase.

The Economic and Social Council has also had an active history, influenced also by conditions which were only dimly foreseen when the Charter was written. Not only has this Council work been impeded by the great power conflict, it has had to strive for economic stabilization and development at a time when world economic life has been dominated by an over-riding problem—the shortage of dollar exchange. Since the United Nations could not possibly command the means to alleviate this shortage, its own economic activities of necessity played a subordinate part. Nonetheless, what has already been done, despite these hardships, by the Council, the Secretariat and the specialized agencies, gives fair promise that once the immediate postwar problems have been mastered, the international economic agencies will contribute enormously to maintaining stability and giving impetus to further development.

One can only pick a few specimens out of an immense catalog: the Annual Economic Surveys prepared by the Secretariat's Department of Economic Affairs, rapidly becoming the standard for over-all analysis of economic trends, the highly practical and ingenious work of the industry committees of the Economic Commissions for Europe and that organization's arduous efforts to restore East-West trade; the rationalization of international statistics; the beginning of large-scale lending by the World Bank; the manpower programs of the International Labor Organization; the far-reaching programs for the restoration of land transport in Europe; the agricultural and nutritional programs of the Food and Agriculture Organization; the starting of regional economic analysis through the Commissions for Latin America and the Far East; the drafting of the Havana Charter and the preparatory work for the International Trade Organization. These are only a sample of the intense, far-reaching and continuous work which the United Nations system has undertaken in the economic field.

Now these agencies stand before a new opportunity in the projected program of technical assistance for underdeveloped areas. For the first time a coordinated effort of international agencies and national governments will tackle the problem of bringing the knowledge and technique of the whole world together for the development of those parts of the earth where the resources of nature have not been put at the service of man.

It is this program which reveals in acute form one of the internal problems of the United Nations system; that of the coordination of the specialized agencies with each other and with the central organization. The authors of the Charter deliberately chose to leave the operational tasks to autonomous agencies brought into realtionship with the Economic and Social Council by individual agreements. Some progress has been made in coordinating aspects of the work of these agencies. No one, I believe, will claim that the problem has been solved. The forthcoming program of technical assistance will furnish the real test of the ability of all parts of the United Nations system to function together smoothly and efficiently.

In the multifarious fields of social endeavor the United Nations system has built solidly on the foundation of previous international achievement. The international control of narcotics still remains a model of effective world-wide cooperation, and the United Nations has strengthened it. International effort to combat other social evils makes gradual headway. The refugee problem, unbelievably greater than that after the First World War, yields to constant international effort, although remnants of it will be with us for years to come. UNESCO is solidifying its organization to eradicate illiteracy and enlarge the cultural horizon of men everywhere.

Much of the work of the United Nations can only proceed through slow evolution. This is particularly true of the provisions of the Charter relating to dependent peoples. The Trusteeship Council's functions have been crystallized by the trusteeship agreements approved by the General Assembly. The Council is now engaged in the painstaking analysis of reports and surveillance of the administration of the trust territories. Their inhabitants are the special concern of the international community, and the record will show that the United Nations is fulfilling its responsibilities toward them.

All these are the specific activities to deal with concrete international problems; taken together, they mark the continual striving for effective world organization and world community. The authors of the Charter knew, however, that these could not stand alone, that they must be buttressed with a structure of world law. This all-important goal the United Nations is also pursuing with steady and practical purpose. Its great achievement to date has been the universal declaration of human rights, which, while not a binding enactment, was proclaimed without dissenting vote as a standard of achievement for all nations and peoples. The process of ratification of the Convention on Genocide has begun; a draft covenant on human rights is now before the Economic and Social Council.

A long-term process of codifying international law is well under way through the International Law Commission set up by the General Assembly. The Commission has already completed a draft declaration of the rights and duties of states. Preparatory work is under way on such diverse subjects as the principles applied in the Nuremberg trials, the law of treaties and the regime of the high seas.

The International Court of Justice the principal judicial organ of the world community is also at work enlarging and strengthening the rule of law. In the Corfu Channel case is laid down important principles of state responsibility. In the advisory opinion on reparations for injuries incurred in the service of the United Nations it upheld the international personality of the United Nations and gave it a firm standing to invoke rights under international law necessary for the fulfillment of its functions.

Thus the United Nations builds the mansions of world organization, world community, and world law stone by stone. It has no magic formula which can call these walls to rise in a twinkling of an eye. It deals with hard facts in a hard world in which progress can only be made by hard and back-breaking work.

It is a strange paradox that these very virtues are the source of much of the doubts which have been aroused in the public's mind. A group of scholars drawing up an ideal world constitution and having no responsibility for concrete tasks can promulgate what they want. A United Nations council or commission must deal with actual problems

and must seek workable and acceptable solutions. Its operations are under constant public observation and criticism. Even temporary set-backs (as in some phases of the Palestine and Indonesia questions) may make spectacular headlines and lead to exaggerated impressions of failure. Much of the work, as in the economic and social fields and in the realm of world law, are devoted to slow evolution over the years. It is hard for an impatient public in a troubled world to see the significance of these efforts when so many quick and radical remedies for all our ills are proclaimed daily.

I have stressed the basic features of the United Nations system—global membership, interrelation of international problems, and continuity of effort. These are the features which distinguish it particularly from regional arrangements or temporary instruments of international cooperation. In the United Nations, Cuba has a vote on the treatment of Indians in South Africa, and Lebanon has a vote on the report of the Economic Commission for Latin America. The world is looked on as an essential unit and all nations have their say on problems of international concern.

Regional arrangements have a definite utility and the Charter makes a specific place for them. No regional arrangement, however, can substitute for the United Nations because by its very nature no regional arrangement could furnish the basic features which a universal organization alone comprehends.

A single example will suffice. When the United Nations deals with Palestine, it can take action not only on the political aspects, it can also deal with the emergency case of refugees, and eventually it can look forward to stimulating through the technical assistance program the economic development of the Middle Eastern region. In its political decisions it has the moral backing of the whole world, not only the great powers or the directly interested parties. In its social and economic activities it can bring together ideas and talents from everywhere.

The United Nations system is still incomplete and it has not yet been able to display its full potentialities. It will not be able to do that until the basic political conflict between East and West is substantially lessened and the peace treaties have been concluded. No one is under any illusion that the United Nations can settle that conflict. By keeping the parties together, by focusing the attention of the peoples of the world, by devoting itself to specific situations which it can resolve, the United Nations is contributing to the lessening of tension and is preparing the ground for eventual political stabilization.

Four years is no more than a moment in world history, much too short a moment in which to reach a judgment valid for centuries to come on so complex an issue. Yet we have learned several things from the specially difficult circumstances of these years.

We have learned that while the United Nations depends on its member nations for its powers, its resources, and its personnel, the member nations depend upon the United Nations.

We have learned that while the United Nations is no universal panacea and while it has definite limitations, it has a tremendous scope for effective action.

We have learned that in the present state of affairs, the United Nations is the only organization capable of giving at least a modicum of order to world affairs, and that any future development toward a stronger international order must be firmly based on its structure and experience.

We have learned that the United Nations is here to stay.

The Truth Shall Hunt Out Every Citizen

EXTENSION OF REMARKS
OF

HON. LEONARD W. HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1949

Mr. LEONARD W. HALL. Mr. Speaker, under the leave extended to me it is my happy opportunity to include for the RECORD an address delivered by Hon. Will Hays, of Indiana, at a dinner at the Mayflower Hotel, Thursday evening, August 4, given by the Republican membership of the House and the Senate for the members of the Republican National Committee.

The full text of this great address by Will Hays is as follows:

I am honored in the invitation to speak here tonight. I am keenly conscious, as all of you are, that this is a significant occasion, at a highly significant moment in the history of our party and our country.

We know that the world is at a crucial crossroads, and that it looks anxiously to the United States for leadership. But how can we be trusted or competent to lead others unless we are ourselves adequately and ably led? How can we guide mankind out of the blind alleys of totalitarian illusions if our own Government is sampling illusions of the same order?

Both at home and abroad, there are fateful choices of direction to be made, and the signposts are not easy to decipher. Some of them, alas, are deliberately misleading. They read progress though they point to stagnation. They read security though they point straight to the destruction of individual freemen. Many of them are inscribed liberalism, though they indicate roads to the most illiberal and undemocratic goals.

For our own sake and for the sake of the free segment of the world, America must not take the wrong turning. If it does, the one certainty is that all mankind must follow us into the valleys of error and despair. The divine will manifest in history has imposed on our country a role of leadership which we did not seek, but which we cannot evade. We cannot play that role properly—we shall be so many Pied Pipers of disaster rather than leaders—unless we know where we're going here at home.

More than ever before, America today needs the material and spiritual vitality, the clarity of vision, that have made it the greatest Nation in man's career on earth. It needs a rebirth of confidence in those personal virtues of democratic self-reliance that have stood us in good stead lo these many generations.

But democracy is not an abstraction. It is an all too human institution, reflecting the character of the men and women who make it work. For good or ill, it finds expression through political parties. That is why democracy can never be any better or any nobler than its political parties. That is why, in seeking to make a more perfect instrument out of our Republican Party, we are in fact engaged in a great and vital service to the Nation.

The pledge of patriotic dedication to better and saner government implicit in this gathering may well become a remembered landmark in the development of our country. It may decide the central issue of these times, which is between government of the people and government over the people. It is not yet too late to arrest the creeping paralysis of bureaucracy and stateism that is reaching into every part of the body politic. It is not too late for our grand old party, born out of crisis to save the Nation from dissolution, again to save it from the perils of today. It can be done.

My friends, I come here tonight as a rank-and-file Republican who wants nothing from his party but everything for his party. I declare my unswerving allegiance to the common-sense principles to which our party has been dedicated—the principles which have spelled progress and happiness, abundance, and freedom for the Nation.

To begin with, I compliment the retiring chairman of the Republican National Committee, whose talents and devotion and personal charm have won him a permanent niche in Republican hearts. In saying that I appreciate the weight of the burdens he is relinquishing, I speak out of the fullness of personal experience.

At the same time it is a pleasure to congratulate his successor, who now shoulders those heavy burdens. Again I draw upon my own vivid memories when I mix a little human sympathy with the congratulations.

Mr. SCOTT and I, and the men who have held the important office through the years, know more intimately than the rest of you what Chairman Guy Gabrielson has let himself in for. The least he deserves for his fortitude in tackling the tough assignment is an earnest promise of our understanding and cooperation. He must feel that we are solidly behind him as he seeks to translate the challenge of his job into a great opportunity for service to our America.

A former chairman of the Republican National Committee, called upon after the lapse of a full generation to greet a meeting such as this, can only hope to make up in sincerity what he may lack in wisdom. No one knows better or realizes more surely that these new times bring new problems, which cannot be solved by precedent or bringing things down out of the attic.

Yet, as I survey the current political scene, I note a remarkable analogy with the period when I assumed the chairmanship. Then, as now, we were the minority party in a war and postwar period crowded with trouble. Then, as now, there were tensions within the organization that had to be resolved—in the interests not only of the party but of the country which needed the party. Then, as now, those tensions were resolved, after which a Republican victory touched off an era of fertile growth and national vitality.

My thoughts have reverted a good deal recently to the sad day of January 6, 1919, when a great Republican, a great American, and a great human being passed from the scene. I was en route to my home in Sullivan, Ind., and thence to Chicago for a critical session of the Republican National Committee a few days later. But at Muncie, Ind., a telegram apprised me of the sudden death of Theodore Roosevelt. I had to make an immediate decision: whether or not the Chicago meeting should be postponed.

In a sense, however, the decision was made for me by Colonel Roosevelt himself. I remember the grim morning when he had received word that his son Quentin had been killed. He was scheduled to address the Republican State convention at Saratoga, N. Y., next day—and he kept the appointment. His heart was crushed by sorrow as he read his speech. And at one point we saw him lay aside the manuscript. We heard him interpolate a beautiful and supremely moving tribute to all the boys who were dying in order that their country might live.

Recalling that scene at Saratoga, I knew that the fighting leader lying dead at Oyster Bay would want us to carry on. The Chicago meeting was held as scheduled.

Teddy's robust spirit was with us. It was an inspiration in all the activities that followed, as the party healed its wounds and regained its natural vigor, so that by 1920 it once more took the helm of the American ship of state.

Shortly after the Chicago meeting I learned from his family that they had found a message on his bedstead, which Colonel Roosevelt had scribbled in pencil in the night. It was a brief memorandum—given to me and cherished always. This is what it said:

"Hays, see him; he must go to Washington for 10 days; see the Senate and House; prevent split on domestic policies."

That simple message—the last words of a patriot— packed a philosophy as well as a party policy. Their import remains as decisive for 1949 as it was for 1919. Theodore Roosevelt's last thoughts were for the welfare of his country. In effect he called for unremitting vigilance in achieving unity of purpose and action in meeting domestic problems. It was a true soldier's call to his party to close its ranks and accept the challenge of the time.

Tonight I can do no better than to convey the essence of his last message to the Republican Members of Senate and House who are our hosts; to the members of the Republican National Committee present here as guests; and above all to the seekers of good government in the rest of the country.

That call for unity in the party, is as clear and true as it was 30 years ago. Let us never forget that government is not a self-starter. Its functions through individuals, and those individuals in turn are elected through the mechanism of practical politics. This is a sequence not to be avoided.

If the aspirations of the American people are to be met, if the common sense of the democratic way of life is to find practical expression, we must have two political parties—both patriotic—both strong and virile.

Since I cast my first vote—and I was 21 that day—I have steadfastly believed that what we need in this country is not less politics but more attention by more people to practical politics—not only on election day but on every day of the year. Such attention, my friends, is the patriotism of peace.

It seems to me strange and sad that a free people who have paid so much for the right to govern themselves have to be urged to use the inestimable privilege of the vote. Yet such is the fact. All the evils of Government, all the dangers of false leadership, flow from the laziness or lethargy of men and women remiss in exercising those rights for which less fortunate peoples yearn and bleed.

It is not my function tonight to get down to cases on specific political issues. But one thing is sure. They cannot be met and resolved until every man and woman shoulders some of the responsibilities. Otherwise we shall lose by default the battle for the mind of man now under way in our country and in all countries.

In a more primitive period of our history, politics seemed a specialized department of national life. A great gulf divided Government and the existence of the average man in an isolated community. Today, with Government playing an ever-heavier and more dominant role in our complex society, politics has become as wide as life itself.

There is no longer any excuse for any American to abstain from the political processes that shape his daily existence as surely as they shape the destiny of the whole Nation. It is within the limits of this simple truth, I am convinced, that the Republican Party must find the fundamental directives for action in the months and the years ahead.

Our first and immediate duty can be summed up in a single word: organization. We must have a supremely strong, articulate and efficient political party. It must be geared to the discipline of free allegiance to a common cause, in which patriotic men and women sacrifice differences in little things for united effort on the big things.

The need, mind you, is for unity, not uniformity. Uniformity is something imposed from above. In recent years we have watched it being imposed through the perquisites and threats of patronage; through the reckless squandering of the Nation's resources to buy the support of this or that group or class, this or that section or community.

True unity comes from below; its sap, as in a sturdy oak, flows to its remotest branches. True unity is rooted in the soil of the home, the school, the church, the neighborhood, the humble problems of humble people everywhere.

And thus I see the second great directive for the Republican Party. Ours is the tremendous obligation and the tremendous opportunity to generate political awareness at the grass roots. We must draw tens of millions of citizens into the political processes. We must break through the indifference and inertia on which false prophets and misleaders thrive.

There is a mighty job to be done at the level of the home and the neighborhood, where nearly forgotten copybook maxims are still believed; where the essentially American virtues of toleration and thrift and godliness have not lost their magic.

Under the spur of the recent war, let us recall, millions of Americans were awakened to a sense of civic duty. Suddenly they found both the inclination and the time to take up the burdens of war work, to share with their neighbors, in a spirit of self-abnegating patriotism, the duties of the emergency.

If some part at least of that fervent interest in the fate of our country can be revived and maintained, it will bring untold good to all of us. But that revival will not happen. It has to be brought about by an organization that is itself imbued with a year-round and unsleeping patriotism. That's a big order, but the Republican Party is equal to the challenge.

It is splendidly useful that the women of our country have become so interested and active in party and government. In the increasing participation we are not merely adding numbers to our ranks. Far more important, we are making effective in national life those instincts for order, economy, decency—above all, those spiritual qualities—which are especially the domain of our women. The national household needs and needs badly a powerful injection of the clean-sweeping common sense which our mothers and wives and sisters bring to the individual American household.

Our duty and our opportunity are no less urgent in relation to the youth of the country. You and I know that our sons and daughters are being sold a bill of goods by purveyors of alien and shameful philosophies. They are being fed sleeping pills of spurious security as a substitute for the spunk, the ambition, the adventure of living and achieving that should be their natural American heritage. It seems to me somehow against nature for American youth to be induced to bargain its birthright of self-reliance for a mass of bureaucratic pottage. The Republican Party, dedicated to the rights of individual opportunity that made America great, can surely save the next generation from the living death of an abject defeatism. A vital part of the overall party purpose must be to make certain that the youth of America have responsible party participation.

What does the Republican Party stand for? If any one Republican had the authority to give an explicit answer he would be attesting a congealed state of affairs. It is our pride that within our party there is and always will be full political self-determination. The party mirrors the hopes and purposes—the philosophy of life and government—of the men and women who find their political home within its ranks. They are the kind of men and women who are determined to restore Americanism to America. They insist that there can be no divided loyalties; that any American who prefers any other flag, foreign, red, or black, is by definition a traitor to the Stars and Stripes.

In this time of raucous propaganda of subversion, it is the Republican Party that can best mobilize Americans who want ordered change, not revolution; progress, not wholesale destruction. Ours is the special duty to safeguard those American values which 90 percent of our people consider too valuable to be bartered for temporary benefits.

The actions and the spirit of Republicanism are cemented into the magnificent structure we call America, which is the miracle of history and the marvel of all mankind. What is the past to us was the unexplored future to those who built the structure. It would never have achieved its grandiose dimensions if the Republican Party had not been at all times a party of the future.

It is that today. We are conservatives in the original sense of the word, in that we are dedicated to conserving the best in American life and tradition. And that, I submit, is genuine liberalism, as contrasted with the bogus variety being hawked by muddled demagogs.

The crisis of the present juncture in American life is not primarily economic. It is spiritual. There are no insoluble problems; and no solutions which demand an abandonment of clean and high ideals can endure. During a hurricane dead leaves and branches fall from a live oak, but the fiber of the tree tightens and the roots drive deeper into the soil.

Liberty is a grave responsibility, and responsibility is duty. And that duty is to preserve the American way of life, its capacity for growth, without temporizing or compromising our sacred principles. It has been truly said that "Liberty is fire on the hearth, license is fire on the floor."

To our great Bill of Rights we pay homage. Too much honor cannot be given to that immortal document. Might it not be well that we give thought at this time to a Bill of Duties and with the enjoyment of the privileges of America and the rights that are ours, we in gratitude remember our duties.

This gathering is significant because it expresses the determination of the American people to bring their Government back within the limitations of the Constitution. We have flourished within these limitations and we have no intention of being lured into the swamps beyond. The salvation of the United States in this respect depends on the disciplined organization, the assimilation of millions of politically homesick citizens, to which the Republican Party shall devote itself from this day forward.

Destiny chose for our thrilling American adventure a land of inexhaustible riches. But those material resources would have lain fallow and useless, as in other richly endowed land masses, had it not been for the American spirit. It is not the gold in the hills but the iron in the hearts of the American people that has told the story.

I urge a rekindling of that spirit now, before it is too late. We are only in the first chapters of the story. Let no one tell you that we are at the end of the American adventure. We are merely in the pause that precedes another of our perennial beginnings. Our task is big, yet it is essentially simple. It is to get the facts to the folks. The rest will follow, for we have profound

faith in the common sense and the wholesome instincts of the American people.

The Republican Party, which has best expressed the American spirit in the past, is now geared to express it in the immediate future. With the help of the Almighty, in humble consecration to the divine providence that has guided our steps, we face that future confidently, eagerly. We face it as a united and dynamic political party geared for action and for victory. We shall so organize that the truth shall hunt out every citizen and so strengthen him in wisdom and determination that he will make certain freedom shall not perish from the earth.

Wages and Hours—Suggested Amendments

EXTENSION OF REMARKS
OF

HON. RALPH W. GWINN
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1949

Mr. GWINN. Mr. Speaker, the first general regulation of wage and hour standards for private employment was incorporated in the National Industrial Recovery Act of June 16, 1933. Section 7 (a) of that act provided that every code of fair competition was to contain the condition that employers must comply with the maximum hours of labor, minimum rates of pay, and other conditions of employment approved or prescribed.

The NRA was declared invalid by the Supreme Court on May 27, 1935, in the case of *Schechter Poultry Corp.* v. *United States* (295 U. S. 495, 79 L. ed. 1570).

On June 14, 1935, less than 3 weeks after the Schechter decision, the Walsh bill was introduced in the Senate. This bill was the forerunner of the Walsh-Healey Act which was approved by the President on June 30, 1936, and made effective September 28, 1936. The clear purpose of the Walsh bill, and of course, of the Walsh-Healey Act, was to salvage as much Federal control over the wages and hours of private employees as the Schechter decision would permit. This purpose was made abundantly clear by the two Government witnesses who appeared in support of the Walsh bill—the Solicitor General of the United States and the general counsel of the National Recovery Administration.

Less than a year after the Walsh-Healey Act was enacted, March 29, 1937, the Supreme Court declared valid the Washington State minimum-wage law for women—*West Coast Hotel Co.* v. *Parrish* (300 U. S. 379). This latter decision resulted in the conclusion that the Federal Government did have adequate authority to control wages and hours of private employees who were engaged in commerce. According to the first annual report of the Wage and Hour Administrator, this decision had important bearing on the wage-and-hour law. This report reads, in part, as follows:

This decision made possible a reconsideration of Federal legislation establishing wage-and-hour standards for industries not subject to effective control through State action.

On May 24, 1937, the President sent a message to the Seventy-fifth Congress, first session, requesting legislation to establish fair labor standards. This message urged that:

All but the hopelessly reactionary will agree that to conserve our primary resources of manpower, Government must have some control over maximum hours, minimum wages, the evil of child labor, and the exploitation of unorganized labor.

The President further stated:

Allowing for a few exceptional trades and permitting longer hours on the payment of time and a half for overtime, it should not be difficult to define a general maximum working week. Allowing for appropriate qualifications and general classifications by administrative action, it should also be possible to put some floor below which the wage ought not to fall.

With the establishment of these rudimentary standards as a base, we must seek to build up, through appropriate administrative machinery, minimum-wage standards of fairness and reasonableness, industry by industry, having due regard to local and geographical diversities and to the effect of unfair labor conditions upon competition in interstate trade and upon the maintenance of industrial peace.

Pursuant to the President's recommendations, the Fair Labor Standards Act of 1938 was enacted on June 25, 1938. As will be shown later, this act controls the same conditions of employment as the Walsh-Healey Act and it applies to Government contractors as well as to other persons engaged in commerce or in the production of goods for commerce. However, as will be shown later, there are serious conflicts between the standards imposed by these two statutes with the result that any person accepting Government contracts subject to the Walsh-Healey Act is thereby compelled to increase his overhead expenses to make sure of compliance with the requirements of both statutes. In practice it is only reasonable for the contractor to pass these added charges on to the Government in the form of higher prices. This direct increase in cost to the Government, and the many indirect costs—costs not included in the contract price—to the Government make the Walsh-Healey Act a direct vehicle for pyramiding the almost unmanageable operating expenses of the Government with no really substantial benefits accruing to anyone as a result of the act's application.

When considered in its relationship to the National Industrial Recovery Act and the Fair Labor Standards Act it is obvious the Walsh-Healey Act was truly a stop-gap legislative measure. Without question that act should have been repealed when the Fair Labor Standards Act was enacted. However, in view of the then existing questions concerning the validity or constitutionality of the latter statute, the Seventy-fifth Congress was probably justified in not repealing the Walsh-Healey Act. Whether or not the Congress in later sessions was justified in continuing the Walsh-Healey Act on the books remains to be seen.

CONFLICTS BETWEEN THE FAIR LABOR STANDARDS AND WALSH-HEALEY ACTS

As stated previously, there are many direct conflicts between the Fair Labor Standards Act and the Walsh-Healey Act. Both statutes establish a 40-hour workweek and compel the payment of time and one-half for overtime. However, in addition to establishing a weekly standard for overtime payment, the Walsh-Healey Act compels the payment of overtime on a daily basis for hours worked in excess of 8 per day. In an effort to avoid the pyramiding of overtime payments, the Administrator of Walsh-Healey Act has ruled consistently that overtime must be paid under this act on a daily or weekly basis, whichever will yield the greater compensation to the employee. Thus, in any week when an employee works on a Government contract subject to the Walsh-Healey Act, his overtime earnings must be calculated on a daily basis and then on a weekly basis to determine which basis will result in the employee's getting the most overtime compensation. This means double wage calculations for each employee each week which in turn means double bookkeeping expenses for the contractor which are passed on to the Government in higher prices.

Of course, the addition in price to the Government on a single contract for a relatively small amount, for example, $12,000, may be small. However, when the increased costs on all Government contracts are added together, the amount could assume staggering proportions.

Another important conflict between the two statutes arises as a result of their respective minimum-wage standards. The Fair Labor Standards Act requires that employees be paid not less than a minimum established by the Congress. At present, the rate is 40 cents an hour but everyone expects this rate to be increased substantially by the present Congress. The Walsh-Healey Act, on the other hand, compels the payment of not less than the minimum wage determined by the Secretary of Labor to be the prevailing minimum in the locality for the industry involved. This means that the Walsh-Healey minimum is whatever the Secretary of Labor arbitrarily determines it to be. No one in any way familiar with the history of economics in this country would suggest that prices have not been increased as a result of wage increases. Moreover, no one could honestly say that wages, industry by industry, have not been increased substantially whenever the Secretary of Labor, in his wisdom, has determined the prevailing minimum wage for an industry under the Walsh-Healey Act. This can mean only one thing—whenever the Secretary determines a new prevailing minimum for an industry, the Government must later pay higher prices for the commodities produced by that industry. Furthermore, the impact of the Walsh-Healey rates goes far beyond Government business. Common sense tells us that it is not possible to pay employees one rate for Government contract work and a lower rate for the same work if it is performed for other customers. Thus, the entire wage structure in any plant must conform with the wage structure required to be adopted under a Walsh-Healey determination. This then must mean that as a direct result of Walsh-Healey determinations,

wages throughout the industry are increased and price increases follow for everyone along with the Government—see exhibit A.

A third important conflict between the Fair Labor Standards and the Walsh-Healey Acts involves the child-labor provisions. Under the Fair Labor Standards Act, it is permissible to employ girls and boys over 16 years of age except in hazardous occupations. Under the Walsh-Healey Act, however, the employment of girls under 18 is prohibited and a $10-per-day penalty attaches for each day a girl under 18 is employed on Government contract work.

Now no thinking individual favors the exploitation of children in factories, on the farms, or otherwise. But the conflict in the child-labor standards of the two acts has the inevitable result of increasing Government contract prices in many situations.

For example, it is not at all uncommon in the clothing industry for girls over 16 but under 18 years of age to obtain employment in nonhazardous work such as pulling basting threads. Their employment is permissible on commercial work but not on Government work. Thus, whenever a Government contract is going through a clothing factory, the contractor must add to his supervisory staff sufficient personnel to see to it that ineligible girls are not permitted to do any work on the contract. Once again, this added cost must be passed on to the Government in higher prices.

But higher prices to the Government resulting from the conflict of standards in the Fair Labor Standards Act and the Walsh-Healey Act tell only part of the story.

OTHER COSTS

For many, many years, the Wage-Hour Administrator has complained of insufficient personnel to conduct investigations under the Fair Labor Standards Act. Because of the conflicts in standards of the F. L. S. A. and the Walsh-Healey Act, one cannot help but conclude that the time of inspection personnel must be doubled whenever they inspect for Walsh-Healey and F. L. S. A. compliance. This must mean that with half of the number of present inspectors, the Wage-Hour Division could continue the same number of F. L. S. A. inspections as it does presently. No one except the Administrator, who naturally wants a big Bureau, has suggested this number is insufficient. Thus, should the Walsh-Healey Act be repealed, inspection personnel of the Wage-Hour Division might be cut in half without impairing the effectiveness of Wage-Hour enforcement. The Department of Labor personnel savings need not stop there. There are numerous other employees in the Department of Labor whose work on Walsh-Healey matters would no longer be necessary, with the result that further reductions in personnel could be made.

There is still another aspect of Walsh-Healey procedures adding costs to Government procurement in general. Under such procedures, it is necessary for the procurement officer awarding a Government contract subject to the Walsh-Healey Act, to have filled out in quadruplicate a Public Contracts Division form describing the contract and so forth. In addition, the contracting officer must notify the contractor of the application of the Walsh-Healey Act and of any wage determinations under it. When one considers the number of Government contracts awarded subject to the Walsh-Healey Act, the great amount of clerical work which must be performed by personnel in offices of contracting officers assumes enormous proportions. If this work is made unnecessary by repeal of the Walsh-Healey Act, the Government costs of operating procurement offices would be reduced materially.

EXHIBIT A

Since the war, the Secretary of Labor has apparently launched a program to increase all wage determinations under the Walsh-Healey Act and to issue others for which no prewar rate had been established. The following tabulation shows the wage determinations made under the Act before and since the war:

Industry	Prewar rate	Postwar rate
Aircraft manufacturing	$0.50	
Aviation textile products manufacturing	.55	
	.47½	
Cement	.70	
	.63½	
	.62½	
	.57	
	.55	
	.50	
	.47	
	.40	
Chemical and related products	.40	
	.50	
Cotton garment and allied industries	.40	
Dental goods and equipment manufacturing	.40	
Die-casting manufacturing	.50	
Dimension granite	.57½	
	.42½	
	.40	
Drug, medicine, and toilet preparations	.40	
Envelope	.42½	
Evaporated milk	.50	
Fertilizer	.40	
	.50	
Fireworks	.40	
Flint glass (changed to "Pressed and blown glass and glassware")	.40	
	.42½	$0.83½
Furniture manufacturing:		
(a) Metal furniture branch	.45	
(b) Public seating branch	.40	
(c) Wood furniture branch	.50	
Gloves and mittens	.40	
Handkerchief	.40	
	.40	
Iron and steel	.62½	1.23
	.60	1.19
	.58½	1.08½
	.45	
Knitting, knitwear, and woven underwear	.40	
Leather manufacturing:		
(a) Tanning, currying, and finishing of leather	.40	
	.50	
(b) Welting and power transmission belting	.40	
Luggage, leather goods, belts, and women's handbag	.40	
Men's hat and cap:		
(a) Cap and cloth hat branch	.67½	.85
(b) Fur felt hat branch	.67½	
Men's neckwear	.50	
Paint and varnish	.40	
	.50	
Paper and pulp	.50	
	.40	
Photographic supplies	.40	
Rainwear	.40	
Scientific industrial and laboratory instruments	.40	
Seamless hosiery	.40	
Shoe manufacturing and allied industries	.40	
Small-arms ammunition, explosives and related products:		
(a) Small-arms ammunition branch	$0.42½	
(b) Blasting caps branch	.47½	
(c) Explosives branch	.57½	
Soap	.40	
Specialty accounting supply manufacturing	.40	
Structural clay products	.40	
Surgical instruments and apparatus	.40	
Tag	.40	
Textile	.40	$0.87
Tobacco	.40

Vitreous or vitrified china	.42¾	
Wool carpet and rug	.40	
Woolen and worsted		1.05

Pulp and Paper Industry Needs Protection From Foreign Competition

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1949

Mr. MACK of Washington. Mr. Speaker, in 1940 the United States exported 480,938 tons of wood pulp. Last year our exports of wood pulp totaled only 97,782 tons. In short, in 8 years our exports of wood pulp declined by more than 80 percent. For every 5 tons of wood pulp we exported in 1940, we were exporting only 1 ton in 1948. We are losing our foreign markets for wood pulp.

In 1940 our imports of wood pulp were 1,224,570 tons. Last year our imports of these same pulps were 2,176,111 tons. In short, in 8 years our imports of wood pulp increased by 50 percent. For every 1 ton of wood pulp we imported from foreign countries in 1940 we were importing about 2 tons in 1948. We are losing our domestic markets for wood pulp.

Our exports of wood pulp to foreign nations in 1948 were 383,156 tons less than we enjoyed in 1940.

Our imports of wood pulp from foreign nations in 1949 were 951,541 tons greater than in 1940.

These two figures indicate a net loss of wood pulp business for United States producers of 1,334,697 tons between 1940 and 1948.

MANY JOBS LOST

This tremendous loss in our wood pulp markets means a loss of jobs for American workers.

Figures of the industry reveal that it requires 22.8 man-hours or 2.85 man-days of labor to produce one ton of pulp. The loss of 1,334,697 tons of pulp business by American mills to foreign competitors therefore means the loss of almost 4,000,000 man-days by the workers in our pulp plants.

It would require 15,000 pulp mill employees working 300 days a year to produce 1,334,697 tons of pulp a year. So

we may say that this loss of pulp business to foreign competitors between 1940 and 1948 means the loss of jobs for 15,000 American workers in the American pulp industry.

In addition to these, those who supply the pulp mills with materials, such as the loggers who furnish the pulp wood, also have lost employment. Jobs also have been lost by those who normally supply other goods and services to American pulp mills.

TARIFF PROTECTION NEEDED

Why are we losing this business to foreign competitors? Mainly because our American mills often cannot compete with those in foreign countries where wage rates and living standards are much lower than those prevailing in the United States.

Pulp made by 50-cent-an-hour labor can undersell American pulp made by $1.50 an hour labor, despite the efficiency of the American industry derived by the use of improved machinery and due to the better know-how of American workers.

Continued loss of American markets both overseas and at home is to be expected unless the American industry is given protection against low-wage competition and unless ECA nations in their buying cease their discrimination against American producers of pulp.

GOVERNMENT LOSES TAXES

American citizens have invested almost $5,000,000,000 in pulp and paper plants. This industry, in 1948, paid to the Federal Government $346,000,000 in income taxes over and above other millions paid to the tax support of State and local governments including the schools. If the industry is deprived of a large segment of both the domestic and foreign markets it formerly enjoyed, its earnings certainly will decline and the Government will be a heavy tax loser.

Also this pulp and paper industry in its manufacturing plants alone last year employed 205,000 workers. These workers received about $612,000,000 in wages. If some of these workers lose their jobs as a result of too little exports or too great imports of pulp, their tax payments to the Federal, State and local government will decline.

Today there are 4,000,000 unemployed workers in the United States. Many of them are in the pulp and paper-making industry. These people want jobs, not relief.

Confronted with this reality, the administration should be carefully reviewing the causes of this growing unemployment of which, not the least important, is the practice of recent years to give away our American markets to low-wage, low-living standard foreign countries.

The pulp and paper industry is only one of many adversely affected by this policy.

Fishing is one of many others. Our imports of fish last year totaled 422,000,000 pounds valued at $110,000,000. That is a whale of a lot of fish to buy abroad when our own American fishermen could be profitably employed in supplying it.

What's Wrong With the Republican Party—Even on Old Issues They Can't Agree

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 27, 1949

Mr. PRICE. Mr. Speaker, last Saturday, like so many Members, I tried to listen to as many news commentators as I could. One that I heard interested me greatly. It concerned a poll of Republicans on their chances in the 1950 House and Senate elections.

After listening to it I thought that it illustrated, once again, that the Republican Party is still trying to inject new life into old issues. It is trying, without success, to find some new ones.

Joseph McCaffrey, of Mutual Broadcasting, who conducted this poll, informed me when I asked for a copy of his script that he was contemplating a similar poll among Democrats next week. I certainly hope that we prove more original than the Republicans.

Mr. McCaffrey's comments made over the Mutual network, Sunday, July 17, follow:

The Democratic-controlled Eighty-first Congress has now been in session more than 6 months. For 6 months the Republicans have sat as a minority, watching this Democratic Congress in action. Now, what do the Republicans think of their chances to win control of Congress a year from next November.

To find out the answer to that question I have just completed a mail poll of 23 prominent House and Senate Republicans. A cross-section of the Republican Party in Congress.

The replies are very interesting and significantly, the Republicans most pessimistic about chances in 1950 refused to allow use of their names.

More than 50 percent of those polled doubted that the Republicans could win either or both houses. Less than 50 percent were optimistic that the Republicans would win either or both.

Only one person polled, New York's KATHARINE ST. GEORGE, second ranking GOP woman in the House, stated unequivocally that the Republicans would win both House and Senate.

Among those who thought chances excellent in both houses were Indiana's Senator CAPEHART and Congressman NORBLAD, of Oregon, and PFIEFFER of New York.

Michigan's CLARE HOFFMAN thought the Republicans could win the congressional elections if they would quit "following Dewey, Stassen, and like thinkers." He made no mention of the Senate.

Neither did the former Speaker of the House, Minority Leader JOSEPH MARTIN, who thought the Republicans would make substantial gains over the country and will elect a Republican House next year.

Even such an incurable optimist as Ohio's CLARENCE BROWN, one of the top House Republicans, qualified his look into the future.

Said BROWN, "It is my opinion the Republicans should and can win control of the House in 1950 if a direct, hard-hitting, aggressive campaign is made on sharply drawn issues."

As to the Senate, BROWN said there is a possibility the Senate will go Republican.

Two other Republican spokesmen thought the party has a chance if it works hard enough. One of these, Washington State's WALT HORAN said, "The results will depend on the candidates and party workers getting out and working." Said HORAN, "Negative campaigns have been failing consistently for 16 years and will continue to do so."

A younger Republican, who wished to remain anonymous, replied it would depend on the quality of the candidates and the work they would do. Right now he thought the chances of Republican success seem to be 50–50.

The rest of the replies were more cautious. Kansas Senator CLYDE REED, who comes up for election himself next year, would only say the Republican Party has a more favorable chance in the 1950 election than appeared probable after the 1948 election results.

The ranking minority member of the House Labor and Education Committee, SAMUEL MCCONNELL—"a good chance in the House, a fair chance to win the Senate." Senate minority leader WHERRY thought chances good. Senator AIKEN: "Good in both Houses." Senator MORSE: "Reasonably good." One of the younger House Members: "Republicans will make fairly substantial gains in both Houses, but I doubt if we will get control of either—a net gain of three or four seats in the Senate; from 20 to 25 in the House."

Another anonymous House Member who is high in his party's policy-making councils: "The Republicans will gain in the Senate and make substantial gains in the House, although possibly not sufficient to recapture control of the House until 1952."

Another anonymous Member, a veteran of many years in the House and known as one of the Republicans' foremost progressives, pointedly refused to comment but in reply to the second part of the poll, what issues would be most important to the Republicans, wrote: "Issues will mean nothing to the Republicans until they return to the ideals of Abraham Lincoln and Teddy Roosevelt."

As to issues, the one of economy leads all the rest, specifically in relation to the recommendations of the Hoover Commission.

One member said, "Economy in itself is not an attractive issue, but the carrying out of the Hoover Commission recommendations seem to have taken a firm hold. If we can make the commission recommendations an issue we can profit by the economy issue."

Next as an issue is the belief by nearly half of those polled that there may be a recession or depression by November 1950.

Socialism, as an issue, ranks next. Says Oregon's Congressman WALTER NORBLAD, "The socialistic trend has been evident for many years and has grown progressively worse. I still believe the people of this country do not want to rely on the Federal Government for their every wish and want."

This was stated in a milder way by Vermont's Senator GEORGE AIKEN who called it government control over the individual, particularly the farmers.

The next issue is labor. Wisconsin's Congressman GLENN DAVIS calls it stubborn politics-playing in labor legislation. He said, "It looks as if the Democratic party would prefer to have labor legislation as an issue for the 1950 campaign rather than to accept a number of important changes in the law acceptable to a majority of Members of both Houses."

Foreign policy ranks next as an issue, only there is a sharp difference of opinion here—the same as there is among Senate Republicans on the present debate over the Atlantic Pact.

Progressive Senator WAYNE MORSE said, "There is increasing evidence developing that the failure on the part of some Republican leaders to recognize that we cannot meet

the growing threat of communism in the world by adopting an isolationist attitude in foreign relations, is bound to do serious harm to the Republican Party in the 1950 campaign."

But another Republican Senator, who refused use of his name, said, "I believe that the extent of foreign spending will probably be an issue by 1950, including arms for western Europe."

Among the other issues mentioned in this poll were: "the dire failure of Democratic leadership during this Congress" * * * "hypocrisy in civil rights on the part of the Democrats" * * * and one reference to "getting ride of chiselers and special-influence men in government."

The Republican conservative viewpoint was summed up best by CLARE HOFFMAN of Michigan who said, "Let's stop swallowing the unsound ideas of the New Dealers" * * * adding, "I do not want to reestablish my great-grandfather's outdoor back-house nor his tallow candle, but I do want a policy such as we have always followed, saving, working, and paying as we go."

The Reciprocal Trade Agreements Act also was mentioned several times. One Republican Senator, who will be up for election next year, said, "the Trade Agreements Act has already hurt many industries, forcing them to lay off thousands of employees because of heavy importations permissible under lower tariff policies."

And that, just a year before the campaigns open, is how the Republicans feel about their chances in the 1950 elections. Certainly, at this stage, they cannot be charged—as they were in the last election—with being overoptimistic!

Statehood for Hawaii and Alaska

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 5, 1949

Mr. MANSFIELD. Mr. Speaker, there is much sentiment in this Congress for a vote at this session on the question of statehood for Hawaii and Alaska.

A poll on the question by the Hearst newspapers has now reached virtually every Member of Congress.

I am informed it shows overwhelming sentiment of the membership in favor of statehood for both these Territories, and that the wish of most of the Members is for speedy action by the Rules Committees on these bills.

The poll would indicate that it is almost certain the two enabling bills would pass if brought here together, or one closely upon the heels of the other and thus, as Senator MAGNUSON pointed out in the Senate day before yesterday, this Congress could claim the credit for an historic accomplishment.

Mr. Speaker, there is no lack of favorable committee report on these measures.

Investigations have been held over a period of 10 years, and the preponderance of testimony is heavy that both Territories have qualified for statehood, and are thus immediately entitled to the promotion guaranteed them, if they made good, at the time they became Territories.

The objections made to either Territory are, after all, objections based on transient grounds, matters no more serious and permanent than the troubles of any State, certainly nothing to compare to the troubles of most of the present States when they were Territories.

Certainly political considerations of partisan nature should not affect a matter so momentous, so valuable to the Nation in world prestige, in improved economics and in defense, as the creation of two new States.

The Public Lands Committee of this House has reported the measures favorably, and we await their appearance on the floor.

The committee, I am advised, did not consider politics while it was studying the two enabling acts and holding hearings on them. It gave no thought that Alaska might send Democrats to Congress, or that Hawaii might send Republicans pretty consistently.

It concerned itself with the economic advantages, the fact that the peoples of Hawaii and Alaska are fully entitled to full self-rule, and that what we need now in the Pacific is a sound demonstration of Americanism for our own defense and an example of the American way of life to the peoples of Asia.

Potato Price-Support Program

EXTENSION OF REMARKS
OF
HON. FRANK FELLOWS
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Friday, August 5, 1949

Mr. FELLOWS. Mr. Speaker, Members of both the Senate and House from the potato-producing States met in the Merchant Marine and Fisheries Committee room on Tuesday, August 2, with representatives of the National Potato Council and the Department of Agriculture for the purpose of discussing the present farm-support program and the proposals contained in the so-called Pace bill. The National Potato Council, after extensive exploration of the system of supporting the Irish or white potato, recommend and the potato farmers ask that the present program, with mandatory price support at from 60 to 90 percent of parity, acreage allotments and marketing agreements be continued, and a fair trial given the program under which the farmers are now operating. This position has the backing of the potato industry generally.

The following statement was made on behalf of the National Potato Council by W. M. Case, member of the legislative committee of the council:

Mr. Chairman, we welcome this opportunity to say to this important congressional group that potato farmers are tired of being made the whipping boy of the farm price-support program, especially when the record clearly shows that potato growers, on the whole, have done almost exactly what the Government has requested of them under the programs that have been in effect.

We are tired of being held up to public scorn as the recipients of so many millions of dollars without any credit at all for the growers' own efforts over a period of 3 years to reduce the costs.

Even when we do sharply reduce the cost—cutting it this year to an estimated one-fifth of what it was in 1948—nobody pays any attention or gives us any credit, because the admittedly high cost of previous programs has been drilled incessantly into the public mind.

We don't like to be continuously pointed out as the bad boy of the farm program when it seems to many potato growers rather obvious that the difficulties of the potato industry are but a forerunner of some of the problems which eventually will be confronting other groups in our Nation.

We feel that we are being made the illegitimate child of the farm program, for reasons unknown to us, when our breeding and membership in the great agricultural family is as correct and as proper as any other commodity.

We particularly wish to point out to the gentlemen assembled and to the public that the present price-support program for potatoes provides for the very low level of only 60 percent of parity—a figure that amounts to the equivalent of insurance on the cost of production, and insurance to the consumer of an adequate supply of potatoes at reasonable prices.

In view of the fact that potato farmers have been deliberately singled out for an unwarranted campaign of attack, we say it is high time to take a look at the record.

ACREAGE REDUCED 41 PERCENT

That record will show that potato farmers themselves have voluntarily reduced their acreage in each of the years from 1943 through 1949. It will show that the acreage planted to potatoes this year is the lowest in 70 years, and is 41 percent less than 1943 and 10 percent less than last year.

Of this decrease, 36.5 percent came in the years from 1943 to 1948. It came in spite of the fact that during this period potatoes were supported at 90 percent of parity instead of the 60 percent in effect for the 1949 crop.

The figures show that potato-planted acreage in each of the last 5 years, 1944 through 1948, and in this current year of 1949, has not even equaled the national acreage recommended by the Department of Agriculture.

This means that potato growers, as a whole, have taken a double cut in their potato acreage in each of the years since 1944. They have taken one reduction through compliance with the Department of Agriculture's acreage goal program, and a second voluntary reduction by underplanting, as a group, the total acreage that was actually allotted them.

For example, the Department recommended a 1949 goal of 1,980,000 acres, but potato farmers actually planted only 1,915,300 acres. This is 64,700 acres under the Department's allotted goal and is another example of the voluntary efforts by most producers to cooperate with the Department's requests.

Increased per-acre yields have offset, to a considerable degree, the 41-percent reduction in acreage since 1943 but, to a great extent, this has been due to the exceptionally good crop years that this country has enjoyed since 1940. Most authorities do not expect these good years to last forever. As a group, potato farmers have consistently complied virtually 100 percent with the Department's acreage goal program.

As a result of this compliance, plus the fact that the support price has been cut to 60 percent, we are producing this 1949 season a crop estimated to be the smallest since

1941. The July crop report estimated that the 1949 potato crop would amount to 369,000,000 bushels, which is 77,000,000 bushels less than last year, a reduction of approximately 17 percent.

PRICE SUPPORT REDUCED TO 60 PERCENT

The revision in the price-support program providing for support from 60 to 90 percent was recommended by potato growers themselves who are frankly concerned over the cost of the program and have repeatedly sought methods whereby it might be reduced.

The record on this is rather complete. As far back as May 1948, potato growers, meeting here in Washington, recommended to their Senators and Representatives that changes be made in the potato price program. They worked out what they thought, at that time, was a program that was practical, workable, fair to the consumer, and equitable to the potato grower.

On that occasion, they recommended price support from 60 to 90 percent of parity and asked that, where workable, marketing agreements be made one of the requirements for eligibility of price support, thus guaranteeing to consumers the best that was produced.

Following those recommendations, the Secretary of Agriculture reduced the rate of the support for potatoes to 60 percent of parity and potato producers have accepted and are supporting this very sharp reduction in the support price.

The National Potato Council gave full approval, on February 23, 1949, to this lowered price-support program by saying to Members of the Congress from potato States, at a meeting similar to this one, and to the Department of Agriculture, that it believed the current program should be given a fair trial before changes were made.

Similar recommendations to give the current program a fair trial without change have since been made on four occasions, May 4, May 27, June 8, and July 29, 1949, to the Special Subcommittee of the House Committee on Agriculture, of which the Honorable STEPHEN PACE, of Georgia, is chairman.

One of the most important features of the present 60 percent price-support program has been overlooked in most of the blasts against potato growers, and that is the change this year to a single price as the base support price for all eligible potatoes instead of the two-price system in effect on previous crops.

Until the 1949 crop, the Government based its purchasing program on a price for U. S. No. 1 grade potatoes with certain lower grades supported at 50 percent of this price.

Under this year's program, the Government support price is based on No. 2 potatoes. The result is that consumers are getting the better grades of potatoes being grown. The only place where a grower can get a good price for his No. 1 potatoes is in the market. The support price is at or below the cost of production. Had this single-price system been used in previous years, as many in the industry urged be done, the result would have been far fewer complaints from consumers as to the quality of potatoes they could buy in their grocery stores.

ATTACK ON POTATOES

Many bitter attacks have been loosed on potato farmers, apparently in an effort to use them as the horrible example of the present farm program.

Attackers have repeatedly quoted costs of previous years, particularly last year's $200,000,000 when the support price was at 90 percent, without mentioning the efforts that potato farmers themselves have been and are making to reduce the costs.

While these efforts are being made on the part of the American potato grower, the trade program of our Government permitted the importation of 10,000,000 bushels of potatoes, thereby using American taxpayers' money to indirectly support foreign producers in bringing their potatoes to American markets and aggravating the supply and demand situation in this country. It is rather a disturbing fact that the better our potato program works in avoiding Government expenditures to support prices, the more profitable it is for foreign producers to import into this country.

No one in Government has seen fit to tell the public that the cost of this year's program is now running sharply below that of 1948.

For example, as of July 24, 1949, the Government's purchases under the present support program totaled only 3,600,000 bushels at a cost of approximately $4,650,000 compared with purchases on the same date in 1948 of 11,900,000 bushels at an approximate cost of $20,041,000.

If this same relationship continues throughout the harvest season, which is now in progress, the costs of the potato program for 1949 will approximate only $45,000,000 to $50,000,000 as compared with last year's $200,000,000 when the support price was at 90 percent.

This represents a cost of about 30 cents per person to consumers. This is not a very heavy cost to guarantee an adequate supply. Past years of short supplies have usually seen consumers forced to pay from $1 to $2 per capita in higher prices.

Why doesn't someone publicize what the potato farmers themselves have done?

We feel that the potato growers and the Government can and should point with pride to the fact that the Nation's potato farmers have voluntarily reduced their acreage 41 percent and cut the cost of their program one-fifth to one-fourth of what it was last year.

We are proud to tell consumers that the one-price support system is bringing to their tables the better grade potatoes.

We are anxious to tell the public that under this program the low-grade potatoes are being diverted into many useful channels, such as starch, flour, and livestock feed.

It has been suggested that immediate provision should be made for marketing quotas as a part of the price-support program for potatoes. Very few potato farmers know anything at all about marketing quotas. They have not been used on this crop in the past and in many areas, such as Maine, there are no other crops on which quotas have ever operated.

When the question of marketing quotas came up, the National Potato Council pointed out that this was a surprise to potato growers in every State in the Union. Without endorsing or opposing, the council merely asked for time in which to acquaint farmers with the mechanics of marketing quotas and to let potato growers themselves express their opinion.

We were granted this request but, at the same time, we were advised that a recommendation would be made to remove potatoes from the mandatory price-support list and that support be made discretionary with the Secretary of Agriculture. We feel that this is rather severe and is not necessary at this time.

Potato farmers take the position that they have gone a long way in adjusting their production in line with demand. They have cut their acreage 41 percent. They have taken a reduction from 90 to 60 percent in their support price. They are on a one-price system that brings consumers the best quality. Through their own efforts, they have brought about a reduction in cost so sharp that this year's program will cost only one-fifth to one-fourth of last year's. The growers have asked for marketing agreements which would be binding on the noncomplying grower.

All we ask is a fair trial of the program under which potato farmers are now operating.

We want to continue to demonstrate that potato farmers, by cutting their acreage, by taking a lower support price, by marketing a top quality product, and by sharply reducing the cost to the Government, are already doing a pretty good job of bringing about worth-while improvements.

Regardless of what form the farm legislation finally takes, potato farmers ask that the present program, with mandatory price support at from 60 to 90 percent, acreage allotments and marketing agreements be continued.

This program is being aggressively supported by research projects in marketing and distribution through cooperative projects to which State and Federal Governments and the potato industry are making substantial contributions.

If, after a fair trial, this program does not work to the benefit of the consumer, the Government and the grower, we will gladly consider any changes that are necessary.

Automatically Controlled Money Versus Managed Currency Systems

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1949

Mr. WHITE of Idaho. Mr. Speaker, with all the attempts and trials that have been made to find a solution to our money problem we are still confronted with the uncertainties and insecurity of a managed-currency system. In our effort to find a solution and establish a sound, adequate, workable money system it is interesting to compare the insecurity of the present system of managed paper currency with the tested and tried system of automatically controlled redeemable money based on the coinage of the precious metal that worked so well in the upbuilding of our country. The comparison is more fully explained in the letters inserted herewith:

NEW HAVEN, CONN., *July 8, 1949.*

DEAR CONGRESSMAN WHITE: In re your letter of July 7, 1949, second paragraph, a stable monetary system should provide for expansion of currency with increase of population and needs of expanding commerce. I favor an automatically controlled money system by the use of the precious metals, gold and silver, at a ratio of value in some ratio with volume of production or ratio of visible supply of gold and silver. I do not favor a managed currency unless dictated by Congress which has the constitutional right to regulate the value of money.

I spent a whole afternoon with Eugene Meyer at the United States Treasury in the 1929–32 crisis talking over what could be done to head off the depression, but Hoover could not comprehend. I had the ear of F. D. R. and he seemed to understand as President. The movement revaluing gold started in England and little was said about the fifteen billion profit the Treasury made when we followed. Cornering gold for 20 years was my plan for a further revaluation. If power is given to revalue at once up to $105 an ounce if necessary and to resume specie payments—there will be no depression.

My plan is to stabilize the price-level at a reasonable level and this is brought about easiest by revaluing gold, and then letting it circulate as it used to. The ideal situation

would be a metallic standard of value and resume specie payments with a coin "a heart of gold in a ring of silver," but to stop the depression needs quick action and there isn't time.

The Federal Reserve System makes a long-drawn-out boom which when it bursts has no bottom. The average percentage of collapse of prices in crises is about 55 percent—many were less, some more, but the 1929–32 collapse was 85 percent (plus) and Federal Reserve was helpless. Half the banks failed. A more dangerous situation now exists and Congress should act at once.

Sincerely yours,

JOHN P. NORTON.

HOUSE OF REPRESENTATIVES,
Washington, D. C., August 5, 1949.

Mr. JOHN P. NORTON,
New Haven, Conn.

DEAR MR. NORTON: When you say in your letter of July 8 that "I favor an automatically controlled money system by the use of the precious metals, gold and silver, at a ratio of value in some ratio with volume of production or visibility of supply of gold and silver," I find that our views on the money question are in exact accord.

This Nation started out with and prospered with an automatically controlled money system based on the coinage and legal tender of the money metals, gold and silver. This monetary system comes nearer to stabilizing values by increasing in volume at approximately 3 percent a year. Three percent being the estimated rate of the annual growth of the population and commerce so that our supply of money of ultimate redemption increased evenly and automatically with the growth of population and commerce. This, our automatically controlled money system has been discarded to make way for the interest yielding managed paper currency system, whereby every dollar of paper money created and issued in any quarter is loaned into circulation in exchange for interest-bearing notes, or interest-bearing bonds. Coupled with this the banks have the power to contract or expand the volume of money in circulation at will, so at last we have a perfect monetary system—from the bankers' standpoint.

Of course, we have learned from experience that when the banks exercise this power to lower price trends by curtailing the volume of money in circulation, which is done by simply refusing to renew outstanding notes or make new loans, which causes business to stagnate and property and service of all kinds to fall in value, thereby creating a depressed financial condition that seriously impairs loaning value of the collateral or security on which the banks can make loans—with the banks helpless to make loans our financial pump loses its prime.

With property and collateral values gone, or greatly reduced, the banks find themselves unable to start the creation of new money or reissue retired money by making loans for lack of acceptable security in the hands of their customers and are helpless to prime the country's financial pump and reverse price trends without the help of heroic Government measures.

Now that this managed-currency scheme with its interest-gathering mechanism has been saddled on the people of practically every nation, including the primitive Orientals who are at present in the throes of devastating inflation, there doesn't seem to be intelligence enough, or power enough, to overcome the influence of financiers who seem determined to hold fast, at all cost, to their managed-currency concession, acquired with so much painstaking care, even to the destruction of all values and governments.

The people, it appears, are helpless to throw off this unwieldly and unworkable monetary system and return to the tried and tested automatically controlled monetary system based on the coinage and legal tender of both gold and silver at an established ratio and the redemption of our paper currency with the coins of either metal.

Sincerely yours,

COMPTON I. WHITE,
Member of Congress.

To Increase Compensation for World War I Presumptive Service-Connected Cases, and So Forth

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1949

Mr. TEAGUE. Mr. Speaker, I am very happy to support this bill H. R. 5598, which, in my opinion, is a big step forward toward a well-balanced veterans' program of a grateful Government to those who served it so well in all its major conflicts.

This bill, if enacted into law, would provide for an increase in compensation for presumptive World War I service-connected cases, provide minimum ratings for service-connected arrested tuberculosis, increase certain disability and death compensation rates, and liberalize requirements for dependency allowances for certain disabled veterans.

Section 1 of this bill would restore to World War I statutory presumptive cases full compensation of 100 percent in lieu of the present 75 percent. Original laws provided for any veteran contracting disability prior to January 1, 1925, would be presumed to have incurred the disability in the service. Subsequent laws reduced the amount of compensation for this group to 75 percent of the prevailing rates for other disabled veterans. Some 20,000 cases are involved, 95 percent of which are either TB or NP cases.

Section 2 will change the rates on compensation for arrested cases of tuberculosis—service connected—to total disability for a period of 2 years; 50 percent for the next 4 and 30 percent for the ensuing 5 years. Following far-advanced active lesions the permanent rating, after 11 years, shall be 20 percent, provided there is continued disability, impairment of health, and so forth. During the first 2 years, failure to follow a prescribed treatment for arrested tuberculosis, or to submit to periodical examinations will result in the compensation being cut to 50 percent.

Section 3 will set up a new disability payment schedule based on $150 for total disability service-connected. This represents an approximate 8.7-percent increase over the wartime rate of $138 per month for total disability. This proposed increase would also result in an increase in the peacetime rates of service-connected disabilities based upon percent of disability in view of existing laws calling for a rate of 80 percent of that of the wartime schedule. Some 2,000,000 cases are involved. It will further provide for increase in the rate of pensions granted our war widows and orphans from the present $100 a month to $105 a month and for each additional child from $15 a month to $25 a month. This increase will assist this group in meeting the rising cost of living, and will be of nominal expense, disregarding the some 58,000 cases involved, due to deaths, remarriages, and children becoming of age.

The bill goes on further to amend the Dependency Allowance Act which states that for those veterans 60 percent or more disabled there shall be paid a proportionate additional allowance for dependents. Section 4 will grant additional allowances to those veterans who are 50 percent or more disabled as I feel that such veterans are generally unable to secure suitable regular employment to adequately support themselves and their dependents.

Finally, section 5 liberalizes line-of-duty requirements with respect to a service person whose disease, injury, or death was incurred without willful misconduct while in confinement under sentence of court martial or civil court, unless sentence involved an unremitted dishonorable discharge or the offense for which convicted involved a felony. Under existing law disability incurred while in confinement under sentence of court martial or civil court is held not to have been incurred in line of duty and both the veteran and dependents are barred from compensation.

Orchids to Representative Mary T. Norton of New Jersey

EXTENSION OF REMARKS
OF
HON. WALTER A. LYNCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 4, 1949

Mr. LYNCH. Mr. Speaker, under unanimous consent granted me to extend my remarks, I take great pleasure in, including therein an editorial from the well-known newspaper the Jersey Journal of July 29, 1949. As the title "Congresswoman NORTON Wins Double-Header" indicates, it has to do with our distinguished colleague, Representative MARY T. NORTON. It is indeed a well-deserved tribute to one whose public career has on so many occasions been marked with singular honors.

In her long career in Congress Representative NORTON particularly distinguished herself when, in the Seventy-fifth through the Seventy-ninth Congresses, she served as chairlady of the important Labor Committee and brought honor to the district which she represented by her diligence, tact, and ability. No less has she distinguished herself as chairlady of the Committee on House Administration of the Eighty-first Congress, as the Jersey Journal so well states in the following editorial:

CONGRESSWOMAN NORTON WINS DOUBLE-HEADER

Congresswoman MARY T. NORTON marked up an outstanding day of her long career in

public life when the House of Representatives passed the anti-poll-tax bill. Mrs. NORTON very actively sponsored the measure in the House, and in doing so not only pleased millions of colored people in the United States, but also provided President Truman with the first real action by Congress on any part of his civil-rights program. Mrs. NORTON doubtless feels like a pitcher who has won a double-header.

Whatever other uses the poll tax may have had in its time, its chief use, or rather abuse, for a long time has been to disfranchise thousands of Negroes in Alabama, Arkansas, Mississippi, South Carolina, Tennessee, Texas, and Virginia. In running counter to deep racial prejudices in those States, Mr. Truman, in advocating an anti-poll-tax law, appeared to be taking on a fight that might endanger the Democartic Party in the solid South. However, the man from Missouri seems to have an uncanny knack for guessing right politically, and he was right this time, knowing that no matter what the Democrats did to them, Dixielanders would never vote Republican. The result is that he has won millions of Negro friends, distributed elsewhere in the United States than the South, all of whom used to be counted as Republicans. That was demonstrated on election day last November.

However, the southern gentlemen are not completely without recourse. The Congressmen and Senators from below the Mason and Dixon's line have been giving the President no little trouble with some of his favorite legislation. They will probably now put more steam in their work.

Natural-Born Citizens

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1949

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Polish-American Journal of June 4, 1949:

NATURAL BORN—NATIVE BORN

(By Lesnicki)

ROOSEVELT'S (F. D. Jr.'s) place of birth (Campobello, Canada), causes some headaches for various "kibitzers." They raise the question: "Can F. D. R., Jr., be President of the United States?" Is a foreign-born citizen of the United States eligible to the Presidency? F. D. R., Jr., Congressman-elect, is not a candidate. Nothing has been said by him or his followers of the intention to become a candidate for the Presidency. But kibitzers are raising the question. So let's look at the facts.

A foreign-born citizen of the United States is eligible for the Presidency in respect to citizenship, if he is an American citizen by virtue of birth and not naturalization. The Constitution says: "No person except a natural-born citizen of the United States shall be eligible to the office of President." But natural born does not mean native born. Suppose, for instance, F. D. R., Jr., were born in Paris in the American Embassy while F. D. R. (and M'me Anna Eleanor with him), was in Paris in the service of the United States as Assistant Secretary of the Navy? There would be no question as to F. D. R. Jr.'s qualification for the Presidency of the United States in respect to original citizenship. I do claim that the same would be true of all persons born of American parents in foreign countries, even if the parents were in private business or merely traveling. The act of Congress approved March 26, 1790, provides:

"The children of citizens of the United States, that may be born beyond sea, or out of the limits of the United States shall be considered as natural-born citizens: *Provided*, That the right of citizenship shall not descend to persons whose fathers have never been residents of the United States."

It is true that the provision in the Revised Statutes covering this important subject, like the act of 1855 on which it was based, does not contain the words "natural born," but the section 1993 of the Revised Statutes reads: "All children heretofore born or hereafter born out of the limits and jurisdiction of the United States whose fathers were or may be at the time of their birth citizens thereof, are declared to be citizens of the United States; but the rights of citizenship shall not descend to children whose fathers never resided in the United States."

The above-quoted clause prevents the perpetuation of a line of foreign-born citizens. But persons who are born of American parents outside the limits of the United States, and who continue to reside outside the country must comply with certain requirements in order to receive the (often, perhaps too often, asked for) protection of the American Government. And so—very justly, in my humble opinion—in 1907 it was enacted that "such persons reaching the age of 18 must record their intention of becoming residents and to remain citizens of the United States." And upon attaining their majority they must take the oath of allegiance.

That's the law. But for the benefit of those embarrassed with the possible candidacy of F. D. R., Jr., I'll prescribe a recipe quoting the great American of all generations, Lincoln, who said: "I have found that if one is embarrassed, usually the shortest way to get through with it is to quit talking about it, and go at something else."

Quit talking and thinking about F. D. R. Jr.'s candidacy for President, and start thinking and talking about a modus how to prevent various types of Gubitshevs to be employed by the United Nations, and various Judy Coplons to give the Gubitshevs United States secrets.

Planning for Rural Program Needs

EXTENSION OF REMARKS
OF
HON. SCOTT W. LUCAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES

Monday, August 8 (legislative day of Thursday, June 2), 1949

Mr. LUCAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Mr. Arthur C. Page over Station WLS before the first National Association of Broadcasters program clinic, Northwestern University, Chicago, Ill., on June 28, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PLANNING FOR RURAL PROGRAM NEEDS

In the last few years there has been a very great increase in the number of radio stations with farm-service departments, or with programs intended to serve the farm audience. This, of course, indicates more appreciation of the importance of the farmer, especially appreciation of his prosperity. It also undoubtedly reflects the attitude of the FCC toward the importance of service to agriculture.

It is well to remember that 25 years ago, when broadcasting was much younger, there was no such widespread recognition of agriculture. Only a few stations in the whole country were making any attempt to put on special farm or rural programs at that time. I think all of you know that our station, WLS, was directed toward farm and rural service from the beginning, and 25 years ago this was quite a curiosity in broadcasting.

Addressing this subject, Planning for Rural Needs, we need first to know what we mean by "rural"—in other words, who are these people we're talking about and what are they interested in?

Let's think primarily of the people who live on farms, who manage and work on those farms, and who are responsible for the production and marketing of grain, produce, and livestock from them. Let's direct our thinking toward them, because they are the ones who set the pattern. Along with them is a great group of people who are not actually farmers, but whose interests are parallel, and who are directly concerned with everything that affects farmers.

This secondary group includes the hardware dealer, the feed and seed dealer, the banker, the grocer, the elevator man, and numerous other groups. When the farmer decides to spray with 2–4–D to kill weeds, he's going to be asking for 2–4–D at the hardware, seed, or feed store the next day. That's what I mean by the interlocking of interests between the strictly farm people and those who we can call just rural. In a sense, they are in close partnership with each other, and insofar as radio is concerned they are one compact audience whose livelihood centers around agricultural production and marketing, and the life of the rural countryside. These are the folks we are talking about and planning to serve.

At the very outset, we need to remember that these are people with very large and very real problems. We must bear in mind that we are talking to people whose investments total billions of dollars, whose annual production runs into billions, and whose success or failure depends on their daily management of their job.

These folks are interested in many of the same things as people in other areas. They want the news and they keep pretty well posted on what happens in Czechoslovakia or Australia. They are interested in good music—good music with sweet melody and rich harmony. They are not so strong for be-bop. They have a fine, healthy sense of humor and so they like good comedy.

The kind of information they want and require for the operation of their daily work is used in the making of decisions which involve heavy possibilities of profit or loss.

For example, the weather is the most universal of all interests—it's the thing most people talk about. But it isn't just a matter of saying, "Is it hot enough for you?"—but "Shall we start the mowers first thing in the morning and lay that hay down?" If they've got 3 days of assurance there will be no rain, it means all hands on deck to rush the haying and get the hay under shelter. If that hay should be rained on while it's cut, there's important damage to one of the vital crops of the season. Similarly, the forecasts of frost warnings—for citrus growers, strawberry growers, cranberry growers—to them, weather isn't just conversation, but a tremendously vital cash problem which can make or break a season's work.

We can't manage a farmer's job for him—he is quite capable of doing that for himself—but we conceive it to be our job to furnish him with sound, accurate, and timely information on which he can base his decisions. For a farmer must make vital

decisions every day—sometimes many times a day—and we want to give him the right information so he will be able to decide correctly.

Before we pass the subject of weather, let me add this: Our farm listeners have been watching the weather all their lives, and they have a pretty good picture of the movement of air masses and the direction of storms. They tell us that they want more than just a perfunctory forecast—they want also a background picture of the whole weather situation. In our case, here in the Middle West, they know that if there's a cold wave coming across Nebraska into Iowa, it won't be more than a few hours before it's likely to cross the Mississippi into Illinois. Many times people in Indiana have written that when we said it had just started to rain in Chicago, they began to watch the northwest, and in a few hours that rain had moved on over to Indiana. I'm glad to note that the Weather Bureau is doing a fine job on this now, and giving just that sort of background information. Indirectly, also, it is important to corn growers of Iowa, Illinois, and Indiana when they hear about the destructive drought of New York State, Pennsylvania, and New England, for that certainly means there is going to be need for more middle western grain in the Eastern States this winter, and probably more need for meat.

Market reports are of extreme importance. Let me emphasize again that here we are dealing with the lifeblood of agriculture. A man has thousands of dollars tied up in a livestock venture—raising and feeding hogs, fattening cattle—and it is vital that he market them carefully.

In our own case, we emphasize to every person who handles such information on the air the fact that they are not talking about abstract figures, but about information that involves a vast amount of money. For example, we figured up one day that the marketing of hogs at Chicago alone, in one day, amounted to a total valuation of more than a million dollars. Every man who had hogs to send to market was vitally interested in making the decision—whether to load them and ship them tonight for tomorrow morning's market, or to wait until next week. It might make a lot of difference in the family income for the year. That's why we don't let anything sidetrack that vital information.

Another factor is adherence to a schedule of broadcasting. Farmers today are doing the biggest job in all history, and they are doing it with a very small force of workers. One man today does a perfectly stupendous amount of work, using modern machinery. In order to do this, he works on a schedule as sharply defined as your schedule in the radio station. He doesn't have a minute to waste. You'll find that when the minute comes that he expects to hear the estimated receipts of livestock, he's going to be listening, and you'd better have them there for him. He's got a tractor standing idle, waiting, and he wants to listen on schedule. That is one important item in giving adequate and satisfactory farm service by radio.

I think it goes without saying that no such quality of service can be given without a real understanding of what it is all about. For instance, look for a moment at livestock market quotations. It is not enough merely to quote market prices—that doesn't give the picture the farmer wants and needs. In fact, you could quote market prices and give a false picture of market conditions. Suppose you quote the top price paid for cattle today. It may be sky-high and sensational, but it also may have been the price paid for only a few head of extra choice animals, entirely out of line with the run of the market. Here, as in the case of the weather, it is necessary to give interpretation and background—a true picture of the whole situation.

None of this can be accomplished by any tricks of clever rhetoric, or so-called showmanship. These are real and vital things and it is important that we do so good a job that our listeners depend upon what we tell them, and make their decisions accordingly. If we do that, they learn to trust us—we've got to deserve their trust—and if your farm listeners trust you, and depend upon what you tell them, you've got one of the most loyal groups of listeners in the world. They won't worry about whether you use split infinitives or dangling participes.

Now there's more to it than this.

It has often been said that farming is not only a living but a life. There are scores of civic enterprises peculiar to the rural community, in which we can weld ourselves into that rural life as a part of it.

It happens that our station has been vitally interested for many years in rural fire protection. We have answered hundreds of letters asking how to proceed to organize a rural community—to set up a rural fire department. There has been a lot of progress in that field. We found, from a survey of rural fire chiefs, that their biggest problem was the need for a quick water supply for their booster pumps—and that's why we launched a campaign for the building of fire cisterns on farms—and sent out thousands of sets of plans telling how to do it. Yesterday this inquiry came to my desk: It said, "We have a rural fire department but it will take 20 minutes, the best they can do, for them to get to our farm neighborhood. What can we do in the meantime—how should we plan to make the most of the time fighting a fire before the fire department gets here?"

Now that's a sincere and tremendously important inquiry—and it's up to us to give an intelligent answer. If we don't know the answer, we'd better get out and find it.

There are lots of other problems—such as promoting 4–H Club work in the community—Future Farmers—Rural Youth—meetings to organize purebred livestock breeders' associations—farm festivals and celebrations. In the course of the year there are hundreds of such opportunities to lend a hand with the affairs of the rural community. The way to look at them is to feel, always, that this is our community, and this is our work, and these are our neighbors, and we'll lend a hand whenever or wherever we can be of real service.

Speaking of neighbors—I don't know whether this is as true in all parts of the country—but certainly here in the Middle West the spirit of neighborliness is one of the most beautiful characteristics of the rural community. A man gets sick at the beginning of the crop season—or he breaks a leg—or his wife dies—he's out of commission, and his work is going to drop behind schedule. Time after time—thousands of times, a group of from half a dozen to a hundred neighbors come trooping in with all their equipment, plow his fields, plant his crop, clean his barnyards, cut his wood—yes, and the women come and clean house, all with a gay picnic spirit, just because they want to be good neighbors.

We have told on the air of hundreds of such episodes—over and over again—and the more you tell about it, the more the spirit grows—and we think that's wholesome, and good for the rural morale. We're proud of these folks, and we say so, to their faces, and we thing that helps to make a better rural life.

There's another part of farm broadcasting, and that is the fact that while you're talking to farmers, there's a vast audience of town and city people listening. Believe it or not, we have a vast audience of folks in the city of Chicago who follow the farm situation as if it were their own personal problem. So that imposes on us the necessity of interpretation—sometimes a word here and there to help build understanding between the two. If the price of milk seems high, maybe the city folks need to understand a bit more about what the dairy farmer is up against—and we think that, too, is part of our job.

We think it's important, to, when hundreds of pairs of newlywed farm couples come to see us, that we take time to greet them—only for a minute or so—but a recognition—to tell them we love them, to wish them Godspeed. That, too, is part of the job. We think it's important to help publicize the schedule of the mobile X-ray truck that will take chest X-rays to detect tuberculosis, or the local plans for blood testing to get the low-down on the brucellosis-undulant fever situation.

This could go on and on.

I would like to leave you with this vitally important fact. No one, no radio station, can possibly do this job without making a real study of it. You've got to have a man who knows these people, who lives and moves among them, who is in sympathy and understanding with them. And he's got to have a budget, and time to do it. This is no casual matter. These are the most wonderful people in the world, and any radio station has a right to be proud if it has earned their trust and confidence by giving them genuine and thorough service.

Tribute to Hon. Arthur Capper by F. W. Brinkerhoff

EXTENSION OF REMARKS

OF

HON. CLYDE M. REED

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Monday, August 8 (legislative day of Thursday, June 2), 1949

Mr. REED. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial written by F. W. Brinkerhoff, of the Pittsburg (Kans.) Sun, concerning our former colleague, Senator Arthur Capper.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

EDITOR SAYS SENATOR CAPPER REMAINS IN PUBLIC LIFE

Arthur Capper was a central figure again at a picnic in Topeka attended by 17,000 Kansans. It was the forty-third time that, on his birthday, the former Senator had entertained the children. All sorts of entertainment were provided for these young Kansans. And everybody had all the ice cream in the world.

The Capper birthday picnic now is being attended by the grandchildren of those who as kids themselves attended the earlier picnics. Thousands of those who were at the picnics in the first years are now past middle age, necessarily. Senator Capper originated the picnic to make a good-will gesture on his part as a newspaper publisher. He was interested in obtaining the friendship of the boys and girls. His keen judgment told him that friends made in childhood are quite likely to remain friends in manhood and womanhood. When the first picnic was held Arthur Capper probably had no idea of any political career other than the one he had carried on as an active Republican Party member through the years in his Topeka newspaper experience.

Half a dozen years later Capper really was in Kansas politics. For a couple of terms he was governor and from the governorship he went into the United States Senate for a stay of 30 years. The picnics for the children continued to be an annual event.

Arthur Capper is out of the United States Senate now. He is out of public office entirely. It might be said that he is out of public life except for the fact that no man who has been a Senator for 30 years and governor for 4 years and has retired from office voluntarily could be considered out of public life. Arthur Capper will remain in public life in Kansas as long as he lives. Certainly no man in Kansas in politics—or out of politics—is more generally known throughout the State. And there has been no more kindly feeling toward any man than that which Kansas bears toward Capper.

In public office he was always a Kansan. His honesty was never questioned. No one every faintly suggested that Senator Capper's position on any question was influenced by anything other than his own judgment on what was right and what was wrong. It is not extravagance to say that no man in Kansas politics in all its history has been held in such affection and esteem by the people of his State as has Arthur Capper.

His public career certainly provides an interesting study for those who would seek to determine the reason for his tremendous hold on the people. He was never a spectacular gladiator in any battle. He was not skilled in diplomacy, in smoothing over rough places, and rounding out square corners and avoiding the bumps. But he was proficient in obtaining knowledge and expert in the application of sound common sense to the performance of his duties.

Subsidization of Socialist Labor Government in Great Britain

EXTENSION OF REMARKS
OF
HON. JAMES P. KEM
OF MISSOURI
IN THE SENATE OF THE UNITED STATES

Monday, August 8 (legislative day of Thursday, June 2), 1949

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Stop, Look, and Listen!" written by Elizur Yale Smith and published in the New Bedford (Mass.) Standard-Times of July 30, 1949. The article relates to our subsidization of the Socialist Labor government in Great Britain.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STOP, LOOK, AND LISTEN!

(The author of the following article formerly resided in Massachusetts and was connected with various newspapers in the western part of the State. Historian of the Bills of Rights Commemorative Society, he has been a free-lance writer since his retirement from the Canadian Army in 1919. He belongs to many military and patriotic societies.)

(By Elizur Yale Smith)

It is about time we took heed of the prophetic words "stop, look, and listen," in regard to our subsidizing the Socialist labor government in Great Britain. We have doled out more than $50,000,000,000 to our former ally, much of it, of course, under lend-lease, which helped to put down Nazi aggression, but lend-lease, instead of giving us world peace, has given us the evil of world communism, despite the fact Soviet Russia accepted a slice of it worth $11,000,000,000.

Three years ago Britain came to us humbly asking for a loan and we graciously gave her $3,750,000,000 to bolster up her economy and assist her in getting on a prewar standard of living. The gift was to last her until 1951, but all that dole—for none of it will ever be repaid, any more than Britain paid us any of her war debts of World War I—was spent just about as soon as she got it, much of it on trifles, and not on food, clothing, or such industrial equipment as would assist in putting this once-proud empire on her feet.

Then, under the ECA, which took effect April 2, 1948, and which calls for a total of $21,780,000,000, unless Congress become frugally minded, toward economic reconstruction and military aid for Europe and China, Great Britain got nearly a billion more. The ECA aid is supposed to run from 1948 through 1951, in credits and loans. Now, Britain is waiting with her hand extended for nearly another billion; waiting until our Senate passes the appropriation bill and she will be looking for a like amount in 1950 and 1951.

When will the end be? Paul G. Hoffman, ECA Administrator, soon after he took office in 1948, toured Europe and in October announced from Berlin that he believed the countries covered by the ECA would have achieved a complete recovery by 1952. Not so, I fear. When the ECA plan expires, unless it is renewed, or western Europe makes a faster recovery than it is doing at present, Soviet Russia will pounce on these weak European countries, or many of them, and hide them behind her iron curtain, whether they like it or not, just as she did with Poland.

BRITAIN IN POOR COME-BACK

Every country west of the iron curtain has made a better come-back than has Britain, even beaten Germany and Italy, and especially Belgium and the Netherlands. While we are handing out doles to Britain, our great United States Republic is spending more billions of dollars than it is receiving through its various forms of taxation and our taxation system has reached the saturation stage.

If we do not stop our deficit spending, bankruptcy will be the result, and our great Republic will wallow in the swill of socialism and communism. With a national debt of about $252,000,000,000, we need another Alexander Hamilton to guide our fiscal system today. He did a good job of it under George Washington. Communism thrives on bankrupt nations, misery, hunger, and large numbers of unemployed.

The two most distinguished statesmen in the world today are Herbert Hoover and Winston Churchill. It is unfortunate they are both 75, for, as heads of the United States and Great Britain, respectively, they could save the world from the creeping anarchic systems of evil governments. Not long ago, Mr. Hoover said, "Communists like to see the people of Europe hungry in order to more easily establish their political ideals." Early this year, Mr. Churchill remarked that the Labor government was making the British people "live in a fools' purgatory upon the generous grants of free enterprise capitalist America."

Furthermore, last week at Wolverhampton, the former Prime Minister stated that the British Government, under the Socialist Labor Party, had been carried from its "high and proud position at the end of the war," to a state where it is "low alike in prosperity and reputation, both at home and abroad."

SOCIALISM, THEN COMMUNISM

This writer, in various published articles, has always maintained that socialism leads to communism, for Karl Marx and his collaborators, Friedrich Engels and Wilhelm Liebknecht, founded the Social Democratic Labor Party in Germany and they spread the propaganda of communism under the name of socialism. Mr. Churchill, in his Wolverhampton speech, said British socialism "can beat the worker down to the level of a Soviet Communist serf," and that socialism and communism differ very slightly. The American Congress should not pour one more penny down the British socialistic rat hole, even under the existing ECA.

Let us stop, look, and listen before it is too late. Canada, one of the British Commonwealth of Nations, has already heeded this prophetic counsel, for a few days ago this Dominion ruled that any further loans to Britain were out. Canada's Finance Minister said the mother country's answer to her future lies within her own economy: "In her ability to produce goods that will sell at competitive rates anywhere in the world."

While we are loaning money in the form of a dole to Britain, she is cutting down her exports from the United States and other dollar nations by 25 percent. This is sure to affect our own economy. Britain is buying wheat and meat products from the Argentine and many other commodities which we raise from Soviet Russia.

Not many months ago, it was announced she was making a loan of $65,000,000 to Soviet Russia so Russia would buy her goods. Where do these millions come from? There is no reason why the American taxpayers should donate their funds to pay for Britain's unsuccessful experiment in socialistic government, for her present government will lead to a communistic government if she doesn't watch out. The goblins will get her, sure enough.

White Paper on China

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 8, 1949

Mr. DURHAM. Mr. Speaker, under leave to extend my remarks, I include the following editorial which appeared in the Greensboro Daily News, Saturday, August 6, 1949:

WHITE PAPER ON CHINA

The critics of the Truman administration's China policy are in the position of a kibitzer who criticizes a golfer for not making a hole-in-one on a 500-yard hole. What they are really blaming the administration for is for its failure to pass a miracle.

This ought to be clear to anyone who has read the newspapers for the past few years, but if the assertion needs any bolstering it can be found in the white paper of our State Department entitled "United States Relations With China," which, with its 1,054 pages, is quite a bolster in itself.

In his letter of transmittal Secretary Acheson sets out the salient facts. We desire to help the Chinese people; we have tried to help them and are still trying to solve that problem. Two of the main troubles with China are: (1) A population which cannot find enough to eat, and (2) the destruction of the emerging middle class by the war. We tried to help Chiang Kai-shek's government in every way we could but it would not take our advice and it squandered our aid. General Marshall could do nothing to help China because both the Communists and the Nationalist government were bent on destroying each other rather than helping their country. Neither could General Wedemeyer, for the same reason. His advice to China to "utilize her own resources, reform her finances, her government and her armies, and accept American advisers in the military and economic fields" came to nothing because the Nationalists would not accept it.

The Nationalist government fell not because of lack of American aid but because its leaders had proved incapable of meeting the crisis confronting them, its troops had lost the will to fight, and the government had lost popular support. * * * The Nationalist armies did not have to be defeated; they disintegrated.

As Secretary Acheson points out, we had only three alternatives in China: (1) Pull out, (2) intervene on a major scale, (3) try to avoid a civil war through compromise. The first was against our traditions and our duty to an ally; the second was impracticable; and the third was attempted but the intransigence of both sides prevented it from having any success. We did what we could to help China but there is a limit to the aid one country can give another, particularly if that country is not willing to accept it and use it to advantage.

That is what it all boils down to. The situation which now exists is not what we wanted but it is one which we must face. Recriminations are useless, particularly in view of the fact that no one has suggested a more sensible course than the one we followed. Our policy is still to aid the Chinese people to work out a democratic form of government suitable to themselves, but circumstances force us into a period of watchful waiting. There's no use crying over our failure to make a 500-yard hole in one stroke; it usually takes several.

Do Not Increase the Postal Rates

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, August 8, 1949

Mr. MULTER. Mr. Speaker, I commend the following article, which appeared in the New York Times of August 8, 1949, to the attention of my colleagues. We should start devising ways and means of helping business rather than hindering it. The operation of the post office by the Government can be countenanced only so long as we agree that postal service is a governmental function. Let us not try to make it a paying business at the expense of the dissemination of knowledge and information.

PUBLISHERS AND ADVERTISERS FEAR FURTHER INCREASE IN POSTAL RATES—BILLS NOW BEFORE CONGRESS TO MEET DEFICIT IN POST OFFICE DEPARTMENT ARE ATTACKED AS HIDDEN TAX ON ADVERTISING

Fears were expressed here last week by publishing and advertising spokesmen that the Nation's daily, weekly, and periodical press may soon be called on to pay even higher postal rates than those proposed in bills now before Congress.

When these bills were introduced early this year, at the instigation of Postmaster General Jesse M. Donaldson, they called for an estimated 300 to 600 percent increase in second-class rates used by publications, and one of some 300 percent in third- and fourth-class rates, used largely by direct mail advertising and other businesses.

The Department of the Post Office, it was urged, faced a deficit of perhaps $500,000,000 this year, and increases of $253,000,000 were necessary to cut down this growing loss.

One feature of the rate boost measures has been attacked as a hidden tax on advertising. This provision was one that would apply a sliding scale of costs, not only by zones, but by percentage of advertising content in a publication. Postmasters also are to be given the power to class as advertising any reading matter referring to products, stores, prices, etc., for purposes of computing total percentages of advertising.

Because emphasis has been placed on reducing the post office deficit, opponents of the bills have demanded that, if this principle were to be applied, all Government departments be placed on a businesslike basis, including those of Agriculture, State, Commerce, etc. They also demanded that the post office be placed on a more efficient operating basis through use of up-to-date handling, traffic management and general organizing practiced in industry.

With a drive on now to boost postal workers' wages, expected to add a probable $237,000,000 more to post office expenses, it is believed that new demands for reducing next year's deficit will be made in terms of still higher rates.

Mr. Donaldson has declared that he has no intention of trying to make the Department self-supporting. He also has stated that 90 percent of postoffice costs are uncontrollable, since they represent wages determined by Congress, and subsidies paid to railroads, ships, and air lines transporting the mail, and determined by Government agencies.

According to one advertising official here, if Congress awards pay increases to postal workers as civil servants this can be taken as acknowledgment that postoffice operations are a public service set up and carried on for the general benefit. Since publications have traditionally been accepted at low rates because of their value in disseminating knowledge, a change would mean that the Department had not been performing a service, it was declared.

It seems certain, the official added, that if operations were reduced to handling first-class mail—the only class which the postoffice has exclusive right to handle—there would be no need for so many postal workers.

An official of a mail advertising group here commented that the plan to raise the penny post card to 2 cents will not bring in the additional revenue calculated to result.

Why use a card when you can send a letter for 1 cent more?" he asked. "Doubling the price won't mean doubling the cash income."

Address of Gen. Robert L. Eichelberger

EXTENSION OF REMARKS
OF
HON. CLARENCE J. BROWN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1949

Mr. BROWN of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Gen. Robert L. Eichelberger at the American Legion Convention, Department of Ohio, Columbus, Ohio, August 6, 1949:

It is always a pleasure to be among veterans. It is doubly so today when the veterans are from Ohio and the meeting place is Columbus. In the first place, I was born and raised in Urbana, just west of here, and before entering the military service as a cadet at the United States Military Academy I attended Ohio State University. My forefathers came to Ohio when Indians were still prowling its forests, and my heart will always be in the soil where my father and mother are buried.

Out in the Pacific in World War II it was my honor to command 9 of the 18 National Guard Divisions at some period or another of their operations. But one of my finest memories centers on the day that I landed at Tuguegarao, in northern Luzon, to welcome the Thirty-seventh Ohio Division into the Eighth Army, and to be met at the place by Gen. Bob Beightler and Gen. Leo Kreber. With me at the time was my brave and ever-efficient chief of staff—Gen. Clovis Byers, of this city. Four commanders, all from Ohio, whom fate had thrown together.

Back in the First World War, I served in Siberia. Shortly before my arrival there, the democratic regime of Aleksandr Kerenski had been overthrown by a small but well-organized group of Bolsheviks and the whites were in full flight toward safety. In those days, I had the feeling that the ruling class in Russia did not deserve to remain in power but that no such suffering could possibly come to my own country, where through individual initiative and hard work, there had been developed the highest standards of living the world had ever seen.

Now, I am not certain. To even the most casual reader or to the greatest optimist, it must be apparent that this world of ours stands in the shadow of crisis. In both Europe and the Far East, the balance of power has been upset through the events of World War II. Through the defeat of Nazi Germany, the Soviets have been able to overthrow all semblance of democracy in such countries as Poland, Czechoslovakia, Austria, Rumania, and Bulgaria. Largely through our overthrow of Imperial Japan, communism has spread southward in Asia, across the Yangtze River, and poises a threat to the entire Far East. By ruthless police state methods and by complete suppression of the press, the inhabitants of Russia and her satellites are kept in complete ignorance of our American way of life and they are taught to picture us as the tools of Wall Street, bent only on destruction of Russia.

Twice in my Army career, Germany chose war with the United States because of our military weakness and because it was felt that quick victory was certain before our industrial potential might tip the scales. Aggressive, militaristic Japan chose war in 1941 because we had endeavored to halt Japan's seizure of the Far East. In no case would these nations have marched against us had not early victory been anticipated.

I speak of these things in the presence of you Legionnaires because yours is an organization dedicated, in the final analysis, to patriotism—patriotism which means a willingness to die in defense of your country. Because of the very luster which your achievements in the past have added to the stature of the sons and daughters of Uncle Sam, that little band of men in the Kremlin when contemplating world plans may well cast hesitant views in our direction. They may say to themselves: "Look what happened twice to Germany. Remember what happened when the United States was thrown into the scale. Maybe we better not risk war; it might mean our defeat."

But as an organization, you have other objectives—certainly nothing more noble than the inculcation of love of country, of honor and sensitive duty among the millions with whom you are in daily contact. You who have seen war, who know its destructiveness, its demands on human endurance, its insatiable consumption of material supplies and above all, its cruel obliteration of the weak and defenseless; you have a special responsibility to communicate your knowledge and your understanding to all other citizens.

Your country is facing today problems, present and future, which equal in scope and significance any it has hitherto encountered in 173 years of existence. Because we exist in these times, it is difficult to

appraise their historical import. But grave as they may be, they deal—as did our great crises of the past—with the preservation of freedom. What America decides today, what she plans for tomorrow, can determine the sort of world your grandsons will possess—whether it be governed by justice or enslaved by force.

With that thought in mind, let us turn our attention to the arena of the Far East from which I returned last fall after six continuous years served in war or in the occupation of Japan.

The Imperial Japanese Government struck us with unparalleled savageness and rapidity, because they hoped for speedy military victory. With a veteran army and with war matériel more advanced than any that we possessed, particularly in landing craft, they were able to gain in the early stages one of the greatest military victories in history. In those early months their soldiers seemed invincible.

On December 7 they bombed Pearl Harbor. Two days later they struck in the Philippines; on the following February 15 Singapore fell; within the same month, the Netherlands East Indies were under the conqueror's boot. Then the attack shifted further to the southeast and from Rabaul, New Britain. The imperial high command planned a two-pronged drive. One prong was to strike for control of southeastern New Guinea, the other through the Solomon Islands to slash the supply lines from America to Australia. Neither were destined to succeed because of the achievements of a thin line of khaki-clad soldiers and their counterparts in all the services. Within 6 months, a nation which had prepared for war and had thousands of hardened troops to execute its will, carved out one of the greatest colonial empires known to man. With deft strokes the Japanese brought within control 95 percent of the world's rubber supply, 45 percent of the world's known oil reserves; countless volumes of the raw material from which the world's medicine supply, particularly the quinine drugs, is extracted. And with this vast empire recognized in the aspirations of the Tanaka memorial as the greater east Asia coprosperity sphere, came the slave labor potential of 100,000,000 people.

The story of our recovery is set in a background of fever-ridden swamp and jungle, where American soldiers lay day after day in waterlogged foxholes or crept through murderous fire toward enemy positions they couldn't see. It gave us a narrative of combat studded by the bright and shining record of military, naval, and air leadership which never faltered in sharing the risks of battle with their men. There was the ever-constant example of leaders in all ranks of whom far too many were buried in the long axis that leads from Australia to Tokyo.

To illustrate the viciousness of combat, in my first fight at Buna in Papua, there were four of us who were general officers and of those, three were shot. None of them were shot at a distance greater than 70 yards from the enemy.

The Air Force, like the submarine and PT-boat men, furnished their great share of inspiring episodes. There was Jimmy Doolittle's heart-lifting raid on Tokyo in 1942, the predecessor of B–29 superfortress attacks that reduced every major city of Japan and burned out the port of Yokohama in just 2 hours. The industrial might of this Nation produced the great fleets of battleships and aircraft carriers which in combination with the "ghost ships," raised from the floor of the sea at Pearl Harbor later bombarded the Japanese coast at will.

I know it is difficult to comprehend. We pitted a destruction and fury against a disciplined nation in which every one of its population centers except the Temple Cities was destroyed, two of them by the forces wrapped up in the atomic bomb. We and our allies mounted a gale of might against a disciplined people whose habitations were slowly but surely being reduced to ruin and devastation. Yet, until the very last, it was a people who retained an unshakable will to fight, headed by a military caste that gave little, if any thought, to the consequences.

That we have witnessed such a transformation in the Japanese nation is only further testimony to the effectiveness of the American armed forces; the wise and just policies of the occupation; to the cooperation of the intelligent Japanese and, certainly, not the least of these, to the disciplined conduct of the soldiers of the Eighth Army.

You understand that the Eighth Army, in carrying out the occupation of Japan, did not live off the country as other conquering nations might do. Neither did it take away, without recompense, the food and goods of a conquered people. In accordance with the Hague Convention, our country has been sending into Japan a minimum amount of food to prevent suffering in cities still being rebuilt from the shambles and even raw materials for economic rehabilitation.

We have introduced in Japan the framework of democracy. There have been the first free elections in her history. She is no longer a police state with a nationalized people. There have been given to them many of the freedoms which we hold so dear—freedom of speech and freedom of the press, the right of assembly, the writ of habeas corpus, the right to pass a policeman without bowing. If we have seen fit to introduce these changes, then we must overlook the past cruelties of the Japanese Military Party and accept the Japanese as we now find them. We must remember the wholehearted cooperation, from the Emperor to the farmer—and by the way, we could not have achieved the results gained in Japan without this cooperation.

If Japan under its military domination was a vicious enemy, we must remember that it could become a powerful friend. I do not like to think of Japan as an ally in war, although that might well be possible. I would like, rather, to think that we have built up a great reservoir of friendship and respect through the prestige, the fairness and generosity of our country which would act as a deterrent to those who entertain no desire to fight on two fronts.

During my last year in Japan the welfare of my country to me obscured, perhaps, all other issues. Glad as I have been to see the inculcation of democratic ideals among the Japanese, I would not give that the slightest token of value unless in time of danger we could rely upon Japan being at least a friendly neutral. In the final analysis, in looking back over the traditional suspicion between these Asiatic powers, the individual Japanese citizen is best equipped to estimate what might have happened had the Soviet Union, rather than the United States, controlled the occupation.

Our over-all victory in the Pacific, carried out at a cost of 300,000 Allied casualties and the expenditure of billions in money and treasure, is as yet in dubious respect. Even now it is apparent that the resurgence of communism on the mainland of China has already cost us many of the fruits of that victory. Before specifying the over-all reasons, I should like to inject momentarily some pertinent aspects of the geographical picture.

It must be remembered that Russia, as a result of the Allied victory in the Pacific, received as a reward the strategic as well as geographic aspirations of 150 years. Except for a port of Korea, Communists control the Asiatic land mass to the north of the Yangtze River and if Japan were to become Communist and thereby be added to the chain of the Kurile Islands, the Sea of Japan would become a Communist lake. Russia today spreads like a blanket over the top of Hokkaido, the northern island of Japan. My old stamping ground, Vladivostok, lies only 400 miles to the west of the coast of Hokkaido. The southern coast of Sakhalin is merely across La Perous Strait to the north, and the Kuriles, now under Communist domination, are so close on the east that one could cross in a rowboat. One can appreciate, then, what a great prize Japan would be if the Communist nations were permitted to gain possession. But to the United States, Canada, the Philippines, and Australia it would signify the loss of World War II and a potential defeat in the Pacific in any future war that might be forced upon us.

There are, as I have pointed out, several major factors or reasons for the advance of communism in the Far East. In the first place, in the course of our overwhelming victory over Japan, we also caused the surrender to the Reds of the Japanese Army in Manchuria, estimated as high as 1,000,000 troops. So long as this formidable Japanese Army remained intact, the southward spread of communism into China proper was effectively checkmated. When this barrier was removed, all of China lay open to ideological infiltration from the north in spite of all the wartime reinforcement of the Nationalist regime.

A second major factor has been the existent state of what we might call the "war weariness" of the followers of Chiang Kai-shek. When you stop to think that this segment of the Chinese people has been fighting since the early thirties, better than 15 years, you have a better appreciation of the strains and exhaustion by which present-day China is beset.

A third, though less tangible item, is to be seen in the ideological line—the usual story of promises—offered people by Communists—a standard appeal that has accompanied its advances in other parts of the globe. The fact is that with standards of living so low that any change is welcomed as an improvement, Asiatic peoples are wide open to communistic turmoil.

The great question which remains to be answered is whether the Communists will be able to control that milling mass which we call China. Like farmers throughout the world, the Chinese peasant loves the soil. He wouldn't want to be regimented into collective farms. The Chinese are the small traders of the Far East. They will require international trade in order to live. Unless the Reds cease their hymn of hate and seek friendly commercial contacts, there will be chaos in China, and the Communists will not be able to impose their regime on that vast population.

So long as Russia does not control the island chain and particularly the main islands of Japan, the further advancement of the Reds is to a very large extent stymied. And if we can make sure that the Japanese are reasonably able to protect themselves after a peace treaty is concluded, the scales will be tipped the other way. That is why I consider Japan as the key to the entire Far Eastern situation at this time.

As a result of the war, it is a nation reduced to the status of a military pygmy. She has lost the oil of Sakhalin, the rice of Korea, the coking coal, soybean, and iron ore of Manchuria, the sugar of Formosa, and all of her overseas investments. During the war, we destroyed her navy and her merchant marine. After the war, the Eighth Army destroyed over a million tons of explosives; 3,000,000 small arms; 3,000 tanks; 10,000 airplanes, and 90,000 field pieces.

Having done these things and having introduced a "Made in America" constitution

which renounces war and guarantees every freedom we ourselves enjoy, we must assume a protective obligation until Japan can look to its own defense.

We are fulfilling that obligation today through the development of our own land, sea, and air defense team and plans for further improvement of our defense structure are in keeping with this purpose. They represent, it is true, preparations against war—preparations against a war which we hope will never take place, a war which will not take place unless our national honor and right to a continuing free existence is at stake.

Even now the United States Navy continues to exert a stabilizing influence in areas where explosive incidents of international import could occur. Our Air Force, through extraordinary achievements, notably the Berlin air lift, brings enviable prestige to our people while carrying out the policy of their Government. The Army, while complementing the strategic roles of both Air Force and Navy, has been administering the affairs of 150,000,000 former enemies and foreign nationals. It is doing these things on a world-wide scale because the country believes that unless we give peace and democracy an opportunity to take root in fields where aggression has bred for generations, the victories of World War II will in the long run become meaningless.

A few, for their own reasons, allege that this sea-air-land defense is a disturbing element on the world scene, terming it a standing threat to other peoples. But the countries against which, they imply, our armed forces may be aimed do not need secret intelligence sources to recognize the absurdity of such charges. Our forces at home and abroad are, by every possible standard of comparison, the minimum nucleus for security.

For the people of the United States, this step means many things. It means the determination of all services to work together in meeting any real threat as it begins to develop. It means unity of purpose in all issues that affect the national interest. It means an adequate and balanced force to execute the people's will.

In practical operation, the creation of a single national military establishment is a major step toward the sort of preparedness we need. It is not something that is merely invented but is a system of defense that is dictated by time, space, and by unalterable facts of geography, political and military.

Meanwhile, the task of developing proper awareness of partnership between the public and its institutions of defense lies still ahead of us. I cannot conceive of the country's veterans, particularly Legionnaires, standing idly by awaiting duty or orders in event of a crisis. You are organized and equipped, mentally and morally, for greater and more constant service and your leadership should be felt at all times.

The concept of leadership that I should like to leave with you is that which we attempt to impress on officers of the Army, Navy, and Air Force in the present day. It is that of a leadership which is not concerned solely with the welfare of this or that component alone. It is that of a leadership solicitous for the entire national welfare.

A great degree of that country's safety is in the hands of you men and women who had to win both world wars. Already you merit the continued gratitude and esteem of your Army and your country for spearheading the effort that has upheld our national sovereignty in two world wars of a generation.

We are even more grateful that you stand now to protect us in the future against individuals or ideologies that threaten or would suppress the ancient truths which are the foundation of a free existence.

Television Sets in Offices of Admirals

EXTENSION OF REMARKS
OF
HON. RALPH E. FLANDERS
OF VERMONT
IN THE SENATE OF THE UNITED STATES
Monday, August 8 (legislative day of Thursday, June 2), 1949

Mr. FLANDERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two short paragraphs from an article entitled "Washington Background," edited by John C. O'Brien and published in the Philadelphia Inquirer of August 1, 1949, relating to the effect of television sets in the offices of admirals.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

WASHINGTON BACKGROUND

Have you resisted the impulse to buy a television set because you thought it would distract junior when he should be doing his home work? If you have, and you find it necessary to justify your decision to junior, just cite this action by Under Secretary of the Navy Dan H. Kimball.

Seems the Navy bought a lot of nice television sets and installed them in the offices of the admirals. Well, after a trial period, Kimball decided that the admirals could not keep their minds on their work. So he took all the television sets out and sent them around to Navy hospitals.

Congress in Favor of Prompt Action on Statehood for Alaska and Hawaii

REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 8, 1949

Mr. LARCADE. Mr. Speaker, as a Member who has taken an active interest in the question of statehood for Alaska and Hawaii, I am greatly disappointed that the Rules Committee has not reported out a rule on the bills before that committee.

Mr. Speaker, it is not necessary for me to recount the history of the various reports of investigating committees which visited both Alaska and Hawaii, and the fact that the Public Lands Committee of the House of Representatives also had exhaustive hearings before that committee and approved the bills for both Alaska and Hawaii almost unanimously, there being only one reservation of one of the committee members, and notwithstanding the fact that the bill to grant statehood to Hawaii was approved in the House by an overwhelming majority in the Eightieth Congress, the Rules Committee has not reported out these bills.

However, Mr. Speaker, I do wish to call to the attention of the House that only last week a poll of the membership of both the House and Senate indicates that the Congress is overwhelmingly in favor of granting statehood to both Alaska and Hawaii by a tabulation of approximately 3 to 1.

Mr. Speaker, I submit the tabulation and statement by Mr. Ray Richards, in regard to statehood for Hawaii and Alaska, published in the Hearst newspapers on Sunday, August 7, 1949, as follows:

HAWAII, ALASKA STATEHOOD ENDORSED—CONGRESS IN FAVOR OF PROMPT ACTION, HEARST POLL SHOWS

(By Ray Richards)

WASHINGTON, August 6.—The present Congress needs only a chance to vote to give statehood to Hawaii and Alaska.

The Hearst newspapers today completed a poll of House and Senate which shows overwhelming sentiment of Members for passage now of two pending enabling acts, at present blocked for sheer political considerations by the House leaders of both parties.

On the various propositions of the poll the vote ranged from 3 to 2 to better than 3 to 1 in favor of statehood for both Territories now or in the near future, singly or both at the same time.

Heads of the statehood movement in Congress expressed amazement at the poll's demonstration of their actual rank-and-file strength.

It was pronounced one of the most complete unofficial congressional polls ever taken, reaching all 96 Members of the Senate and with only 5 of the present 433 Members of the House refusing to make any response at all. There are two House vacancies.

Delegates JOSEPH R. FARRINGTON, of Hawaii, and E. L. BARTLETT, of Alaska, said the count would be used to show the House party leaders that they are suppressing the will of the membership in refusing to permit a vote before the present session ends this fall merely because Hawaii would likely send Republicans to Congress and Alaska probably would send Democrats.

ONE HUNDRED AND FIFTY-FIVE WANT A VOTE AT ONCE

Of 190 Members of the House and Senate who had no lights and shades of opinion but voted with flat "no" and "yes" on the question of double statehood in this session, 155 said they were for statehood for both Territories and wanted a vote at once.

Only 45 voted against statehood and action for both Territories in this session.

That tally is better than 3 to 1 for statehood now.

One hundred and sixty-four Members of House and Senate said they were undecided as to statehood for both Alaska and Hawaii and on the possibility of acting on the enabling acts in this session.

A total of 217 votes would be required for a bill to pass the House.

One hundred and eighty-two Members of the House said they were undecided about Alaska, and 171 Members said they were definitely for Alaska statehood now.

That means only 46 votes from the 182 undecided Members would be needed to pass the Alaska statehood enabling act in the House.

One hundred and fifty-three House Members said they were undecided about Hawaii, and 196 said they would vote for Hawaii statehood if given a chance in this session.

HAWAII NEEDS ONLY 21 MORE VOTES

That means Hawaii would need the votes of only 21 of the 153 undecided House Members.

Said Delegate FARRINGTON:

"Many more votes than that, of course, would be foregone.

"There are many reasons for the number of undecided Members.

"It is astonishing, for one thing, that so many Members expressed positive affirmative opinions on statehood in view of the ban placed by the leadership on any action this session.

"This ban, of course, had shoved the statehood issue into the background until the great patriotic campaign of the Hearst newspapers recently brought it to the fore, and thus many Members have not studied it as an active issue."

Forty-three Senators said they were undecided on Alaska, and 32 Senators said they wanted to vote for Alaska statehood now.

Forty-four Senators said they were undecided on Hawaii, and 33 said they would vote for Hawaii statehood if the bill comes up this year.

A majority of the Senate being 49, Alaska would need 17 of the 43 undecided votes, and Hawaiii would need only 5, for Senate passage after the House had passed the bill.

FAVOR STATEHOOD IN PRINCIPLE

During the course of the poll a good majority of the Members who voted "undecided" explained that they strongly favored Hawaii and Alaska statehood in principle, but found some objection to immediate action in the Hawaiian shipping strike or in certain alleged defects in Alaska's territorial home-government system.

These were objections, they confessed, that could be cleared up in a short time, and they said they will be ready to urge immediate action and to vote for statehood.

Of the entire House and Senate only 65 Members said they were unchangeably against admitting Alaska, and only 61 said they would never vote for Hawaii statehood. Objecting to one, most of these favored the other.

One hundred and ninety Members of the House and 27 Senators, a total of 217, said they wanted Hawaii admitted immediately and Alaska to wait a while.

Fifty-four Members of the House and 24 Members of the Senate, totaling 78, said Alaska should be admitted at once, but Hawaii had better wait.

FIVE WHO REFUSED TO RESPOND

The five Members of the House who were well and in Washington but who refused to respond even with a "no comment" reply are EDWARD J. HART, New Jersey Democrat; MICHAEL J. KIRWAN, Ohio Democrat; THOMAS J. O'BRIEN, Illinois Democrat; ALVIN F. WEICHEL, Ohio Republican, and CHARLES A. WOLVERTON, New Jersey Republican.

Said Senator WARREN G. MAGNUSON, Washington Democrat:

"Statehood for Hawaii and Alaska means national defense, higher national prosperity, better distribution of taxes, justice for Americans not yet fully self-governing, a declaration to the world that we are solid in the Pacific.

"The poll of the Hearst newspapers shows beyond doubt that Congress is willing to vote for statehood.

"With this demonstration we know finally that statehood cannot fail if put to a vote, and we shall demand more and more strongly that it be put to a vote with partisan political considerations shamed out of existence."

MEMBERS OF HOUSE VOTE 3 TO 1 TO ADMIT TERRITORIES

During the past week the Washington bureau polled Members of the House of Representatives on the question of statehood for Alaska and Hawaii under four specific headings. Their replies are given in the tabulation below. Here are the four questions:

1. Are you in favor of statehood for Alaska?
2. Are you in favor of statehood for Hawaii?
3. Do you favor Congress voting on Alaska at this session?
4. Do you favor Congress voting on Hawaii at this session?

Favorable reaction of the individual Congressmen is indicated in the table on each question by "Yes." An unfavorable reaction is indicated by "No." Lack of decision on any of the four questions is shown by the letter "U" (undecided). "NC" means "no comment." Members ill or absent are so indicated in the table.

HOW SENATORS VOTE ON ALASKA, HAWAII

During the past week the Washington Bureau polled Members of the Senate on the question of statehood for Alaska and Hawaii under four specific headings. Their replies are given in the tabulation below. Here are the four questions:

1. Are you in favor of statehood for Alaska?
2. Are you in favor of statehood for Hawaii?
3. Do you favor Congress voting on Alaska at this session?
4. Do you favor Congress voting on Hawaii at this session?

Favorable reaction of the individual Congressmen is indicated in the table on each question by "Yes." An unfavorable reaction is indicated by "No." Lack of decision on any of the four questions is shown by the letter "U" (undecided). "NC" means "no comment." Members ill or absent are so indicated in the table.

Will the United States Support the International Declaration of Human Rights?

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 8, 1949

Mr. MULTER. Mr. Speaker, I direct the attention of my colleagues to the following articles which appeared in the New York Herald Tribune of August 7, 1949. The International Declaration of Human Rights prepared under the sponsorship of the United Nations and agreed to by 48 nations, including the United States, is indeed a beautiful document. I wonder when we will take the initiative of putting its principles into effect in this country.

EUROPE PUZZLED BY JIM CROWISM

(By Walter White)

ANKARA, TURKEY.—"We love America but are bewildered by the contradiction of her professed ideals of human freedom and of her treatment of the Negro," a distinguished Italian said to us. At Istanbul an intelligent corps of newspaper men showed unmistakably to Mrs. Edith Sampson, of the National Council of Negro Women, and me that the one American problem above all others on which they wished information was the race question.

Here in Ankara we were told of the Turkish schoolgirl during the war who was asked by her teacher what she considered the most cruel and fitting punishment for Hitler. The girl is reputed to have replied, "Darken his skin and force him to live among the Americans." A few days ago during a seminar on "Democracy and education," the most earnestly asked question was, "What are you Americans doing to implement the International Human Rights Charter?" The questioner was too polite to mention lynching and filibusters in the United States but none of the Americans on the Round the World Town Meeting of the Air was unaware of what he meant.

In London, Paris, Berlin, and Vienna the same piercing inquiry was directed at the American seminar. Ambassador George Wadsworth told me during a garden party at the Embassy residence that "the race question in America is the No. 1 question fired at me wherever I go." Gillespie S. Evans, chief of the United States Information Service here, tells me that in Egypt, from where he was recently transferred to Turkey, he was constantly asked how the United States can aspire to world moral leadership as long as she permits Negroes and other minorities to be mistreated in the United States.

Part of this attitude (and many times as many examples could be cited) is due, of course, to the assiduous broadcasting by Moscow radio of minute details of every real or alleged violation of civil rights and human liberties in the United States.

Town Hall and its seminar members are meeting the issue frankly in the only manner in which it can be met. We admit freely that there are some major flaws in the implementation of democracy back home. We would be foolish to deny that there are lynchings and floggings by the Ku Klux Klan, because every instance of such crimes is made known over here as soon as it is in America. But, we add, there is a rapidly mounting body of public opinion in the United States against bigotry, as is evidenced by support of the recommendations of the President's Committee on Civil Rights.

But there are two things we devoutly wish were true. One is that folks back home would wake up to the fact that permitting bigots to ply their evil trade is doing more to weaken and harm America's position abroad than any other one thing. The other thing we wish is that Senators RUSSELL, ELLENDER, and WHERRY were here to answer the questions about the filibuster against passage of the civil-rights program which took place so soon after we joined 47 other nations at Paris in signing the international declaration of human rights.

CROSSROAD IN ST. LOUIS—REPORT ON RACE RIOTING BRINGS SEGREGATION ISSUE TO A HEAD

(By Harold Rosenthal)

ST. LOUIS.—One of the most important documents in the history of St. Louis made its way last week to the desk of Mayor Joseph N. Darsk. It was the report drawn up by his own St. Louis Council on Human Relations, which was appointed to get to the bottom of the swimming pool race riots here June 21 that made headlines over the Nation.

Headed by Henry F. Chadeayne, insurance man and unsuccessful Democratic candidate for mayor 4 years ago, the 13-man council hired a professional race-relations specialist, George Schermer, of Detroit, to delve into the matter. Within 2 weeks, Mr. Schermer's report and recommendations were in the council's hands.

The report went past the immediate blame, which could be focused easily enough on a gang of older boys and young men who hung around at Fairground Park, scene of the disturbances, and charged inadequate community leadership, coupled with the practice of segregation in Missouri's school system.

It urged the end of racial segregation and discrimination at all public recreational facilities, following careful planning and preparation, but admitted it would be a difficult task in the face of what has happened.

Mayor Darsk took no flat stand on the segregation issue during his campaign, but offered a broad plank on the subject paralleling President Truman's Fair Deal program. He must decide now whether to open the pool to all the citizens, as recommended in the council's report, or keep it closed to avoid further trouble.

St. Louis is having a polio epidemic, and keeping the pools closed for the rest of the summer as a health precaution may be a temporary solution.

Mr. Schermer's report, after going into the background of the disturbances, declared that too many people, in all stations and strata of St. Louis life, were only too anxious to write the Fairground Park incident off as the product of a "malicious conspiracy." He termed this "an easy, face-saving device" and a "kind of scapegotism." He said the police did a good job, but could have done much better.

He urged that constructive forces of St. Louis be enlisted in a long-range program to end the State's constitutional requirement for "mandatory segregation in public schools." Abolition of segregation in the Catholic schools here made national news several years ago.

St. Louis is much like Washington in its race problem. It is midway between the North and South geographically, and that can also about describe the Negro sociological situation. There are no Jim Crow seats in busses and trolleys, and Negroes can sit virtually anywhere they please in Sportsmans Park, home of the Cardinals and the Browns. They are religiously excluded, however, from the big hotels, the big restaurants, and the theaters.

Racial intermarriage is forbidden by State law. The city's 120,000 Negroes live in a narrow congested area, running from the Mississippi west to Kingshighway, a broad thoroughfare. Expanding housing needs of the Negro population, which has increased three times as fast as the white population, is met merely by extension of the segregated area. Every time it takes in another block or two, increased tension is the immediate byproduct.

The city maintains seven indoor swimming pools, four for whites and three for Negroes. The two outdoor pools are for white use only. There is no legal support for barring Negroes. Negro spokesmen contend they have been kept out by deft side-stepping, expediency, and balancing of pressure.

This year, the Division of Parks and Recreation once again came under terrific Negro pressure to lift the invisible ban. Negro leaders also had made it plain that they didn't care for apparent sponsorship by the division of a group known as the Municipal Athletic Association. The city denied that any special concession was made to this organization, which uses park facilities extensively.

Mr. Schermer's report says that the Municipal Athletic Association, an all-white organization, was only technically separated from the administration and supervision of organized athletics in the division, and therefore it would seem proper to conclude that the Division of Parks and Recreation had given official sanction to racial segregation.

According to the report, the commissioner of parks and recreation, Palmer B. Baumes, 8 years on the job, came to Director of Public Welfare John J. O'Toole and requested a statement of policy on segregation. The report declared that Mr. O'Toole, new to the job, told Mr. Baumes that if Negroes requested admittance, there was no legal bar to keep them out.

The newspapers got wind of it that same afternoon and Mayor Darsk, after consultation with advisers, called the editors of the three St. Louis papers, requesting that the story be given ordinary and factual treatment. The Globe-Democrat, first on the streets with the story in its early evening edition, headlined a front-page story Pools and Playgrounds Open to Both Races, and said that Negroes and whites hereafter might swim together in all the city pools and use the same playgrounds.

The news got a heavy play on a radio newscast that evening. The disturbances occurred the following afternoon and evening at Fairground Park, a short distance from Sportsmans Park. At least a dozen persons, white and Negro, were injured seriously enough to require hospitalization. No one was jailed and the only legal action taken was a $5 fine for a teen-age white boy caught letting air out of the tires of a police car.

According to Mr. Schermer's report, the tension died down almost immediately after the disturbances. The city is still wary, however.

When the Brooklyn Dodgers played a recent crucial three-game series with the Cardinals, there was a greater concentration of policemen and firemen in the stands than this writer had ever seen on his many trips into St. Louis with various ball clubs. There are three Negroes among the 25 Dodger players, Jackie Robinson, Roy Campanella, and John Newcombe.

However, the booing directed at Robinson on this particular trip was lighter than it had ever been. The three Negro players, whose estimated value in today's baseball market is roughly a half-million dollars, continued to put up at a Jim Crow hotel.

Complaints About Taxes

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, August 8, 1949

Mr. DINGELL. Mr. Speaker, the CONGRESSIONAL RECORD, I believe, should embody the plain and understandable views of The Commentator, W. K. Kelsey, on the complaint about taxes as he treats the irksome subject in the Detroit News of July 6, 1949.

Mr. Kelsey, a seasoned and sound reporter of many years, never to my knowledge posed as an expert as some scribes are inclined to do because they are privileged to editorialize or comment on any subject at hand. Certainly he never claimed being an authority on the vexatious and ever-present problem of taxes. But like many people he gave much thought to the question of what makes taxes rise. He arrived at the correct answer by the simple means of using the brain which God gave him and which he himself developed to a high state by thinking. Yes, just studying and thinking dispassionately and fundamentally will win arguments and will confound so-called experts. Thought, time, and the honest desire to get to the basic reason will invariably uncover the truth. Mr. Kelsey has established a reputation for fairness, honesty, and thoroughness in his column which commands the respect of countless and eager readers who are his followers or daily fans.

THE COMMENTATOR
(By W. K. Kelsey)

To complain about taxes is, as Hamlet said in another connection, as easy as lying. Everyone knows that taxes are high. But so is the cost of Government, which is the only reason for taxes.

It follows that the way to reduce taxes is to reduce the cost of government. Anyone familiar with government, whether on the national, State, county, or city level, knows that it is far easier to increase costs than to decrease them. As population grows, so do community needs, and demands that they be met by government.

All taxes imposed in this country are levied by legislative bodies consisting of taxpayers. The individual interest of the legislator is to keep taxes low. But the pressure of national, State, and local community interests is usually in the other direction, and is frequently too strong to be resisted.

There is a tradition in this country that government is wasteful. The Commenator's grandfather used to tell about how he watched the construction of a post office; how two laborers would spend an entire morning setting a single stone, and all the afternoon placing another. They fascinated him. He watched them by the hour. And what was he doing meanwhile? Loafing.

Recently a great cry was raised that the Michigan sales tax was being evaded. The department of revenue admitted that this was probably true, to some degree, and said the reason was that its inspection force was undermanned. It couldn't check all the returns; it could investigate only samples. So it was given more inspectors, whose salaries and expenses were added to the tax budget. More sales taxes may be collected; but the cry is, we don't want more taxes, we want fewer taxes. We don't want more money spent by government, we want government to cut costs.

ON WHOM THE TAXES FALL

That leads to the question of incidence of taxes. Who pays them? Are they fairly distributed, or are some people carrying a disproportionate burden?

Obviously the person who avoids paying the sales tax due the State is merely a cheater. He collects the tax from his customers, but he keeps it for his own purposes. The incidence is on the purchaser of his goods, but the State does not get the money.

Taxation has two main purposes—to raise money for government, and to spread the burden as equitably as possible. That is the chief reason why the personal income tax is graduated; not to penalize the wealthy, but to have each person contribute according to his ability.

On the other hand, the corporation income tax is largely an indirect tax on the consumer; it is a business cost which figures in the price of the goods sold. If there were no corporate income tax, goods could be sold at a lower figure; but a needy government would have to raise the money in some other way. This tax is a sales tax in disguise.

Into the equity picture has recently crept the idea of a balanced economy. If any large section of the population works hard but barely breaks even, or has to dip into savings, or borrow money, to make both ends meet, it ceases to demand the goods its numbers warrant, and its lack of purchasing power injures the whole market.

Now, a balanced economy is difficult and tricky, and a lot of first-class brains have been baffled in making plans to achieve it. The New Deal experimented with it hastily and roughly. Henry A. Wallace improved on its ideas with his plan for an ever-normal granary, and on such a basis was built the present scheme of subsidies for important crops. Now comes Secretary of Agriculture Brannan with a refinement so complicated that most city dwellers have not even tried to understand it.

But all these schemes are directed toward keeping the economy in balance, and thus prevent such breaks in the market as upset the tax structure and drive taxing bodies mad.

A PRODUCT OF EVOLUTION

To all the complaints and arguments the simple answer is that our tax structure has not been jerry-built by politicians for their own benefit, but is the product of long evolution. It is by no means perfect, but it never will be and never can be.

We talk of reducing Federal taxes, but analysis shows that almost the only sensible way of reducing them is to reorganize governmental agencies according to the Hoover Commission's suggestions; and even then we don't know whether much money will be saved the taxpayer, since for every administrative dollar cut there is certain to be a demand for two or three more dollars of expenditure for this and that which the country cries that it needs.

So where else can cuts be made? Not in the debt service. Not safely in Marshall plan aid, for it is fundamental that we establish an economic bulwark in western Europe against a communism that recognizes no national frontiers.

We might save something in the defense services, but at the cost of our nervous systems.

Who dares advocate chopping the expense of our war veterans?

Well, where can we cut, and how much? And the same questions can be asked at the State, the county, and the municipal level.

It is all very well to roar against taxes, but it is ridiculous to come down to cases and find the critic chiefly injured by a levy on mouse traps—which is about where the argument winds up.

HOW LONG A RECESSION?

The family economics bureau maintained by the Northwestern National Life Insurance Co. says that the consumer will end the present recession by his own decision on prices. He has plenty of money, and he will spend it when prices become low enough to entice him.

The fact is, reductions in the price of raw materials have yet to be passed on to the consumer, as is evidenced by the fact that the index of the cost of living has not yet fallen appreciably. That means that most of the products now on the market were manufactured when costs were still top; it takes time for raw materials to become manufactured goods and to pass through jobber and retailer to the consumer.

The bureau finds that there is not now any great accumulation of high-cost goods to be disposed of. Therefore retail prices should come down soon. The question remains whether they will attract buyers before unemployment forces several more million people off the buyers' market.

There is considerable fear that strikes will cause much unnecessary loss of purchasing power. In the national interest, this is a good time for both employers and employed to keep their tempers and to bargain sanely. The recession will end its course the more quickly if production is sustained.

Department of Welfare

EXTENSION OF REMARKS
OF
HON. LESTER C. HUNT
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Monday, August 8 (legislative day of Thursday, June 2), 1949

Mr. HUNT. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Suspicion of Plan No. 1," published in the New York Herald Tribune of August 5, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SUSPICION OVER PLAN NO. 1

The Senate Executive Expenditures Committee has unanimously approved four reorganization plans offered by the President, but has delayed approval of plan No. 1. The four follow closely the recommendations of the Hoover Commission. Plan No. 1 carries out one commission recommendation, that calling for a Department of Welfare with Cabinet status; but it bypasses another, that specifying transfer of the Public Health Service to a United Medical Administration. If, as Senator TAFT and others in the Senate fear, this omission in the Welfare Department plan will jeopardize the eventual establishment of an independent health and medical agency, then the Senate committee does well to withhold its approval.

The entire Hoover report presents no more flagrant example of waste and extravagance than in the Government's far-flung medical and health activities now costing some $2,000,000,000 a year. The potential for conservation both of funds and of personnel is clear-cut and is substantial. The savings can come only through a consolidation of the activities of the 40 separate agencies which now compete extravagantly in building unneeded hospitals and assembling medical and technical staffs. If there is to be a real consolidation, the Public Health Service must be a part of it.

The President's message on the reorganization plans says that the Welfare Depart-

ment plan "will not in anywise interfere with the presentation of additional reorganization plans with respect to other recommendations of the [Hoover] Commission in this field." It also notes that "other proposals are currently under study, but final conclusions have not been reached in respect to them." Actually, what the Senators fear, and what the country's medical men fear, is the influence of Federal Security Administrator Oscar Ewing upon the final conclusion with respect to a United Medical Administration. He is the man who will head the new Welfare Department, and he is also the administration's prime proponent of national compulsory health insurance. Mr. Ewing is scarcely likely to support any plan which might mean that an independent medical agency, and not Mr. Ewing, would supervise that grandiose system, were it enacted.

Therefore, unless and until the President can offer assurance that there is to be a United Medical Administration to save the taxpayers' money, the Senators have reason for delay.

New Super Liberty League

EXTENSION OF REMARKS
OF
HON. MATTHEW M. NEELY
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES

Monday, August 8 (legislative day of Thursday, June 2), 1949

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Inner Circle of Native Fascism Plans New Super Liberty League; 'Leak' Spoils Secret Conclave," published in the magazine In Fact for July 11, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INNER CIRCLE OF NATIVE FASCISM PLANS NEW SUPER LIBERTY LEAGUE; "LEAK" SPOILS SECRET CONCLAVE—NAM, HEARST, READER'S DIGEST, NEWSWEEK, SATURDAY EVENING POST AMONG 36 "ELITE" INVITED TO MEETING

A new super liberty league is in the making, with the Nation's richest and most powerful reactionary and Fascist groups ready to discuss plans for merging their propaganda and fund-raising activities not only to block social legislation but also to defeat at the polls the few liberal Congressmen who still sponsor and fight for such measures.

A secret meeting of native fascism's inner circle, slated to be held at a private club in New York on June 28 and 29, was postponed when news of the session "leaked." The hand-picked guests were notified by telegram of the cancellation and were told a new date would be set shortly.

WINCHELL OFFERS DATA TO PAPERS, HAS ONE TAKER

The significance of the new movement can be seen from the fact that the press is represented by the chief editorial writer of the Hearst chain, one of the editors of Reader's Digest, an editor of Newsweek, and the former chief editorial writer for the Saturday Evening Post. The National Association of Manufacturers, the Committee for Constitutional Government, headed by press lord Frank Gannett, the "fascistic" Tool Owners Union, several Congressmen, and the American Economic Foundation headed by the former chief of the Crusaders are others among the 36 "elite" sponsoring or invited to the conclave.

Equally significant is that although every newspaper and wire service in the land was informed that documentation on this secret session would be made available to them, the New York Post-Home News (June 30) was the only one of the 1,750 dailies in the country to mention the story.

In Fact obtained the documents in this case from Walter Winchell following his June 26 broadcast in which he said he would turn over to any newspaper which asked for it a list of all those invited to attend the secret meeting. Winchell's "Girl Friday," Miss Rose Bigman, told this weekly that several New York papers had made inquiries. The wire services were not interested. Suppression of this story is another illustration of how the Nation's newspapers are completely unconcerned about exposing native Fascist activity.

LETTER SIGNED BY FOUR WITH LONG FASCIST RECORDS

The document which "leaked" is a letter which bears out the famous prediction of the late Senator Huey Long that fascism will come to America disguised as Americanism. Its significance is in the names of the sponsoring individuals and organizations and the list of 36 selected to help form the new movement. Their backgrounds will be cited below. The letter was signed by Merwin K. Hart, head of the anti-Semitic and pro-Fascist National Economic Council; Fred G. Clark, former chief of the Crusaders and now head of the big-business-supported American Economic Foundation; Fred A. Hartley, Jr., the cosponsor of the Taft-Hartley law who now heads the Tool Owners Union, and Robert B. Dresser, a big contributor to American Action, Inc., the Gannett Committee, and other arch-reactionary groups, and friend of labor spy Joseph Kamp. It follows:

SUITE 7501–3, EMPIRE STATE BUILDING,
June 1949.

(Personal and confidential.)

DEAR ———: We write to ask you to attend a conference to be held on Tuesday and Wednesday, June 28 and 29, commencing at 10 o'clock on the morning of June 28. The meeting will be held at the University Club, 1 West Fifty-fourth Street, New York.

As you will see from the enclosed list of persons, to each of whom a letter similar to this is being sent, we are inviting only those whom we believe to be convinced that the liberties of the American people are being threatened by both communism and socialism—by socialism almost as much as by communism. We, of course, have not included all of the leading men who think as we do, but we believe greater progress can be made if at this meeting we include only those who have wide connections and the facilities, through organizations, for reaching large numbers of people.

The best hope of preserving American liberty lies at the present time with the Congress of the United States. But recent events prove that we cannot rely on the leaders of either party to protect us against costly something-for-nothing schemes which will take us down the same path to socialism as that taken by Great Britain.

We believe that a majority of the individual Members of both Houses of Congress are opposed to most, if not all, of this program.

SEEKS COALITION ON PROPAGANDA, FUND RAISING

But socialism has infiltrated not only much of the Democratic Party but important elements in the Republican Party. The only hope of stopping this program is through a bipartisan coalition. Such coalition has taken place on a number of votes in the Congress. But how long such a coalition can stand up in the absence of more thorough organization among private citizens is a great question.

In our opinion, what is needed is for citizens who feel as we do to organize more effectively than they have yet organized and to take the offensive.

Among the matters to be discussed at this meeting are the following:

(1) What parts of the socialistic program pending in Washington are now being adequately counteracted and what parts are not?

(2) What steps can be taken to see to it that those parts that are not being adequately counteracted can be opposed effectively?

(3) What positive legislation, if any, should be proposed, the effect of which would be to strengthen the American Republic and weaken the forces that are trying to disintegrate the Republic?

(4) Look into the merits of organizing in certain congressional districts a small educational committee of competent citizens who could acquaint the people of those districts with the true significance of the socialistic measures pending in Congress.

(5) Look into the matter of possible duplication of effort, the suspicion of which is retarding fund-raising of various organizations.

This meeting is not designed in any way to further the interests of any particular organization. It is designed rather to afford an opportunity for a frank exchange of views.

The sessions will last from 10 a. m. until 1 p. m., and from 2:30 until 5:30 p. m. on both days.

The undersigned, in the light of any suggestions received from those invited, will undertake to prepare a simple agenda. It is urged that all those receiving this invitation keep the matter in confidence. It will be better not to have any publicity until and unless the meeting itself decides to obtain some publicity.

Sincerely yours,

FRED G. CLARK.
ROBERT B. DRESSER.
MERWIN K. HART.
FRED A. HARTLEY, JR.

CITE BACKGROUND OF HART, CLARK, HARTLEY, DRESSER

A postscript on the letter says: "Kindly address reply to Merwin K. Hart," on whose stationery it is written, and whose Empire State Building address is headquarters for the new Fascist movement. In Fact has for years exposed three of the four signers. Here is a short biography of each:

Merwin K. Hart: Denounced as a "quisling" by Interior Secretary Ickes. Named by Congressman SABATH, of Illinois, as head of one of 11 leading Fascist organizations for the Un-American Committee to investigate. (Text of document in In Fact June 30, 1947.) Named as one of the leading United States Fascists by Attorney General (now Supreme Court Justice) Jackson. (Source: Massachusetts Law Society Journal, November 1940; see In Fact March 4, 1946). Hart propagandizes for Franco, endorsed Jane Anderson, American traitor who worked for Hitler.

Fred G. Clark: The Crusaders, which Clark headed, was secretly subsidized by the du Ponts, as Senator (now Justice) Black showed in his famous lobby investigation. Other money back of this outfit fighting for private utilities, against TVA, other New Deal reforms: General Motors, Sun Oil, Kuhn Loeb, Sewell Avery, of Montgomery Ward, and Philip Wrigley. When Clark syndicated his "Wake Up, America" series, 423 papers with 7,130,102 circulation printed his propaganda.

November 9, 1942, issue of In Fact first exposed Clark, then head of American Economic Foundation, when he introduced Lawrence Dennis, founder of the American Fascist Party and one of the men named in the sedition indictments, as author, traveler, commentator, although Dennis himself had admitted publicly he was a Fascist. Latest expose of Clark, April 4, revealed the true educational work of his foundation as collaborating with Tool Owners Union, of which he is a founder. As soon as news of this new

parley leaked, Clark ran for cover, apparently afraid of losing the tax-exemption his organization enjoys as a nonpolitical foundation. "I'm not in it any more," he said. "I don't like the smell of it."

Fred A. Hartley, Jr.: In addition to coauthoring the law bearing his name, Hartley is now flying his true colors as head of Tool Owners, publicly branded as Fascist by New York State, which, in refusing it a charter, stated: "No more fascistic organization * * * and danger to our way of life has yet come before the official attention" of the license board.

Robert B. Dresser: Contributor of American Action, Committee for Constitutional Government, and Hart's National Economic Council.

COLLEGE HEAD, AD MAN, MINISTER ON "ELITE" LIST

Following are the persons to whom the original get-together letter was sent by the foregoing four:

George S. Benson: President of Harding College, Searcy, Ark. Syndicated columnist—usually given free to papers which will publish his propaganda. Writings have appeared in Leon de Aryan's Broom.

Don Belding: February 9, 1948, In Fact exposed "billion-dollar ad campaign to hoax United States * * * using slogan popularized by Hitler." This was a 5-year plan to use 10 percent of America's advertising budget for propagandizing the NAM slogan "free enterprise," which was actually coined by Hitler and used in the 1920's to enlist Nazi cartellists in his party. Don Belding, head of one of the country's five biggest advertising agencies, is author of this plan.

Howard H. Buffett: The former Congressman from Nebraska has one of the worst records made in the House. Voted the straight ticket for the private utilities and against public welfare. Voted against rollback of prices, etc. Labor baiter.

DeWitt Emery: President, National Small Businessmen's Association, actually a front for big business. Exposed in In Fact April 19, 1943.

James W. Fifield, Jr.: This minister is one of the leading clerico-Fascists in the Protestant fold. Following Rev. Dr. Frank Buchman's declaration for Hitler in 1936, Rev. Dr. Fifield tried to take over Buchman's moral rearmament movement by organizing spiritual mobilization, which he now heads. In Fact, October 30, 1944, first exposed Fifield.

Garet Garrett: Chief editorial writer Saturday Evening Post 1940–42.

LABOR SPY, NAM BACKERS, EDITORS CITED

Earl Harding: January 28, 1946, In Fact's main item was headed "Secret Fascist plot to fight PAC exposed." This was an exposé of American Action Committee whose main objective was to fight CIO's and the National Citizens Political Action Committee. Harding was member of AAC executive board (and former editor, New York World).

Albert W. Hawkes: Former Senator, former head, United States Chamber of Commerce (founded by NAM).

Henry Hazlitt: Lapsed liberal, from Nation to New York Times to Newsweek.

Henry Jung: The inclusion of this name is a tip-off on the anti-Semitic side of reaction and fascism. Jung, head of American Vigilant Intelligence Federation, Chicago Tribune Tower, was exposed as a labor spy in McCormack-Dickstein report 1935 and in La Follette civil liberties investigation; exposed as wholesale peddler of forged protocols of Zion.

Howard Kiroack: On April 28, 1947, In Fact's big story was headed "Reader's Digest gets 1947 award from organization associated with bundists, anti-Semites." Credit was given Friends of Democracy for exposé. The Layman's National Commission, Howard Kiroack, chairman, had given an award to the Digest which the Digest advertised to clergymen as being for distinguished service to religion.

Robert L. Lund: This is "Listerine" Lund, medicine man, whose product had been under Federal Trade Commission investigation for years and who was charged with false advertising. One of the small clique who reconstructed the NAM and made it the most powerful big-business outfit in the Nation today.

DIGEST EDITOR, GOP MONEY MAN, PEALE ON LIST

Paul Palmer: The first exposé of the Reader's Digest ever published was in the November 16, 1942, issue of In Fact. It showed that pro-Nazi and pro-Fascist, antilabor propaganda was palmed off on the 11,000,000 readers; that articles were planted, not digested; that many were editorialized items written by staff, and that staff included several leading pro-Nazis, pro-Fascists, etc. Paul Palmer was named as the Digest editor who, as editor of the American Mercury, had invited Lawrence Dennis to publish a dozen articles in favor of fascism—the first openly pro-Fascist articles in America.

Charles S. Payson: One of the big financial backers of GOP, main angel for pro-Nazi Scribner's Commentator, which went out of business after the Nazis declared war on the United States.

Rev. Norman Vincent Peale: Peale was head of the CCG. When Congressman PATMAN exposed it as the No. 1 Fascist outfit, the press suppressed the attack, but In Fact published it, and Peale was forced to resign. However, Peale's name appears as a sponsor of all sorts of native Fascist outfits.

Sam B. Pettengill: Syndicated columnist, sponsored by CCG, named as No. 1 Fascist writer by Representative PATMAN in exposé of CCG. Former Congressman.

H. W. Prentis, Jr.: Former head of NAM.

Richard S. Rimanoczy: Clark's associate in founding American Economic Foundation, on board of Tool Owners.

George W. Robnett: Secretary, Church League of America and National Layman's Council. See Carlson's Under Cover, pages 477–480.

NEW YORK UNIVERSITY PROFESSOR, GOP PUBLICIST, GERMAN AGENT INCLUDED

Dr. Edward A. Rumely: This is the man who really runs Gannett's Committee for Constitutional Government, but his name does not appear on letterheads because he was convicted and sent to jail for being a German agent in World War I.

James P. Selvage: Exposed in the La Follette investigation of the NAM as their press agent. Also press agent for years for the Republican Party.

Dr. Walter E. Spahr: Chairman, economics department, New York University. Exposed by La Follette committee as being on the secret college professor pay roll of NAM.

John B. Trevor: President, American Coalition of Patriotic Societies, one of the typical professional patrioteers.

Col. John Owen Beaty: A professor of literature at Southern Methodist University and faculty adviser of the Baptist students there, a newcomer to native Fascist circles. Sent anti-Semitic Christmas cards around country last year.

Rogers Dunn: Published the Dunn Survey, which attempted to explain away the elections of F. D. R. by claiming the New Deal had a "secret weapon" which consisted of loading the public pay roll with voters who were indebted to F. D. R. for their jobs and hence cast their ballots for him.

E. F. Tompkins: Chief editorial writer, Hearst's New York Journal-American; on board of American Defense Society, the first organization to peddle the forged "Protocols of Zion" in the United States. Exposed by In Fact, April 1, 1946.

William H. Buckley, Kern Dodge, Dr. H. H. Griffith, George S. Montgomery, Jr., George P. Syme: These names are also on the list. In Fact will be grateful to readers who can identify them.

White Paper on China Amounts to Oriental Munich

EXTENSION OF REMARKS
OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, August 8, 1949

Mr. CANFIELD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement made by the gentleman from Massachusetts, Hon. JOSEPH W. MARTIN, Jr., Republican leader of the House of Representatives, on American policy in China:

The State Department's white paper on China policy is a confession of inexcusable failure.

The sordid story of our desertion of China at Yalta in February 1945 is fully admitted. The Yalta deal, in which China's own allies gave away Chinese territory as the price for Russia's entrance into the Pacific war, was made in an atmosphere of secrecy so deep that it was not even discovered by our own highest State Department officials until after President Roosevelt's death, and was not made known to Generalissimo Chiang Kai-shek until 4 months after Yalta.

With the Communist troops in north China threatening a civil war once Japan was conquered, it was evident after Yalta that peace for the world could only mean chaos for China unless the United States stood firmly by. Even the white paper cannot and does not attempt to deny that Chiang's forces had the upper hand over the Communist forces as late as 1946. Yet, it was in July of 1946 that the fatal decision was made to stop American aid to China to force Chiang Kai-shek to admit Communists to the Government.

But the record which the white paper reluctantly unfolds does not stop with the decision in July 1946. In the fall of 1947 we dispatched a mission to China headed by Gen. A. E. Wedemeyer. General Wedemeyer, an outstanding authority on China, came to the conclusion that China could be saved from Communist domination if the United States renewed its program of aid and military assistance, such as we had initiated in Greece to stop the Communist penetration in that country. General Wedemeyer's report was suppressed and never made public. Only now, with its publication in the white paper does the Congress of the United States and the American people know what that report contained.

Not until April 1948, when the Republican-controlled Eightieth Congress finally stepped in, was the aid program for China revived. Despite the action of Congress the administration procrastinated so long that no aid actually reached China until November of last year, and after the fall of Manchuria and north China to the Communists.

The white paper amounts to an oriental Munich, which even its proponents cannot claim will bring "peace in our time." Only men of little vision can believe that we can save Europe with economic and military aid on one hand, while on the other hand we sever Europe's economic life lines by virtually abandoning to the Communists Europe's sources of supply in Asia.

If there is one constructive note in the entire 1,050 pages of the white paper it is the apparent fact our policymakers have at long last realized that the Communist conspiracy is world-wide and that its penetration into China is a threat to all of China's neighbors. Unfortunately, it is a knowledge gained late, and at too great a price, to be greeted with other than solemn thanks.

So far as I can learn, the State Department has no intention of working out a China policy under the bipartisan methods which have been followed so successfully in other foreign policy matters. If this should continue to be the State Department's attitude, no course will be left to the Republican Party but to pursue the China question alone and in a fashion which we can only pray will awaken our Government and our people to the inherent dangers in the position now taken by our Government.

Foreign policy should be above partisanship. I think that I speak for most Republicans when I say that we stand ready to join with the administration in the formulation of a strengthened China policy for peace. Believing that the seeds of world war III have already been plantd in Asia, we extend this offer of cooperation in the deep conviction that unless our Government's course undergoes radical change the disaster that will be reaped will mean destruction for most of the globe.

Korea

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 8, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Boston Sunday Post of August 7, 1949:

KOREA FOLKS BELITTLE UNITED STATES—THINK WE'RE "NUTS," SAYS WINTHROP MAN JUST RETURNED FROM ORIENT—FEAR COMMUNIST TIDE

(By Ralph Harber)

It's an old Korean custom.

That's the only explanation an American can get for many of the weird things and ways of life that prevail and have been prevailing in Korea for thousands of years.

So says Eugene E. Cronin, of Winthrop, United States communications chief in Korea, who is home on a 2-month vacation after 29 months in Korea.

"To a Korean an American is a foreigner who is nuts," smiles Cronin. "To him an American is a fellow who gives you something for nothing—which to the oriental mind is sheer insanity."

Concerning American policy in Korea, the lanky telephone expert feels the United States should act decisively soon.

"Half measures won't work," he says. "We should either go all the way in protecting southern Korea from the Communists or pull entirely out and let the Red tide continue to some other barrier."

Cronin agrees there are strong arguments on both sides of the question.

The only hope for Korea is combating communism lies in her children, he says. "They are wonderful," he enthuses, "they are smart and take to democracy and our way of life like a flock of ducks to water."

To illustrate the inflexibility of the adult Korean mind he told the story of the steaks. At his headquarters at Seoul perfect United States steaks were being ruined by the native cook. The cook's idea of the proper way to cook a steak was to pound it to a pulp and then cook it almost to a cinder.

DOESN'T STAY LEARNED

Cronin finally decided to do something about it. He went into the kitchen and carefully showed the cook how to broil a steak, American syle, with each slice cooked to a delicate pink in the middle.

"Did he catch on?" we asked.

"Sure," said Cronin. "We had good steaks, American style—that day."

"So that solved the problem?"

"Not on your life!" said Gene, as he is known to his friends and associates. "The very next time we had steak on the menu, there he was pounding them to pieces and cooking them to a crisp."

"It's the same with everything else, in dealing with the adult Koreans," claims Cronin. "A lot of money has gone down the drain in Korea, but the part spent in the education of the children has been well invested. They are bright, intelligent, gay, and lovable."

How about the adult attitude toward democracy? Cronin shakes his head. "Just try and explain democracy and you wind up talking to yourself," he laughs.

"WHO'S BOSS MAN?"

As Cronin describes it, the Korean first asks "Who's boss man—Truman?"

He is told that Truman is not boss man because Congress can refuse to obey him.

"Then Congress boss men," says the Korean.

Americans carefully explain Truman can veto laws and the Supreme Court can declare the laws of Congress illegal.

"Then Supreme Court boss men," says the Korean.

"You try to tell him the Supreme Court is not absolute boss because its members are appointed by the President," Cronin continues. "Then he asks you the $64 question: 'Well, who is the boss?'

"As you explain that in America the people are the boss, the adult Korean looks at you as if you are a little teched in the head. The people the boss. He then finds an excuse to get away from such a crazy loon. Later you may overhear him telling some friend about how whacky these Americans are."

SANTA CLAUS COUNTRY

Koreans consider America the country of Santa Clauses. When Cronin first took over as chief of communications he found that they will take anything they can get their hands on. During 2 years he lost his entire wardrobe—five suits and most of the haberdashery that went with them.

It seems Koreans don't consider stealing a crime. The crime, in their humble opinion, lies in getting caught.

Soon after his arrival in Korea there came an order for another couple of hundred sets of telephone receivers. He noticed that a sizable batch had been sent only a few weeks before. He investigated and after considerable probing uncovered the equipment, stolen and hidden away.

"They are like squirrels," says Cronin. "They will take things they have no earthly use for, just to hoard them."

And they always order everything on every ECA list, whether they can use it or not. It's free, isn't it? They even ordered television tubes in a country without a television station. Needless to say, says Cronin, those orders are pared constantly.

ON LIST, WASN'T IT?

They even ordered a quantity of platinum, an amount they wouldn't use in a century. After considerable parlaying it boiled down to the inevitable Korean reason—it was on the list, wasn't it! Cronin says, they'd eagerly order an atom bomb if it was on the ECA list.

What shall we do about Korea?

"Well," says Cronin, "if we want to consider it a military rampart then we've got to go in and take vigorous action. The question is where to draw the line in Asia as we have in Europe. If we want to make the fight in Korea we've got to back up the work we've already done. If we don't then I think it would be best to get out entirely and let Russia take over as they certainly will.

"If we go in we cannot expect Korea to be anything but a nilitary expense. The Communists have all the industrial plants and power in the northern half of Korea. Southern Korea, where we are operating, is primarily an agricultural country.

We will not make a profit from them, because they have nothing to sell us and we have little in which they are interested. The only industry in southern Korea, if it can be called an industry, is the making of lacquered boxes, jewelry, and objects of art, mostly from silver and mother-of-pearl. It is all done by hand, so there would never be enough to interest Americans who can make the same things and in greater quantity with machines.

What is the Korean attitude toward communism?

Most of them, says Cronin, fear communism and Communists. They have heard what has happened in northern Korea, and want no part of collective farms and factories.

If we pulled out and the Russians let them alone, Cronin says, they would go back to the same system they had before the Japs took them over a long generation ago.

"Their feudal system worked for several thousand years and seemed to satisfy them," says Cronin. "Like other Asiatic peoples, they might work out their own destinies if other nations would let them be themselves.

"The Japs made little impression on them in all the years they occupied Korea. They are a proud race and a stubborn race. The hatred they have for the Japs about equals the fear they have for the Reds. They accept Americans as the wonderful lesser evil with the bounty we bestow upon them as gifts from the gods.

CHILDREN THE HOPE

"We could only make a democracy of Korea by educating the children in this generation and the next. That takes time. And it seems, in the present world crisis, time is the thing we lack the most.

"As I said before, we must act very soon in Korea or Korea will be added to the growing list of nations engulfed by the rapidly rising tide of communism."

"I Shall Not Want"

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 8, 1949

Mr. GOODWIN. Mr. Speaker, sooner or later, we may face the question of who will be left to pay the taxes unless we stop giving something for nothing to so many who are willing to benefit at the expense of those who are willing to work for their living. Along this line I commend to my colleagues a reading of the following editorial from the Wakefield (Mass.) Daily Item:

"I SHALL NOT WANT"

Occasionally (and with due credit) we use here something some other writer has produced which goes along with our own line of thought—and generally does a better job. Here's one from the American Druggist, presumably by its editor, John W. McPherrin, who starts with the comment that "after 5 weeks in Great Britain, we came home with new reverence for the faith of mankind that created America.

"It is our conclusion," he continued, "that there is no hope, peace of mind, or real security for anyone in the belief that the state is my shepherd, I shall not want. This is the real concept of the welfare state and it has done something to the British spirit.

Nothing, not even a free health service, is more important to a nation than the spirit of its people.

"So far as the British health scheme is concerned," he says, "it is a major expression of the welfare state idea, and as a health scheme, it is very similar to the plan President Truman has proposed for this Nation. It is too early to tell what it has accomplished for the health of the British people, but there are definite signs that it has done something to their faith in themselves. If this Nation of ours should ever adopt the same kind of a scheme, we must be prepared to accept the same increases in taxes and government controls. But of much greater significance is the depressing effect upon the spirit of the people.

"The Britons want security, but we do not think they have found it in the Socialist idea that the state is my shepherd. To the extent that any man accepts the doctrine that the state alone can bring him security and happiness, he will lose faith in himself. Nevertheless we must recognize that that false concept has a mesmeric appeal.

"It is reassuring to know that America is founded upon radical faith in people, but we dare not be complacent. It is our immediate responsibility to see that no citizen is tempted to lose faith in himself. We must help and inspire each citizen to make himself a useful member of society, and thus achieve true security for himself and his family."

Kent Cooper

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, August 8, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Evening Tribune, Lawrence, Mass., August 6, 1949:

KENT COOPER STILL AT IT

Kent Cooper, executive director of the Associated Press, is a versatile man. He can turn his hand to many chores, some of them as far removed from the newspaper business as Parnassus is from Kansas City. For example, he is a recognized musician and composer; he has written an operetta and many songs. The newspaperman of stage and screen would grow green at the gills if it were suggested for a moment that he had a taste for the finer things of life. But not Kent Cooper. He admits he has a taste for the finer things of life, and he does what he can to insure their continued existence. How does he do this, you ask—well, for one thing, he is passionately interested in the widespread propagation of a phrase which, he feels, has been, and will continue to be, the open sesame to all the truths of the world—things of the spirit along with the cold, hard facts of everyday life. The phrase is "freedom of the press." For over 30 years he has used the crisp aptness of expression which is his special gift to needle the world into awareness of the important function of a free press.

His latest effort in this direction is a novelized biography, recently published in New York. It is the story of Anna Maulin Zenger, a beautiful, sharp-witted, idealistic New York girl, who in the 1700's became the world's first woman newspaper publisher and editor. Like many another historical figure, she did not seek out the role she was to play in history; it sought her out. She married John Peter Zenger, a printer, who, in the course of time, became publisher of the New York Weekly Journal. This was in 1733. Less than a year later, because he dared to criticize the Governor of the Colony of New York in his columns, he was arrested and tried for seditious libel. Defended by Andrew Hamilton, Zenger was finally acquitted. His acquittal gave validity to a new thought: that the press should be free to print fair criticism of issues affecting the public weal. With Zenger's victory as a precedent, other publishers, feeling themselves liberated from restraints which discretion formerly told them they had better respect, began increasingly to let their voices be heard. Freedom of the press was born.

Mr. Cooper holds that it was actually Anna Zenger, and not her husband, who took the measure of the Colony's arrogant governor. After extensive research, he arrived at the conclusion that John Peter Zenger, while a good printer and a good man, did not have the qualities of mind which would enable him to prosecute the fight against the governor's arbitrary rule. The articles which appeared in the Weekly Journal were the work of a finer talent than he could claim. The talent was Anna's, Mr. Cooper feels. He is so sure of it that he dubs her "Mother of Freedom." And he makes out a convincing case to support his opinion.

Readers of the book will share Mr. Cooper's enthusiasm for Anna. They will agree with him that she deserves a special niche in the annals of America. Courage, resourcefulness, integrity, brilliance, were her weapons, and she used them with results which changed her world and made ours a better one.

Without a Shot Being Fired

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, August 8, 1949

Mr. GOODWIN. Mr. Speaker, many well-intentioned citizens do not realize that they are contributing to the eventual wiping out of our free system when they join pressure groups in demanding that the Congress keep on spending the taxpayers' money for new and expensive projects. It is unfortunate and it may become tragic that the same energy on the part of some of our people now expended in urging things which cost more money cannot be applied to a movement to secure early approval of the Hoover plan and a drastic slash in Federal expenses. I feel that there is such excellent reasoning in an editorial from the Everett (Mass.) News-Gazette of July 27, 1949, that I quote it, as follows:

WITHOUT A SHOT BEING FIRED

In the words of Herbert Hoover: "The battlers for the bureaus must be overcome by sheer force of public opinion if our free system is to be saved for future generations." This is a grim warning from a public figure who knows what he is talking about. It is lent fresh emphasis by the fact that the Federal Government is again spending far more money than it is collecting from taxpayers—conservative estimates place the deficit this year in the neighborhood of $5,000,000,000.

It is difficult for some to appreciate the almost mathematical relationship between the financial status of government and the political status of the people. Our taken-for-granted privilege of going to the polls periodically to vote as conscience and common sense dictate is part of the free system of which Mr. Hoover speaks. It can exist only so long as the great majority of individuals are able to exercise their franchise of citizenship without fear of reprisal. And the term reprisal does not necessarily mean a firing squad.

As a country becomes submerged in bureaucratic government, as public debt accumulates and the money depreciates, as normal productive activities are increasingly disrupted by excessive taxation and regulation, as the rolls of public employees lengthen, the vitality the free system withers. If the process continues long enough the people with a vested interest in bureaucracy become a majority and the effectiveness of elections is lost. Thus the free system is obliterated amid a chorus of good intentions without a shot being fired.

Fruit Industry "Sold Down the River" by State Department

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Monday, August 8, 1949

Mr. HORAN. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I am indeed pleased to include an article by Sales Manager H. C. Barrigan, of the Wells & Wade Fruit Co., in Wenatchee, Wash.

Many eastern consumers hear of fruit rotting on the ground in the West, and yet are astounded to see the same fruit displayed on the eastern markets at prices which they consider prohibitive.

Ours is still a good market and yet the cost of producing perishable fruit and vegetables is so high in the United States, and the transportation of it has risen so greatly in the past few years that it cannot be moved profitably.

Small wonder then that our fruit producers begin looking quizzically at a tariff policy which does not reflect some reasonable protection to those who produce in the United States.

As I said on the floor last Wednesday, the reciprocal trade treaty policy of the present Democrat administration will be a big issue in the next campaign. It should.

The article follows:

FRUIT INDUSTRY "SOLD DOWN THE RIVER" BY STATE DEPARTMENT—GROWERS URGED TO WRITE REPRESENTATIVES TO GET BAN ON CANADIAN IMPORTS

(Sales Manager H. C. (Spike) Barrigan, of the Wells & Wade Fruit Co., asserts in the following article prepared for the Daily World that imports of Canadian apples this year will be a critical factor in marketing of the 1949 North Central Washington apple crop.)

(By H. C. Barrigan)

The July 23 issue of the Packer carries the headline, "Hope ebbs on early Canadian ban lift." The article then goes on to ex-

plain the American dollar shortage in Canada, hence the decision to prohibit purchases of American goods—principally fresh fruits and vegetables.

This is nothing new, or startling to shippers and sales managers who are only too well familiar with the results of the Geneva Conference, when the fresh fruit and vegetable industry was sold down the river by our State Department. The industry was invited to send a representative and then refused admission to the conference and discussion with our Government officials..

Government procedure, especially treaties with foreign countries, are too complex for the average citizen to comprehend. For this reason, we elect, and place our confidence in our congressional representatives to protect our interests. Just how far the interest of the apple industry was protected is a question that every owner of an apple orchard should ask himself.

Let us look at the record: Nearly 2,000,000 boxes of apples from Canada (mostly British Columbia), boatloads from Chile, Argentina, and Australia are sold here. Yet the gate is closed tight against sale of our apples to these countries. British Columbia dumped their Jonathan crop and a large share of their McIntosh on our Midwest markets last season just at the time we were getting into our harvest peak and while trying to get our market established for volume movement. Result: Complete demoralization of our Northwest Jonathan deal due to the oversupply. Chile, Argentina, and Australia took over our late spring deal with fresh crop apples causing millions in losses to northwest growers who held Winesaps for the late deal.

Let us use Canada as an example inasmuch as she is the largest exporter of apples into the United States. Also being the largest customer of American goods, she consequently claims impunity on exports to us. Obviously this claim was recognized by our State Department when they signed the apple growers' name to a treaty permitting uncontrolled movement of Canadian apples into this country in exchange for their patronage of American goods.

What are these goods purchased by Canada to make her our largest customer? Briefly, they are essential goods that she cannot manufacture or produce herself. Otherwise you can be very sure they would be on her prohibitive list. Canadian representatives to the annual conference when they tell us how many apples they propose to export to this country will remind us of their tremendous purchase of citrus. Has anyone ever had the experience of eating Canadian-grown citrus?

No one will criticize our good neighbor for its action in protecting its trade balance; nor hesitate to congratulate them for being able to outsmart our Government officials. By the same token we give them credit for their ability to realize that sooner or later the Northwest apple grower is going to object to being the scapegoat. That the time must come when he must fight to have this injustice corrected.

Two million bushels, or approximately $5,000,000 worth of apples, from Canada may sound insignificant in terms of our national production and its value. It isn't so much the quantity as the timing.

They dump them onto our markets when our harvest is at its peak and we need every possible outlet to relieve the surplus over our storage capacity. This results in the pipe line flowing and the law of supply and demand taking control of our prices.

In our efforts to prevail on Canadian shippers to lay off until our harvest is well over its peak they answer that they haven't sufficient cold storage to permit holding. Yet our Northwest shippers have and are still investing millions in cold-storage facilities in an effort to prevent gluts in the market. We are merely investing this money to save the Canadian growers from doing so.

Under the present agreement they are in position to ride under the umbrella of our growers. If the market is active at profitable prices they keep the apples coming. As soon as a break in prices occurs and the business is no longer profitable they turn to their other outlets until the market straightens out after we have been forced to call on Government agencies to help us relieve our surplus that the foreign imports caused; or the advertising commission is forced into special promotion drives at our growers' expense.

Reciprocal trade agreements are essential to world trade. In the case of the apple grower, however, reciprocity is a forgotten word. Consideration for his investment and his future livelihood is completely disregarded.

Did the State Department make use of one of the many bureaus available to them to develop the fact that a Canadian apple grower can produce a box of apples ready for market at approximately $1 a box below our own production cost? In other words, they can undersell us up to a dollar a box and still show a profit.

Or did they determine that the Canadian grading rules are considerably more liberal than ours, permitting them to compete against our "combination grade" with a box marked "extra fancy" which is actually no better than our "combination"? Do they realize that these apples roll across the border totally exempt from the rigid numerous inspection regulations which the American producer is compelled to comply with?

It would be interesting to be enlightened by someone in Washington why the Canadian dollar crisis should not be assisted to a much greater extent by exporting, for instance, petroleum. Our producers advise us our reserves are rapidly being depleted. A famine can be expected in the near future.

What about the Alberta and Peace River oil fields? Are they being capped for lack of customers? Or could it be that the American petroleum interests have more power in Washington than the insignificant apple grower? What about the lumber industry? With our boxes costing over 40 cents each (equal to the cost of growing) our local mills could have no objection to the importation from Canadian mills, if their statement is correct to the effect that our forests are rapidly becoming depleted of timber available for this purpose, hence the high cost.

We were recently informed by the press that the Premier of Alberta had rejected the application for a natural-gas pipe line across the border in order to preserve their resources for the future. Yet this project alone would have returned them a great many more millions in dollars than their apple exports.

At the conclusion of the International Apple Convention this month, a committee representing the American apple growers will meet with a similar delegation from Canada. At this meeting we will be told the approximate quantity they must export to this country in order to stabilize their own domestic deal. Why such a meeting is necessary is incomprehensible when our committee has absolutely no power to prevent them doing as they wish. Except possibly to plead with them to do all they can to avoid a complete market collapse for their interest as well as ours. This indeed is a sorry state of affairs for our apple grower.

The apple grower of this region is in for a rude awakening in the not-too-distant future. Unfortunately, he is a helpless individual who refuses to sense danger or act for his own protection. That is, not until he wakes up broke and has to appeal to Washington to have our rich Columbia Basin area declared a distressed area in order to receive assistance from school-lunch programs, financed by RACC and seed loan.

In spite of the tremendous efforts being made by our Horticultural Council and the Traffic Associations no progress has been made. It will take more than this to get action quickly if we are to get relief this season in order to prevent the inevitable loss confronting the industry. Every grower, large and small, must appeal to our representatives and must do it at once. It can be done and it must be done. The success or failure of the effort is entirely in your hands Mr. Grower.

What Would You Say?

EXTENSION OF REMARKS
OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 8, 1949

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks I include a copy of a radio address by Mr. Dave Beck, executive vice president, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America. Mr. Beck's address is entitled "Legacy of Liberty," and was presented by the Columbia Broadcasting System on Tuesday evening, July 26, 1949, as one of a novel series of radio programs. The speaker on each program is asked to phrase his remarks as if they were in answer to the question "What would you say if this were your last lecture?"

An estimate of our own philosophy of life could very well be based on our message to the rest of mankind if we knew that it was the last thing we could ever say. At that moment in the ebbing tide of life we could not dally with the transient, momentary concerns of our mundane existence. Rather would we look to those eternal truths which alone can give lasting importance to the words and works of every man, truths which the passage of time can never corrode. The allegiance which men swear to these truths is a "good" which cannot be "interred with their bones" and long after the foibles and follies of our weak human natures have passed into meaningless dust, this allegiance will stand as the only memorial which time cannot ravage. Perhaps it would be well if each of us probed our consciences more frequently with the soul-searching question—"What would I say?"

Mr. Beck's address follows:

LEGACY OF LIBERTY

The question I have been asked to answer here tonight poses a real challenge.

What would I say if this were to be my last messages, my last public address, or my last lecture?

I would, of course, be concerned for those to whom I have devoted the major part of my life's work—the people of labor—those who must toil for their living.

What could I say, out of my long association with them, that would contribute most to their future welfare?

PROTECT YOUR LIBERTY

First, I would say, as I have so often said before: let nothing under any circumstances

cause you to surrender your American liberty. That is the most important thing I could possibly say.

I would say, as I have said to chambers of commerce, Rotary clubs, Kiwanis clubs, church gatherings of various kinds, to university student bodies over the country, as well as to meetings of my own associates in the labor movement.

This is the greatest and best country on earth. Our form of government is the best to serve the people. Private enterprise in business and industry has given us the highest standard of living, the highest level of public health, safety, happiness and opportunity that the world has ever known.

I believe our system and our way of life are the best ever conceived by the mind of man.

Freedom of the individual, freedom of thought and speech, freedom of press and pulpit, freedom of religion—these freedoms are not the fruit of our American system, they are the seeds from which it grew.

Neither peace nor security have any meaning if freedom must be surrendered to get them. The history of the ages proves beyond the slightest doubt that every time a people has given up liberty, for whatever reason, it has surrendered all. Be eternally vigilant lest bigots steal from you your liberties as they have done so many times in the past, in other lands.

Be willing to give everything you own of material value, be ready to fight—yes, to lay down your lives, if necessary—for your liberty. Better to perish miserably defending freedom than to live as slaves.

If this were my last word to you, I would also admit that we must pay a price for our right to be free—often a very heavy price indeed—but freedom is worth it.

NOT ALWAYS EFFICIENT

We are not always efficient, or just, or unselfish in a free country. There is a slack and waste and, too often, outright dishonesty. There are faults in business, in government, in labor. Unprincipled men take advantage of the privileges of freedom to cheat the unwary and the ignorant. Weak men neglect their responsibilities and prove faithless to their trust. Strong men ride arrogantly over the defenseless. The law is slow in bringing the rascals to book. Men of character and high ideals and good training do not always occupy the posts of leadership.

Yes, these things are true at times. They are exceptions: they are not the rule. These evils do not long endure, for you and I know that things which are not right cannot stand the test of time. Eventually and inevitably the wrongs the people suffer are righted, even though justice seems to walk with feet of lead.

PRICE IS NOT TOO HIGH

In spite of these faults, which occur because we are but a part of an imperfect human family, struggling up toward the goal the Deity set for us. I say—and I have said it a thousand times—if we must pay this price to preserve our freedom, the price is not too high.

I would say to capital, to the management, and ownership of our great business and industrial enterprises, and to small business as well:

You cannot long remain free unless labor is also free. Our system of free, private enterprise and initiative is not a one-way street. If you destroy for others the very freedoms which have made your way of life possible, if you shirk your responsibilities to the public, then you will bring down upon yourselves the tragic consequences of lost faith.

I would repeat this solid truth:

There is no problem in human relationships so complex or so grievous that it cannot be solved reasonably, if men of character, men with a sincere and honest desire to cooperate in mutual confidence, will sit down together around the conference table, each respecting the rights and dignity of the other, and all inspired by the will to serve the common good.

COOPERATIVE EFFORT

Sincere and unselfish cooperative effort is the greatest need of the world today.

I would say this to labor:

You cannot take from business what business does not have.

You cannot take something out of a bucket unless it is first in the bucket. You cannot do by magic what you cannot do by reason; there is no mystery in either business or labor.

You must meet management on the common ground of reason and honesty. Intelligence must serve you and nothing else will avail.

If you drive business to the wall, you destroy the jobs of your fellows and both you and they have nothing.

CAN SAY "YES"

Oh, I can find a thousand men, on almost any street, who can say "Yes," without regard for consequences, if they think that will make them more popular.

What we need, in every segment of our economic life, is more men who have the courage to say "No," when that is the answer dictated by reason and conscience. We need men who can forget personal pride and ambition, who have the ability to look down that road to the future, who can weigh the consequences of their actions, and who can serve intelligently and courageously, thinking only of the welfare of their people.

I would by all means say this to labor—to all who toil for their living—if this were my last word on earth:

GIVE FAIR DAY'S WORK

Give a fair day's work for a fair day's wage. That is your obligation. The man who refuses to do this is dishonest, both with his fellows and with himself. He does not earn a right to a share in tomorrow's progress, because he is not giving of himself to make that progress possible. He is a drag, a dead weight upon the shoulders of honest toilers.

Keep your agreements: Hold them sacred. Once your word is given, make it good, no matter how unpleasant the temporary result may be. The signed contract of a labor union must be the solemn pledge and bond of every member; it must be fulfilled to the last letter. That is the way of honorable men.

To my own close associates in the teamsters' union, I would say:

STUDY YOUR INDUSTRY

Study your industries. Know their problems and help find the answers. Work to make your employers prosperous for in so doing you will enable them to pay better wages and at the same time give the public better and cheaper service. Thus you will build an increasing demand and assure a greater volume of employment, economic advancement all down the line, and better conditions for yourselves.

Take an active part in the civic life of your home communities. Be good citizens and good neighbors.

Register and vote in all elections; let nothing keep you away from the polls on election day. The right to vote is a precious part of your American liberty.

Take your full share in all public and charitable enterprises. Support the Red Cross, the March of Dimes, the Community Fund. Contribute to your church. Help those who are not as fortunate as yourselves.

Practice thrift; buy the bonds of your Government. Provide as much security for yourselves and your families as humanly possible by saving a part of your earnings.

I have often warned labor against communism, for I have seen the Communists at work in unions.

Communism is a deadly poison; it seeks to destroy your liberty.

COMMUNISM DENIES GOD

Communism denies God, religion, and the church. Its philosophy is the doctrine of defeat; its essence is terrorism. It makes perjury a virtue and honesty a sin. It is the opiate of desperate men.

More perhaps than we realize, our rights and privileges, our very safety in our homes, depends upon the integrity of our American judicial system.

Communism would utterly destroy the foundations upon which our law and courts are established, for it advocates to its followers that they lie deliberately under oath, to advance their cause.

When the witness in court takes his oath before God and upon the Holy Writ to tell the truth and nothing but the truth, his testimony must tip the scales of justice in the direction of right, or the law becomes a travesty. Any doctrine which teaches lying under oath, which denies the existence of God, undermines the last hope of fair dealing and justice for the common man.

FEEDS ON DISASTER

Communism feeds on disaster and turmoil and tragedy. Those who follow its tenets do not want peace; they want a sword. They do not desire progress for the workingman, they hope for unemployment, for bankruptcies, and depression. Out of these tragedies and sufferings of the people, they plan to steal, violently and forcibly, the power to rule. If they ever succeed—God help America.

I have no fears that the Communists will ever succeed in America so long as our people are awake to the dangers in their vicious creed, and so long as we love liberty well enough to defend it with our lives.

Yes, there are faults in our system, but the system itself provides the means for correcting them without ripping out the very foundations of our house. We are competent to solve our problems in our own American way. We do not require, nor will we tolerate, interference by the agents of a foreign power.

SAID THESE THINGS BEFORE

I have said all these things before. They are a part of my philosophy of life. They strike a responsive chord in the hearts of my associates in labor.

Never forget that the rights and liberties we now enjoy were won by the blood and tears and suffering of untold thousands during the long, historic struggle of the common man, up from serfdom. They did not merely happen to us. They were not granted or given to us. Our forebears won them.

We shall keep these rights and liberties so long as we deserve them and we shall deserve them only so long as we are willing to give everything we have—even our lives—to keep our freedom safe.

This is our greatest duty. It is the only way we can preserve for generations yet unborn the priceless heritage which so many generations of men, long since forgotten, struggled so bravely to hand down to us.

Congress and the Army Engineers

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, August 8 (legislative day of Thursday, June 2), 1949

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article

which appeared in the current issue of Harpers magazine in regard to the civil functions of the United States Army engineers.

The article was written by a distinguished newspaperman, Mr. Robert de Roos, and an author, Mr. Arthur A. Maass, a well-known authority on resources and regional development. The article constitutes another public warning to Congress that it should give early consideration to the administration of development projects in our great river basins.

Mr. Maass is especially qualified to discuss this subject, for he served as a member of the staff of the natural-resources task force of the Hoover Commission, which studied in great detail the Army engineers' operations in several watersheds. Mr. Maass himself was the author of the task force's study of the situation in the Central Valley of California, which appears as appendix 7 in the natural-resources report.

The Public Printer has estimated that this article will make 3½ pages of the RECORD, at a cost of $287.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE LOBBY THAT CAN'T BE LICKED—CONGRESS AND THE ARMY ENGINEERS

(By Robert de Roos and Arthur A. Maass)

If you are near a river this summer, look sharp. Unless you are careful, the Corps of Engineers or the Bureau of Reclamation, in their zeal to commit a dam or a levee, are likely to run you down. The two agencies are working a little frenziedly these days, because their continued independent existence is threatened. The threat comes from Herbert Hoover's Commission on Organization of the Executive Branch of the Government, which has recommended that the corps and the Bureau be combined into a single, integrated Water Development and Use Service in the Department of the Interior. This is notably a threat to the Department of the Army's brass-bound baby, the Corps of Engineers, which considers itself immune to reorganization or even to orders from the President of the United States, who is presumably its boss.

The Corps of Engineers will do everything in its power and the power of its numerous friends to see that the reorganization plan is killed, and the Hoover Commission was well aware that it would. "Perhaps the most imposing argument against transferring the civil functions of the Corps of Engineers to another agency is found in the intense opposition with which any such proposal is likely to be met," it said. And even before the recommendations were made public, the Corps of Engineers was lobbying against reorganization in a campaign so flagrant that Mr. Hoover himself denounced it.

In the severe criticism leveled by the Commission, both the Corps of Engineers and the Bureau of Reclamation came off badly. But the Commission, after an elaborate investigation, was especially unable to justify the activity of the Army engineers in the field of navigation, power generation, and flood control. Here the engineers' presence is an anomaly—expensive, dangerous to our water resources, and rich with administrative confusion.

If the Hoover Commission's recommendations for the administration of the country's water resources are ignored, the consequences will be costly and tragic. At present, the Nation is faced with the paradox of two powerful agencies spending enormous sums of money without a basic plan, under competitive and wasteful conditions, and without effective direction from the President and his executive office. In its 47 years of existence, the Bureau of Reclamation has spent $1,530,000,000. In the same period the Corps of Engineers has spent over $5,000,000,000, and it will spend $3,200,000,000 more to complete projects now under way.

By any standard, this is a considerable water bill, even for a country as prosperous as the United States. And, in a sense, it is only a beginning. The Bureau and the Corps and other agencies concerned with the country's water resources have spent, or will spend within the predictable future, $40,000,000,000. The issue is not whether the money should have been spent, but whether it has been spent well—and whether the amount still to be spent is to be paid out wisely or squandered on a variety of high-cost, pork-barrel works for which the Nation pays and from which, in some cases, only a few individuals benefit.

The Corps of Engineers was the object of the Hoover Commission's censure largely because its record of noncooperation, arrogance, and independence is perhaps unequaled in the history of an executive division. Almost without exception, the Corps has disregarded the orders of its Presidents. It has set itself above its Commander in Chief. It calls itself the consulting engineer to and contractor for the Congress, and it considers itself an arm of the legislative branch. Franklin D. Roosevelt, generally regarded as a strong President, lost every round he fought with the corps. Although the champ swung angrily and often, he never laid a glove on the Army engineers.

The reason is clear: The old rivers and harbors bills and the current Army civil functions appropriations bills are the juiciest pork available to hungry Congressmen. Last May, when Senator PAUL H. DOUGLAS, of Illinois, merely intimated this fact, he was angrily attacked for playing politics with something sacred.

The Corps of Engineers has a long and glorious history. It was organized in 1779 by the Continental Congress, disbanded, and then reconstituted in 1802 when West Point was established as the country's first engineering school. Throughout part of the past century, in fact, a good engineer was almost by definition an Army officer. Until 1866 the corps itself ran the Military Academy and was thought to be the elite of the military service. The tradition that the engineers get the top-ranking members of a West Point graduating class—who can choose their own branch of service—still counted for something as late as the recent war. The corps had continued to attract top-ranking officers because it continued to offer the most active and interesting career in peacetime. Within the Army it is unique in this respect, for since 1820 it has increasingly involved itself in internal improvements in the national geography—primarily navigation work on rivers and harbors.

It was these civilian activities of the corps with which the Hoover Commission concerned itself. And there is no purely military question involved, any more than criticism of the corps today should imply disregard for the past achievements of its combat battalions, who put more bridges across the Rhine in 15 days than had ever been there before. It could be said, of course, that the condition of American rivers is a matter of military consequence, and so it is. But so also is the condition of the Nation's roads and railroads, and under the same argument the engineers could take them over tomorrow. It might be preferable, in fact, to have the engineers run the railroads rather than the rivers; for a river consists of water, and many more persons are interested in water than the engineers who deepen and dam it.

Water, besides being a national resource and the property of the people, is a mobile commodity that can be used for more than one purpose. The same river can provide irrigation, supply a constant flow for navigation, cause floods, generate electrical energy, provide a habitat for fish and wildlife, and at the same time absorb the pollution of factories and mines. The idea of multiple-purpose development of the rivers, to use the water in as many ways as possible, began to get under way in the [redacted] and it soon brought the corps into conflict with another part of the Government. In 1902, the Bureau of Reclamation had been established to promote irrigation in the semiarid States west of the ninety-eighth meridian. Since then it had grown and flourished, and by the time the principle of multiple-purpose development was put into general law the Bureau and the corps were both into the rivers up to their necks.

The Flood Control Act of 1936 stated the intention of Congress to authorize multiple-purpose river developments over the entire Nation, wherever flood control was one purpose involved. This confused and confusing piece of legislation made flood protection, in addition to navigation, a function of the Corps of Engineers. Irrigation was retained by the Bureau of Reclamation. Furthermore, the Department of Agriculture was charged with protecting against floods by retarding the run-off into the upper reaches of streams, and the Federal Power Commission's function of surveying river basins for hydroelectric potential was reemphasized. Said the Hoover Commission of this law:

"As the corps' original responsibility for navigational improvements was expanded to cover flood control and other purposes incidental * * * to flood-protective works, and the Bureau's responsibility for irrigation was expanded to include other potential by-products of irrigation, the one agency working upstream met the other coming down. Now we are witnessing the spectacle of both agencies contending for the authorization, construction, and operation of projects in the same river basins, for example, in the Central Valley, Columbia, and Missouri Basins."

Competition over the same river leads to costly duplication of effort. In California's Central Valley, both the Army engineers and the Bureau have simultaneously made surveys and plans for a dozen streams. Each agency spent approximately $250,000 on studies for the Hell's Canyon project in Idaho. Both the Bureau and the corps have surveyed and resurveyed the streams of the Columbia Basin and the Missouri Basin.

The physical confusion resulting from the warring agencies' presence on the same rivers is compounded by the fact that they work under different laws that stem from different philosophies. Reclamation law provides for the repayment by the water users of a large part of the Government investment; it prohibits speculation on that investment; it limits the amount of water a single user can take from a public project; it specifies that publicly generated power shall be sold at the lowest practical price, with preference to public agencies.

Just how well reclamation projects have paid out is controversial. Almost from the beginning, the time allowed for repayment has been repeatedly extended. Now most projects are on a 40-year repayment schedule. But some new projects will cost so much that a 78-year repayment period is being considered.

The laws under which the corps operates do not have even these safeguards for the public's funds. In many cases, local groups benefiting from Army navigation and flood control pay nothing for their benefits. The corps has been slow enough to recognize the necessity for generating cheap power, but even when power has been generated, the corps has persistently advocated sale of the power at the source, where only the

large private utilities can purchase it. Whereas the Bureau maintains at least partial control over Government structures, the Army turns many of its facilities over to local administration.

II

In addition to these giant water boys, the Department of Agriculture, the Fish and Wildlife Service, the Federal Power Commission, the Public Health Service, and a dozen other administrative units have an interest in the rivers and their uses. With so many fingers in the water, it is stirred and muddy to behold. Normally, differences between executive agencies can be coordinated, compromised, or eliminated in the President's office. This has not been possible with the water agencies, principally because of the arrogance of the Corps of Engineers. The engineers have torpedoed every effort at coordination. The Hoover Commission reported:

"There is simply no escaping the fact that so long as the present overlapping of functions exists with respect to the Corps of Engineers, the Bureau of Reclamation, and the Federal Power Commission, costly duplication, confusion, and competition are bound to result. It has been demonstrated time and again that neither by voluntary cooperation nor by executive coordination can the major conflicts be ironed out."

The 7-year fight over Pine Flat Dam on the Kings River in California is a case in point. Funds for this dam, which President Roosevelt declared to be predominantly an irrigation project, were sought both by the Bureau—which was already committed to the basin-wide Central Valley project—and the corps.

The trouble started straight away when local authorities asked both the corps and the Bureau to study their needs. This is a common gambit—two surveys and two estimates, to allow the local moguls to choose the better deal. Roosevelt ordered that both reports be kept confidential until they could be reconciled by the National Resources Planning Board. The Army's report, however, was sent directly to the President, bypassing the NRPB; and, through a clerical error, it was dispatched directly to Congress by the White House. Subsequently the NRPB sent the Bureau report to Congress.

The physical plans were almost identical. Emphasis on function, however, differed. The Bureau of Reclamation contended that irrigation benefits would total $1,255,000 annually; flood control, $1,185,000; and power, $683,000. The corps found that irrigation benefits amounted to only $995,000 and flood control, $1,185,000; it planned no power installation. Thus, by the corps' reckoning, flood control was the dominant function; in the Bureau's eyes, however, Pine Flat was an irrigation project. Later there was a significant change in the corps' figures.

President Roosevelt, in a series of letters to the Secretary of War, to congressional committee heads, and to the Secretary of the Interior, made it clear that his Administration considered the work an irrigation project. He wanted it constructed by the Bureau. But the corps continued to submit the project to Congress as a flood-control project, one of its own civil functions.

This bickering and insubordination to the President went on throughout the war. Finally, the President dispatched a blunt note to Secretary of War Stimson:

"Memorandum for the Secretary of War

"I want the Kings and Kern River projects to be built by the Bureau of Reclamation and not by the Army engineers. I also want the power generated at the projects built by the Army engineers to be disposed of by the Secretary of Interior. I hope you will see that the rivers and harbors and flood control bills include appropriate provisions to effectuate these.

"F. D. R."

It was a strong note. And it had no effect whatsoever on the corps. The Army engineers forwarded the memorandum to Congress, in a routine way, but they did not mention either it or the President's position when Congress subsequently asked them to testify. The Kings River project is now under construction by the Corps of Engineers—an isolated unit in the Central Valley project which is designed as an integrated basin program of prime importance to California. Incidentally, in the Army plan, no power will be generated.

Meanwhile, after the project was under way, a new estimate of benefits was produced. This time the corps showed benefits from irrigation of $3,382,000 and from flood control, $2,126,000. In other words, the Army's own figures showed the project to be predominantly in irrigation project—which should have been built by the Bureau of Reclamation in the first place. Further, local contributions are lower than they would be under Bureau administration, and the country as a whole—which pays—comes off second best. A dangerous precedent may have been set in the Central Valley, where the Army seeks authorization for many other works that are in conflict with the Bureau's basin plan.

The President's policy of having the irrigation water and power produced at Army dams distributed by the Secretary of the Interior was subsequently adopted by Congress. The corps has been in public opposition to these provisions, however, and has sought their repeal.

From the start, the Corps of Engineers gunned for the National Resources Planning Board set up by Roosevelt in 1934 with instructions to prepare a report on the Nation's water resources. The corps took part in the work of the Board's water committee but refused to approve its report. "I am not prepared to approve it in its entirety nor to discuss in detail at this time some of the items which appear to me to be of questionable merit," the Secretary of War said.

The corps kept the NRPB under constant attack, and when President Roosevelt sought to make the Board permanent, in 1936 and later, he was actively opposed by the Secretary of War—the only Cabinet member who failed to support Roosevelt's views in this matter before Congress. In 1941 the NRPB made a final attempt to develop a national water policy. Once again the corps was uncooperative, and the Chief of Engineers refused to sign the final report. "The report has been made in a worthy cause," he wrote, "and the necessity of withholding my concurrence is regretted."

When the NRPB was killed in 1943 (with the corps' blessing), the President's Bureau of the Budget, central coordinating agency of the Executive Office, proposed to take over certain resource coordination functions. This move was blocked when the corps set up its own Interagency River Basin Committee. This committee has no status, no money, and no staff; it has solved no interagency dispute. But its creation convinced Congress there was no need for the new Budget Bureau activity. Today the Bureau of the Budget attempts to coordinate public works activities in the entire Federal establishment with two professional employees and a single clerk.

One of the corps' coolest and most sensational floutings of Presidential decree may yet cost the country several billion dollars. In 1941, President Roosevelt ordered all construction agencies to submit their reports to the Executive Office for clearance. There they were to be reviewed by the NRPB, and later by the Bureau of the Budget. From January 1941 through August 1948, the corps submitted 426 reports. Of these, 360 were cleared; 44 were held not in accord with the President's program; 32 were held up because special circumstances made them unacceptable.

Once again, the corps was unruffled; it submitted the 76 unapproved reports to Congress without change and the recommendation that they be authorized for construction. These 76 projects included the largest and most important river developments in the Nation. The total cost for these 76 projects—which the President's office found unacceptable because of, in many cases, insufficient study—is estimated at $2,500,000,000. Many of the projects, the President's office said, were not economically justified; they would cost the Nation more than they were worth. Nevertheless, they were submitted to Congress—and 62 of them were authorized.

The projects include $200,000,000 for bank stabilization and for a 12-foot channel in the Mississippi—which has serious repercussions for the Missouri and Ohio Rivers—$42,000,000 for the Red River; $10,300,000 for flood control in Illinois; $120,000,000 worth of multiple-purpose dams in the Central Valley, which have caused serious conflict with the Bureau of Reclamation projects.

How do they get away with it? The answer is simple. Congress loves the Corps of Engineers and the corps loves Congress.

The corps has the whole-hearted support of the so-called rivers and harbors bloc, led largely by men from the lower Mississippi area. These men, given permanent seating by our democracy, have high seniority on the committees dealing with navigation and flood control on the Father of Waters. One of them, Senator JOHN J. MCCLELLAN, was a member of the Hoover Commission and entered an impassioned minority defense of the corps.

Stanchly behind the rivers and harbors bloc is the National Rivers and Harbors Congress—an organization dedicated to the principle that no stream is too small for a Federal hand-out, no levee tall enough, no channel deep enough, no harbor improved enough. It is a comprehensive lobby group, an involuted sort of affair which includes among its membership Representatives and Senators—the lobbied—as well as the contractors, the State and local officials—the lobby. At the top, of course, are the officers of the Corps of Engineers, who are ex officio members of the Rivers and Harbors Congress. The president today is Senator JOHN J. MCCLELLAN, the very same.

Relations among the congress and the Congress and the corps are very cozy. Regularly the congress resolves in favor of the Corps of Engineers. "We reaffirm our faith and confidence in the Corps of Engineers, whose devotion to this Nation and loyalty to the Chief Executive have made possible the orderly and efficient development of the greatest waterway and flood-control projects on earth," said a recent resolution. "I feel that I am among old friends," said the former chief engineer.

III

A major weakness in the corp's position—in light of national policy but not from the point of view of local beneficiaries—is its failure to collect enough return from the largesse it bestows. The Federal Government bears the entire cost of most flood-control structures—the long miles of levees on the Mississippi and the new concrete dams everywhere. The Federal Government generally bears the entire cost of navigation works as well—with the proviso that local interests pay nominal right-of-way, terminal, and dock costs.

And the Federal Government, as represented by the corps, is liberal. Before 1935, the corps had developed and maintained an outer harbor at Buffalo, N. Y. Costs for an inner harbor had been borne by the city. But in 1935 the city asked the corps to take over maintenance of the inner harbor simply because the city said it was short of cash;

it did not want to pay if it did not have to. The district engineer, the man representing the corps on the spot, turned down the request. The Chief of Engineers, however, recommended that the Federal Government pay half the costs of the inner harbor, thereby relieving the city of this burden. Congress voted this proposal into law. In a single bill, 17 projects which the Executive Office of the President declared did not have a high enough degree of local participation were, nevertheless, passed on to Congress—which, on the recommendation of the Corps of Engineers, obligingly approved.

Among these 17 was a $322,000 channel project from Boston Harbor to Commercial Point. Although the district engineer declared that oil interests on Commercial Point should pay $100,000 toward the cost, the Chief of Engineers said that no local contribution was necessary. Another project which was disapproved by the President but passed by Congress was a $160,000 Tacoma Harbor project. The NRPB found that benefits would go largely to two lumber companies. It was found also that timber resources in the area were nearing exhaustion—which would end the usefulness of the project anyway. Congress, however, approved the corps recommendation as it stood.

Another controversial project—among dozens—is the improvement of the Warrior-Tombigbee River system to permit barges traveling downstream on the Mississippi to return upstream via the Mobile, Warrior-Tombigbee, and Tennessee Rivers to the Ohio. This proposed route would have the advantage of being a slack-water route, while the Mississippi River improvements have so increased the speed of its current that upstream travel is difficult and expensive.

The project was rejected by Congress in 1944, but it was resurveyed and reintroduced. The cost was estimated at $117,000,000 plus an annual maintenance charge of $811,000. However, said the engineers, the savings for Mississippi River shippers who would use the new upstream route would be $1,200,000 annually. In addition, the corps listed some benefits to local traffic. Congress agreed, and the project was authorized.

The point is this: Had the Corps of Engineers been required to prove that its Mississippi River navigation projects were paying off, it surely could not have recommended the Warrior-Tombigbee project. It would have needed to keep the upriver traffic on the Mississippi as a justification for its improvements there. Lacking a system of tolls, or even of proper accounting however, the corps felt itself justified in taking on the new and extremely expensive program. Ironically enough, it is the increased speed of the Mississippi—brought about by the corps' own diking and channelization—which makes the second project economically attractive in the corps' eyes.

The reluctance of the corps to charge tolls against those who use its waterways makes it very popular wherever navigation works exist. Many people, however, strongly believe that the Federal Government should charge for its services. User-charges would have two effects: they would help pay for the out-of-hand costs of construction and maintenance; more important, they would serve as a test of benefit estimates. Without tolls, or any other measuring device, no one can prove whether a benefit has actually materialized. The corps can make, within limits, almost any estimate necessary to win congressional approval. No one checks up to see whether any advantages have been gained. After the Federal money has been spent, no one seems to care.

As far as national policy is concerned, President Roosevelt said in 1940: "I have always believed that many facilities made available to our citizens by the Government should be paid for, at least in part, by those who use them." He mentioned "the $50,000,000 that the Government spends annually on the maintenance of dredged channels, buoys, lighthouses, lifesaving stations, etc. It would seem reasonable that some portion of these annual expenditures should come back in the form of small fees."

The corps always has opposed tolls, however. One of the main incentives behind plans for waterways is a desire on the part of local business interests, who in turn influence Congress, to force down railway rates by competition from toll-free waterways. The corps is shrewd enough to realize that if shippers were forced to pay tolls the differential between water and rail freight rates would tend to disappear—along with the justification for the waterway. It is true that the present system does sometimes bring down the rail rates, but usually only on commodities carried by water—as a countermeasure, frequently the railroads raise the rates on other products and the average citizen benefits not at all.

The corps has been notoriously lax in evaluating its proposed waterways as part of the national transportation complex. Not once have the Army engineers made a systematic study of waterways as a component of a system that includes water, rail, trucks, and pipe lines. Only once was a corps project—the Lake Erie-Ohio River Canal—evaluated by the Interstate Commerce Commission; the ICC found it undesirable and Congress refused to vote funds.

IV

The relationship between water and rail rates is particularly important in considering the Pick-Sloan plan, now under construction in the Missouri Valley. The Pick-Sloan plan reveals all the elements of confusion and competition between the Bureau of Reclamation and the Corps of Engineers. It alone is enough to show the need for responsible administration of a national water policy.

A rough idea of the confusion that exists can be gained from this: Neither the Bureau of Reclamation nor the corps—nor anybody else—actually knows how much water there is in the Missouri. It is almost certainly true that there is not enough water to maintain in dry years the Army's proposed 9-foot navigation channel from Sioux City to the mouth. There is grave doubt there will ever be enough water—even in wet years—for the Bureau's ambitious irrigation plans, plus navigation. There is grave doubt that irrigation is even desirable in the area. There is still graver doubt that the expensive navigation installations are worth the money. What is certain is this: The corps and the Bureau have rushed the Nation into a billion-dollar undertaking without sufficient planning or investigation. And they have busted up a river that should have been developed as a whole.

Competition between the agencies is to blame for this piecemeal attack on the Missouri. Maj. Gen. Lewis A. Pick, now Chief of Engineers, came up originally with a plan for 22 dams; W. G. Sloan of the Bureau of Reclamation came up with 90 dams; Pick called for 1,500 miles of levees; Sloan, for irrigation of 4,700,000 acres of land; Pick said he would generate some power; Sloan said he would generate 758,500 kilowatts. On this basis, the corps and the Bureau were slugging it out on the river and in Congress for funds.

Then the corps and the Bureau were driven into each other's arms by a common threat: the proposal of a Missouri Valley Authority, modeled after the formidably successful Tennessee Valley Authority. To forestall such a creation, the corps and the Bureau reached a compromise. Earlier, the Bureau had attacked the Pick plan in several instances as wasteful and unnecessary; the corps had returned the compliment sneer for sneer. But when the MVA was proposed, they hastily came to terms. "Every project in both plans was incorporated into the joint venture except the Army's Oak Creek Dam," said Rufus Terral of the St. Louis Post-Dispatch, "and it would have been included too if its site were not to be submerged by another dam. One way or another, the two agencies had agreed to what in their composite view was a waste of more than $150,000,000 of the people's money."

Said the Hoover Commission: "The compromise consisted for the most part in a division of projects, each agency agreeing to forego the privilege of criticizing projects assigned by the agreement to the other. The result is in no sense an integrated development plan for the basin. Agreement between the two agencies may be more costly to the public than disagreement."

The 9-foot channel for the Missouri has been approved. It was recommended on the ground that the present 6-foot channel—which cost approximately $70,000,000—is inadequate; barge operators must change equipment between the Missouri and the Mississippi because of the Mississippi's 9-foot channel. Given a 9-foot channel in the Missouri, the argument ran, there will be complete interchangeability of equipment between the two rivers.

Now, without knowing whether there is enough water available, the 9-foot channel is being constructed in the Missouri. Simultaneously, the project for increasing the depth of the Mississippi channel to 12 feet is ready to go. When both projects are completed, interchangeability of equipment will be as impossible as ever.

Behind that cloud of confusion around the 9-foot channel in the Missouri is again the lure to the local interests of a chance to force down railroad rates. The project will cost many, many millions, and there is actually no guaranty that rail rates will be forced down. At present, in the expensive 6-foot channel, about all that moves on the river are bargeloads of sand and gravel—most of which are used to build levees by the Corps of Engineers.

In their hurry to get authorization and money, the corps and the Bureau almost overlooked the river itself. Scant recognition was given to the problem of fish and wildlife. This colloquy between Charles E. Jackson, Assistant Director of the Fish and Wildlife Service, and Maj. Gen. Thomas M. Robins, of the corps, is illustrative: Mr. Jackson was arguing that fish and wildlife must be considered in any river development.

"Mr. JACKSON. I don't know what plans you have for the Missouri River. I understand a report was submitted. I haven't seen it yet. You see, some progress is made before we have had the opportunity to know what is contemplated on the Missouri.

* * *

"Mr. ROBINS. I didn't know there was any fish problem on the Missouri River.

"Mr. JACKSON. That is exactly why we want to be consulted before any project is undertaken."

V

No sensible effort has been made to evaluate all the soil and water conservation needs of the Missouri Valley, or in any other way to combine estimates and consider the valley as a single watershed. The Department of Agriculture has only recently submitted a hastily prepared plan for the expenditure of several billion dollars for soil conservation on the same watershed. The Federal Power Commission estimates that it would need $250,000 to survey adequately the power potential and market in the valley. The Bureau's plan for the Missouri provided for the production of 758,500 kilowatts of power. The corps, reluctant to build power facilities, merely said it would develop power; it did not say how much.

This difference in the attitude toward power is a recurring strand in the conflict between the Bureau and the Army engineers.

The Bureau is committed to produce power: Power revenues help pay off the investment for irrigation works. It operates under a law which gives public agencies first chance at its power at low rates. It advocates construction of transmission lines to load centers where the public power can be picked up by small cooperatives and municipal distribution systems. The corps opposes construction of transmission lines. It would sell its power at the bus bar—i. e., at the generators. This is precisely what the private utilities want; the Army is supported in its program by these utilities.

By 1960, the Hoover Commission estimates, Federal plants will be producing 15 to 20 percent of the power supply of the country. If all the power plants now listed as possibilities are ever built the Federal plant will ultimately be producing as much electric energy as the whole country produced in 1947. It is obvious that a power policy, as a corollary to a sound water policy, is indicated.

Very quietly, the Corps of Engineers has also entered another large field of public endeavor which promises to be costly to the taxpayers. In the 1944 Flood Control Act—the latest of the major laws in the field—"major drainage projects" were made a part of flood control. No one seems to know where these three words came from or how they got into the act, except that it is almost certain that a Congressman from the lower Mississippi was the author. Two major drainage projects have been authorized so far—on the lower Mississippi, of course. These major works will be 100 percent Federal gifts; the local interests must only clear the land and construct minor works.

There is no antispeculation provision in the law. If you own a swamp and are lucky enough to get the Corps of Engineers to drain it for you, you can sell it at any price you can get; the people of the United States will gladly pay the bill. There may be Federal responsibility for helping draining districts, but it is doubtful whether this responsibility should go further than the giving of reimbursable aid. Here again, various uses of water should be carefully examined. Some drainage operations have produced inferior agricultural land. And swampland is not necessarily wasteland. It is important as a nesting ground for wild fowl and as spawning grounds for fish.

Drainage operations are expensive. So is maintenance of a drainage project. The fact that drainage was slipped into a bill enlarging the functions of the Army engineers, without adequate local participation or antispeculation provisions, would seem to be a mistake. The Hoover Commission, with its task force on natural resources, looked at all the facts. It recommended the transfer of the civil functions of the Corps of Engineers to a Water Development and Use Service in the Department of the Interior. The functions of the Bureau of Reclamation would also be transferred to this Water Service. Such a consolidation would give the country what it needs: a single agency charged with the responsibility for administering our water resources.

The Commission also recommended an important addition to the executive structure: A Board of Impartial Analysis which would review and coordinate all construction plans for the President before submission to Congress. Thus Congress could act on a coordinated program rather than struggle through competitive plans and counterplans.

Senator JOHN J. MCCLELLAN and Carter Manasco, former Congressman from Alabama, bitterly attacked the plan to cut the corps down to size. "This is a critical period in world history," they wrote, as minority members of the Commission. "The uncertainties of the peace and the possibilities of another world war, it seems to us, should preclude any thought of weakening our military potentialities by turning from tried, tested, and proven policies and programs to an experimentation in something that has little hope of success."

Their argument, a favorite with supporters of the corps, that the peacetime functions of the engineers—building dams and levees—train soldiers for war was knocked in the head by the majority report: "The argument that river and harbor work can be directed only by the Army engineers becomes * * * absurd when it is realized that less than 200 Army engineers are involved and that the remainder of the personnel under their control * * * are civilians who supply most of the detailed knowledge and continuing direction. * * * There is no reason why the same and even better results cannot be obtained by assigning them [engineer officers] and corresponding officers of the Navy and Air Forces * * * to a central consolidated works department." With the 200 officers out of the way, the report said, civilians might have the chance for promotion they deserve.

Senator MCCLELLAN and Mr. Manasco, recalling the heroic folklore figure of the district engineer holding back the flood while the convicts work the levee, tried another barrel—we need these brave officers in time of emergency: "A most recent example is the unprecedented blizzards that swept the West. Could the Bureau of Reclamation have been of comparable service to that performed by the Corps of Engineers in meeting the exigencies of this great peacetime emergency?"

Most significantly, the late James Forrestal, a member of the Commission, did not join Senator MCCLELLAN and Mr. Manasco in their dissent, although he was head of the Department which included the corps. He did, however, abstain from joining the majority recommendation on the consolidation of the corps' civilian functions.

Senator MCCLELLAN feels strongly about pruning the civil works of the corps. And he is in a position to do something about it. He is chairman of the Committee on Expenditures in the Executive Departments, the committee dealing with the Hoover recommendations. It is notable that when the hearings this spring were recorded in 230 printed pages, more than half the talk was an effort to exempt the corps from any reorganization plan. An effective reorganization, on the other hand, as recommended by the Hoover Commission, would put responsibility for our water resources up to one agency—and demand results. It would certainly save money, and it might save our rivers.

The Clark and McGrath Appointments

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES

Monday, August 8 (legislative day of Thursday, June 2), 1949

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a splendid editorial, which appeared in the August 3, 1949, issue of the Nashville Tennessean. The editorial states well the indisputable fact that Attorney General Tom Clark and the Senator from Rhode Island [Mr. MCGRATH] are excellent choices for the high places for which they have been chosen. The fact that they have taken a strong position in political matters is not derogatory of their ability or of the advisability of their selection. I wish to congratulate President Truman upon their appointment. They deserve full congressional and public support.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FRIENDS—WHY NOT?

Columist Thomas L. Stokes, liberal writer, has decided to view with mild misgivings the two appointments recently made by President Truman.

Where the ability of Attorney General Tom Clark and Senator J. HOWARD MCGRATH is concerned, he has no complaint. He also concedes their high character.

But the usually level-headed Mr. Stokes subscribes to the strange theory frequently voiced in other quarters that the President, in deciding who will be named to high offices, should make it his first order of business to scratch off the list any man who happens to be his friend. He does not go so far as to advise that an enemy should be thus honored, but at least the appointee should be wrapped in neutrality.

Furthermore, anything that smacks of a "kitchen cabinet" appointment displeases Mr. Stokes, although some eminent justices have risen to that honor from the Attorney Generalship. Among them are Messrs. James C. McReynolds, Harlan F. Stone, Frank Murphy, and Robert F. Jackson.

For our part, we are gratified to note that President Truman, like his illustrious predecessor, does not feel that any qualified candidate is debarred from promotion by reason of personal or official friendship with him. With commendable common sense, he may reason that, all other things being equal, it is well to elevate one with whom he has been associated and whose qualities of character and mind he has come to respect.

Nothing now stands in the way of Mr. Clark's membership on the highest Court save approval by the Senate, and that will be forthcoming in view of the high esteem in which he is held by Members of that body. He is no graduate of the Federal bench, as some would have preferred, but that has never been a prerequisite for the role he is to assume. His legal background is one of distinction in his own State of Texas and in many years of Government service; his character is beyond reproach, and he is endowed with outstanding energy.

It is idle, we think, to speculate; as another columnist, Mr. Marquis Childs, has done, on whether Mr. Clark will be influenced chiefly by Chief Justice Vinson. The forecasters have been wide of the mark in the past, as in the case of Associate Justice Hugo Black. And there is no reason to deplore the possibility that Mr. Clark will not always view important issues exactly as the late Associate Justice Frank Murphy would have done. Enough to say that he has the ability to grasp important points of law and interpret them sincerely and judiciously.

For the same reasons that he frowns on the Clark appointment, Mr. Stokes thinks President Truman, in seeking a new Attorney General, should have turned his back on an able man of high principle who also had been a loyal supporter in the last campaign and election. In many ways, Mr. McGrath was the logical man for the vacancy. There is no basis for the view that because he has served efficiently as chairman of the Democratic National Committee, he is forever to be cataloged as a politician and capable of holding no other position than that of Postmaster General.

If the President had listened to Mr. Stokes he would have penalized Senator MCGRATH because of friendship; and it does him credit that he refuses to think along those exceedingly narrow lines.

It speaks well for Mr. Clark that some of his critics find their greatest grievance in the fact that they cannot be sure in their own minds just how he will vote on so-called liberal issues. This might be viewed as a tribute to his openmindedness and lack of predjudice, but on the one hand the conservatives fear that he will go left, while a segment of the former New Deal group is hounded by the thought that he may not see eye-to-eye with it. From the country's standpoint, we should say, this is not an unhappy situation.

Neither is it displeasing to see President Truman giving his worthy and loyal friends the consideration they deserve when greater opportunities for service present themselves. The confidence he has demonstrated is built on personal contact and observation. And, above all, friendship carries no stigma in his estimation, Columnists Stokes and Childs notwithstanding.

The China Situation

EXTENSION OF REMARKS
OF

HON. JOHN DAVIS LODGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, August 8, 1949

Mr. LODGE. Mr. Speaker, the white paper just issued on United States relations with China is primarily an attempt to justify the State Department's mistakes rather than to correct them. This is often the tendency of parties which have been in power for too long. Apparently the administration would rather lose a continent than lose a little face. There is, of course, interesting factual information in this voluminous report but it is also apparent that much of the material has been carefully selected to sustain a plausible defense of our betrayal of China at Yalta rather than to bring out the shameful truth.

For it is a sad and bitter fact that China would probably be better off today had she been our enemy or had she at least devoted her energies to the annihilation of communism when during the war it had reached a very low ebb. Had China been our enemy it is probable that we would now be pouring hundreds of millions of dollars into that area as we do in Germany and Japan.

To hold that we can eventually succeed in stemming the tide of communism in Europe while we do little or nothing in China is to abandon the open-door policy, to go back on our solemn obligations, and to retreat into an isolationism which is as old-fashioned and obsolete as it is dangerous for us and for the peace for which the American people are sacrificing so much.

I regret that the State Department saw fit to publish this clever and misleading piece of advocacy at a time when the military-assistance pact, the principle of which I strongly favor, is in such serious difficulty.

Under leave to extend my remarks in the Appendix of the RECORD, I am inserting two editorials which appeared on Saturday, August 6, in the New York Times and the Washington Daily News respectively:

[From the New York Times of August 6 1949]

INQUEST ON CHINA

In transmitting the white paper on China to the President, Secretary Acheson placed emphasis on the value of informed and critical public opinion. Presumably it is in the interest of the formation of that opinion that this report has been compiled and published. The record, Mr. Acheson, is now available to the Congress and to the people of the United States.

Unfortunately the comprehensive character of the report makes it, to some extent, self-defeating in this aspect. This is no fault of Secretary Acheson or his department. They have tried to include a large mass of salient material so as to show the reasons for the courses that have been taken. In fact, they could with profit have included some things that have been omitted. The treatment of the Tehran and Yalta agreements, for example, is so compressed as to be cursory.

The fact remains that this a document of 1,054 pages, more than half of which are in small print. The whole of the report will be read by very few persons indeed. What will be read, instead, to some extent, are various summaries of the report and comments upon it. Thus most of the informed and critical opinion will have been formed at second or third hand, at best. A great many facts, judgment and exchanges of information and opinion have been set down here, but the conclusions that are derived from them will depend largely upon the individuals who do the deriving, and not solely on the facts and judgments themselves.

This is true also of Secretary Acheson himself, whose letter of transmittal is in effect a summary of the report and a comment on some of the facts and opinions in it. It is not unfair to point out that such a summary cannot possibly be objective, no matter how earnest and honest the men may be who make it. The Department will not inform the President that this effort over which it has labored is inadequate or misleading, even if some persons in the Department think so. It will not take the position that the policies it has shaped have been mistaken. This inquest on China is not the work of a serene and detached coroner but of a vitally interested party in the catastrophe. Unfortunately, at this point one of those vital interests is self-justification, which certainly is the enemy of objective analysis.

For example, there is the sweeping conclusion of the Secretary in his letter to the President when he stated that "nothing that this country did or could have done within the reasonable limits of its capabilities could have changed that result (of the civil war); nothing that was left undone by this country has contributed to it." Even with that escape clause, "within the reasonable limits of its capabilities," the implications of such a declaration go far beyond mere presentation of fact; they constitute a gigantic and quite fatalistic blanket approval of our entire course of action in the past 5 years. This complete disclaimer of any responsibility for what has happened to China not only obscures the truth; it puts the mark of very special pleading on the whole document. It will, of necessity, make the reader wary rather than sympathetic. It will point up the need for going beyond the summary of the Secretary, or any other person, to the facts, judgments, and opinions of the white paper itself.

Some of them can be of great value. The publication of the Wedemeyer report, for example, was too long delayed. It should have been available for study a long time ago. The candid and informed opinion that is sought will, among other things, want to know why the report was suppressed, in the first place and why its major recommendations were not followed, in the second. In the light of its text the reasons that have been given thus far seem flimsy.

Other elements of value will in some cases have to be read between the lines. While the report is explicit in its attack on the Nationalist Government in China, it is understandably reticent in comment on the American misappraisal of the political forces at work in the Far East. Secretary Acheson says in his conclusion that the Communist regime in China serves the interests, not of the Chinese people, but those of Soviet Russia. This judgment, reached apparently quite recently, should help to throw a sharp retrospective light on the long-continued efforts of our Government to force the Communists into the Government of China.

This white paper, an attempt at vindication, is actually a sorry record of well-meaning mistakes. Many of them are now set down here and those who will can learn their painful details. If that helps informed critical opinion to aid in preventing some similar mistakes in the future, the white paper will have served a more important purpose than saving the administration's face. It can point the way toward a future policy, and that aspect of it will be discussed in these columns tomorrow.

[From the Washington Daily News of August 6, 1949]

WE NEED A PACIFIC POLICY

Secretary of State Acheson has told President Truman that the Communist regime in China serves the interests of the Soviet Union and may lend itself to the aims of Russian imperialism in a campaign of aggression against China's neighbor nations.

It has taken Mr. Acheson a long time to reach this very obvious conclusion. Moreover, such a campaign of aggression is more than a mere possibility. A review of Communist activities in Japan, the Philippines, Hawaii, Indonesia, Burma, and Siam will show that it is making dangerous headway.

The State Department knows this. Why doesn't it admit it?

The American Embassy in Moscow correctly forecast Russia's designs in China and the rest of the Far East in a report to the State Department in April 1945, according to the Deparment's own white paper. Nevertheless, after that the Department tried to set up a Communist coalition government in China.

Mr. Acheson now proposes that American policy be shaped to encourage all developments in China which are aimed at throwing off the foreign yoke of Moscow-directed communism.

Had this been our policy 3, or even 2 years ago, that yoke might not have been imposed on China. Yet, while talking of encouraging resistance to communism, Mr. Acheson still seems to object to extending any aid to the forces now actively fighting communism in China. This doesn't add up.

Lieutenant General Wedemeyer submitted a program to the President in September 1947 which he thought would be successful. But it was vetoed by the State Department, and his recommendations only now have been made public. General MacArthur is known to have had a similar program in mind, but he wasn't consulted.

A lawyer for the defense who doesn't have a good case tries either to confuse the issue or attacks the victim in the case, particularly if the victim isn't present to defend himself. The State Department does both these things in its carefully edited white paper. But in making Chiang Kai-shek the whipping boy for the Department's own blunders, Mr. Acheson leaves unanswered the question of most concern to all Americans:

What is the Department doing, or planning to do, to protect American interests

in the Pacific, not only in China but in the Philippines, Japan, Hawaii, and other threatened areas?

Vague talk about encouraging hopeful developments in China or elsewhere won't get us anywhere. The Kremlin has a plan. We need one to counter it.

The promised review of far eastern policy by the department's hand-picked experts, none of whom qualifies as actually expert in this field, is not the answer.

We need a positive, constructive, workable program in the Pacific—a program prepared by persons who thoroughly understand the military and economic situation in that part of the world.

Department of Government Liquidation

EXTENSION OF REMARKS
OF
HON. WALTER E. BREHM
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, August 8, 1949

Mr. BREHM. Mr. Speaker, on previous occasions I have referred to one of my distinguished constituents, Mr. J. Keller Kirn, who is very definitely an authority on monetary matters. In times past I have inserted in the RECORD articles which Mr. Kirn had written and which had been published in various newspapers through the country.

Just recently an article written by Mr. Kirn appeared in the Columbus (Ohio) Dispatch under the heading of "Reader would set up a department of Government liquidation." The article does present material for thought and I therefore take pleasure in including it with these remarks in the hope that it will be seen and read by those interested in the economy of our National Government. Mr. Kirn's article follows:

According to our Constitution, article 1, section 8, powers granted to Congress, the first power granted is "To borrow money on the credit of the United States." The power to lend money was not granted in order to protect us against using Government loans to add a fourth branch of Government industries to create jobs to trade for votes to retain and gain power to rule us with rules made by rulers whom we do not elect, instead of governing us with laws made by Congressmen whom we elect.

Congress should remove obstacles to the Hoover plan by creating a department of liquidation to liquidate Government industries such as banking, insurance, and utilities (steam-power plants), then issue United States bonds to be exchanged for stock in each corporation formed to take over each Government industry, after which stockholders should elect their officers to operate their corporation and pay taxes according to laws governing corporations. Officers should employ loyal citizens who can qualify. Veterans should be given preference. Former bureau officials and employees would have the advantage of experience to qualify for such nonpolitical jobs not affected by change in administrations. Bonuses should be offered to officials and employees for decreasing expenses and increasing efficiency.

Congress should allow other countries which will cooperate with us, to issue their bonds without guaranty by our Government, and offer them for sale to our citizens. If this would have been done in the past, our citizens would not have settled England's $32,000,000,000 loan for $650,000,000, then deducted it from the request for an additional $4,400,000,000 loan and loaned $3,750,000,000 more. Neither would we have such a colossal debt and almost unbearable taxes. Our 6 percent of the world's population can't finance and support the rest of the world forever. Our natural resources, money, credit, and taxpaying ability are not unlimited. The Un-Fair Deal's plan to pass more laws, create more taxpaying projects which can't be amortized, and printing more money will lead to disaster. A sound economy without sound money is impossible. Sound money is our best weapon. Congress should restore sound money and require other nations to do the same.

Wanted: A Wise Mother Robin

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 8, 1949

Mr. ARENDS. Mr. Speaker, under permission to extend my remarks, I include an editorial from the Daily Pantagraph, Bloomington, Ill., of August 4, 1949, entitled "Wanted: A Wise Mother Robin." The editorial expresses very pointedly the one thing the Congress should do, namely, advise the western European nations that it is high time for them to get out and learn to fly on their own. The day has arrived to inform these nations that we are coming to the end of the road and the time when we no longer can afford to hand out money to them simply because they need it.

WANTED: A WISE MOTHER ROBIN

Did you ever watch a mother robin teach her young to fly?

They sit with their mouths open and screech for food from the safety of their nest. And she coldly routs them out. They flutter screaming to the ground. When she alights to see how they're doing they cuddle up to her and she flogs and scolds them away. She makes them fly and she makes them become self-dependent. Otherwise they would sit in their nest with mouths open for food until they starved, or fall out to be devoured by a cat.

The mother robin seems to know when and how to make the break to teach self-reliance in her young.

The United States must learn how and when to encourage western Europe to fly under her own power. It may take a little scolding and shoving. But the time must come. We cannot forever respond to the cry: "If you don't help us we'll go Communist."

That's one of the questions Congress must decide in the current move to arm Europe as a corollary to the North Atlantic Pact. It's a question we must decide in reflecting upon the British loan, aid to Greece, and the subsequent Marshall plan. All these things were felt necessary and the Pantagraph supported them. We feel that they helped to stem the tide of communism.

But now we learn that Europe still is not on her feet. No one seems to know exactly when she will be. The urgent call for more aid comes from statesmen like Marshall and Harriman; from columnists like Alsop and Mowrer.

Yet these men admit that western European nations have not done what we had hoped they would do to consolidate their own forces. Their customs barriers are still up. Their socialistic experiments are still in progress. Their military cooperation is mostly on paper.

The big question Congress must answer in determining how much arms aid to give and how much dollar aid to follow the arms aid is whether it will strengthen Europe or whether it will make European muscles more flabby.

When shall we say, as the mother robin says:

"It's time to get out and learn to fly on you own. If you want to be lazy when I push you out of the nest and let the big cat communism get you, then that's your worry. The only way to avoid him is to be able to support yourself. You can render him helpless if you develop your own wings. You're his dinner if you don't. Now I've done all I can for you. Get a move on."

There ought to be something of that tone of voice in the new grants in arms and money we are going to make—must make.

A Plundering, Blundering Administration

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 4, 1949

Mr. REED of New York. Mr. Speaker, the internationalists have voted away our billions; they have voted away our domestic market; they are exporting our pay rolls; they are planning to export, arms, ammunition, and our national resources. What next? Take notice, fellow Americans.

The free-trade faction of the supporters of the trade-agreements program is at it again. They have been quiet for some time now, thinking that with a Democratic Congress they would have no trouble wiping out domestic industries which cannot compete without tariff or quota assistance. The recent awakening is the result of demands from all sections of the country that we slow down in giving away our domestic markets and transferring American jobs to foreign industries.

Hundreds of ex-servicemen and others have gone into the business of raising fur-bearing animals because they had faith that their Government would give them some aid if foreign competition could not be met. Already one-half of them have lost their savings and been forced to abandon their fur farms because their Government failed them. Russia, with its starvation and conscript wage system and government-operated trading system has all but destroyed the American fur market. No one expected our fur farmers to compete on even terms with the low standard of living abroad, nor to retain individuality and free enterprise as against foreign state trading, export subsidies, and outright state-operated dumping by foreign competitors. The pleas of thousands who labored under the delusion that their Government would assist them to meet such competition on even terms are finally having some effect.

The independent oil producers, tobacco growers, those who go down to the sea in ships and come back with fish, and many manufacturers of china, pottery, gloves, clothespins, silk, textiles, and other commodities are flooding Congress with appeals for assistance. Those appeals are in such numbers and carry such logic that they cannot be ignored. Congressmen and Senators who formerly voted to make the President the czar of American industry without check or assistance in tariff-rate matters now are forced to admit there is such a thing as too low a tariff.

It is only right that the appeals of the tomato growers of Florida to their congressional representatives should be given consideration. Mexico was literally handed the American tomato market on a silver platter—and not one single concession from that country now exists. What is economic, or just, or for the betterment of the United States in such a deal? The Florida vegetable growers were taken for a disastrous ride on this one—and they will be a long time forgetting it.

The independent oil producers in Texas and Oklahoma are bombarding their Senators and Congressmen with complaints that they have been sacrificed to big foreign and domestic interests. Oil output in those and other producing States has been curtailed by law—to the extent of over 600,000 barrels per day, but there is no law or restraint on imports, which are taking a larger and larger share of the domestc market. The producer who has been forced to shut down his well, and the thousands of laboring men who are on part time or without work, are rightfully saying to their representatives in Congress, "You brought this on us; now it is up to you to do something about it." To the credit of those congressional delegations, they are doing something about it.

The fishermen of both coasts and a dozen different States cannot sell their fish, except at cutthroat prices, so they go without work, and their families become bitter, and the Senators and Congressmen from those States realize the great hardships this unrestrained lowering of tariffs has placed on their constituents. What are they going to do about it? Sympathy is not what those fishermen want. They want work, good hard work, and long hours, and danger—and a fair living wage—in the industry of their choice. Foreign governments subsidize their fishing fleets; they do not demand decent wages, nor good living standards, nor high taxes for all of the various extras that have made the American laboring man the envy of all his foreign neighbors. Now we find our own citizens envying those of other countries whose governments seem to take some interest in whether their citizens are employed.

I said long ago that we would someday wake up. Many are still sleeping, but the murmurs of the thousands, even millions, whose jobs have been exported to low-wage-scale countries through unrestrained tariff reductions are becoming louder and louder. The efforts of the free-traders to pacify and quiet them by the use of subsidies and threats of world chaos are being redoubled. They are worried because their plans to do away with American industries which cannot compete on free-trade terms with foreign big business, monopolies, subsidized companies, or state-owned factories are falling about their ears.

On July 27, 1949, State planning and developing agencies were given the opportunity to listen to some official State Department propaganda. The speaker was one of the dozens trained and indoctrinated by the free-trade school in the State Department that has graduated so many "pinks" and outright Communists. The shallowness and lack of accuracy in this address are so apparent that it is hard to believe that the educated group listening to him placed any credence in what he said. Most listeners probably did not. It started with the customary attack on the Smoot-Hawley tariff law and all of the ills of the 1930's were placed at the feet of that act. Such an opening has not only been worn threadbare, but appears infantile under close scrutiny.

The high-tariff policies of the various nations of the world during the 1930's were blamed on the American tariff—a false and misleading premise in the first place, and in the second place the trade restrictions of foreign countries are so much higher today than in the 1930's that there is little comparison. This, the pinks, liberals, and internationalists would have us believe were in retaliation for the tariffs of the United States which are, today, the lowest in modern history.

The average rate of duty on imports into the United States is now in the vicinity of 5 percent. Are the high tariffs, the Sterling block, the embargoes, the quotas, the licensing systems, the exchange manipulations, the monopolistic state trading of the other countries of the world the result of American tariffs? Any New Dealer that must fall back on this type of dissertation must indeed be about at the bottom of his economic, intellectual, and barren barrel. It is particularly notable that the speaker from the State Department failed to refer in any way to the fact that the depression of the 1930's was well over before the State Department or the President made any move in the direction of lowering tariffs. A few very minor trade agreements were made prior to 1939, but the total average reduction was negligible until that year. Just why, if the depression was the result of the tariff act, the New Dealers did nothing to correct it, is not known.

The State Department speaker did a little better when he presented the thesis that there has been a wide disparity between our exports and our imports, but he fell off his horse again when he inferred that American tariffs were the cause of the trade imbalance. He probably knew, although if he did he kept it from his audience, that much of our exports were artificially stimulated and could not possibly have been so large without this country giving a large part of the goods away. It does not take an economist to know that if we are to be paid for our exports we must import.

Imports of manufactured goods according to the speaker, are relatively small because, and I quote "American manufacturing costs are low relative to foreign costs and European manufacturers find it difficult to hurdle our tariffs." He spoke glibly of rubber, coffee, tea, bananas, and other articles which have no tariff whatsoever, but carefully refrained from mentioning one single article which was not imported because of high tariffs. It is strange that so many of these propaganda speakers, doing political work while being paid by the taxpayers' money allocated to some agency often refer to important items imported under the free list as products of which we should import more. They are aware that the general public has no way of knowing that rates of duty have nothing whatsoever to do with the quantity of those products imported.

Furthermore, to what does the administration attribute these "high" tariffs? To the Congress? It has been 15 years since the Congress has had anything to do with tariffs. Just why do these "high" tariffs still exist? If they were evil they should have been taken care of in 1934—or even in 1932—as promised by the Democratic platform. If manufactured goods are not entering the United States because of our tariff policy who is to blame?

The fact is, of course, that the free traders, especially the communistic element, have not dared to wreck too many domestic industries all at once. The plan is to pluck them off one or two at a time, beginning with the small independent businesses which cannot make much noise or do much to block the program. Note carefully the industries that have been first affected—note that they are relatively small, that hand work is important in most of them, and that individually they could do little to protect themselves: Watches; tomatoes; cherries; tree nuts; clothespins; china and pottery; glassware; raw furs; oil, from independent wells; tung oil; wool gloves; raw wool; sponges; fish products. The list is growing fast as foreign industries subsidized by American gifts and fake loans reach full production and the shores of this country offer the lowest duties in history.

The State Department called for the extension of the trade agreements program, the bill for which has bogged down in the Senate. The State Department speaker referred repeatedly to the "crippling amendments" of the 1948 extension, but made no attempt to identify them. One cannot help wonder how his audience reacted to his obvious effort to duck the issue, though he can hardly be blamed for not wanting to discuss it. The improvements in the 1948 act were well thought out; they have proved their merit; they have not offered one iota of hindrance or restrictions to the making of new agreements. The voice of the people is being heard and when the Senate gets around to trade agreements it is almost certain to include the 1948 improvements, one-worlders, free-traders, Communists, and the plundering, blundering New Dealers to the contrary notwithstanding.

Wire the Back Door

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, August 8, 1949

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from National AMVET:

WIRE THE BACK DOOR

Now that the Senate—as was expected—has finally ratified the North Atlantic Treaty linking 300,000,000 peace-loving peoples to mutual assistance in fending off Red communism you might think we could all breathe a little easier.

AMVETS, as an organization, stood four-square behind the Atlantic Pact, believed in the motives behind it, testified in its favor before the Senate Foreign Affairs Committee and worked actively for its approval.

We succeeded.

But is the job done?

For an answer, let us hark back to the recent meeting of the AMVETS national executive committee and the sage observation of one of our members during discussion on a resolution favoring a similar Pacific pact against communism.

Said he: "When you wire your home with a burglar alarm you don't leave the back door unprotected."

Yet America generally and the State Department specifically have done just that; our back door in the Pacific has been left wide open and, what's more, no one seems to be doing anything about it. No one in authority, that is.

Unlike most nations, the United States straddles a hemisphere with its front door on the Atlantic facing Europe and its back door on the Pacific facing Asia.

In our awareness of Communist danger and its ever-present threat of aggression, we have done a pretty fair job of wiring the front door with alarms and extending sensitive warning signals far out into our front yard. In addition to the essentially negative attitudes of defense, we have even embarked on positive methods of penetration beyond the iron curtain with such things as the Voice of America, designed to carry the truth into a dark land of falsehood, repression, and false gods.

The facade we present to the western world today is tidy, tough, and taut.

Our back yard is a wholly different story.

Our back yard is a moral slum littered with dirty self-deception, stagnant pools of backwatering, and unguided rivulets of wishful thinking.

Our back yard is wide open to Communist aggression—and worse than that: The Reds are already on the move there, while our diplomats cluck their tongues and do nothing.

It is all very well for Mr. Dean Acheson, our Secretary of State, to say that such things as a Pacific Pact are premature—to hint that the Chinese Communists are not really Communists at all but merely agrarian reformers—to imply that the Chinese Nationalists are graft-ridden anyhow—to promise that "serious study" will be given to the problem.

It is all very well to say these things—and to issue white papers and blue papers and green papers—and to bottle up reports that may disagree with preconceived notions. All very well, indeed.

But in the meantime what's to be done about the Chinese Communists—who this month frankly and flatly restated their allegiance to Moscow—as they take over the great port cities of the Orient and outflank our poor and tiny island bastions of defense?

We conceived and established a North Atlantic Treaty to forestall in Europe a thing we feared—the very same thing that is already happening in China and soon, without doubt, in other nations of the Far East.

Yet in the Far East we do nothing—and do that nothing poorly.

It just doesn't make sense.

And the real measure of that tragedy is that just a few short years ago it was us—the American veterans of World War II—who cleaned the junk from our backyard at such cost in lives and sacrifice and suffering.

And why did we have to clean it up? Because the foreign aggression that we had been watching with bated breath in Europe finally struck at us. From where? Europe? No; from our very same backyard. The Pacific Ocean.

The North Atlantic Treaty is a step forward. But we cannot relax because the North Atlantic Treaty is not enough. Self-protection and common sense demand that we initiate a Pacific pact at once—now—immediately—before it is too late.

We veterans of World War II had our bellies full of military adventures in Guadalcanal, New Caledonia, Midway, Guam, Okinawa, Tarawa, and all the other blood-stained names of heroic memory. National inaction now could send us back there in a few years or months.

Let's wire that back door—with a pact that will prove they had better not tread on us, ever again.

Where the Little Guys Learned To Cheat

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 8, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Times-Herald:

WHERE THE LITTLE GUYS LEARNED TO CHEAT

Comptroller General Lindsay Warren has informed Congress of "shocking" evidence of fraud, bribery, and collusion in the making and settling of war contracts. An organization takes its morals from the top. The White House throughout the Roosevelt regime was occupied by a family of grafters who made millions out of their official connections. It is, therefore, not at all remarkable that some lesser figures in the executive departments were dishonest.

President Roosevelt was the first President ever to sell publication rights to his official papers. He got a handsome price for them. He was the first President ever to take advantage of his official position as boss of the post office to amass a stamp collection that was worth more than $200,000 when it was liquidated. He was the first President to conspire with his sons to shake down citizens who had reason to fear the power of the Government.

Among the victims was John A. Hartford, of the Atlantic & Pacific Tea Co., who was persuaded by the President himself to "lend" son Elliott $200,000 at a time when chain stores were being singled out by some of the New Dealers for confiscatory taxes. Mr. Hartford got back exactly $4,000 of his money, 2 cents on the dollar.

Son James played the same game with much the same kind of help from his father and mother. By his own account, his annual income in the years from 1933 to 1937—years when business was at a low ebb—was never less than $21,000 and rose to $49,000.

He was then a comparatively young man but he was immensely successful in the insurance business. His specialty was selling insurance to individuals and firms which were either under Government control or in fear of what the Government might do to them. Among the Roosevelt clients were liquor companies, shipping companies, radio companies, and contractors, all of them eager to win the friendship of the White House.

They got what they paid for. George Washington Hill let Jimmy write a two-and-half-million-dollar policy on his life. Three weeks after the inauguration, Mr. Hill was received at the White House.

Wife Eleanor signed a radio contract with a coffee growers' syndicate at a time when our good neighbors in the coffee business were looking for help. She took a mink coat from Canadian admirers. She is supposed to have taken out at least a million dollars in her years in the White House in payment for books, magazine articles, radio broadcasts and lectures. She has said she gave it all away. When son Jimmy left his insurance business for another job, she represented him in its management.

These are only a few of the high spots in the record of the grafting Roosevelts. They set the moral tone in Washington during the war years. It is to the credit of the rank and file in the Executive departments that so few of them were contaminated by this vicious influence.

Labor Conditions at the Port of New York

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 8, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

XAVIER INSTITUTE OF
INDUSTRIAL RELATIONS,
New York, N. Y., August 8, 1949.

MY DEAR CONGRESSMAN: The Federal Government subsidizes shipping. The $64 question on the New York docks is: When will the Government use that and its investigatory power to clean up the iniquitous labor conditions existing in the world's largest port?

On Friday, July 22, John M. Murtagh, Commissioner of Investigation for New York City, released the earnings of the longshoremen in the port of New York for the year October 1, 1947, to September 30, 1948. The release was made shortly before the bargaining committees of the International Longshoremen's Association and the New York Shipping Association sat down to negotiate their new contract.

In 1948 approximately 46,000 men drew pay checks for longshoring, working 42,000,000 hours, or a little more than 900 hours per man. Using 2,000 hours as a normal work-year (50 weeks times 40 hours a week) there was work for 21,000 men on a full-time basis. Only 3,075 longshoremen out of 46,000 men worked 2,000 or more hours.

To earn a week's vacation pay in 1948 a longshoreman had to work 1,350 or more hours; 12,000 longshoremen out of 46,000 men had the necessary hours and received checks totaling $840,000 ($70 times 12,000). Adding

to the discontent of the majority of the longshoremen was the knowledge that according to the contract the vacation fund was built up by employer contributions of 4 cents per man-hour. Four cents per man-hour multiplied by 42,000,000 man-hours gave a vacation fund of $1,680,000. What happened to the other $840,000?

The severe competition for work wasn't helped by the fact that 20,000 of the 46,000 men worked less than 200 hours. These men were not regular longshoremen, but other workers seeking supplemental income on the docks, even though the majority of the longshoremen can't make a decent annual wage. The situation is further aggravated not only by these extras working a high percentage of overtime hours, particularly on Saturdays, Sundays, and holidays, but also depriving thousands of regular longshoremen of the necessary work opportunities to qualify for welfare benefits and vacation pay.

Perhaps the sharpest way to point up the substandard condition of the New York longshoremen is to draw a comparison with the San Francisco longshoremen. In making this comparison the 20,000 New York men with less than 200 work-hours are omitted in order to avoid a completely fantastic picture.

Income group	San Francisco	New York
	Percent	*Percent*
Less than $2,500	9	56.6
$2,500 to $3,500	17	31.3
$3,500 to $4,000	25	8.1
$4,000 to $4,500	40	3.0
$4,500 plus	9	1.0

Eighty-eight percent of the New York longshoremen made less than $3,500. Seventy-four percent of the San Francisco longshoremen made more than $3,500. A few correctives should be made for a 100 percent accurate account. The San Francisco longshoremen's earnings were for the year 1947, a better year for shipping than 1948. Forty percent of the San Francisco longshoremen's earnings were made in overtime hours and are computed in their reported annual income. Less than 15 percent of the New York longshoremen's earnings are made in overtime hours and are not reported in this income computation. However, if allowances were made for these factors, it still would not substantially change the validity of the above comparison, as the detailed table below should indicate:

Number of men	Man-hours worked	Amounts earned per man ($1.75 per hour)	Average weekly wages
8,000	199 to 799	$348.25 to $1,398.25	$6.60 to $26.90.
3,000	799 to 1,099	$1,398.25 to $1,923.25	$26.90 to $37.00.
3,500	1,099 to 1,399	$1,923.25 to $2,448.25	$37.00 to $47.00.
4,200	1,399 to 1,699	$2,448.25 to $2,973.25	$47.00 to $57.18.
5,500	1,699 to 2,199	$2,973.25 to $3,848.25	$57.18 to $75.93.
1,160	2,199 to 2,599	$3,848.25 to $4,548.25	$75.93 to $87.47.
255	2,599 to 3,094	$4,548.25 to $5,414.50	$87.47 to $104.12.
18	3,094 to 3,456	$5,414.50 to $6,044.50	$104.12 to $116.24.

Fourteen thousand five hundred New York longshoremen out of approximately 25,600 made less than $47 per week in 1948. Their hourly rate in 1948 was $1.75 an hour for all hours between 8 a. m. and 5 p. m., from Monday to Friday, and $2.62½ for all other hours. If any additional proof is needed for the New York longshoremen's low-income status, consider the fact that longshoremen will not be accepted either in low-rent city housing projects nor in private housing developments. Longshoremen are compelled to live in tenements and pay higher rents than those living in low-rent city housing projects.

Indicative, too, of the longshoremen's low-income status was a lawyer's defense of a loan shark charging 520 percent interest a year. "Longshoremen can't go to banks or loan companies for money," he said. "They are poor risks. They have no steady employment because of the shape-up and other employment practices on the water front." In sentencing the loan shark, Justice Irving Ben Cooper declared, "I am filled with unrestrained amazement at the loose practices of those who pay the longshoremen where one man can turn in a batch of pay disks and get the pay of several men. The companies are under a duty to plug up this loophole which makes it possible for Bender and his type to take advantage of these poor men who borrowed only to make ends meet." The assistant district attorney estimated that the loan shark netted about $400 a week.

In addition to the 46,000 men working at longshoring (dock, deck, and hold), 5,200 men worked at the allied dock crafts—checkers, clerks, carpenters, etc. In 1948, then, a total of 51,200 men drew pay checks in a union claiming a membership of 30,000. All these figures lend substance to the complaints of longshoremen (1) that favoritism is far too prevalent in employment opportunities; (2) that thousands of men find there is no necessity for joining the union, and many make out better than union members in hours worked; (3) that seniority has little meaning on any dock unless the regular men on the pier or in the section are strong enough as a group to insist on seniority being observed.

The question arises as to whether or not the ILA is a company union of the Blue Book type that spawned Harry Bridges on the west coast. Certainly, the situation is similar.

The rejection by the ILA president of Commissioner Murtagh's suggestion that the union close its books temporarily until the surplus of men disappears was unique for a trade-union leader. A hypocritical appeal was made to the Taft-Hartley law's prohibition.

Conveniently ignored by the union president was the fact that prior to the Taft-Hartley law the union always opposed any limitation of men to prevent the cruel effect of men and their families sharing starvation. Conveniently ignored, too, was the fact that the same shipping companies bargaining with the ILA are cosponsoring with the National Maritime Union an amendment to the Taft-Hartley law. The bills as introduced by Congressman LESINSKI and Senator MAGNUSON, H. R. 5008 and S. 2196, would amend section 14 of the Taft-Hartley law by adding a subsection "c" to legalize the hiring hall in the maritime industry.

The union president, however, is considering raising the union's initiation fee "to discourage membership." At present the ILA's initiation fee is a nominal $50, and this in a union that has never paid any welfare or strike benefits or even published a union newspaper. Overlooked in the consideration of raising the initiation fee was the Taft-Hartley law's prohibition of excessive or discriminatory fees. "In making such a finding the Board (NLRB) shall consider among other relevant factors * * * the wages currently paid to the employees affected." (Sec. 8–b–5). The annual income earned by the majority of longshoremen hardly warrants an increase in the $50 initiation fee.

Equally to be indicted with the union are the employers who, contrary to all the facts and principles of social justice and common decency, have defended the racket-ridden shape-up system of hiring. Their only argument, efficiency, is ghastly in view of the shape-up's evil effects. Actually the argument is puerile when you see the drift of shippers away from New York due to the high extra costs peculiar to the New York waterfront. To say, as has been said, that longshoremen are satisfied with this present set-up is to say that workingmen are satisfied with job insecurity, are unconcerned about serious maldistribution in their annual wages, don't think that loan sharks' interest rates ranging from 520 to 1,000 percent are exorbitant, scoff at safety enforcement, care little for democratic union practices and prefer mob rule.

Perhaps the strongest and most authoritative indictment of the shape-up was made last fall by New York District Attorney Frank S. Hogan:

"The number of criminals operating on the water front is a direct result of the shape-up system," he said. "It is responsible for kick-backs, loansharking and a large percentage of the other crimes on the waterfront. The power over employment is so arbitrary that these conditions necessarily follow. That has been evident for more than 30 years, as shown by official surveys, investigations, and reports.

"The shape-up is the root of the evil. I think it is a system which spawns criminal activities so regularly that the State legislature might legally abolish it. Seemingly for their own selfish interests, the Shipping Association and the ILA are unwilling to do anything. But if either the union or the employers had any decent regard for the worker, they would quickly agree that it is in his interest to abolish it. Evidently neither the employers nor the union has been stirred by any such humanitarian impulse. In such a situation the representatives of the people in the legislature should take remedial action."

The $64 question is not whether or not negotiating committees of the ILA and the New York Shipping Association will apply themselves to the solution of these iniquitous conditions that have flourished through their joint criminal neglect. The $64 question is: When will the Government use its subsidy and investigatory powers to clean up the mess on the New York water front?

Longshoremen's unions in Hawaii, England, Australia, our own west coast and major ports throughout the world have fallen under Communist leadership by default. Is New York, the world's largest port, to go the same way because of the failure of Congress to institute a thorough investigation aimed at recommending the necessary remedial legislation?

Sincerely yours,

JOHN M. CORRIDAN, S. J.,
Associate Director.

Making Child Abandonment a Federal Offense

EXTENSION OF REMARKS
OF
HON. GEORGE H. WILSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 8, 1949

Mr. WILSON of Oklahoma. Mr. Speaker, on Saturday evening August 6, 1949, my able colleague from Oklahoma, Hon. TOM STEED, delivered the following timely address over a national hook-up on the National Broadcasting Co. I

commend to all the reading of Mr. STEED's address on the subject of Making Child Abandonment a Federal Offense.

One of the finest and most deserving welfare programs in the United States is that which provides aid for dependent children.

And yet, strangely enough, what is perhaps one of the most despicable abuses of all welfare benefits exists under this very same law.

It is to give you a comprehensive picture of this comparatively new evil that has wormed its way into our American life that I address you today.

First, I should like to give you the over-all picture of the child-welfare program, after which I want to point out this evil of which I speak in its sordid details and then give you what I consider to be the best solution to the problem.

Aid to dependent children is now being provided to more than 1,200,000 children through the cooperation of Federal and State Governments under the Social Security Act. Cost of this program has increased sharply. In the 1948 fiscal year this program caused Federal, State and local authorities to expend in excess of $352,000,000 to care for this 1,200,000 children.

Contrasted to this, the same program was less than half this burdensome just 8 years ago. In 1941 total costs for the program were $153,000,000 with slightly over 600,000 children receiving benefits.

Many of these children would not be living in their own homes or homes of relatives, but instead would be residing in institutions or in homes of strangers if the Congress had not provided Federal grants-in-aid to the States for children in families with no breadwinner.

The Federal and State Governments, in furnishing aid to dependent children, have recognized that there is no adequate substitute for a family home for children and that economic need should not result in breaking up of normal family relationships.

I think that all Americans feel as I do about this program and wish it to be be continued. As Christians, all of us want to guard helpless children from the hardships and heartaches that can be created by economic stress.

Children eligible for this program are those who have no parents, those who have disabled parents, and those whose parents for one reason or another, over which they have no control, are unable to provide the necessities of life for them, and children who have been abandoned. It is a comforting thing to know that we have, under this program, agencies which see to it that no American child goes to bed hungry or homeless.

This aid is extended to children who are in need, even to those who have the misfortune to be the children of parents who are unworthy of the honor and who desert their children. No child is denied aid, regardless of how sorry and worthless one or both of his parents may be. And that is as it should be.

But even in the most worthy of our welfare endeavors, we sometimes fail to close all the loopholes against abuses. This is particularly true of this dependent-child welfare program. In providing for the child, we failed to make any preparations to punish those parents who can and should, but because of lack of common decency, fail and refuse to provide for their own flesh and blood. And it is through this loophole that one of the most brazen abuses of human charity has grown up in recent years.

All over the Nation to some extent, and to a much greater degree in some States, we can see our child-relief rolls growing day by day because worthless parents are deserting their children and leaving them for the American taxpayer to support. This has grown to such alarming proportions in some areas that conservative estimates show that 25 percent of the total relief roll in some States is represented by such cases.

You may wonder why I have become so interested in this problem. I am ashamed to say it, but it is true nevertheless, that my great State of Oklahoma has the sorriest record of all States in this regard. Most recent reports show that 72 out of every 1,000 children in Oklahoma are now receiving aid to dependent children. When you compare this to the national average of 25 out of every 1,000 children, you readily see that the situation in Oklahoma is nearly three times as bad as the national average.

Under these circumstances, I think you will agree with me that it is fitting and proper that a Congressman from Oklahoma may well take a leading part in current efforts to rid the relief rolls of these abuses.

Perhaps I first should outline to you the way this curse has grown up. All States have laws making it a crime for able-bodied parents to desert their children. But all States are handicapped in their ability to enforce these laws, because it is easy these days for a deserting parent to leave his home State and hide away in far-off places. It is expensive to return such deserters and few counties have the funds needed to chase down these culprits.

Under the original social-security laws, the records in the welfare offices are made confidential. Because of this, we find ourselves faced with an odd situation. In hundreds of courthouses throughout the Nation, we find a welfare office on one floor where deserted children are brought for help. The welfare worker immediately becomes aware of the fact that the crime of child desertion has been committed. But this same welfare worker is barred under the law as it now stands from going to the prosecuting attorney's office and advising him of this violation of a criminal law. As a result, it is sometimes a fact that the prosecutor never learns about the crime, or if he does, it is long after the recreant parent has disappeared.

Perhaps it would not be more than long-suffering people could bear if these cases of desertion and abuse were limited to just those who for one reason or another decide to quit their families and their most sacred obligations. But in the last few years the evil has become much worse than that.

Personal investigation has revealed to me that we have an ever-increasing number of cases of actual conspiracy between the father and mother to get their children on the relief rolls. I know of several cases where divorces were obtained through such collusion on the part of the parents. And as though this in itself was not bad enough, I have even found cases where the father, after entering into this conspiracy, actually returns to the family home after the relief has been granted and proceeds to live off the money paid to his supposedly deserted child. And if you still want to hear more of the sordid details, I should like to tell you of some cases I discovered where these sorry fathers not only lived off the funds intended for his child, but actually took the money away with him to be spent on beer and in gambling. I have witnessed some such cases with my own eyes.

Through the loophole in this law which permits this sort of thing, investigation reveals to us that in many cases we are actually financing the breaking up of homes. The most alarming thing about all this is the fact that these sort of cases are on the increase.

A husband and wife become displeased with each other. Ordinarily, parents will endure these conditions if there are children. Or at least if divorce seems to be the only way out, decent parents will see to it that their children are provided for. But not so in the cases I mention.

I have actually heard deserting fathers say: "Why should I worry? The Government will take care of my kids better than I can. I am tired of keeping my nose to the grindstone. I am going out and have some fun while I am young enough to enjoy it." And off he goes, secure in the knowledge, Mr. and Mrs. American Taxpayer, that you and I will see that his children do not go hungry.

Another man sees the first one get away with this sort of thing, and sooner or later he says to himself: "Why shouldn't I do likewise?" And so the rolls grow larger day by day and the number of worthless parents increases.

Saddest of all are those cases where a father tells his family he is going away to hunt for work. He is rarely heard from again. Even if the law finds him, more often than not he is discovered in some far-off State living with another woman.

Just to illustrate, I would like to tell you of one case in my home county. This man left his first wife after they had produced five children. He remarried and left his second wife after they had produced three children. He subsequently left her and is now living in California with a third wife. My latest information is that this third marriage already has produced one child. So what do we find in the case; he is living the life of Riley in sunny California, while you and I are paying for the care of two former wives and eight of his children. And the law has never been able to reach him. He just laughs at the law.

I have a letter from a judge in my State who calls my attention to one family where there are nine children. Four of these children were born after the father deserted the family. When this father was finally caught, the court discovered that he had been sneaking back home from time to time and living with his divorced wife. She seemed to like the situation since the arrival of each child increased the amount of money she could draw from the relief funds.

If time allowed, I could recite case after case which are as bad as the few examples I have already described. But by now I feel sure you must have some idea of my reason for declaring that this thing has grown to be a curse in America.

Now, I want to outline to you what I propose to do about it. And here is where you can help, as I know that my chances for success will be greatly enhanced if American public opinion is aroused.

First, I have introduced bills to cure this situation. One of these bills already has been approved by the House Committee of Ways and Means, and I feel certain will become law as soon as the bill now in process of being enacted is completed. It is a simple idea which does this: It makes it mandatory for the welfare worker, when evidence of child desertion is received, to make immediate report of this to the prosecuting attorney. In this way, local law will be able to deal with some of these deserting parents before they cross State lines and get outside of the reach of local law enforcement agencies.

My other plan requires enactment of a new criminal law—one which makes it a crime for a parent to desert a child and cross a State line. We make it a felony for anyone to steal an automobile and take it across a State line, and I think any parent low enough to steal the home and bread from his own children ought to suffer a like penalty.

I need help in getting other Members of Congress to realize the importance of this part of my program. If we can make it a Federal offense to desert children, parents then cannot hide from the law so easily. I know of no other way we can meet the situation. I am encouraged by the response I have already received from other Members and feel hopeful that the time is near at hand when we can get this bill passed. Your Congressman will be coming home soon. I hope some of you will talk to him about

this problem. Perhaps you know of similar cases in your own home community that you can call to his attention. Your Congressman is a busy man, but thus far I have found every one of them vitally interested as soon as he sees the facts.

Perhaps we shall never succeed in convincing some people they must live up to their moral obligations of supporting their own flesh and blood. But if we can get my bill enacted into law, at least we can see to it that those who are too sorry to support their own families can be put into jail while you and I support his family for him. Past experience teaches that most men, when actually faced with the choice of remaining in jail or supporting their children, suddenly decide to be good fathers again.

I have received letters of encouragement from welfare workers, prosecuting attorneys, judges, and others interested in better family life in America from every State. So I know this is a problem to some degree in every State. With the help that aroused public opinion can give, I feel confident we soon can have a law that will wipe out this vilest of all welfare abuses in America, criminal desertion of helpless children.

Extension of Reciprocal Trade Agreements Program

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, August 8 (legislative day of Thursday, June 2), 1949

Mr. KEFAUVER. Mr. President, in my opinion it would be a neglect of public duty if this Congress failed to extend the reciprocal trade agreements program. In support of this position, I ask to have inserted in the RECORD an excellent editorial from the Atlanta Journal of July 3.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RENEW WITHOUT DELAY THIS VITAL PROGRAM

The Reciprocal Trade Agreements Act, a vital part of our foreign policy, expired on June 1. Its renewal had been voted by the House, but the Senate loitered until the deadline was reached. Thus a program which has served us well for 15 years is allowed to lapse at the very time when it is most needed to support our Nation's efforts for world security and peace and when it would be most useful to that cause.

We are spending billions of dollars on the European recovery program, designed to help the democratic countries of Europe regain their economic self-reliance and thereby preserve their political freedom, in both of which we are deeply concerned. A salient provision of the ERP is that those 16 countries shall reduce trade barriers among themselves and also, as far as possible, between themselves and the rest of the world. That is a specific requirement of the ERP legislation and wisely so, because permanent recovery and stable prosperity depend on freedom of trade.

But how can we expect others to live up to this commitment if we ourselves abandon the principle it involves—the principle embodied in the Reciprocal Trade Agreements Act? That measure, fathered by Cordell Hull when he was Secretary of State, rests upon the axiom that trade is a two-way process. Reciprocity means bargaining, cooperating, recognizing another's interests and rights, and adjusting differences for mutual benefits. Under this act, originally passed by Congress in 1934 and successively renewed at 3-year intervals, we have negotiated trade agreements with 42 countries. By reducing our tariffs on imports of products which they have to sell and which we need, we have got better terms and broader markets for our exports. The result has been an all-round gain in good business and in good will.

Such is the program which expired June 1 and is now in abeyance, owing to the Senate's failure to concur betimes with the House in renewing the act for another 3 years. That this regligence will be allowed to stand for long is unthinkable. Without the authority of the reciprocal-trade agreements law, the hands of our Government are tied in many important negotiations now pending and a shadow of doubt is cast upon the sincerity of its professed intentions in the entire realm of international affairs. Russia, undoubtedly, would like to see us abandon the reciprocity program, but our own and the free world's most vital interests demand that we lose no time in ensuring its continuance.

A Liberal Democrat Welcomes to Washington the Daughter of Medill McCormick

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 8, 1949

Mr. O'HARA of Illinois. Mr. Speaker, I was interested some days ago in the remarks of my distinguished colleague from Illinois [Mr. VURSELL] and my dear personal friend, on the new ownership and management of one of the large daily newspapers in Washington, the Times-Herald. While I usually do not find myself in agreement on political issues with the worthy gentleman from Marion County in Illinois, I wish in the present instance to join with him in wishes for all good fortune to the young woman of 28 who is beginning a career in metropolitan journalism in the continuance of a great family tradition. It must be heartening to her uncle, who is the publisher and editor of the older of our two morning newspapers in Chicago, to know that the call of the blood in this young woman is to have expression in the rich field offered in the daily journalism of the Nation's Capital.

This is a personal matter; it has nothing to do with politics. I am sure that all my colleagues from Chicago, who differ and shall continue to differ with the uncle of this young woman on matters of politics, policies, and philosophies, nevertheless will be glad with him that a long-time family tradition in the domain of the fourth estate is to be continued in the person of an earnest young woman whose manners of personal deportment, we are told, and whose social approaches are marked by a commendable democracy.

I would caution my good friend and colleague, the gentleman from Illinois [Mr. VURSELL], however, against excessive optimism that young, democratic Mrs. Maxwell Peter Miller, Jr., will continue too long, in the generation of which she is a part, to defend the institutions of a rugged and ruthless individualism which have already largely disappeared and which will pass entirely with the generation of which her uncle is a part. I think that the uncle would have it that way, at least to the extent that his niece should be the spokesman of her own thoughts and of the men and women of her period, and above all, regardless of what her political leanings should be, she should prove up, in the final analysis, as a great journalist.

As a young man, her uncle responding to a family trend toward public service, occupied a public trust in the county of Cook, Ill. I think he did a good job and that, in the period of his youth, he was an idealist.

Her father was one of the men who fought with Teddy Roosevelt at Armageddon to pound the Republican Party in Illinois from the first place that it had occupied for 20 years to the position of a third party. He came to Springfield in January of 1913, elected as the candidate of the Progressive Party, as State representative in the General Assembly. I have many fond and sweet memories of Medill McCormick, later United States Senator, and of Gen. Frank S. Dickson, former Member of the Congress and Adjutant General of Illinois, his brilliant and lovable secretary.

Medill McCormick as a member of the General Assembly of Illinois, supported the full program of liberal and progressive legislation of the Democratic Dunne administration. There were the same cries then of "State socialism," insidious subversive undermining, then charged to the IWW; all the cries of agonized big business. But none of them phased young Medill McCormick.

He headed a State investigation to hasten the day for liberal pensions to mothers. He fought for the minimum wage at a time when all big business was crying in horror at mere mention of the name. With his wife, Ruth Hanna McCormick, he worked against the reactionary forces for the passage of the partial equal suffrage act which has the forerunner of full suffrage for our woman citizens.

Nor can I forget that at that period, when the woman clerks in Chicago's large stores were receiving a wage of about $5 a week, Ruth Hanna McCormick, the wife of the young progressive representative in the legislature, was working day and night on State Street in Chicago in a brave attempt to organize into a labor union these woman clerks, that their wages and conditions of employment might be brought into a happier sunshine.

Yes, Mr. Speaker, this young woman of 28, who has taken over a great Washington daily newspaper, has a rich heritage in liberalism. There is the call of the blood to carry on a great family tradition in journalism. I wonder, too, if time will not prove the call of the blood to carry on another family tradition as expressed by both her father and her mother in those stirring days when the progressives fought at Armageddon and

the reactionaries of the Republican Party took a licking from which they never have recovered. It may turn out to be the call of the blood to liberalism.

In any event, the daughter of a great father, my very dear personal friend, Senator Medill McCormick, has my most sincere good wishes.

The Tragedy of China

EXTENSION OF REMARKS
OF
HON. WALTER E. BREHM
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, August 8, 1949

Mr. BREHM. Mr. Speaker, in my opinion an editorial which appeared in the Washington Star under date of July 7, 1949, dealing with the situation in China, possesses sufficient merit to justify its insertion in the RECORD. It is as follows:

THE TRAGEDY OF CHINA

Although some Americans may disagree with its reasoning, its historical accuracy, and the wisdom of publishing it at this particular moment, the State Department's white paper on China adds up, on the whole, to a bleakly persuasive argument in defense of the past policy of the United States in dealing with the Nationalists.

If the document can be summarized at all, it may be summarized as follows: (1) Through no fault of our own Government, a disaster of the first magnitude has taken place in China; (2) this disaster, which threatens to have a profoundly adverse effect on the strategic position of the United States and the whole free world in relation to Asia, is attributed primarily to incompetence, corruption, and decay within the Nationalist regime of Generalissimo Chiang Kai-shek, and (3) short of direct intervention by our armed forces—which could lead to a war that would be condemned by both the American and Chinese people—there is no practical, concrete action we can launch at this stage to help turn back the Communist tide; the only thing we can do is to work out a new policy to meet the new situation.

In his letter transmitting the white paper to the President, Secretary Acheson has been unqualifiedly emphatic in answering those who have blamed the State Department for what has happened. As he has put it, "The unfortunate but inescapable fact is that the ominous result of the civil war in China was beyond the control of the Government of the United States. Nothing that this country did or could have done within the reasonable limits of its capabilities could have changed that result; nothing that was left undone by this country has contributed to it. It was the product of internal Chinese forces, forces which this country tried to influence but could not." And he has made clear that in his opinion the Nationalists are now all but washed up, with the Communists in a position to win control everywhere in China.

In support of this thesis—which is backed up by a vast amount of documentation, including the hitherto secret Wedemeyer report—Secretary Acheson begins with a debatable but vigorous defense of the Yalta Agreement and goes on from there to argue, in effect, that the postwar course of Chiang's Nationalist government led inevitably to the present disaster. The generalissimo initiated the idea of a political reconciliation with the Communists, but like the Red leaders, he resisted such a reconciliation when the Hurley and Marshall missions sought to effect one. Then, against the strongest kind of expert American advice, he decided that he could settle things by force of arms. But he found that he could not. The war-weary Chinese people drifted away from him. His armies did not have to be defeated; they disintegrated. After VJ-day he received about $2,000,000,000 in loans and grants from the United States, plus military and civilian surplus property originally costing $1,000,000,000, but still he suffered defeat after defeat. Why? Not because of lack of arms or ammunition, but because of decadence in his regime, loss of confidence in his leadership, incompetence among his generals, shattered morale among his troops, and the fanatical zeal with which the Communist forces fought against him. Would the Wedemeyer proposals have helped? Not without drastic reforms of the sort Chiang had steadfastly refused to make.

Although there may be considerable room for argument about the "ifs" and "buts" involved in all this, Secretary Acheson and the "white paper" have made clear that there is one supremely tragic and dangerous fact that cannot be debated or wished away. The fact is simply this: That China, after its long years of bitter struggle against the war lords, the Japanese, and the Communists, has lost—for the time being at least—its opportunity to achieve internal peace, unity, freedom, and independence. What it faces now is the grim probability of being converted into a satellite of the Kremlin. What the world at large faces is the prospect of the Chinese voting with Russia in the United Nations, the prospect of Red aggression against China's neighbors, and the prospect of a gravely unsettling new balance of power in the far Pacific.

In the teeth of such a situation, now that we have virtually written off the Nationalists, what should American policy be? There is no easy answer. Of course, as Mr. Acheson has said, we must continue with such traditional things as our friendship for the Chinese people and our support for the country's independence. In addition, we must encourage all developments likely to help throw off the foreign yoke of the Kremlin-serving Communists, and we must do whatever we can to prevent the Red contagion from spreading elsewhere in Asia. But it is far simpler to speak vaguely of what we ought to do than it is to hammer out a concrete program of action that will yield good results.

Accordingly, it goes without saying that the special group organized by the State Department to formulate a new far-eastern policy has an extremely difficult job on its hands. We ought not to delude ourselves about it: The tragedy of China has a tragic meaning for the entire free world, and it has created problems that will bedevil us for years to come. Certainly, from this point on, recriminations about where the blame lies should be subordinated in the United States to the prime task of agreeing on measures to cope with the consequences of the Nationalist collapse.

The GOP Dilemma

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 8, 1949

Mr. McCORMACK. Mr. Speaker, I include in my remarks an interesting and analytical editorial that appeared in the Washington Star of August 7, 1949:

THE GOP DILEMMA

The new chairman of the Republican National Committee, Guy George Gabrielson, has put forward two objectives—neutrality for himself and harmony for the committee.

Mr. Gabrielson should not have any great difficulty being a neutral chairman. He will find it more difficult, as his own narrow margin of victory indicates, to harmonize the clashing elements within the national committee. If one assumes, however, that he is successful in attaining both of these objectives, the GOP still will not have found a way out of the political wilderness in which it has wandered for almost two decades.

For the dilemma of the Republicans goes deeper than questions of neutrality and party harmony. This dilemma was stated in a few words by the retiring chairman, Representative SCOTT, of Pennsylvania. "Until we search our souls," he said, "and stand very clearly in the public mind for things which people instinctively feel are good for them, no amount of well-financed 'public relations' will make up for the lack of such a public policy."

There is a lot of truth in that statement. Governor Dewey has been assailed by the Old Guard for his "me-too" campaigns. Even more vehement were the denunciations of Wendell Willkie on that score. And in a sense the spokesmen for the Old Guard appear to be right. In the last three Presidential elections the Republicans have appealed to the voters, not as a real opposition party, but more as a party which adopts the essentials of the Democratic program, promising only to do a better job of putting them into effect. And on all three occasions the voters preferred to stick with the Democrats.

So when Mr. SCOTT says the party must stand for things "which people instinctively feel are good for them," what does he mean? Is he calling for more of the me-too approach, or does he has in mind offering the electorate a clear-cut and real choice between the policies of the Democrats and yet-to-be-devised policies of the Republicans?

This, in brief, is the essence of the GOP dilemma. If it is going to be an effective opposition party it must find a program, consistent with what the people feel is good for them, that offers some real choice between the Republican Party and the Democratic Party. As yet, there is little evidence that the Republican policymakers are capable of devising a program which is both different and politically feasible.

Arms Race Is On

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, August 5, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, I am inserting an interesting article by David Lawrence which appeared in the Washington Evening Star of August 5:

ALL HOPE FOR AVOIDING ARMS RACE GIVEN UP BY TRUMAN, JOHNSON—SECRETARY'S TESTIMONY ON AID PROGRAM HELD OF TOP SIGNIFICANCE

(By David Lawrence)

All hope for reduction of armament and all hope for the avoidance of a race in armament building with Russia seems to have been given up by President Truman if Secretary of Defense Louis Johnson, who makes

international policy nowadays, was speaking for the United States Government in his testimony before the House Armed Services Committee.

What Secretary Johnson said in answer to questions by Representative JOHN VORYS, Republican, of Ohio, in connection with the arms-aid program is of transcendent significance. Here exactly is the transcript of testimony:

"Mr. VORYS. Now, on disarmament: We've got a proposal before the United Nations that we will disarm when the rest will, provided there is inspection, etc. And certainly this does not change that, does it? We are ready to disarm whenever the rest are on a basis that will secure all of us?

" 'FELL FOR THAT ONCE'

"Secretary JOHNSON. We fell for that once.

"Mr. VORYS. But we are willing to proceed. This doesn't alter the plans we have made?

"Secretary JOHNSON. I am suspicious of all the disarmament talk. I think there is peace for the world only in a strong, armed America. We want to bring the cost of that down within our economy. But there are forces loose in the world that I would not trust for a moment, so far as America disarming, and we might as well say that on the record now as later.

"Mr. VORYS. What I mean is that when those forces will enter into a plan of reduction that provides for our security, we don't intend to change our views by this legislation?

"Secretary JOHNSON. You assume that those forces would enter into such an agreement. Nobody's word in certain places will be sufficient. Nobody's agreement will be sufficient as far as I am concerned, on certain people disarming.

"Mr. VORYS. We would require inspection and punishment for violation, as provided in our proposal to the United Nations?

"Secretary JOHNSON. It is possible to frame it so that by inspection and checking, perhaps as Mr. Baruch talked about in connection with atom bombs, that can be done. But with the forces that are rampant in the world seeking today to destroy our way of life, the hope for American peace, which is world peace, is strength of American arms and strength of American economy.

"Mr. VORYS. That is all."

ALIBI FOR MISTAKES

The phrase, "We fell for that once," bears explanation because it is an alibi for the mistakes of a previous Democratic administration. The reference about disarming undoubtedly was to the arms limitation conference in 1921 by which Great Britain and the United States and Japan agreed to maintain naval armament on the basis of a 5–5–3 ratio.

But the inside story of what happened afterward has never been emphasized. Japan chose to use the naval tonnage allotted to her to build fast cruisers and aircraft carriers. The treaty was due to expire after 12 years, and the Tokyo Government formally notified the other powers, including the United States, that she did not intend to renew the treaty. What is more, Japan notified the United States in December 1934, at the London Conference, that she considered America's attitude in the Far East one of aggression and that she planned to build up her navy to any strength she pleased.

This warning was never made public, although now it appears in the State Department's volume of past diplomatic records. Evidently the Democratic administration, which was in power in the thirties, failed to heed this warning. Japan built enough aircraft carriers to be able in 1941 to capture the Philippines and all of southeast Asia and to administer a crushing defeat on the United States Navy and on the Army and Air Forces at Pearl Harbor.

Reduction of armament can be a matter of agreement, but with any such agreement goes the right to increase armament if treaties are violated or terminated.

The fact that the Truman administration has decided that it will not modify its arms program even if tension eases or if the Russians change their policy, and that America intends to build up the mightiest armed force the world has ever known, will mean a tremendous cost for many years. It will, of course, lead to considerable competition in armament which is already being started—and which is being construed by many Members of Congress as the precursor to inevitable war.

Why I Love America and Hate Communism

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 8, 1949

Mr. MADDEN. Mr. Speaker, Richard S. Kaplan, attorney in Gary, Ind., has written an effectual, concise, and highly commendable message which reveals the communistic menace in its true light.

Mr. Kaplan is historian, service officer, and member of the Americanism committee of Gary Memorial Post, No. 17, of the American Legion.

His message appeared in the Hoosier Legionnaire of March 1949:

WHY I LOVE AMERICA AND HATE COMMUNISM

(By Richard S. Kaplan, historian and service officer, Gary Memorial Post, No. 17, member Americanism committee, department of Indiana)

Day by day, my heart has been growing heavier and heavier, and inside of me I've been getting sicker and sicker. Reading the audacious boasts and pledges of the leaders of the Communist Party in the United States, most of whom are now on trial before Judge Medina, that in the event of a war between the United States and Russia, they will support and aid Russia, simply nauseates me.

How in the name of Heaven can men possessing the brain of an ant live in these United States and support the ideologies of communistic Russia? As a democracy, why should we continue to harbor, protect, and tolerate these disloyal creatures?

Why do I feel so bitter about these men and all of their ilk? Because I love America—love these United States with all my heart and with all my soul. Why do I love my country as I do?

Because my father (God rest his soul) came here from Russia as a young man, fleeing from persecution and Czarism. He had nothing but his hands, his mind, and a will to learn and work. He found both here.

Attending night school (at no cost to him) he learned the English language and the history of this country. He was given the chance to earn his living without let or hindrance, the whole world before him, handicapped by nothing and no one other than his own will and ability.

Because, given the chance, my father was able to own his own little business, practice his religion in his own temple, and raise four children to manhood and womanhood.

Because those four children were given a free education, a chance to obtain college educations, a chance to travel and know this country.

Because all through our lives we went to bed at night safe and secure in the knowledge that police were in the streets, not to knock at our doors, not to search our homes or to grab any of us and throw us, willy-nilly, into a dungeon—but to protect us against evildoers. Asleep or awake, each of us knew that the power of our town, our county, State, and Nation was behind us, watching over us, protecting us like a loving mother ready to spring at the throat of any who would harm us and to avenge an injury to us through its police and courts.

Because, in spite of my religion (or because of it), I was able to achieve an honored profession and, like my parents, bring my daughter, and grandchild into this world blessed and protected by this same country.

Because when my father—an orthodox Jew—died in Allston, Mass., he was carried to his grave by 10 pallhearers—police officer friends of his life—all Roman Catholics, come to say their last farewells to their friend.

Because I was given an opportunity to serve my country in time of peace and in the armed forces in time of war, not because I was forced to do so, but because I wanted to do so.

Those are but a few reasons for my love of my country.

I hate communism and all it stands for.

Because none of the events and conditions above presented could have occurred in Communist Russia, where the individual is but a grain of sand to be blown hither and yon by the faintest breath of the politburo and its stooges, where the state is God and all, and where the individual is but a servant of the state. Because communism is the drug that destroys the very soul of man, dwarfs the mind of man, and leaves him a pliable tool.

Because, having known freedom all my life, I treasure it, and freedom is an unknown thing in communistic Russia, or in any country dominated by communism. Anything or anyone who would take away my freedom—freedom of thought, freedom of worship, freedom of expression, freedom to live my life as I wish to live it, so long as I do not hurt my fellow man—I repeat: anything that would destroy that freedom, I hate with all the hatred in my heart.

Because communism, evil thing that it is, will, if allowed to spread and grow in this country, destroy the breath of life as we Americans know it. And, though the stooge leaders of communism in this country don't realize it, they, too, will be destroyed, for they will outlive their usefulness to the communistic state, and communism has always preached that that which is not useful to the state must be destroyed.

If my father were alive today he would say, as he said 100 times over in his life, "There is no greater or better country in all the world than the United States. I know. You who were born here don't know the difference between good and bad. Coming from a bad country, I can appreciate a good country. I've seen the sleet and the storm and the rain. I can appreciate the sunshine represented by the United States."

Let us all say amen to his words.

To those who prate of their love for communism, all I can say is, "I pity you. May I, however, suggest that we in the United States can spare your presence here. Go, join the country you love so much, practice your communistic ideology there. We want no part of it here.

I love my country.

I hate and fear communism because it has brought fear where only love existed before.

Feed Air Lift to New England

EXTENSION OF REMARKS
OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 8, 1949

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following articles from the Boston Herald of August 6 and 7, 1949:

[From the Boston Herald of August 6, 1949]

FEED AIRLIFT TO NEW ENGLAND—REPRESENTATIVE ROGERS OFFERS PLAN FOR DROUGHT AID

(By Bulkley Griffin)

WASHINGTON, August 5.—An "Operation Hayride" to provide feed for the dairy cattle of drought-stricken New England this coming winter was proposed today by Representative EDITH NOURSE ROGERS, of Massachusetts.

This plan, comparable to last winter's haylift to blizzard-ravaged States of the West, would require a Presidential emergency declaration in addition to the present "disaster area" designation, Mrs. ROGERS said, and she expressed confidence of getting this support.

WESTERN AID CITED

Under the disaster-loan scheme now in effect for five of the New England States, farmers who cannot obtain loans from regular channels may draw on a $44,000,000 fund administered by the Farmers Home Administration. Reports from New England indicate that little use will be made of this aid.

Asserting that New England "should not be penalized just to make goodwill for the West," Mrs. ROGERS recalled that the seven snowbound Western States were aided last winter to the tune of $33,445,410. Of this, $19,395,410 was supplied by Federal agencies from regular appropriations, $1,050,000 from the President's emergency fund; and $13,000,000 from State and local funds.

Arguing for the air route because of the serious hay and feed shortage in New England and the traditional dearth of freight cars, she said last winter's haylift had cost the Air Force approximately $1,000,000, a sum that would have been absorbed in normal operational costs had the pilots not been dropping hay to farmers.

SALTONSTALL IN FAVOR

Senator SALTONSTALL of Massachusetts supported the proposal, saying he hoped the Department of Agriculture would give as sympathetic attention to New England in its present drought as it is now giving to the West in funds to be used against grasshoppers, and as it did during last winter's haylift.

Air Force operations in the West lasted about a month, January 24 to February 25. At one time, 116 planes, mostly "flying boxcars" and C-47's, took part, with a force of from 300 to 500 men. States affected were Arizona, Idaho, Wyoming, Utah, Nebraska, North Dakota, and South Dakota.

TONS OF HAY FLOWN

Air Force planes in that period carried 4,577 tons of hay and feed, as well as 458 passengers, 5,000 blankets, 77 weasels (snow vehicles), 1 radio beacon, 200 pounds of medical supplies, 5,000 cubic centimeters of blood plasma, and $500,000 worth of radium. The pilots rolled up 5,496 flying hours.

Officials here emphasized that the Air Force planes and men would have been flying practice missions, learning instrument procedures, and making winter training flights at the time, and that a certain amount of its budget was set apart for these purposes. The haylift was a useful substitute.

TARIFF LIFT OPPOSED

Mrs. ROGERS was advised earlier in the day by John R. Steelman, Presidential assistant, that Secretary of Agriculture Brannan had rejected her proposal to lift the import duty on Canadian hay as a possible aid to New England farmers next winter. Most of the region's imported hay comes from New York State and Canada.

Secretary Brannan contended that the suspension of the duty on hay would serve no useful purpose, but Mrs. ROGERS said tonight she had talked with him again and that he had promised to look into the matter more closely and reconsider his decision.

SEES SUPPLIES AMPLE

The Secretary had said earlier that there were ample supplies of hay and other feeds both east and west of the Mississippi and that lifting of the duty would be construed as an unfriendly act to American livestock feed producers.

An official of the Department of Agriculture said tonight that western farmers last winter had an abundance of hay but that it was covered with snow and inaccessible. He suggested that New England, which will have little hay, might offset a winter jam-up and perhaps some money by importing feed now.

Only 37 of Massachusetts' 32,897 farmers had applied last night for Federal loans made available by Washington's action Wednesday in declaring the entire State a drought disaster area.

Raymond Freeman, regional director of the Farmers Home Administration, announced that 25 applications had been filed in the local office in Brockton and 12 others, from Bristol County, in the office at Providence.

OPPOSED TO PLAN

Carleton I. Pickett, representing the Massachusetts Farm Bureau Federation, estimated that not more than 200 of the Commonwealth's farmers would take advantage of the Federal loans, but approved the action of Secretary of Agriculture Brannan as protecting that tiny minority of our membership.

"Money won't cure it," he said. "The farmers just have to dig in and work a little harder to catch up. Nobody's ruined, but we have taken a terrible licking."

[From the Boston Herald of Aug. 7, 1949]

MODIFIED UNITED STATES AID URGED IN HAY CRISIS—HEAVY IMPORTS SEEN NEW ENGLAND NEED

Farm officials close to the problems of New England dairymen, who are faced with an acute shortage of local feed for their herds because of drought damage, advanced their own solutions yesterday to avert the impending crisis.

Three months of hot sun and negligible rain have ruined New England's hay crop yield, forcing farmers to look as far west as Nebraska, where bumper hay crops are reported, for winter feed.

PRICES JUMP

Normally, dairymen buy relatively little hay and feed outside New England, but the drought-caused shortage has forced local hay prices to jump and brought dairy farmers face to face with the prospect of severe financial losses.

Louis Webster, of Blackstone, head of the marketing division for the State department of agriculture, declared the Government could help in two, possibly three, ways:

By directing county agents to make an accurate survey to ascertain the anticipated hay needs of dairy farmers this winter when the shortage will actually be felt.

By making available information on the sources of hay surpluses and by acting as an intermediary for New England buyers and Midwest sellers, to insure drought harassed farmers' hay at a fair price, which, he said, should be about $40 a ton, delivered.

And lastly, if hay prices in the Midwest skyrocketed because of the unprecedent demand from the East, by having the Government underwrite in part the rail transportation costs of the hay in order to keep the price to farmers within reason.

Webster advanced his plan, along with other farm experts acting independently, as a counterproposal to the recommendation of Representative EDITH NOURSE ROGERS, that the Federal Government initiate an "operation haylift" to send the dairy feed to the East from the West.

Her suggestion was greeted with mixed reactions, as farm officials viewed it as too drastic, while stressing that dairy farmers would welcome modified Government help in feed procurement, if necessary. It was pointed out an air haylift did not seem the answer to a situation that would not reach the crisis stage until 3 to 5 months from now.

Unanimous support, however, was recorded form Mrs. ROGERS' recommendation to lift temporarily the import duty on Canadian hay. Agriculture officials here stated they hoped United States Secretary of Agriculture Brannan, who recently rejected an earlier appeal by the Congresswoman to suspend the import tax, would change his decision.

Webster, in explaining his suggestions, estimated that 100,000 to 150,000 tons of hay would have to be imported into New England this winter. He pointed out, however, that hay was selling in Indiana and Illinois now for only $19 to $20 a ton, and was plentiful there.

At the same time, a railroad spokesman said that transportation costs from Chicago would run about $15 a ton, indicating Midwest hay might be acquired for approximately $35 to $40 a ton.

Webster stressed these figures to accompany a warning to dairymen against panic in attempts to stock-pile hay now to be ready for the winter storage. He cited specifically instances where farmers, worried about future supply, had purchased poor-grade standing hay for as high as $35 a ton.

A similar proposal was presented independently by J. Ralph Graham, head of the marketing and production service for New Hampshire, and Carleton Pickett, secretary of the Massachusetts Farm Bureau.

Pickett also added that the Farm Bureau had urged suspension of the Canadian hay import tariff 2 weeks ago to both Governor Dever and the United States Department of Agriculture Program Board.

Commenting on Mrs. ROGERS' haylift proposal, Pickett declared "any action that will help farmers is agreeable. All are well-meaning, but the haylift idea is a little drastic and possibly premature.

"It is time, however, for politicians of both parties to sit down and talk with farmers about their needs before formulating policies to help farmers. I agree with Webster and Graham that a more studied approach to the problem aimed at breaking the shortage with western hay at a reasonable price is more nearly the answer."

Meanwhile the weatherman continued to report no real break in the drought, with a prediction of fair weather with temperatures in the 80's again today.

Hawaii Emergency

EXTENSION OF REMARKS
OF
HON. JOHN PHILLIPS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 13, 1949

Mr. PHILLIPS of California. Mr. Speaker, when the Delegate from Hawaii returned some weeks ago from the islands, he spoke of the strike situation there as one of fear, anxiety, and despair almost to the point of panic. Yet the President was doing nothing about it. He seemed concerned about the crisis in England. Under somewhat similar conditions in Berlin, the United States established and maintained one of the most remarkable examples of American courage and organization ability in history, the air lift. Yet here is Hawaii, our Pacific friend, whom this House at least invited into the Union as the forty-ninth State, and the Communists can do as they please there, without any visible concern on the part of the President of the United States, in whose hands the power lies to stop the strike and feed the people.

Under unanimous consent, I include with these remarks an editorial from the San Francisco Chronicle of July 12 on the subject. It is still good reading. The editorial follows:

ISLAND EMERGENCY RATES ACTION BY THE PRESIDENT

The 9-weeks-old longshore strike in Hawaii has long since ceased being a matter more or less exclusively the concern of the disputants—if, indeed, it ever was.

Of far greater concern now is the welfare of Hawaii's half million residents and the problem they present to the Federal Government, which holds the ultimate responsibility for their welfare.

The rejection by the union of the 14-cent hourly wage increase recommended by Governor Stainback's fact-finding board opens the prospect for the almost indefinite protraction of the strike. The half million people of Hawaii deserve better than that; they deserve better from the President of the United States than a vague reiteration of his previous statement that he is powerless to act.

As the Chronicle has said before, this is no ordinary strike; it is no ordinary longshore strike. As far as Hawaii is concerned, it has approximately the same impact as a military blockage imposed to force a beleaguered garrison into submission. Because it cuts Hawaii's main economic arteries, it approaches in seriousness for the Territory the condition a railroad strike would produce for the continental United States.

It is true the people of Hawaii are still eating. But ruin can be effected by other means than simple starvation. Their sources of income have to a large extent dried up. The whole economy of the islands is geared to the precious shipping traffic which now lies paralyzed under the strike. Debts are mounting, jobs are disappearing; prospects are increasing for the wholesale losses of savings, homes, cars.

And, not so incidentally, there are hundreds of young veterans who moved into Hawaii at the war's end, and have been buying homes, making places for themselves in the Hawaiian business world, and at the same time contributing importantly to Hawaiian stability and productivity. These, along with the rest, are now losing their grubstakes, their homes, and their hopes.

JOSEPH R. FARRINGTON, the Hawaiian Delegate in Congress, returned from a visit to the islands last week, describing the population as in a state of "fear, anxiety, and despair almost to the point of panic." It is understandable.

We find no greater justification for the President to declare himself impotent to deal with a calamity of these proportions in Hawaii than to declare himself unable to cope with a disaster of equivalent severity in the United States. Probably there is even less justification, since Hawaii still finds itself in a position of voiceless, or at any rate voteless, dependency upon its guardian.

If it is not possible for the President to resort to the injunctive processes under the Taft-Hartley Act, it is certainly possible for him to ask Congress for emergency legislation providing him with the power to appoint a fact-finding board and, if necessary, proceed through the courts to obtain an 80 days' cessation of the strike—within which time the issues could surely be compromised. We suggest that the emergency warrants such action by the President.

In the meanwhile we suggest that the union review its rejection of the recommendation of the Governor's board. Prior to the board's formation the union proclaimed itself ready to accept the recommendations, whatever they might be, provided the employers would do likewise. The union places itself in a curious position now by rejecting the recommendations, which the employers are manifestly willing to accept.

Arms Aid Not Justified on Economic Grounds

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, August 5, 1949

Mr. SMITH of Wisconsin. Mr. Speaker; Henry Hazlitt in the current issue of Newsweek points out that we are weakening ourselves to give continuous and futile blood transfusions while Europe does nothing to stop its socialistic hemorrage. I commend his article and extend it at this point.

If we may judge from the history of the ECA, it is not likely that the economic side of the proposed Foreign Military Assistance Act will be intelligently or adequately considered. Yet in spite of its military and political aspects, the whole proposal rests on the essentially economic argument that the other nations in the Atlantic Pact are unable to pay for their own armament. And this contention is not supported either by common sense or by the facts.

Mr. Truman offers Congress the very fragmentary piece of information that 8 out of the 11 nations in the Atlantic Pact now have total annual military expenditures equivalent to $5,500,000,000. "This," he insists, "is the maximum amount they are able to spend" without self-injury. How does he know that? His own country alone is already spending nearly three times as much on armament as these 8 nations combined—in other words, about as much as 22 such nations. Yet, Mr. Truman still doesn't consider this a maximum for us. On the contrary, he wants us in addition to take over part of the burden of the others.

If Congress will inquire, it will find that the total amount of $1,450,000,000 we are supposed to contribute in the first year is equal to only about 4 percent of the total Government expenditures of the other nations in the Atlantic Pact. It would not seem impossible for these other countries either to increase their total budgets by 4 percent—or, better, to take that amount out of their swollen nonmilitary expenditures. Their other Government expenditures are, in fact, about four times as great as their military expenditures. And these sums are being spent, among other things, on expanded social-security programs, huge food subsidies, and above all on huge deficits in socialized industries.

Mr. Truman thinks other nations need part of these funds from us for "certain items essential for their defense which they are not equipped to provide for themselves." This argument, though often used, has no merit. They can buy these items from us and pay for them with other items. In short, they can pay for imports with exports—or rather they could do so if they had not deliberately unbalanced their economics and their foreign trade with their own exchange controls and overvalued currencies. Our own country does not produce for itself enough tin, natural rubber, or uranium; but it does not occur to us to use that as an excuse to demand these things as gifts from other countries.

As I have already pointed out in previous articles (April 4, May 30, and June 13), there is no way in which we can insure that either the money or the equipment we contribute under an arms-aid program would actually result in a net increase of European armament by that amount. For to the extent that we pay for the armament of European governments, we release just that much more of their own funds for other expenditures. The only way we could prevent this result would be to dictate every European government expenditure—a course which I, for one, would not recommend.

Looking at the matter the other way round, it should be equally obvious that our Marshall-plan funds, though spent on other things, have freed just that much of Europe's own funds for armament. Instead of throwing still further funds in the direction of Europe, therefore, Congress could merely authorize Atlantic Pact nations to use up to, say, $1,450,000,000 of their ECA credit for military expenditures.

The so-called military-aid program, in short, involves precisely the same broad economic issues as the Marshall plan. We are weakening ourselves to give continuous and futile blood transfusions to Europe while Europe does nothing to stop its socialistic hemorrhage. Our own officials don't dare to be specific about the European policies producing this hemorrhage. Their principle seems to be: "Europe's economic policies are none of our affair; therefore we must pay for its deficits."

The Growing Attack on Veterans' Benefits

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 3 (legislative day of Thursday, June 2), 1949

Mr. PEPPER. Mr. President, I ask unanimous consent to incorporate in the

Appendix of the RECORD an article entitled "The Growing Attack on Veterans' Benefits," by Mr. Perry Brown, national commander of the American Legion, published in the American Legion magazine of July 1949.

I am advised by the Public Printer that the manuscript will make approximately two and three-quarters pages of the RECORD, at a cost of $220.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE GROWING ATTACK ON VETERANS' BENEFITS

(By Perry Brown, national commander, the American Legion)

ONCE AGAIN THE DISABLED VETERAN IS THE SECRET TARGET OF ANTIVETERAN PROPAGANDA AND LOBBYING

It is my unhappy duty to call to the attention of Legionnaires and all veterans of both great World Wars certain unmistakable evidence that our hard-won veterans' benefits are under dangerous, irresponsible, and, in some cases, greedy attack from many sides.

In one sense veterans' rights and benefits have always been under attack. Our American Legion is geared to detect, expose, and combat the usual run of sniping at veterans.

But today, for the second time in 16 years, opposition to established veterans' benefits by special and powerful groups contains elements of a real crisis for all war veterans. It represents a challenge which calls for the full fighting strength of the American Legion.

As national commander I have already taken preliminary steps in this crisis. Last March I appointed a special committee, headed by Past National Commander Edward A. Hayes, of Chicago, to investigate the exceedingly complex attack on veterans' benefits and to begin organizing the forces of the American Legion against an enemy which seems to have a thousand heads.

I do not like to be an alarmist, but I know that swift action is necessary. I am mindful of the tragic lesson of 1933, when the infamous, callous, and cold-blooded Economy Act caught us by surprise. Then, before we could marshal our strength, the shocking Public Law 2 of the Seventy-third Congress was slipped through the national legislature in 1 day, without a hearing.

Those of us who remember that law, and who remember the terrible year and 8 days that followed its passage, cannot be complacent today. Too many straws in the wind foretell another gathering storm for veterans and their dependents. The pattern now is strikingly similar to that of 16 years ago. In some ways it is worse.

In 1933 the cry was for economy. And so it is today. In addition, today there are powerful interests who seek, not economy but the capture of veterans' appropriations for themselves.

In 1933 there was a league—the National Economy League—supported by the dollars of many of our seemingly best citizens and large industries. Those were the depression years, and the National Economy League spent its dollars to promote the claim that the cost of veterans' benefits had to be reduced.

Many veterans and their friends were lulled into false security by promises (which you always hear from opponents of veterans' rights and benefits) that the war-injured would not be asked to share in the economy. We hear the same pious words today. Savings, they said then, must be made only in the cases of those veterans who might be said to be enjoying Government generosity.

They sneaked their law across—and the betrayal of the veteran was of a magnitude to make Americans blush for shame.

Immediately veterans whose disabilities were classified as non-service-connected were removed from veterans' hospitals. At first, in this gigantic bed-emptying, no attempt was made to readjust the veterans or find other care for them. They were thrown from their beds by the thousands, cast into the streets—most of them not only sick but penniless and without hope—at the bottom of the great depression.

In the fiscal year 1933–34 over 10,000 sick or convalescent veterans were thrown from VA and Army and Navy hospitals in the name of "economy," and in the same year 9,631 CCC, CWA, and other Government agency beneficiaries were installed as patients in those same hospitals.

A wave of veteran suicides swept across the land. American Legion posts boarded some of the outcasts, clothed them, asked them to hold on while the Legion fought the vindictive law. American Legion welfare and relief funds kept many of them and their impoverished families in food and shelter, but we could not keep them all.

What happened to the promise not to molest the rights of the war-injured veterans?

Once the iniquitous law was on the statute books the promise was violated completely.

The compensation of disabled war-injured veterans was whittled to the bone in 1933 and in many cases it was completely eliminated, even for gassed and bullet-wounded war heroes. The suicides mounted. Some simply lost the will to live and died of despair.

We have their records. The victims were ordinary men for the most part, unknown outside of their home towns. But perhaps many will remember the tragic news story of Maj. Frank Cavanaugh, footoall coach at Fordham University, who had half his face shot away in action and restored with plastic surgery. Not long before the Economy Act became law this popular hero's eyesight failed and he had to quit his job. Facing a serious operation, his sight gone, and with a wife and nine children to support, Major Cavanaugh was among those whose pension was slashed. He died of his illness before the vicious law was undone.

The greatest "saving" made under the Economy Act of 1933, during the year and 8 days it took the American Legion to break its back, was in service-connected disability compensation to the tune of $157,000,000. As the late Senator Couzens, of Michigan, said on the Senate floor, "* * * $157,000,000 was taken out of the hides of the men disabled as a result of the World War."

Do you remember the official title of that law? It was called an act to maintain the credit of the United States Government.

Think of it. The Congress swallowed that effrontery and so, apparently, did a public which had been conditioned by a siege of propaganda in newspapers and magazines. The American people, without whose support Congress does not dare to act, had been won over to the idea that veterans' benefits were waste, and that veterans were milking the Government dry. The American people had been artfully led to believe that the disabled veteran was the logical person to make sacrifices to ward off a completely phony threat to the credit of the United States.

Was the Nation's credit in danger? That was one of the years of WPA, PWA, CCC, and many others of the great and revolutionary emergency acts of the New Deal for which ample credit was found. Since then a new generation of soldiers, whose benefits are now under attack, has fought a war whose cost could swallow the entire Federal budget of those years many times over, and the credit of the Government is still intact. Even the title of that pernicious law was a lie.

Remember all this, because the enemies of the veteran are molding the public mind again with phony statistics, misrepresentations, exaggerations, distortions, and half-truths—all aimed at sabotaging the veterans' program. Again they are crying "Hooray for the war hero" out of one side of their mouths and "Too much cost" out of the other.

Veterans' benefits are part of the cost of war—and it is a cowardly act to renege on them in the security of victory. Nobody likes the cost of war, but before we swallow any more falsehoods let's put some billions of dollars in their proper proportion. If the veterans of War II had been poorer soldiers so that the war had lasted 6 months longer, the cost of the extended months of the war would have run over $45,000,000,000, and we would have found ample credit to pay for it. That sum would carry the present veterans' program for the next 9 to 15 years.

What is the situation today? Let us look at the propaganda front which is artfully preparing your mind and all Americans for an assault on veterans' benefits. In recent months a disturbing number of magazine and newspaper articles have been inciting the general public and even many veterans against the appropriations of the Veterans' Administration. The attack appears to be against the Veterans' Administration, but it is against the veteran. And many of the proposed veteran victims are joining in the attack because the propagandists know that anybody can be taught to hate a Government bureau.

Let us look at one attack on the VA which probably received the widest readership of any. It appeared in the March 1949 Reader's Digest. This magazine prints articles from other magazines, but this article was one of its own. For some reason, it seemed to be needed, even though no other magazine had published it. The author was a Charles Stevenson and the title of the article was How Bureaucracy Swindles the Taxpayer.

Only one Government bureau was discussed—the Veterans' Administration. Although the title of the article charged swindle, no swindle was shown or claimed in the text. This is odd because the Reader's Digest has one of the most expert and best-paid staffs of editors, and they know the meaning of words. Why did they suggest to you that the VA is swindling taxpayers when nobody can show a cent of swindle in the VA?

The article damned the VA in no mean terms from one end to the other. It cited mismanagement, stupidity, irresponsibility, lost records, waste, and duplication of effort.

We in the Legion know that the VA went through a terrible time at the close of World War II when its workload vastly exceeded its capacity and its staff was inexperienced and inadequate. Horrible things happened.

One of the interesting things about this article was that, without giving dates, Mr. Stevenson cited the same specific VA clerical errors and blunders which the American Legion magazine had reported 2 and 3 years earlier. If you have that Reader's Digest and back copies of your Legion magazine, see Clarence Woodbury's That VA Insurance Muddle (June 1947) and Robert B. Pitkin's Insurance Is Like Love (June 1948) and see how many skeletons Mr. Stevenson dragged out of the closet in March 1949, long after the American Legion magazine had reported VA progress in correcting Mr. Stevenson's nightmares.

On page 61 of the March Reader's Digest, Mr. Stevenson said that the VA "* * * spends $6,000,000,000 a year." That shocking article and that statement of spending $6,000,000,000 a year induced many veterans to write their Congressmen, editors, and Legion officials urging that a stop be put to the VA's multibillion-dollar swindle."

Everyone who wrote or felt that way was completely misled. The article did not say how the VA spent $6,000,000,000 a year. It couldn't, for several reasons. First, it would have had to shift its attack away from the VA to veterans, to the GI bill, to Public Law 16, and all our other veterans' benefits. Second, the VA does not spend $6,000,000,000 a year.

The VA does not spend $1,000,000,000 a year.

It is true that the VA has been handling about $6,000,000,000 a year. Of this figure the VA spends approximately 5 percent for general administration. For the year ending June 30, 1949, five and one-third billion dollars of six plus billions were paid directly in cash to veterans and their beneficiaries, for such things as:

Insurance death claims.

Compensation and pension for the disabled.

Tuition and education under the GI bill.

Rehabilitation of the disabled.

Pensions for the survivors of deceased servicemen.

And other direct payments to veterans and their beneficiaries as required of the VA by law.

It would have been a swindle if the money had not been paid.

This is not spending, it is disbursing or paying out as a bank teller pays when a client makes a withdrawal. And it is the cost of war—in payment for services which veterans have already rendered in full.

A little less than $1,000,000,000 remains to be accounted for.

The VA spent that.

Over five hundred and forty-six million of it, or more than half, was spent on hospitalization and medical care of sick and disabled veterans.

The rest, about one-third of $1,000,000,000, was spent on general administrative expenses to run a bureau which administers a large group of benefits to eligibles numbering 18,000,000 veterans of all wars and many of their dependents.

The American Legion warns veterans that any substantial saving for which the public might cry under the influence of such magazine articles can only come from cutting back veterans' benefits. The propagandists who try to line you up against the entire VA appropriation never tell you that. There is room for increased efficiency and better service to veterans in the VA, but it is scarcely a matter of budget reduction. Already, in the opinion of hundreds of American Legion long-time service workers the VA operating budget has been and is being subjected to economies which impair the service the VA can render veterans.

Today veterans are suffering greatly because of the slowness of progress in the VA hospital program—now far behind schedule and being slowed even more by the interference of the economy minded and other special groups.

Below are some funny things being proposed by strong and influential groups and committees. As you will see they are not entirely agreed among themselves. On the other hand there is danger of a concerted attack on veterans among them—just as the New Deal and the economy league (strange bedfellows) ganged up on the veteran in 1933.

In 1933 the Economy Act closed Army and Navy hospitals to veterans, and threw them out in the streets.

Last April the Armed Forces Medical Advisory Committee to the Secretary of Defense, headed by Charles P. Cooper, recommended that Army and Navy hospitals reduce or eliminate care of veterans. Cooper is connected with Presbyterian Hospital in New York.

The Hoover Commission has recommended that VA hospitals cease to exist as such, but that a general Federal hospital system be set up to absorb disabled veterans along with other Government beneficiaries. This suggestion is supposed to provide economy and be beneficial to veterans.

It should be noted that the Hoover Commission investigators did not avail themselves of the advice and experience of those in the Legion who have specialized in rehabilitation problems of veterans for 30 years. They wanted a fresh look at the situation. One of the few acts affecting veterans which Congress ever passed without giving us a hearing was the Economy Act of 1933, which is also one of the few acts affecting veterans which was so wrong that Congress had to eat it piece by piece.

Regarding the recommendation of the Hoover Commission on eliminating hospitals from VA, I will state categorically that it is the experience of the American Legion and of the United States Government and of every State in the Union and of thousands of veterans that the disabled veteran too often suffers when he is treated in a nonveteran hospital.

It is also the experience of the American Legion and of thousands of veterans and many VA employees that there is already too much red tape confronting the veteran who is eligible under law for VA hospitalization. Removal of VA hospitals to a brand new bureau will throw another wall of expensive paper work, interoffice memoranda and bureaucrats between the sick veteran and his hospital bed.

Amazingly, the Hoover Commission's recommendation would be a reversal of history if carried out. Until 1921 veterans were hospitalized by the United States Public Health Service. The VA hospitals came into existence because a special committee under former Vice President of the United States Charles G. Dawes, and including John L. Lewis, found that the Public Health Service set-up was unsatisfactory and recommended that for the relief of the veteran he have his own hospitals. The Veterans' Administration itself came into existence on advice of the same committee because the handling of veterans' benefits by many Government bureaus was found to be wasteful, unnecessarily complex and injurious to the proper handling of the benefits awarded veterans by Congress.

In the years since 1921 the American Legion has often criticized the VA, and will do so again, because of difficulties many veterans have had with VA red tape. But the American Legion warns veterans that any attempt to use these difficulties as an excuse for parceling out the VA's functions to other Government bureaus can have only the most disastrous results. It would simply multiply the factors which already make it difficult for the lone veteran to find his way through the bureaucratic maze, exactly as it did until 1921. Yet every group which is jealous of the VA's function and of the VA's appropriation (which is really the veterans' appropriation) uses the veterans' difficulties with the VA as its excuse to bid for part of the VA function and a chunk of the VA appropriation.

The most serious problem we face today in veterans' medicine is the task of getting adequate care for seriously ill veterans, and of saving them from the present plight of patients in non-veteran tax-supported hospitals. Under the watchful eye of the Veterans' Administration and the American Legion, the existing VA hospitals are the finest tax-supported hospitals in the world today. But there are not enough of them, and meanwhile our State and county mental, tuberculosis and general hospitals are in a shameful state and packed to the rafters. Many of them are 40 to 100 percent overcrowded. Usual conditions are so pitiful that the patients are often housed and confined rather than treated.

Among these pathetic patients in State institutions are many hundreds of veterans who are entitled to VA hospitalization but cannot get it because enough VA beds and staff are not available. Outside of all hospitals there are still more insane, psychoneurotic, tubercular, and chronically ill veterans and civilians waiting for accommodations to care for them. Jails are holding some of the insane veterans for whom no beds are available. Children, wives, and husbands of tubercular veterans (and nonveterans) are sickening and often dying from tuberculosis contracted from the tubercular living at home. Psychoneurotic veterans wander from private psychiatrist to private psychiatrist for treatment, spending their own money—for lack of sufficient psychiatric out-patient treatment at VA clinics. Many of these are service-connected and clearly entitled to have the high type of care the VA clinics provide—but enough of it isn't available.

That is the great problem of veterans' medicine today. It is no time to be crying economy. The earliest possible relief for these seriously ill veterans and nonveterans would be to complete the building and staffing of the new VA hospitals. Ninety such hospitals were authorized by Congress as long ago as 1944. Only three of them have been completed, although the veteran population has increased over 15,000,000.

Completion of this program would care for the veterans and take them out of competition with the civilians for civilian hospital bed-space. Physicians and hospitals across the country should join with us in a gigantic effort to solve the problem of the tubercular, the chronically ill, the psychoneurotic, and the insane. I am not able to report they have been doing so. Many, many private doctors are expressing real concern. Some of the finest physicians and surgeons in the Nation are giving their services to VA hospitals and clinics. But I beg them to look to their organizations, for here are the things which organized hospital and medical men have been pressing before Congress.

The American Hospital Association has proposed a plan whereby some non-service-connected disabled veterans be dropped from VA hospitals. Under this plan non-service-connected veterans would carry health-insurance policies with the VA on which the veterans or the VA would pay the premiums. Follow this closely. Such veterans would then be treated in local hospitals when in need of care. The hospitals and the attending physicians would receive fees to be paid out of the health-insurance fund which they propose. Under such a system, they say, the VA hospital program could be greatly reduced and the money saved could be passed on by the Federal Government to the AHA hospitals.

Maybe that looks all right to you. But stay with me, please. There are some shocking things wrong with it. First, there is the technical problem of what disabilities are non-service-connected. In spite of many published statements to the contrary on the propaganda front against veterans, a non-service-connected veteran is simply one whose disability has not yet been determined to be service-connected. Service-connection is established as part of the veteran's claim, usually about the time he needs hospitalization—often after he is in. Can you imagine the red tape and confusion of a vast health insurance program to be carried by veterans or the Government for many years, in which the insured will not know whether the policy applies to him until he is already sick? Under this sweet plan the sick veteran will not even know which hospital to enter, private or VA, until the question of service-connection has been settled. It cannot be settled until after the nature of the disability is known and related to the veteran's military medical record. Many a veteran has already died while his treatment was being held up pending paper work. Let's not make this worse.

Second, there are not enough civilian hospital beds available in many areas right now. A recent survey of Los Angeles County made by Hamilton Associates, a prominent member of the AHA, recommends the immediate expenditure of $87,000,000 to bring civilian hospital beds up to standard. Eighty-seven million dollars for just one county.

The way to solve the hospital crisis in this country is not to rob Peter to pay Paul. There is no economy in the AHA plan for

moving some veterans into the already crowded private hospitals. Just a transfer of funds from the veterans' program to a different outfit. And 30 years' experience in veterans' rehabilitation has consistently shown that treatment of Government beneficiaries in private hospitals costs the taxpayer more and serves the Government beneficiary less.

The AHA suggestion is a thankless one, for the American Legion has supported the Hill-Burton Act, which approves Federal aid for AHA hospitals. The Legion is deeply concerned for the welfare of community hospitals and State hospitals. But our reward for supporting Federal aid to them is this attempt to take that aid out of the veterans' appropriation.

This AHA suggestion has been supported by sections and high officials of the American Medical Association.

And mark this: The AHA plan does not include any attempt to care for any of the insane, tubercular, psychoneurotic, or chronically ill, although it would take funds already appropriated to care for them. Their plight is the great national problem. The Legion and the VA are left to tussle with it. The AHA plan wants no part of it.

But I have just begun. In March of this year the Senate Committee on Labor and Public Welfare held hearings on a cut-back of over 16,000 beds in the veterans' hospital building program, which had been too hastily recommended by the Bureau of the Budget and too hastily approved by President Truman in January.

Several spokesmen for the American Hospital Association and its State groups testified at these hearings. Speaking for the national AHA, Graham L. Davis, of the W. K. Kellogg Foundation, of Battle Creek, Mich., opposed the VA hospital program and urged that funds for it be diverted to AHA hospitals.

Speaking for the New York AHA was John H. Hayes, superintendent of Lenox Hill Hospital and a past president of AHA.

Hayes supported the President's cut-back of 16,000 VA hospital beds and urged the AHA plan as a proper substitute. Neither Hayes nor Davis added that of these 16,000 beds whose elimination they recommended 7,000 would care for insane veterans, over 1,000 would care for tubercular veterans, and 1,000 would care for the chronically ill—none of whom the AHA plan proposes to absorb.

Fortunately others testified at these hearings. Included in the hospital cut-back was elimination of a 500-bed tuberculosis hospital in Detroit. Dr. Bruce Douglas, Detroit health commissioner, pleaded for the restoration of that hospital and stated that 2,700 new TB beds were needed immediately for the Detroit area. The VA hospital would aid the Detroit situation, since it would reduce veteran competition for civilian TB beds.

Dr. A. M. Lyons, Commissioner of Welfare for the State of Kentucky, seconded Dr. Douglas' plea. He testified that his State institutions were greatly overcrowded and added: "I think that the veteran is entitled to better hospitalization than most of our State hospitals offer."

American Legion service workers from many States affected by the hospital cut-back also testified. Edward A. Linsky, adjutant of the department of Pennsylvania, reported that an on-the-spot check at that time revealed between 300 and 500 insane veterans confined in Pennsylvania jails for safekeeping and over 4,000 Pennsylvania veterans remaining at home with tuberculosis for lack of hospital beds.

Lewis E. Sloneker, Legion rehabilitation director for California, stated an immediate need of 599 TB beds for veterans in California. He added that "It is doubtful if there is a jail in the State which is not holding one or more veterans at this minute, waiting for them to be transferred to psychopathic wards. In Los Angeles County alone, during 1948, there was a total of 953 veterans with mental disabilities before the courts, only 24⅔ percent of whom were committed to VA hospitals because beds for the rest were unavailable."

G. W. Steagall, director of veterans' affairs in Tennessee, testified in part: "Veterans are being sent to hospitals every day by doctors in their communities as emergency cases, many times by ambulance, where the veteran is suffering intense pain or with active tuberculosis, only to be told by the admitting officer that he does not meet the requirements of the regulations for an emergency case and has to be taken back home and can only be put on the waiting list and allowed to suffer and oftentimes become progressively worse because of the delay in obtaining a bed."

Also from Tennessee was Dr. H. H. Shoulders, a past president of the American Medical Association. Speaking for the Tennessee State Medical Association he testified in favor of the AHA plan and in favor of the 16,000-bed cut-back in VA hospitals.

I doubt that many private physicians would back up their organizations if they knew the whole story. Already veterans and the Nation owe a great debt of gratitude to individual physicians, surgeons, and medical schools across the country. Since 1946 medical men and medical schools have cooperated unselfishly with the VA, bringing to its existing hospitals their personal services. It is partly as a result of their cooperation that today the too few VA hospitals now operating provide the highest level of skilled medical care ever known in the Federal service in peacetime.

Yet look how the present situation turns and twists. If the recommendation of the Hoover Commission that VA hospitals be handed over to a general Federal hospital bureau is carried out veterans will probably lose this great contribution of our outstanding medical specialists. It is hardly reasonable that they would be willing to contribute the same effort toward a central bureau of medicine that they have voluntarily and patriotically given to veterans. Doctors take such a proposed bureau to be the cornerstone of socialized medicine in this country—which they do not want. In this conviction they have a strong ally in the American Legion.

The American Legion is opposed to socialized medicine if only because of the experience we had with it in the VA prior to 1946. We certainly will not be a party to restoring bureaucratic medicine in VA hospitals. In the interest of the veteran and of the American standard of medical leadership we aline ourselves with the doctors on this matter. And yet we find ourselves at war with doctors' organizations over their grab for the VA appropriation. It is an odd and complex situation and a dangerous one for veterans and doctors and the general public.

While this article is on the press Legion committees will be meeting with representatives of the American Hospital Association and the American Medical Association to try to resolve their attacks on the proper care of veterans, and to try to form a joint policy which will maintain and increase the VA hospitals in proper number as the finest tax-supported hospitals in the world. I hope that on this matter at least we will have progress to report belong long.

Yet if we come to full agreement with the medical profession our joint efforts may still be sabotaged by today's hidden economy league. It is claimed, and the American Legion admits, that the problem of staffing many of the new VA hospitals will be difficult in terms of securing proper personnel, even with the full cooperation of the medical profession.

The American Legion is confident that if the same effort and ingenuity, and particularly the same ambition were exercised on all sides to complete them and staff them as is exerted on many sides to block their construction—then the terrible problem of the insane, psychoneurotic, the tubercular, and the chronically ill could be solved.

But the difficulty of staffing these hospitals is being increased on the economy front. The Bureau of the Budget recommended to Congress in January that the VA operating budget be reduced to the tune of laying off 11,000 VA employees in the coming year. This cut would work serious damage to the ability of the VA to serve veterans in nearly all phases of its operation. One result of an 11,000-man cut-back in VA would be that for financial reasons alone the VA would be unable to staff those new hospital beds which it will be able to open in the coming year.

In April the House of Representatives Appropriations Committee took a favorable attitude toward the VA hospital program, and recommended to the House that funds be restored to continue construction. And then, at the same time, the House Appropriations Committee recommended an additional reduction of $28,000,000 in the VA operating budget which may mean 9,000 more VA employees will have to be laid off.

We need the hospitals desperately. The Nation needs them. But they are no good without staff. The VA has its work cut out to find the proper staff for the beds as they are opened. To this difficult task must not be added the hopeless prospect of having no funds with which to pay such staff.

All through the winter and spring the American Legion has been combating these continuous assaults on the successful operation of the Veterans' Administration. Our paid rehabilitation staff, our legislative staff, and many of our voluntary committeemen have given the bulk of their time to these problems. Congress and its committees have heard our representatives fairly, and they have heard many of our opponents.

Perhaps when you read this the battle of Congress this year may have been won. But the economy front, the propaganda front, and the give us the veterans' money fronts are still busy. They are working on your mind, working on your legislature, and working in secret to gain their ends.

In 1933 we were less than a million Legionnaires. I thank God that we are now 3,000,000 and I pray for 3,000,000 more, for I believe the battle has just begun and it will call for our full and united strength.

Aid for Korea

EXTENSION OF REMARKS

OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, August 8, 1949

Mr. ASPINALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include my article with reference to assistance for the Republic of Korea:

AID FOR KOREA

The Republic of Korea will celebrate its first birthday on August 15 of this year. It is the only country with a democratic form of government now existing in northern Asia. The struggle these people have had in maintaining their democratically chosen government has been occasioned by the fact that their country has been divided at the thirty-eighth parallel and all of that country north of that latitude has been controlled by Russia since liberation day, August 15, 1945.

Liberation day, in the sense of the word, has not been experienced by the north Koreans. At the Yalta Conference, it was decided that north Korea would be under the

control of the Russians and south Korea under that of the United States, for the purpose only of accepting the surrender of Japanese troops. At that time there was no intention of permanently dividing Korea, a small compact country whose economy was complementary—its agricultural, industrial, and mineral resources being interdependent, with agriculture predominant in the south. However, a barrier was set up at the thirty-eighth parallel, and this country was separated into two distinct parts, much to the detriment of their national economy.

Over 90 percent of the iron and steel production is found in north Korea. This is due mainly to the fact that there is available power in this area, in addition to the raw materials. The rugged mountains in this section are rich in ores, and here, too, are found large lumber industries. Chemical fertilizers, so necessary to the agricultural lands of the south, are made in abundance here. South of the thirty-eighth parallel, where more than two-thirds of Korea's 20,000,000 population reside, the main occupation is agriculture, with fishing a secondary industry. With 14,907,973 acres under cultivation, they produce rice and other grains, fruits, and vegetables. Their fishing industry ranks third in the world as far as fisheries exports are concerned. In the past, the northern part of Korea has been dependent upon the south for food, and the south relied upon the north for timber, manufactured articles, commercial fertilizer, electric power, and minerals—including coal, iron, gold, silver, copper, lead, zinc, tungsten, etc. When the Soviet forces occupied North Korea the trading of commodities between the two areas ceased, and the iron curtain was unrolled at the dividing line, the thirty-eighth parallel.

Following the supposed liberation in 1945, the United States made every possible attempt to negotiate with Soviet Russia with the ultimate goal in mind of establishing a government for a unified Korea. Such negotiations failed because the U. S. S. R. would agree only to a unification and establishing of a government which would be controlled by the small pro-Communist minority party.

Immediately after the entry of the United States troops into Korea, a Korean representative democratic council, with Dr. Syngman Rhee as chairman, was set up. Later, superseding this body, a Korean Interim Legislative Assembly was formed—part of which were elected and a number of whom were chosen by the military government in assisting the military government officials in the building of a foundation or future government principles. This group took their oath of office in December 1946 and functioned until May of 1948. The military government used every means in helping the Korean people in the reforming of their own government. In addition to the Korean Interim Legislative Assembly, American supervisors were placed in charge of the various departments and agencies. As soon as the Korean people were deemed trained in their duties, they assumed the leadership in the organizations and the American personnel merely acted in an advisory capacity. The reason that it was not possible for the Korean people to assume the key positions immediately was due to the lack of sufficiently trained personnel. For over 40 years, the Japanese Government had been in control of Korea and all supervisory positions were held by the Japanese and but few Koreans were allowed appointment to such. However, these people, eager for independence and the opportunity to establish their own desired form of government, learned rapidly and in a comparatively short time assumed the duties of administration.

These freedom-loving people have worked very diligently to erase the imprint of the Japanese domination. The Japanese had had complete control of the Korean educational system and no Korean language or history was taught in the schools. Japanese was taught from the first grade on. If a Korean student was found to be using Korean, he was severely punished. Approximately 1 or 2 percent of the Korean students were allowed to attend college. At the time of liberation, the need for trained teachers was so great, that an adult education system was inaugurated and, in this manner, teachers were immediately made available. All Japanese textbooks were burned and their native language restored in the schools. Now, under the compulsory educational system, the youth of Korea is again attending the schools of learning which were denied under the Japanese regime. At the present time, less than 30 percent of the population of Korea, south of the thirty-eighth parallel, is illiterate—due to the endeavors of the adult educational system.

The Department of Public Health brought theretofore heavy death tolls due to cholera and typhus to a minimum by vaccination of the entire populace against these dreaded diseases. They have set up health standards which the people willingly follow.

The land-reform system has restored the lands to the farmers and you no longer find the old landlord feudal system in existence in Korea. The lands, previously claimed by Japanese, have been made available to the Korean farmer by the Korean Government.

The Korean people worked diligently with the goal in mind of eventually setting up their own government. When negotiations with Soviet Russia failed, the issue was taken to the United Nations who voted by an overwhelming majority to hold an election in Korea. Such election was to be under the observation of a United Nations Temporary Commission on Korea and the representatives chosen thereby would be given the responsibility of drafting a constitution and the establishment of a national government.

In January of 1948, the United Nations body arrived in Korea and they immediately tried to gain entrance to north Korea in order to negotiate plans for a free election over all of Korea. Russia doggedly refused to allow their entry and the northern people were not given the opportunity to participate in the election by secret balloting.

A great deal of enthusiasm was displayed in the United Nations-sponsored election and, in accordance with the election law, over 80 percent of the eligible voters registered and approximately 92 percent of those registered actually voted. These percentages exceed election figures in our own United States. The election was held on May 10 and conducted by the Korean people themselves with the United States acting only as assistants. For the first time in the history of their 6,000-year-old country, a free election had been successfully held and they had had the opportunity to choose their own representative form of government.

On August 15, 1948, Sungman Rhee, chosen by the representatives of the people, took the oath of President and their constitution was adopted, thus adding a new name to the list of world democracies. President Rhee is known throughout the Orient as the George Washington of Korea and this infant Republic's struggle for existence might well be compared to that of our own United States during the late 1700's. The Korean people at the present time possess a very determined patriotism and are not daunted by the fact that for the first time in their history, the agricultural south and the industrial north is divided by the iron curtain. Since the election in May 1948, the 200 representatives in the National Assembly have performed a great work in the forming of a government possessing the four freedoms. The people are almost unanimous in their support of this form of government. It was found that 8 of the representatives chosen at the election in 1948 were Communists, posing under other party denominations. These 8 caused such dissension in the assembly that it was demanded by the people and they were removed from office.

Many adverse factors have hindered the new government's progress but, despite such hindrances, the earnest purpose of the people in attaining self-government has been achieved. Now, the important question is, Will they be able to keep it?

Soviet Russia has demanded time after time that the American forces leave south Korea, and that the Russian soldiers will then cease to occupy north Korea. The American forces have been withdrawn but we still hear reports of the presence of the Russian Army north of the thirty-eighth. There is a trained, equipped army of 200,000 Korean Communists in the north, while the south has but a meager, poorly equipped army and navy in comparison. Will there be a civil war in the future, wherein the Communist north army will attempt to invade the southern part of the country, proclaim victory and thus lose the only democratic foothold existing in northern Asia? Such a situation would not only open the door for invasion of Japan by an aggressor, but it would also weaken our position in Japan, where at the present time the Communists are trying to gain sufficient strength to embarrass, if not to obtain control of, the Japanese Government.

The Korean people commenced diplomatic relations with our Western World in 1882 and this friendship has been cemented throughout the years. Even with the domination by the Japanese, this friendly feeling was continued by the missionaries from the United States who for many years sponsored the schooling of Korean boys and girls in the United States so that they might learn the progress of life and teach it to their brothers and sisters upon their return to Korea.

Economic aid to the Republic of Korea is not merely helping another country—in reality it is fortifying our own position in the Pacific. The Korean people have demonstrated their desire to support and conduct a democratic form of government and now are seeking aid—aid which would not be so necessary if the thirty-eighth parallel division did not exist. Should we fail to answer this worthy call for aid, the Republic of Korea may collapse and the Communists placed in a position to overrun the country. Such aid cannot be measured satisfactorily in the worth of dollars, but rather in the worth of maintaining a free government in this—our important friendly sister nation in northern Asia.

New German Threat

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 8, 1949

Mr. JAVITS. Mr. Speaker, appended is the news story of Drew Middleton from today's New York Times referred to in my remarks today:

PRESTIGE OF BRITAIN IN GERMANY FOUND DANGEROUSLY LOW—SOME HIGH OFFICIALS ADMIT THEY HAVE LOST CONTROL OF PEOPLE IN THE ZONE—DEFIANCE BECOMES OPEN—POLITICAL LEADER RIDICULES DENAZIFICATION—ANOTHER SAYS ALLIES RETAINED NAZI AIDES

(By Drew Middleton)

HAMBURG, Germany, August 7.—The prestige and influence of Britain and to a lesser degree that of the United States have reached so low an ebb in the British zone of occupation, the most populous and economically the most important part of western Germany, that a considerable number of Britons,

many of them highly placed officials, admit they have lost control of the Germans.

Reports from Bavaria, long considered the most difficult and least democratic part of the United States zone, show that there, too, the Germans are becoming daily less cooperative and more antagonistic to the occupation power.

The great majority of intelligence reports, both American and British, agree that the very moment when a considerable degree of power is to be handed over to the Germans and the German Federal Republic the people of western Germany view the occupation forces with increasing arrogance, dislike, and disrespect.

OFFICIALS EXPRESS ALARM

Military government officers in both the United States and British zones who are about to depart for their homelands warn that the Allied High Commission will have a much harder time handling the Germans and their new government than is generally realized.

[An Associated Press dispatch from Frankfort quoted Dr. Konrad Adenauer, chairman of the Christian Democrats, as saying in a campaign speech on Sunday that denazification was ridiculous and demanding that libelous attacks against honest members of the Wehrmacht stop. He also said unrestricted domination of the Allies is finished with the formation of the Federal Republic.

[In Nuremberg, the Associated Press reported, Dr. Kurt Schumacher, Socialist leader, charged the Allies had relied mainly on former Nazis to run German affairs.]

Traveling through the British zone for the last 5 days, this correspondent has been impressed by the large number of experienced officials who are genuinely alarmed over the present German attitude and the wave of nationalism with which it is connected.

Such officials still believe the Soviet Union is the great potential enemy of the West, but they are by no means convinced it is the only potential enemy.

"I think we made a grave mistake in concentrating our intelligence services on what the Russians and the German Communists were doing in Germany and not worrying enough about what the non-Communist Germans were doing or planning to do," one told this correspondent.

Another official high in the Military Government in North Rhine-Westphalia, a critical area, remarked recently that he was "morally convinced," although he could offer no definite proof, that some sort of economic general staff existed among the Germans and was directing resistance to the industrial dismantling.

CONTROL OF POLICE HELD LOST

Yet another official said that the British military Government by turning the responsibility for the police back to the Germans too soon had lost control of the German police and that when the next dismantling project began at Gelsenkirchen in the Ruhr on August 15 "if necessary, we will use our troops" to see that the project is accomplished.

He and other officials are convinced that the use of British troops to enforce dismantling would set a bad precedent, but they are equally convinced that with the Germans in their present state of bloody-mindedness it may be necessary and even be salutary from the point of view of western prestige.

However, there are many British and Germans in the British zone who doubt if any action now can restore British prestige. Both parties point out that the fall in British prestige has not been accompanied by any sharp rise in United States prestige.

"It is just that they hate us more, revile us more, and mock us more," one Briton said.

In their present state of mind the Germans are not above using threats. One British regional commissioner is told repeatedly by Germans: "Why do you do this? Why do you do that? Don't you see you are driving us straight into the arms of the German Communists and the Russians?"

The bluff proconsul in question always replies: "I am sorry. I know you will be very happy with your Russian friends."

Other British officials have not been so forthright in the past and part of their present woe is due to the fact that concessions have been made to the Germans in response to these veiled threats of economic or political approaches to the east.

The whole situation represents an amazing change from that which prevailed 4 years ago when this correspondent found the British generally more popular in their zone than the Americans in theirs.

Today discussing the transformation a British official named four principal causes.

First of these he said was the dismantling of industry, which although an allied project is carried out exclusively by the British in the British zone.

"We know that a very large percentage of Germans believe that the present unemployment is due to the dismantling and that the dismantling is entirely a British idea," this source said.

He bewailed the "great mistake" Britain made in not insisting that the dismantling be done by a tripartite commission.

The present wave of nationalism that is finding its most violent expression in the speeches of political candidates of all parties is the second cause, according to this source. Nationalism in one form or another has been on the rise since early in 1943. It has been strengthened by the Russian threat to Germany, the partition, the dismantling and the series of controls instituted by the three western powers, and it is based, most intelligence officers think, on the overwhelming German desire to forget and discount the holocaust of 1945 in a wave of nationalism.

POLITICIANS ATTACKING ALLIES

Until the election campaign began nationalism had been almost leaderless. Now the most respected politicians in Germany are vying with each other in attacks on the Allies and demands for the lifting of controls.

The third cause of the loss of British and western prestige is misinformation, according to this source. This problem, general in Germany, is acute in the British zone.

The British no longer control the editorial policy of a single paper in their zone and the editing is done in a manner to paint a shabby picture of Britain and her policies.

Foreign Secretary Ernest Bevin's recent speech in the House of Commons on dismantling provides an example. The German newspapers in Hamburg printed everything Secretary Bevin said about Britain's intention to continue dismantling and nothing on his statement that Britain consistently had sought for a higher level of industry for Germany at various meetings of the Council of Foreign Ministers.

The British do not have, as the Americans do, an overt publication, which in the United States zone is the Neue Zeitung wherein they can state their case.

Repeal of War Excise Taxes

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES

Monday, August 8 (legislative day of Thursday, June 2), 1949

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial which appeared in the August 1, 1949, issue of the New York Herald Tribune.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

REPEAL THE WAR EXCISE TAXES

In a national tax structure marred by inequities and fiscally inappropriate levies, the retention of war-created excise taxes is one of the most irritating features. Designed to help suppress wartime inflation, the taxes continue to discourage consumer spending with great but undesired efficiency at a time when our concern is to keep the flow of consumer spending at a high level. Although the force of this truth is not lost upon Congress, it is naturally reluctant to repeal the taxes because it fears that the resultant loss in revenue would add further to the deficit already anticipated for 1949–50.

We have reason to applaud, therefore, the excellent presentation of the case for repeal made by Mr. Beardsley Ruml, a private citizen who has performed distinguished service for the Government in fiscal matters on other occasions. Mr. Ruml points out that the industries subject to the levies suffered disproportionately during the sales and employment declines of the last few months. With consumers buying more warily and searching for bargains, the taxes on such things as furs, leather goods, communications and transportation, to name a few, have been strong deterrents.

Taking account of the danger of losing Federal revenue and adding to the deficit Mr. Ruml meets the issue head-on. He believes that the loss in excise tax revenue would be almost entirely offset as a result of the boost in sales and employment the affected industries would enjoy. This boost would raise Federal revenues through the additional corporate income taxes paid by these industries and through the personal income taxes of people who might otherwise be unemployed; and it would reduce unemployment insurance payments as individuals now unemployed are returned to their jobs.

It would be foolish to make exaggerated claims either for the stimulus that repeal would provide or for the offsetting revenues it would engender. But if Congress is still concerned about losing the billion dollars, more or less, that repeal might entail, it has a further offset at hand. That would be an across-the-board cut in the original appropriation requests for all purposes on which it has not yet acted. On the grounds of eliminating sheer waste in Federal spending practices, such a cut has ample justification. As a companion piece to excise tax repeal, its justification is strengthened.

Gold

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1949

Mr. WHITE of Idaho. Mr. Speaker, it is reported that when the great financier J. P. Morgan, the elder, was testifying before a congressional committee and some member asked him, "What is money?" he replied only gold is money. There is inserted herewith Mr. J. C. Piver's essay on gold, taken from his book entitled "Sun and Mankind," which compares with John J. Ingalls' famous essay on grass:

Men seek to obtain all the gold they can lay their hands on, not only with a view to

saving it, but also on account of its power, since they knew only too well woman's desire for that metal. Consequently, there is a direct connection between gold and life; since life is the result of love, and jewelry and gold both have always contributed greatly to the maintenance of love.

As far as we know, no other metal (nothing) on this earth possesses or has ever possessed so great a power over the human imagination—both in men and women—as gold has. (This blind devotion to gold must have some explanation.) The interrelationship among gold, work, and salary is a direct one, but it is likewise directly linked with the sun, since the sweat of labor is produced by the sun and its salary is received in gold or a representative of gold.

In view of the foregoing, and noting the magnitude of today's world economic chaos, it would seem that in the evolutionary period in which we are now living, gold is the sole means of payment permitted by the Creator, said metal being in this period the regulator of human production on earth. When one observes today's confusion ruling the world over, it is not surprising that the dictators we know had a chance to thrive.

Could it be that the sun, which rules all things on earth, the hours of the day, the crops, the seasons, the ripening of fruits and grain, should also regulate man's production by means of this yellow dust, strangely reminiscent of our daily sunlight, which indeed seems to be the goal of all human efforts? And why should not this hypothesis be correct if anything that grows out of the soil is directly linked with the sun, as already mentioned? Why should not man's production, the cities, the factories, the engines, the railroads, the ships, etc.—all that mankind's brain produces, "makes emerge" from earth exclusively with the purpose of capturing gold—also be directly linked with the sun? How could it be otherwise if food itself is subordinated to the solar influence?

Well, we believe that the extraction of gold is the pace, the extraction of gold is the measure, and should not be altered. This yellow dust is for mankind what moisture, light, the heat of the sun, is to the trees, the golden leaves, the pastures, the golden crops. But what an arduous task it is going to be for the human race to effect a little order in the prevailing monetary mess, brought about by false currency and a planned economy. For those of us who belong to a generation that saw gold flowing from hand to hand, the custody of gold by State banks, its present grotesque distribution in the world is something truly diabolic. The world is ruled by interest and that interest always, directly or indirectly, represents gold and this gold must flow freely.

Man needs heat for life and happiness. This heat—directly or indirectly—is derived from the sun and men know, all of them, that this yellow dust, known as gold, so strangely reminiscent of the daily sun, provides all over the world, as an irrevocable means of exchange, food, clothing and housing, all of which means calories, that is, heat indispensable for life. This explains the reason why mankind works so hard to secure this precious metal—because it means securing life itself. This explains also why mankind, cheated by paper currency, secured "artificially" heat, food, clothing, and a roof and procreated so enormously in the last 80 years, as much as from Christ to 1860. Gold is a supernatural measure and should not be altered.

The world is a global unit. It would seem that gold has as its principal mission on earth that of serving as recompense for labor and this recompense for labor must not be altered or modified, since, as would seem from its slow-paced mining, it is a work regulator on earth, a regulator of production. If we consider gold as a messenger of the sun, it would constitute an unequivocal proof that the economic world must be an aggregation forming a global unit, since the recompense metal is coveted by all human beings of the planet and, in consequence, the proceeds of labor must circulate freely, since the recompense is the same for all people. This would also be a proof of the present necessity of removing customs barriers, the originators of conflicts. The blocking of foreign accounts will continue so long as these barriers exist. And if it is true that the metal is the regulating and interplanetary recompense, the Communist theory is inadmissible, since a recompense for work done is something sacred.

It is, therefore, not surprising to see the price of gold increase so enormously in the last few years, with the slow mining rate on the one hand, and on the other, population doubling in 50 years. What is consoling in the midst of the disaster is the morality in the punishment, a terrible penalty for the wrongs committed in times past. Thou shalt not steal. This colossal punishment, the total world mess, constitutes one more proof of the fact that a superior moral force rules us in the cosmos, ratifying the threatening words of the Bible. Men born and things built through inflation are destroyed by fire and bombs at a frightening rate of speed.

The Hawaii Strike

EXTENSION OF REMARKS
OF
HON. JOHN PHILLIPS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1949

Mr. PHILLIPS of California. Mr. Speaker, the papers have announced the passage of an act, by the Hawaiian Legislature, giving the necessary power to the Governor to seize the industries and thus stop the Communist-controlled strike and again to feed the people. That was necessary, but Mr. Speaker, we should not overlook the fact that all the time, for the entire 98 days of this disastrous strike, the President of the United States had the power to stop it any time. Why are not the citizens of Hawaii as important to the President as the citizens of Berlin? Do you suppose this blind side toward the Pacific is due to the fact that the President's power to control the strike came to him with the Taft-Hartley Act and it might have created an embarrassing situation to him personally if he had used this power at the same time trying to make a case against the act itself?

I have asked unanimous consent to print with these comments an editorial which appeared recently in the Los Angeles Times. The editorial follows:

THE PRESIDENT'S POWER IN THE HAWAII STRIKE

In connection with Senator KNOWLAND'S proposal to give the President specific power to deal with the strike now paralyzing Hawaii, President Truman says at his press conference he is not sure he wants such power as it is a local matter.

He also said the President has inherent powers to deal with strikes affecting the national welfare, but that in the case of the Hawaiian strike, this power does not exist.

Now you have it and now you don't. Why does this mysterious and undefined power vanish, and when? The question is not answered.

First it may be said that if the President thinks he has any powers not defined in the Constitution, then it is time he was disabused.

Second, who tells him what happens in Hawaii does not affect the national welfare? Hawaii is an American Territory, ready for statehood; its people are American citizens, entitled to all the rights of anybody on the mainland. These rights include the right to have transportation vital to their well-being. At present, because of an unconscionable hold-up by Harry Bridges' longshoremen's union, they are shut off from the world.

This Hawaii strike is far more than a local matter. It affects the whole country. The President is badly misinformed if he thinks otherwise.

It could be that he fears his efforts to apply the Taft-Hartley Act to the Hawaii strike would redemonstrate its necessity and usefulness at a time when he is trying to get the act repealed.

Why Democratic Socialism Breaks Down

EXTENSION OF REMARKS
OF
HON. RICHARD B. WIGGLESWORTH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1949

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a quotation from an article entitled "Why Democratic Socialism Breaks Down," by Mr. Willford L. King, economist and author of Keys to Prosperity:

Control of industry by government is the very essence of socialism. Every socialistic government must, then, take the responsibility for fixing wages and also the prices of industrial products. Most of the voters are wage earners. Therefore, to maintain itself in power, the government must keep the support of the wage earners. Obviously, the wage workers always want higher wages, and government has no alternative except to yield to their demands.

But the voters also demand lower prices for the goods which they buy. The government failing to grant this demand is quickly replaced by one which is more compliant. Hence, in England, France, and Italy we find the Governments boosting wages while keeping down the prices of the products of industry. The result is, of course, that either the industries lose money or the government uses subsidies to keep prices down. In either case the result is a treasury deficit.

The government tries to meet this deficit by taxing the wealthy, but soon it absorbs all of their income, and still the deficit grows. It cannot tax the masses more and still stay in power. Hence, it does the only thing left—it prints money to pay its bills. But more money makes higher the prices of goods bought by the voters. This brings demands for still higher wages. The government, perforce, yields. The result is a larger deficit and more inflation.

Rationing and price fixing are tried. These measures result mainly in generating flourishing black markets. The government falls.

The next government meets with the same difficulties. The situation gets worse and worse, and the attempts of the government to meet recurring crises grow ever more frantic. The only remedy seems to be a dictatorship of the right or of the left.

In the light of experience, is it not, therefore, evident that democracy and socialism mix no better than do oil and water? In other words, is it not clear that every collectivist democracy contains within itself the

seeds of its own destruction? If such is the case, it appears to be true that a socialistic state, if it is to be even moderately successful, must have a government which is not dependent for its support upon the votes of the masses. Now we see why the policies of the Russian Government are so much less wavering than are those of the socialist democracies. In Russia, the function of the masses is to obey orders without question.

This means that socialism and democracy are inherently inimical, while socialism and absolutism are natural partners. It does not mean, however, that the latter pair can ever secure any such efficiency in production as that developed in a republic by free enterprise and competition. In the collectivist state, the managers of industry obtain their positions, not because of their skill as producers, but because of their political acumen. By contrast, where competition is free and keen, the industrial magnates are chosen by the dollar votes of the customers. The producers who serve the public best thus receive mandates to continue and expand their services.

Furthermore, no government-controlled regime can equal a competitive system in furnishing to men and women producers the incentives which lead them to do their best to increase output. Only where everyone is free and rewarded adequately are human energies released in full. Only under such conditions do all classes really prosper and enjoy life.

Agricultural Conditions

EXTENSION OF REMARKS
OF

HON. JOHN C. STENNIS

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Tuesday, August 9 (legislative day of Thursday, June 2), 1949

Mr. STENNIS. Mr. President, Representative JAMIE L. WHITTEN, who ably represents the Second Congressional District in Mississippi, has rendered distinguished services in the House of Representatives as chairman of the House committee handling agricultural appropriations. Representative WHITTEN, who is an authority on the subjects dealt with by his committee, delivered a splendid address at Mississippi State College on August 3, 1949, as an outstanding part of the Farm and Home Week program. I think his speech will be of value to all the Members of the Congress, and I ask that it be inserted in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Aldrich, Dr. Mitchell, ladies and gentlemen, I deem it a distinct honor to be invited to be with you on this occasion when our people from all over the State have gathered here to celebrate Farm and Home Week. Since I have been in Washington, and before, your institution and its graduates have been most helpful to me. For the past 2 years it has been my privilege to work with one of your distinguished graduates, Senator JOHN STENNIS. Our Senators and the Mississippi delegation, if I may say so, are doing a fine job in Washington. Senator STENNIS reflects credit on your institution and the State of Mississippi. You have a wonderful institution, one that is outstanding in the Nation. I have taken pride in the wonderful achievements you have made under Dr. Mitchell. Perhaps my appreciation has grown during the last few years due to the work I have had to do with agriculture and with the fine people in the extension service, with the experiment station, and in the other numerous branches of our State college.

For the past 5 years I have been a member of the committee handling agricultural appropriations in the House of Representatives. In the present Congress I am chairman of that five-man committee. In this capacity I have come to appreciate the broadness of the agricultural field, the tremendous benefits that are accepted today by our people but which trace back to work of the Department of Agriculture, the Extension Service, to research, and to experiment, and I should add to the fine agricultural schools that have trained the personnel that has made our agriculture great. On that committee we deal with the REA, with the Farmers Home Administration, with research, with 4-H Club work, with the Extension Department, with plant and animal diseases, with price supports. We handle funds for the AAA program, now the ACP, and the soil-conservation program, and, yes, we deal with surpluses, for our committee handles the Commodity Credit Corporation, section 32 funds, and the school lunch program. In fact, each year the whole department budget from A to Z comes before our committee. You cannot serve on that committee without learning much and without having a fine appreciation for all those who work together in the field of agriculture, and most of all, those of the farm and home who are the most real of real Americans.

It is with a feeling of pride that I come home to Mississippi. During the past 15 years I have been in most of the States of the Union and believe me, our State can hold its own with any of them. In addition to our fine people, we have the climate, the rainfall, and thousands of fertile acres. We have the oil and the timber. We are getting the roads and, yes, beginning to get the markets. You cannot go into the arid areas of the West, where they raise cattle and make money at it, or into the areas of the Northwest, where the feeding of cattle and dairying are prosperous industries, without wondering why the people of our State do not get rich from growing cattle, either beef or dairy. We have many times the grass that they have in the West. We do not have to feed our cattle to the same extent or house them at the terrific expense which is a heavy charge against these industries in the Northwest. I may add, however, as you all know, we are making rapid progress in dairying and in growing beef cattle. Mississippi furnishes more than half the milk for the Memphis (Tenn.) milkshed, most of it coming from the Second Congressional District, which I have the honor to represent.

The records show that during 1948 Mississippi produced 23,945,597 pounds of butterfat for the market and that more than $23,000,000 were paid for milk and cream. We have cheese plants and condensed and evaporating plants which add to the farmers' income. We have made the same progress with regard to growing beef cattle. In my own area, according to records of the Panola-Tate Livestock Association, $2,500,000 worth of beef cattle were sold during 1948. In addition more than a half million dollars of breeding cattle were sold. These cattle were sent to many States of the Union and to 20 foreign countries. We have the same production over much of the entire State. Six times in the last 11 years the State of Mississippi has produced the champion Hereford bull.

In spite of our advance in dairying, I am advised that each day great milk bankers drive through our State to New Orleans, Mobile, and other cities from distant points in Wisconsin and Minnesota, and each day thousands of gallons of milk come into Memphis from those areas because our production will not meet the demand.

Notwithstanding the fact that we have built up fine herds of beef cattle in many sections of our State there is still a premium for "Kansas City beef." Today we have made real progress. Tomorrow holds great promise for we are just at the threshold of grain feeding our animals. Once we do that there should be an end to the premium paid for "Kansas City beef." I believe such day is already on its way. In the Congress we have tried to do our part by providing marketing news services at Jackson and at Memphis. This should enable both points to grow into still larger markets for our farm products with better prices to our farmers.

During the past 13 years we have seen the rapid expansion of electricity to our farm homes, making possible a more full enjoyment of farm living, removing much of the drudgery and enabling the farmers to better operate dairies, and other businesses. When the REA was created, only 2,802 farms in Mississippi had central current or less than nine-tenths of 1 percent. On July 1, 1948, 99,120 farms were receiving central station service and in this year more than 15,000 will be added. Of all this program less than three-tenths of 1 percent of all borrowers are in arrears in repayment and most are ahead of schedule. The interest paid to the Government far exceeds any probable losses.

We have constantly urged the expansion of this program that all rural homes may be served. Electric power together with good roads and good schools has done more for the people than anything that I know. Life on the farm has always had much to offer but there has been the drudgery, and the lack of conveniences which were the seamy side of farm life. I know for I was reared 15 miles from the railroad on a hill farm in Tallahatchie County, among the finest Americans anywhere. Today with electricity, with the automobile, with consolidation of schools, the boy and girl, the man and the woman out in the country have everything that those in our cities have and lots more in the advantages that have always gone with life in the country. The work isn't finished. We still have much we can do in improving our homes, our schools, in extending rural electricity, in building roads, but the proof is in, the case has been made.

Today we honor the farm and home owners, and, more particularly, the more than 700 Mississippi farm families who have paid for their farms, purchased through the FHA. Most of this group finished their payments 35 years ahead of schedule. Thousands more are far ahead of schedule in repayment. We all are proud of these families and of this program, a self-sustaining program which helps people to help themselves.

When we took stock during the depression we found that thousands and thousands of acres of our soil were gone forever. No longer was there land which could be cleared and the old worn-out land discarded. No longer could the family move westward. There were many reasons for this waste of our soil. When our forefathers settled this country, land was the cheapest thing there was. It was good business insofar as present income was concerned, to drain the land of its fertility and then to clear more. Our forefathers followed that practice and succeeding generations grew up to believe that was the way to farm. Then in our State we became dependent on one crop, cotton, not simply because cotton would grow well in our State, but for the further reason that we had no cash markets for much of anything else. As all now know, this depleted the soil and in most cases financial returns were so small that the money was not to be had to protect or restore the soil. Recognizing that the Nation and future generations had an interest in this great natural resource, fertility of the soil, the soil conservation program was set up by the National

Congress. Under the program the National Government said to the farmer that if he would follow good soil practices, if he would restore his soil the Nation would make a contribution toward the costs. This Federal contribution has averaged about one-half of the money cost with the farmer putting up his labor in addition to his half of the cash outlay.

There is no question but what the great natural resources of our Nation have been the real basis of our high standard of living. Therefore, all our people have an interest in our soil fertility, in its productivity. The fewer people it takes to provide shelter, food, and clothing for the rest of us, the greater the number of people left to produce radios, cars, refrigerators, and the thousand and one things fo all of us, luxuries to most of the world, but taken by our people to be necessities.

The people of our towns and cities have a real interest in the fertility of the soil in the adjoining areas. The merchant has an interest, the doctor, the lawyer, yes, and the preacher. They have a real interest in the methods of farming employed by the farmers of the county though the farmer owns his land and has the legal right to farm it any way he wants, for all prosper only as the area around them prospers, the Nation prospers only as all its areas prosper. Let the farm production go down, let the land become exhausted and half the people will have to move out of town and the half remaining will have more of a struggle to make a living. Let that happen over the whole Nation, and more and more people will have to be employed in the production of food and clothing and fewer people will be left to provide the manufactured articles that all enjoy. That has been the situation which helped to bring about the low standard of living in much of this troubled world today.

We have done a wonderful job in Mississippi in this field: We have organized 70 soil-conservation districts covering nearly every county in the State. During the years of this program more than 400,000,000 feet of terraces have been built, 20,000 livestock dams have been constructed. More than 20,000 acres have been planted to trees. More than 1,000,000 acres have been reseeded; 15,-000,000 acres have had green cover crops and more than 5,000,000 acres have been treated with lime or superphosphate—all this in addition to what has been done outside the program.

Yet in spite of these concrete results that I have numerated, this program will have failed unless our people continue this change in their way of farming; unless they continue to take care of the soil, rotate their crops and preserve in the land the ability to produce not only for today but for future generations. This program was started because of the tremendous need. In view of the cost it was believed that the Federal Government should institute such program, contribute toward its cost in order to awake a consciousness in the minds of our farmers of the very real danger that we would, in a few years, find all our soil gone. The Government has helped to finance practices only to bring about such practices by the farmers themselves. Whether that course was wise will be determined by what our farmers do on their own initiative in the future. We must guard against any thought that it is an obligation of the Federal Government to pay our farmers to do right by their own soil. Such a feeling would destroy our initiative and independence.

What I have been discussing is not new to you. They are not new to the farm and home owners we honor today. I have mentioned these things to point up what I think we must keep in mind today as never before. At one time it was believed that the individual had the responsibility of providing his own trail to his own home; he had the responsibility of providing for the education of his own children through private teachers whom he paid from his own pocket. As time passed our people began to see that greater opportunities were to be gained if they banded together and built and worked roads. Then later it became apparent that the government, the local government could best do this job, each citizen through the payment of taxes contributing his share of the cost. In later years we found, with the automobile, that through highways could best be built under specifications uniform to a degree, first on a State basis then later on a national basis. Thus you had your State and Federal road programs. So it was with schools. At first a few families banded together and hired a teacher who taught through all grades, the families paying the cost. Gradually it became apparent that schools would be much better for all if grade schooling was taken on as a local government responsibility and we have had tax-supported public schools since with a wonderful improvement in the opportunities for our boys and girls. This same process has been followed in many instances and we would not change back to the old system. This progress has not been easy, for many people believe everything old is good and everything new is bad. That is not true. Neither is it true that all that is old is bad and everything new is good. We must be careful and thoughtful, we must compare the advantages and disadvantages before we embark on radical change. Otherwise we may find we have made a bad deal. When these programs are local we can see the costs, accept them if reasonable, reduce them if not. If change proves bad it is easier at the local level to turn back. At the national level things seem to get out of control.

With the depression, our people began to look to the Federal Government, to Washington. Action was taken by the Congress, most of which proved good, some of it bad. I dare say that most of us under the dire circumstances existing at the time would have gone along in the hope that Federal legislation and programs might help. With the development of such national programs, with the increase in the Federal money distributed over the Nation, I am afraid too many of our people have come to look to Washington as a place or a source of something for nothing. Washington, or the Nation, does have a place in our life. There are many problems that face us as a Nation. There are many things that we can do as a Nation, all regions working together, but Washington should be limited or should limit itself to those fields where the National Government can best do the job. That is true in order to have the best government. Washington is a long way from home. Our people cannot see to the same extent the use of tax money and the terrific costs of operation of the National Government as they can with local government, though they are becoming more and more conscious of it.

I am sure all elected representatives of the people want to do more and more for their people, the people they represent. There are many fine things we all would like to have. There are many additional programs that we would enjoy, if we but had the means. But you must bear this in mind: Neither Congress nor the President can do anything for you that you yourselves do not pay the bill. Every dollar spent for any worth-while program must be gotten from the people either in taxes or by the sale of bonds, and much of the money collected is spent in administration of the program so that you do not get back all that is paid in. I hear on many hands complaints at the Congress collectively for spending too much money, and yet practically all domestic expenditures have been made at the demand of the people. The annual appropriations are huge, but they are not more than half that which a great percentage of our people are urging, yes, many times, demanding. I can't help but believe these demands are made without realizing that Washington has nothing to give that it does not take from the people. Again, the Federal programs have gone so far that perhaps some may feel that since everyone else is getting Federal money he must get his share. That is a dangerous doctrine, one that could lead to the destruction of our Nation.

Today our Nation has a debt of more than $250,000,000,000 and according to the Department of Commerce the value of all our physical assets is only $145,000,000,000. For the past fiscal year we lacked $1,800,-000,000 meeting expenditures. That must be made up by more borrowing. Next year it has been estimated that we will lack $5,000,000,000 meeting expenses. True it is that approximately 65 percent of total expenditures is for national defense, for interest on our national debt, and for programs coming as a result of the war. Nevertheless it is money spent. It is true that we built up this huge debt in winning the recent war, the most disastrous war in all history. Since the war billions have been spent in trying to keep that war from having been in vain. Demands were made for billions for UNRR for relief of our late allies and others. Then billions were requested for the Marshall plan, to prevent the spread of communism and to give an outlet for many of our commodities and to restore trade. Millions were demanded for Greece and Turkey to prevent them from falling into Russian hands. Now we have the Atlantic Pact and demands for billions more from a National Treasury already exhausted. Each time we were led to believe, and we hoped, that this would be the last call. It seems to go on and on. When will it end? Where will it end?

While I voted against continuation of UNRRA and against the British loan, believing the first was not reaching its objective, and believing the loan to the British should be through the Export-Import Bank where we could control the use of the funds, the world situation being what it is today, we must support programs which we believe will help to prevent war. We have lost China, the situation is anything but good in Korea. Our last hope in the Orient seems to be Japan. Sometimes it appears that our international problems are insurmountable. Nevertheless, we all know we must provide for national defense, for without adequate defense we have nothing. At the same time we must realize that Russia could also destroy us by leading us to bankruptcy. Other countries have turned to us. If we become bankrupt there is no place for us to turn. We cannot, in my opinion, continue deficit spending. I have personally tried to provide by law that a percentage of the Nation's income be applied to payment on the principal of the national debt. So far I have been unable to get enough votes to pass such measure. If we are not to pay anything on the debt now, when can we expect to pay it? If we cannot pay anything on the Nation's debt our bonds will have to be refunded when they nature, at higher rates of interest, and an even larger share of the national income will have to be used to pay interest. We have reached the point where some actually urge deficit spending not to meet an emergency but as a cure. It is like saying we don't have enough wealth to go around so we will just distribute a little more debt among the people. Could anything be more unsound?

The people of Mississippi a year ago owed less money to banks and other lending agencies, owned their own homes to a larger extent, and had more money in the bank than perhaps at any time in our history. And yet this national debt is a charge against it all. Many of our citizens have bonds in the bank but frequently we overlook the

fact that each of us has his name signed to all the bonds that others hold, $252,000,000,000 of them. Along with this looking to Washington because of the Federal money which has been distributed from there and perhaps because of the world-wide unrest, our people look as never before for security. We have had the various social or security programs passed by the Congress at the urging of the people, from most of the Nation. Employers contribute, employees contribute, all contribute and the amounts are credited on the books of the Nation. Overly simplified it means that you and I are both worried about the future, about our security, so I promise to look after you and you promise to look after me, we hire someone to keep the records and be responsible for our contributions and we are both satisfied though we will each have less than if we had looked after ourselves, because we two have to support the fellow who keeps the books. If we would but think, this security is dependent entirely upon the solvency of the Nation, upon its ability to collect taxes from the people to pay to the people for their security when the obligations become due when that time comes will the Nation have anything with which to pay?

A few years ago there was a man in my area of the State who worked for a mercantile establishment. He was single, his tastes were inexpensive, so he drew out of his salary each month only enough on which to live, leaving the balance to his credit on the books of the store. This continued for more than 30 years. He built up thousands of dollars of credit on the books of the store. When age and illness overtook him and he called on the store for his money, the store couldn't pay. It went into bankruptcy. The security which he thought he had, for which he had worked all his life did not exist. He became dependent on the aid of his friends, and died a pauper. Is not there a real danger of that with regard to our Nation today?

We must not condemn the seeking for security nor provision for security.

The desire for security by the individual through the years has resulted in the purchase and ownership of property. It has resulted in the development of our natural resources. Such desire has resulted in the education of our children, in the payment for insurance, has resulted in savings, capital, which under our system has made our Nation great.

When we substitute for this effort by the individual, a law upon the Federal statute books with credits on the books of the Nation, when we ask that someone else provide for our security we become dependent upon the Federal Government and its solvency, just as my friend was dependent upon the solvency of his company.

Social security and social programs may be good when within our means to pay. But when promises are made and laws are passed, providing such programs beyond the ability of the Federal Government to pay, they are a cruel delusion, individual initiative is dimmed and the Nation loses the drive, the effort of its citizen. The citizen loses because in his time of need, the promises upon which he relied cannot be carried out.

There is another danger. If all the people look to Washington and get dependent on Washington, then some group will get into control of our Government and remain there as long as there is money to be had either from taxes or from the sale of bonds to be distributed to the people before election time. What will happen when there is not enough income from taxes or the sale of bonds to pay for these programs and to meet interest on the national debt? Is the national debt to be repudiated or paid in paper money? It has happened in other countries. Will whole industries be taken over, the proceeds used to carry on these programs? It has happened in England.

Probably our greatest danger is not in this threat of national bankruptcy, though there is real danger of that, but is in the effect such national policies have upon the initiative and the energy of our people, young and old. Why work and save if what you accumulate, if what you have, is to be taken and distributed to those who neither work nor save? We have the example before us of people more and more wanting the Government to take care of everything. Perhaps it is the troubled world situation, as one historian has described it, that makes people want to herd together. They devote themselves ardently to whatever there is left of the sheep in them. They want to walk through life together, nose to hip, following the course of least resistance. I believe the average American is sturdy and self-reliant. But among those of that kind we find about us too many who want something for nothing. They constitute what is known as the sucker list for every world saver or political campaigner. They want gain without risk, honor without sacrifice, authority without responsibility, security without denial, profit without investment, ease without hardship, prosperity without industry, production without toil, progress without pain. They do not want to pay. But they do pay and unless those who are strong today hold back this trend I fear for the future of our Nation. The American people must realize that the Federal Government is our Government, that it has a real place in our scheme of things. But it must be kept in that place. We must be sure we are getting our money's worth for the people must foot the bill.

All recognize that we have an obligation to care for the sick, the aged, and national programs are in line to enable people to help themselves. No one would return to private roads, to toll roads, to private schools. We would expand the REA and good roads, improve our schools, increase our markets, increase and improve our homes and our living. We would meet our responsibility, but we must retain to the local government those things that can best be done locally and require the individual to do those things that he should do for himself. Then leave to the National Government only those things that can best be done by all the territory of the United States working through its duly elected National Government, for the National Government can give nothing that it does not collect, and much is lost in the process. With each and every national program, not only will ge have higher taxes if there is not Federal control, there is at least Federal regulation, for Federal funds are always provided upon terms and conditions, resulting in the loss of more and more freedom for the individual and more and more dependence upon the Government.

In spite of all the problems facing us we in Mississippi have a wonderful opportunity, and we should use it. We have the great oil development of the last few years. We are rich in other natural resources. We have greatly increased our manufacturing, our industry, which gives us diversification. We are rapidly reaching the place where we no longer have to send out our raw materials for manufacture and pay heavy freight bills when our own raw materials are sent back to us as finished goods.

For the first time since the Civil War we have the capital for our own development. Let us not trail off after new programs from Washington which may seem to give something for nothing, but by application we must continue to develop Mississippi ourselves. Truly I believe our present and future is brighter than that of most any State in the Union. We can make that future even brighter by our own efforts.

I am glad you invited me here to honor our home owners on this day of Farm and Home Week, for there rests the real bulwark of the American Nation. Perhaps he has had to borrow his down payment and perhaps he has to have time to pay off his mortgage, but it is his to have and to control. A home, however humble, not quarters furnished by the Government with tax money where the period of stay is determined by some elected or appointive official who may control his votes, but a home, title to which is in his own name, his place, one he can improve, a place that is veritably his castle. To a large degree, our farm and home owners are the ones who believe that they themselves can better their capacity, and that only what they do with themselves will result in bettering their situation. As someone has said they are the ones who are wary of benefits that do not benefit. They are the ones who realize that a 30-hour week doesn't necessarily help the one who has it but helps the one who works 40, 50, or 60 hours a week or until the job is done. Whether they farm, teach, or run a machine, they are the ones who give more than the job demands, and thereby find themselves in demand.

There are many problems that beset the Nation today, but the farm and home owner, the man who earns and pays for his place, who respects his debts and who provides for his family, is not one of them. There is no worry with any of us that there is any communism there. We don't have questions raised as to his patriotism. We would continue the Farmers Home Administration and the Federal Housing Authority and other programs which help folk to help themselves. We would continue more good roads, schools, rural electricity; yes, through the instrument of Government because it can best be done that way, but not as a gift but on a sound basis with full pay for services rendered. Our home owners, the real backbone of democracy, independent, yes. He wants to do for himself. He can retire at night with a contentment of a job well done, with a family reared to look after themselves and if those of our people can only control we need have no fear of the future, though our problems be great. With God's help they will see to it that we remain strong. I salute the farm and home owners of Mississippi and the Nation.

Financing of Domestic Mining Ventures

EXTENSION OF REMARKS

OF

HON. WESLEY A. D'EWART

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 9, 1949

Mr. D'EWART. Mr. Speaker, under leave to extend my remarks, I include a resolution adopted by the advisory committee of the Helena, Mont., loan agency, addressed to the Reconstruction Finance Corporation, with reference to financing domestic mining ventures.

The unfavorable position in which the domestic mining industry finds itself as the result of recent administration policies and other factors beyond the industry's control requires corrective action. The mines and mining subcommittee of the Committee on Public Lands has made a lengthy and detailed study of the matter and advanced its suggestion in the form of a bill, H. R. 976, and other bills, which await consideration by this body. The suggestion of the Helena advisory committee also deserves the earnest con-

sideration of those concerned with the future of our mining industry:

At a meeting of the advisory committee of the Helena Loan Agency held at the office of the agency on July 20, 1949, the mining situation in Montana and in the West was discussed at length. It was forcibly brought out in this discussion that present economic conditions, with sharply reduced prices for nonferrous metals, with continuing high wages and high costs for supplies and equipment, together with the heavy taxes, have seriously reduced prospecting and small mine development, and have even caused many mines in Montana and throughout the West to cease development and operation. In view of the vital need for prospecting and development of small mines, which will over a period of time develop some substantial mining operations and provide the necessary supply of strategic metals for the protection of the national economy, it was considered essential that some means be developed of financing mining development in Montana and in the West, and a resolution was unanimously adopted, as follows:

"Whereas it has been well established over all the history of mining in the West that reasonable financing by risk capital of mining prospects and small mining projects will in time create a number of substantial mining operations producing large amounts of nonferrous metals; and

"Whereas present economic conditions and heavy taxes make such risk capital largely unobtainable from private sources; and

"Whereas the Reconstruction Finance Corporation has as one of its specific objectives the financing of small borrowers, and since present restrictions and regulations in force in the making of mining loans make it practically impossible to negotiate mining development loans: Now, therefore, be it

"Resolved, That Directors of the Reconstruction Finance Corporation be requested to liberalize the policies of the Reconstruction Finance Corporation in the negotiation of mining development loans, to provide risk capital for the development of mining properties in the West, and that they liberalize rules and regulations to make possible the ready negotiation of such mining loans when the physical characteristics of the property for which applications are filed indicate further development is warranted. The negotiation under such liberalized procedure would be highly constructive to mining development, and is of vital importance in the security of the Nation in providing increased production of strategic metals. It is urged that if further legislation is necessary to permit the more liberal negotiation of mining development loans, that the Directors of the Reconstruction Finance Corporation appeal to Congress for such specific legislation as may be necessary; it is further

"Resolved, That copies of this resolution be sent to the Directors of the Reconstruction Finance Corporation, the congressional representatives from Montana, and to RFC agencies in other western mining States.

"A. T. HIBBARD,
"Chairman, Advisory Committee."

Gabrielson Well Qualified for His Difficult New Job

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 9, 1949

Mr. WOLVERTON. Mr. Speaker, it is important there should be at all times a two-party system in this Nation of ours. The position of chairman of the national committee of either of the established parties is one of great responsibility. The person occupying such a position must possess not only outstanding ability, vision and courage, but also rare tact and tolerance toward the varying viewpoints that arise for the solution of the many problems that confront us today.

I am confident that the Republican National Committee has made a wise choice in the selection of Guy George Gabrielson as chairman of the committee. He possesses the qualifications to carry on and fulfill the duties of the high office for which he has been selected. His selection is not only an acknowledgement of his personal ability, but also an honor to the Republicans of New Jersey.

As part of my remarks, and in accordance with the unanimous consent granted, I herewith include the following editorial published in the Courier-Post newspapers of Camden, N. J., on Monday, August 8, 1949:

GABRIELSON WELL QUALIFIED FOR HIS DIFFICULT NEW JOB

This State has furnished a new national chairman to the Republican Party in the person of Guy George Gabrielson, of Bernardsville, lawyer, industrialist, and erstwhile member and speaker of the assembly.

Gabrielson's selection to succeed Representative HUGH D. SCOTT, JR., of Pennsylvania, has not taken place under the happiest of auspices. He was elected without a single vote to spare over the two other contenders, and the committee conclave at Washington gave little evidence that the intraparty feuding between conservative and liberal wings is likely to end soon or that the much-needed formulation of party policy to bring harmony is in prospect.

Apparently the new chairman was elected largely by conservative votes and the faction aligned with Senator TAFT, although some members of the Old Guard such as Owlett of Pennsylvania were to be found in the ranks of his opposition.

In his final address as chairman, SCOTT told the committee that if the GOP does not soon win some national elections, we will be face to face with the liquidation of the Republican Party as a force in national affairs, and pleaded for unity and harmony, with an end to quarreling and useless recriminations.

Every wise Republican leader must agree, and Gabrielson sounded the right note by stating that he intended to act as an impartial presiding officer apart from factions or groups, with the ambition only of building a united, harmonious, driving, and progressive organization.

Gabrielson has many qualifications for his task, including time and money.

A native of Iowa who moved to New Jersey after serving in the Army in World War I, he quickly built up a highly successful law practice and is a director of numerous corporations. He served 4 years in the legislature in the late twenties and has been prominent in State politics for many years. He was elected to the national committee in 1944.

He was endorsed for national chairman, a few days before the committee met, by Governor Driscoll and Senators HENDRICKSON and SMITH, although the endorsements were not made public until he appeared to be the probable selection.

Now 58 years old and, if not a millionaire as reputed, at least more than ordinarily prosperous, Gabrielson is a graduate of the University of Iowa and Harvard law school, a polished, urbane speaker and accomplished politician. He has the knack of getting along with others and of making many friends and relatively few foes.

Not many men would have been anxious to take over the job Gabrielson has accepted. For it is one of exceptional difficulty. It is only proper to wish him well in it.

Military Assistance Pact

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 9, 1949

Mr. LODGE. Mr. Speaker, when the Secretary of State, Mr. Dean Acheson, testified before the Foreign Affairs Committee on July 28 on the military assistance program I requested information regarding military assistance rendered to foreign countries since VJ-day. I did this because I wanted to establish the necessity for this legislation in view of the fact that substantial quantities of arms and equipment have been transferred to certain countries since VJ-day without specific legislative authorization.

While I approve entirely of the transfers made, I thought it important to clarify this situation.

I also asked the Secretary of State whether section 4–B of the proposed legislation creates a revolving fund.

I am inserting the answers which I have just received from the State Department to these questions:

AUGUST 8, 1949.

The Honorable JOHN DAVIS LODGE,
House of Representatives.

MY DEAR MR. LODGE: During your questioning of the Secretary of State on July 28, on the military assistance program, you requested information (1) on military assistance rendered to foreign countries since VJ-day and (2) whether section 4 (b) creates a revolving fund.

I am enclosing copies of the statements on these matters that we are including in the record.

Sincerely yours,

ERNEST A. GROSS,
Assistant Secretary.

(Enclosures: 1. Section 4 (b). 2. Military assistance rendered in foreign countries since VJ-day.)

REPORT ON MILITARY ASSISTANCE RENDERED TO FOREIGN COUNTRIES SINCE VJ-DAY

The following qualifications of the report should be noted:

(a) The data generally includes only combat material; i. e., arms, ammunition, and implements of war as defined in the President's Proclamation 2776, dated March 26, 1948. In some cases, however, it has not been possible to exclude military equipment not strictly definable as combat material.

(b) Although not included in this report, military equipment other than combat material has also been supplied to foreign governments under various congressional authorities; e. g., trucks, military clothing, communications equipment, etc.

(c) No attempt has been made in this report to distinguish between combat material transferred to foreign governments for the specific purpose of augmenting the military establishments of those governments

and that transferred for other purposes; e. g., for internal police purposes for demilitarization and use in the civilian economy (generally, ammunition).

Military assistance has been extended to foreign countries under the following procedures:

(a) Direct sales of United States military surplus.

(b) Transfers from either military surplus or Government stocks but financed or facilitated by special congressional authorization.

(c) Transfers from Government stocks under the plenary powers of the President.

It should be noted that military assistance within the meaning of the statement in the preceding paragraph is considered to embrace generally only combat material (arms, ammunition, implements of war). In some cases, however, it has not been possible to exclude from the data in this report military equipment not strictly definable as combat material.

A. DIRECT SALES OF UNITED STATES MILITARY SURPLUS (SEE TABLE A)

This Government has continued to dispose of United States military surplus to foreign governments under the authority of the Surplus Property Act of 1944 (Public Law 457, 75th Cong. 2d sess.) as amended. These sales have consisted of limited quantities of aircraft, weapons, vessels, ammunition, and spare parts therefor, which in most cases were needed by the recipient countries for the replacement or maintenance of United States equipment already in their possession. A number of sales involved large quantities of ammunition sold for scrap or salvage purposes. Information on sales under this authority is identifiable in the attached table by the term "P. L. 457" in the last column, and reflects sales completed through May 15, 1949.

Iran: Sales of surplus United States military equipment have been made to Iran under the general authority of the Surplus Property Act of 1944, and have been facilitated by funds made available by Public Law 785, Eightieth Congress, second session, which, among other provisions, provides funds for defraying expenses for the care, handling, and disposal of surplus property abroad. Data reflected in the attached table under this authority are as of May 15, 1949.

Korea: Under the authority of the Surplus Property Act, this Government has transferred to the Government of the Republic of Korea, approximately $40,000,000 in military equipment and supplies. Of this amount, which is based on acquisition cost, approximately $13,000,000 has been for vessels for the Korean Coast Guard, while the remainder has consisted principally of equipment and supplies, including small arms and ammunition, for the Korean Army and police. The transfer of this material has been effected without monetary compensation in consideration of other benefits derived.

B. TRANSFERS FROM EITHER MILITARY SURPLUS OF GOVERNMENT STOCKS BUT FINANCED OR FACILITATED BY SPECIAL CONGRESSIONAL AUTHORIZATION (SEE TABLE B)

Greece and Turkey: Assistance has been rendered to Greece and Turkey under the authority of Public Law 75, Eightieth Congress, first session, and Public Law 472, title III, Eightieth Congress, second session (the Greek and Turkish Assistance Act of 1948). Information on sales under this authority is identifiable in the attached table by the term "P. L. 75 and 472" in the last column, and reflects Army shipments as of April 30, 1949, and Navy shipments as of May 20, 1949.

Latin America: In addition to sales under the authority of the Surplus Property Act, military assistance has been rendered to certain Latin-American nations under the specific authority of Public Resolution 83, Seventy-sixth Congress, third session, which provides the National Military Establishment with limited authority to assist the governments of American Republics to increase their military and naval establishments. Information in the attached table reflecting Army shipments under this authority is as of April 30, 1949; Navy information is as of May 20, 1949.

China: Under the authority of Public Law 512, Seventy-ninth Congress, second session, and following an agreement between the United States and China signed on December 8, 1947, there have been authorized for transfer to China on a great basis 271 naval vessels.

Under the authority of Public Law 472, title IV, Eightieth Congress, second session (the China Aid Act of 1948) there has been allocated to the Chinese Government $125,000,000 which has been used by that government for the purchase of aircraft and other military equipment from both Government and commercial sources in the United States.

The Philippines: In addition to direct sales of surplus property under the general authority of the Surplus Property Act military assistance has been rendered to the Republic of the Philippines under the specific authority of Public Law 454, Seventy-ninth Congress, second session (the Republic of the Philippines Military Assistance Act). Information in the attached table on Army shipments is as of January 31, 1949; Navy shipments include data through May 20, 1949.

C. TRANSFERS FROM GOVERNMENT STOCKS UNDER THE PLENARY POWERS OF THE PRESIDENT

The President, acting under his plenary powers as Chief Executive and Commander in Chief, for the purpose of protecting primary security interests of the United States, has authorized the transfer of combat material from United States Government stocks to France and Italy. The transfer to France under this authority consisted of certain spare parts and replacement items, excess to the needs of United States occupation forces in Germany.

The transfer to Italy consisted of small quantities of military equipment and supplies, primarily small arms and ammunition, which were needed to complete the reequipment of Italian security forces which had been rearmed mainly with surplus allied material in Italy. In authorizing this transfer the limitations imposed upon Italy by the Treaty of Peace were scrupulously observed.

TABLE A.—*Direct sales of United States military surplus under authority of Public Law 457*

Country	Procurement cost	Selling price	Type of equipment
	Thousands of dollars	*Thousands of dollars*	
Argentina	6,673	748	Aircraft, ammunition, small arms, explosives, artillery, spare parts.
Australia	4	----------	Machine guns. Part of bulk sale.
Belgium	44,845	[1] 210	Ammunition, armored vehicles.
Brazil	25,191	3,488	Small arms, ammunition, aircraft, artillery.
Canada	29,626	1,242	Aircraft, radar, light artillery, armored vehicles, spare parts.
Chile	22,265	1,647	Aircraft, ammunition, vessels.
China	102,072	[2] 6,740	Ammunition, aircraft, ordnance and Air Force matériel.
Colombia	7,570	632	Aircraft, armored vehicles, small arms, artillery.
Cuba	15,632	504	Vessels, aircraft, ammunition, spare parts.
Denmark	([3])	1,031	Vessels.
Dominican Republic	501	23	Vessels, small arms, artillery.
Ecuador	4,964	414	Vessels, aircraft, ammunition, spare parts.
Egypt	5,240	540	Vessels.
El Salvador	318	43	Aircraft, ammunition, spare parts.
Ethiopia	11	1	Ammunition, artillery.
Finland	[4] 2,911	190	Trawler and demilitarized mine sweepers.
France	[5] 116,720	10,527	Vessels, ammunition, aircraft.
Greece	15,050	1,960	Vessels.
Guatemala	[6] 2,343	20	Ammunition, artillery, aircraft, small arms.
Haiti	319	34	Aircraft, small arms, ammunition, vessels.
Honduras	92	6	Small arms, artillery, ammunition.
Iceland	85	----------	Aircraft matériel. Part of bulk sale.
Iran	26,469	[7] 5,298	Ammunition, small arms, aircraft parts, artillery.
Italy	[8] 141,357	[8] 22,125	Vessels, aircraft, ammunition, explosives, tanks.
Korea	40,000	([9])	Small arms, ammunition, vessels, miscellaneous ordnance matériel.
Mexico	21,286	644	Aircraft, armored vehicles, vessels, small arms, artillery, spare parts.
Netherlands	7,216	680	Aircraft, vessels, small arms, ammunition, spare parts.
Norway	[4] 7,739	169	Vessels, ammunition.
Paraguay	16	7	Aircraft, spare parts.
Peru	13,870	1,021	Aircraft, vessels, small arms, artillery, spare parts.
Philippines	634	340	Small arms, ammunition, aircraft, spare parts.
Poland	2,600	240	Demilitarized mine sweepers.
Portugal	2,500	562	Aircraft, spare parts.
Sweden	7,632	1,758	Aircraft, ammunition.
Switzerland	6,903	549	Aircraft, ammunition.
Turkey	24,748	1,161	Vessels, armored vehicle parts.
United Kingdom	[4] 70,410	[10] 100	Miscellaneous military equipment.
Uruguay	6,801	831	Aircraft, ammunition, vessels, small arms, artillery, spare parts.
Venezuela	9,339	983	Aircraft, ammunition, vessels, small arms, spare parts.

[1] Includes a large quantity of surplus ammunition for demilitarization, 50 percent of the profits therefrom to accrue to the United States.
[2] Includes $3,736,604 in military surplus financed by Chinese Government from the $125,000,000 grant authorized by the China Aid Act of 1948.
[3] Captured enemy equipment.
[4] Plus captured enemy equipment.
[5] Plus unestimated value of ammunition included in bulk sale.
[6] Includes Army and Air Force equipment valued at $2,041,000 transferred gratis due to reverse lend-lease credit built up by Guatemala.
[7] Facilitated by funds made available by Public Law 785.
[8] Data not complete, since certain figures with respect to aircraft matériel, aircraft, and ammunition are not available at this time.
[9] This transfer was effected without monetary compensation in consideration of other benefits involved.
[10] Plus portion of proceeds included in bulk sale.

TABLE B.—*Transfers from either military surplus or Government stocks but financed or facilitated by special congressional authorization*

UNDER PUBLIC LAWS 75 AND 472

Country	Authorized	Shipped	Type of equipment
	Thousands of dollars	*Thousands of dollars*	
Greece	295,510	270,562	Army and Air Force equipment.
	Unknown	11,358	Navy equipment, including vessels.
Turkey	103,331	87,651	Army and Air Force equipment.
	Unknown	13,840	Navy equipment, including vessels.

UNDER PUBLIC RESOLUTION 83

Argentina	1,709	1,412	Army and Air Force: Ammunition, small arms, explosives, artillery, spare parts.
	2,333	2,333	Naval ordnance.
Brazil	135	135	Do.
Chile	28	28	Do.
Dominican Republic	41	41	Do.
Haiti	166	166	Do.
Mexico	246	246	Do.

MISCELLANEOUS TRANSFERS

Country	Procurement cost	Selling price	Type of equipment	Authority
	Thousands of dollars	*Thousands of dollars*		
China	141,315	(1)	Naval vessels	Public Law 512.
	(2)	25,000	Wide range United States military equipment left in west China by United States troops.	Military operations.
	(2)	None	Ammunition abandoned to Chinese Government by U. S. Marines in north China.	Do.
	694,700	(3)	Ordnance and aircraft matériel, vessels, tanks, miscellaneous service equipment.	Post VJ lend-lease.
	17,667	(6)	Ordnance and other supplies	Sino-American Cooperative Organization.[7]
			$125,000,000 disbursed to China for direct procurement or through U. S. Government agencies.	Public Law 472.
Philippines	72,556	1,875	Army and Air Force equipment	Public Law 454.
	59,129	(8)	Navy equipment, largely vessels	Do.

[1] Grant basis.
[2] Unknown.
[3] Plus 5.16 billion Chinese dollars. Includes US$5,000,000 in bulk sale agreement.
[4] Includes $336,000,000 in services, the largest part of which involved the movement of Chinese armies by air to reoccupation assignments.
[5] Under negotiation.
[6] Services.
[7] Transferred in exchange for services by U. S. Navy under Sino-American Cooperative Organization agreement.
[8] Gratis.

Section 4 (b) of the proposed legislation creates a mechanism for the disposition of property or money received from foreign countries in connection with the operation of the military assistance program.

Such money or property may be accepted by the President either as payment for particular items of assistance so that the money or property may be said to be the proceeds of a sale to a foreign country. On the other hand, money or property may be received not in payment for particular items but as part of the general scheme of mutual aid.

If money is received merely as general mutual aid, without relationship to specific items transferred to the other country, such funds will be covered into the Treasury as miscellaneous receipts and are not available for the purposes of the program. The same disposition will be made of the proceeds of the disposal of any property received as general mutual aid. However, the President is not required to sell such property, but may transfer it directly to the armed services, without any charge to the armed services appropriation.

If money or property is received in direct payment for particular items of assistance, money, the proceeds of the property, or the property itself may be used to reimburse the armed services for the items transferred out of their stocks. If such funds are not used as reimbursement to the armed services for items drawn from their stocks, they remain available for the purposes of the program until spent.

Youth's Answer to Farm Problems

EXTENSION OF REMARKS

OF

HON. CLYDE R. HOEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 9 (legislative day of Thursday, June 2), 1949

Mr. HOEY. Mr. President, I ask unanimous consent to have inserted in the Appendix to the RECORD two farm essays: one by Buster McLain, of Mellow Valley, Ala., who won the first prize; and the other by Miss Blevyn Hathcock, of Oakboro, N. C., who won the second prize.

Both these essays were written by young people, and were awarded these prizes in the contest for essays on rural life, conducted by the Southern Agriculturist, of Nashville, Tenn.

Recently these two prize winners visited Washington, accompanied by Mrs. Milbrey Frazer Covert, the charming and efficient youth director for the Southern Agriculturist; and they visited the Agriculture Committee of the Senate and other places of interest in the Capitol.

These essays indicate the fine thinking of young people engaged in farm work.

There being no objection, the essays were ordered to be printed in the RECORD, as follows:

PRACTICAL AID TO THE SOUTHERN FARMER

(By Buster McLain, Mellow Valley, Ala., first prize)

Why was the South called the Nation's No. 1 problem in 1932? We have a mild climate, many natural resources, and our soil will compare favorably with any in the world.

I will try to give my explanation as to why unfavorable conditions exist, and my solution.

Before 1860 the southern farmer was the richest farmer in the Nation—possibly the world.

At the close of the Civil War, with the breaking down of the plantation system, the freeing of the slaves, and the appearance of the carpetbaggers, came the temporary death of economical, progressive farming in the South.

Many believe that the solution to problems facing the southern farmer will only be found as we advance in education and receive more help from the Federal Government. I am certain Federal control or Federal aid on a large scale is not the answer.

The solution I see to these southern problems lies in inspiration through leadership, neighborly demonstration, and competition. We all know that successful farming is possible in the South because we have thousands of examples of it. Most of these successful farmers, however, we find in groups. Many attribute this to the fertility of the soil, or the exceptional opportunities that are found in certain localities. I attribute it to inspiration through leadership, neighborly demonstration, and competition.

When an unsuccessful farmer lives near another farmer who carries on a good farming program it arouses his curiosity. He observes and inquires how certain jobs are done. The good farmer is merely demonstrating to the unsuccessful farmer. Finally the poorer farmer asks himself, "What does his farm have that mine couldn't have?" He begins to copy his neighbor's program, to ask him questions, and soon the all-out production wheel is really turning on his farm. Other farmers of that nonprogressive section begin to open their eyes to opportunities on their farms. On and on the cycle goes, until every farmer in that community is a "top-notch, on-the-ball" farmer.

Farmers of other sections continue to be unprogressive because they do not have a model, an inspirer, or enough competition. Inspiration through leadership, neighborly demonstration, and competition is the important method of education which will build and maintain our South in its solid agricultural future.

YOU, YOUR FARM, AND YOUR FINANCE

(By Blevyn Hathcock, Oakboro, N. C., second prize)

The solution to some farm problems? Perhaps the lack of that solution is the answer to the question in our minds as we see the spectacle of an abandoned farm—erosion, uselessness, defeat. What is wrong? Surely it isn't that the farmer chose to trade his independence and freedom for a job in a factory, or the clean air and spaciousness of 50 acres for a back yard twice the size of a handkerchief.

It is that he failed to recognize his job as a business. He had no goal and was just managing to eke out an existence. The problem arose when his children wanted to go to

college, or the buildings needed repairs. He had no overhead. What was he to do? Give a mortgage on his farm? Or get a job in a factory where there would be no taxing of his mentality and the pay would come regularly? He chose the latter.

The big problem on numerous southern farms is finance. Farming is a business—a year-round business—and must be regarded as such for success. Just as a businessman takes inventories of his assets and liabilities, the farmer must see the assets and liabilities of his farm and plan in a way to make them profitable to him.

Soil is gold—the backbone of any farm. It is opportunity within itself. Give it a fair chance by nourishing it with legumes and fertilizers. Care for it by terracing, strip-cropping, and crop rotation.

Put 2,000 pines on that treeless slope that has grown up in a profusion of broom straw and briars. Have the natural swamp surveyed for a farm fish pond.

Take a broadminded view. Don't depend on one- or two-row crops. Diversify. Remember that there is always a demand for poultry and dairy products.

Put every single quality of your farm to work for you.

Keep records so you will know whether or not a project is paying.

It is true that all this cannot be accomplished in 1 day or maybe even a couple of years. It takes perseverance, integrity, and work.

You can afford to send your children to college. You can afford to take a vacation, and you can afford the time for a little wholesome recreation. You can have modern conveniences and repair your buildings and paint them. You can put some money in the bank.

Realize success with the whisper of the wind in the pines you set out, and the tugging of a 6-pound bass on your line. Realize success with the knowledge of security. Get a vision. Plan systematically. Work. The sky's the limit.

The Marshall Plan in Norway

EXTENSION OF REMARKS

OF

HON. JAMES P. KEM

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Tuesday, August 9 (legislative day of Thursday, June 2), 1949

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the RECORD a letter written by Mrs. Helen Sheldon, of Field Point Park, Conn., and published in Greenwich Time of Greenwich, Conn., on August 4, 1949. I commend the letter to those who may be interested in a first-hand account of how the Marshall plan is working in one of the participating countries at the present time.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

After 2½ months of living with Norwegian and English people we are getting a good, clear view of the situation here and it is nothing like we expected.

When we left home in May, the newspapers were full of the glowing success of the Marshall plan, and from the viewpoint of European politicians it certainly is. They are having a wonderful time with the money, spending it on fancy welfare projects and paying the salaries of millions of fussy little government officials who are busy tying people up in more red-taped regulations than Americans ever dreamed of, even during the war.

The plan has accomplished one good thing in Norway—there is no unemployment. But if that gives you a picture of a horde of contented workers busily reconstructing bombed houses and battered roads, put it out of your mind. Labor has slowed down to a snail's pace. When we were in Norway 2 years ago an 80-mile stretch of highway from Oslo to the Swedish border, as vital as the Boston Post Road, was under repair. It is still being repaired. Exactly the same piles of stones are in exactly the same places, exactly the same spring busters knock your car apart, and exactly the same catty little group of workmen stand around not even bothering to hold their picks and shovels.

As for new houses to replace the ones that were bombed out of existence, no one in Norway expects to live long enough to occupy them. The reason for this state of affairs in a country that is supposed to be fighting for its economic life is that the Labor government, up to its neck in Marshall plan money, is not going to fire a faithful voter no matter how lazy he is. There is no point in firing him anyway because he goes at once on a lavish dole that amounts to nearly as much as his wages and the same thing happens if he goes on a strike. Meanwhile, the plan money dribbles away with nothing to show for it.

As for the American way of life versus communism, the Labor government is just as communistic as the Russian except that it is not as belligerent and bloodthirsty. By taxation, nationalization, and regulations everybody in Norway is being reduced to the same dead level of monotonous poverty. Thus, food is miserable, much poorer than when we were here 2 years ago before the plan started, and their clothes are worse.

To have a little more money than the next fellow is undemocratic. Department-store owners are being put out of business by the permit system. For instance, all cotton goods must be imported but the Government refuses to give the shop owners the permit to import it. So the owner has nothing to sell and goes slowly broke while it is almost impossible to buy a shirt, sheet, or towel in Norway.

Americans who prattled happily about building up our foreign market with plan money might also consider the car situation. Very few Norwegians can afford cars now even if they could get permits to buy them, which they can't. After a few more years of democratic leveling, no one will be able to buy one.

A demented propaganda is putting a quaint twist on the word "democratic." We were leaving Oslo by plane at 6 in the morning and thought it would be a good idea to order a taxi the night before. We were told that our order would not be accepted because it would be undemocratic to give us a priority over some flap brain who wanted a taxi at the last minute.

The plan saved Norway temporarily from starvation and misery, there is no doubt about that. But Americans who think they are paying for a permanent improvement are not getting their money's worth. The men who could organize business recovery are being firmly suppressed. Recently a group of American newspapermen arrived and businessmen all over the country hoped for a chance to tell their story. They never got it. The visitors were snatched off their government plane by government officials, whisked around on a carefully conducted tour, and sent off with only a slim and fuzzy picture of what's going on.

If Americans want the plan to work they had better hustle some smart organizers over here in a hurry. The present system is just as sensible as having the Community Chest funds administered by members of the Boys Club.

Yours cordially,

HELEN SHELDON.

Grasshoppers in Oregon

EXTENSION OF REMARKS

OF

HON. LOWELL STOCKMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 9, 1949

Mr. STOCKMAN. Mr. Speaker, under leave to extend my remarks, I wish to include an article of the Associated Press in the Klamath Falls News-Herald of July 29, 1949. Two-thirds of the horde of grasshoppers in Nevada have now invaded Lake and Harney Counties in the district I represent in Oregon. They have infested 3,000 square miles in the West, and unless we are ready to fight them early next spring when they start hatching, they will get beyond control. I believe that every Member of the House and the Senate will be interested in this article as it shows clearly the serious menace of the grasshopper infestation. It is as follows:

NEVADA GRASSHOPPER HORDES POUR ACROSS BORDER INTO LAKE, HARNEY COUNTIES, BUT END IN SIGHT

RENO, NEV., July 29.—Nevada's tremendous horde of grasshoppers is about through for this year, but from now on you can call them Oregon's grasshoppers.

Federal entomologists returned from another survey of the locust-stricken area with the report that two-thirds of the horde has migrated across the Nevada-Oregon border this summer into Lake and Harney Counties.

But that is about as far as they're going this year.

"Most of them are in Oregon now, but they are pretty well spent," reported W. M. Mabee, United States Bureau of Entomology representative for Nevada.

"They are losing their strength and can't fly into the prevailing winds any more," he said. "They are dying off pretty fast, and by the middle of August there shouldn't be a hopper left in the area."

That doesn't mean, however, that the grasshopper plague is at an end for good.

The hoppers, or, more technically, locusts, lay millions of eggs before they die. From the eggs will hatch enough grasshoppers, unless next spring's control efforts are successful, to cover even more than the 3,000 square miles they infested this year.

Next spring's big battle will tell the story as to whether the hoppers will continue on their Oregon journey. Federal, State, and private resources will be mobilized for a concentrated 5-week fight against the hoppers as soon as they start hatching, between April 15 and May 1.

Egg beds already have been plotted and will be mapped minutely this winter. The campaigners will have only 5 weeks to get their killing work done, because about 5 weeks after hatching the little hoppers sprout wings, and from then on they are impossible to control.

When they are on the move, they are so dense that a man has to cover his head as they roar across the land. Experts reported that when this year's horde was at its migratory peak, the roar of wings sounded like a distant waterfall.

Presently, about two-thirds of the horde is in Oregon. The major concentration, Mabee said, is in the Hart Mountain antelope refuge, extending some 15 miles north of the refuge headquarters, overlooking Warner Valley. Mabee said he doesn't believe they will get down into the valley this year.

He was accompanied on the latest inspection tour by Frank Cowan, of the Bureau of Entomology's research division at Bozeman, Mont.

Over-all, the hoppers are 65 miles into Oregon, covering an area of about 65 miles by 20 miles.

Just how far they have gotten into California is not known definitely here.

The last Mabee saw of the California-bound hoppers several weeks ago, they were pretty thick across the Nevada-California line in northern Lassen County. Some of them were known to have made their way about 15 miles into California last year.

Just how much damage the grasshoppers have done in Nevada, Oregon and California this year, no one here is willing to estimate.

They have eaten the foliage from thousands of range bushes, leaving only the naked stalks. Whether this brush will revive next year is not known.

The most damaged ranges are in northern Washoe and Humboldt Counties of Nevada, and Lake and Harney Counties in southern Oregon. That area is sometimes called wasteland but Mabee sputters at that term.

"It depends upon your point of view," he said. "If you are sitting in the middle of an orchard, that country up there may look like wasteland, but to a cattleman that is pretty darned good range."

White Paper on China

EXTENSION OF REMARKS
OF
HON. JAMES P. RICHARDS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 9, 1949

Mr. RICHARDS. Mr. Speaker, under leave to extend my remarks, I include a very able and timely editorial from the Washington Post of August 8:

THE CHINA STORY

The 1,054-page white paper on China is the story of American officials who sought unavailingly to frustrate the slow and interrupted course of a revolution, the roots of which go back a hundred years. All of these officials are men of good faith. All of them were actuated by patriotic purpose. Yet the failure of mission after mission either to prevent civil war or to help Chiang Kai-shek lick the Communists has been attended by dissensions in our domestic politics which have been shameful and divisive. The reason is that bipartisanship in foreign policy has never extended to China. Governor Dewey, searching for an independent foreign policy, adopted Chiang's China, and he and the Republicans used Chiang as a stick with which to spank Harry Truman. One result was that the State Department got itself imprisoned in the interparty squabble; many of our diplomats found themselves branded and smeared as members of a red cell that existed only in Republican imagination. Nor was this slur wholly partisan. In the propaganda aimed at discrediting the State Department the critics have been assisted by a swarming and influential lobby of mixed Chinese and American composition equipped with ample funds which belonged properly to Chinese reconstruction.

A panorama of the personalities in charge of our China policy is unfolded in this report, beginning with General Stilwell. Stilwell reported that Chiang Kai-shek had become a hostage of the forces he manipulated, and he meant evil forces. Succeeding events—up to the time that Chiang's nominated successor, President Li Tsung-yen, actually pleaded with Ambassador J. Leighton Stuart to restrain Chiang from interference and blamed the Chiang regime for failure to make judicious use of American aid—vindicated the Stilwell judgment. Never can there have been such a story of monumental stupidity, military incompetence, and political venality and myopia as is threaded through the crowded pages of this white paper. General Eisenhower once warned that you cannot cooperate with weakness. In the postwar story of China the United States sought to cooperate with moral turpitude (government corruption) and a moth-eaten administration. It was this decay that, after the collapse of negotiations for a Nationalist-Communist settlement, the United States tried to make a functioning and victorious regime, though none of the American representatives entertained the slightest notion that that regime had any popular support. The arms we supplied fell, or were sold, to the Communists, and not one battle was lost for lack of arms.

This is a depressing record of American futility. It should wind up the nonsensical assumption that, short of losing ourselves in China, we could have changed the course of events. It should equally put a quietus to the suicidal campaign to induce us to indulge in what the State Department calls the "incalculable risk" of stopping events which are now rushing to a climax. What American policy started out to do before it bankrupted itself in a wretched military intervention was to aid Chiang in solving the Communist problem by political means, which was the stated object of Chiang's own policy. He and nobody else was responsible for this policy of the popular front. Not only General Marshall, but all the Americans before and after him, notably General Hurley, worked at it. The policy was doomed to failure because revolutionary forces were at large and because of the profound mistrust that both sides entertained for each other.

The first cause is scarcely mentioned in these memoranda; the second preoccupies most of the memorandists. It is revealed, contrary to general supposition, that long before the war with Japan was over, Chiang had left the job of winning it to the United States and turned to preparations for a reckoning with the Communists. The account of General Marshall's ceaseless toil at mediation is truly heartbreaking and will remind the student of China of a similar stint by Britain's General Gordon in the T'aip'ing rebellion. The integrity of the position of General Marshall, as of General Gordon before him, was constantly betrayed. Marshall was Kiplingesque in his hope, and the fine austere quality of the man is the only jewel discernible in the dross and disillusion of this packed history.

As for the dross, this unhappy episode in our foreign relations—which has left us with a tarnished prestige in the eyes of the Chinese people—could have been underlined by details of the vast sums which Chinese leaders were banking abroad while they were appealing for and getting vast sums for China from the American taxpayers. General Wedemeyer seems to have had the data about these funds, but on grounds that they came to him in strict confidence refused to yield the information to Chiang Kai-shek. Yet General Wedemeyer was in favor of bigger and better aid—that incalculable risk—as well as of an impracticable scheme for putting Manchuria under UN trusteeship. Here for the first time is the Wedemeyer report. It was for China's sake that the report was not released, for, of course, publication of the idea about Manchuria would have hurt China's pride. Wedemeyer's strictures on Chiang and the gang around him are as acid as any in the white paper. No missioner indeed hides the unholy graft that he and the others encountered in trying to help Chiang. It went merrily on under ECA, and William R. Matthews, shrewdest of recent journalistic wanderers in Asia, reported on the very day of the issuance of this white paper that he had found ECA goods for China on sale in Siam.

The sorry tale is one of sweat and tears and treasure expended in this vainest of vain projects of saving China. Let bygones be bygones (even the avowedly unfortunate failure to consult China over the Yalta deal on Manchuria) and let us, for a change, concentrate or a pro-American policy in respect to far eastern turmoils. Events are moving fast; our Americans are in jeopardy from the natural and intervention-created xenophobes in China, and we must now think of looking after our Americans instead of our Chinese.

Opinions Concerning a National Minimum Wage Law

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 9, 1949

Mr. O'SULLIVAN. Mr. Speaker, in connection with the remarks which I made in the debate on the Lesinski bill, H. R. 5856, in the Committee of the Whole, I called attention to the fact that I would cause to be placed in the Appendix of today's CONGRESSIONAL RECORD a telegram and a statement which I referred to at that time.

I believe that these documents present the viewpoint of the workers much better than the champions of the workers have done to date, and I now set them forth for your reading and study.

This morning I received the following telegram, which I will quote in part, from J. S. Potofsky, president of the Amalgamated Clothing Workers of America:

Sporadic wage cuts in some unorganized plants have already taken place. If a higher minimum wage is not enacted, more wage cuts in the lowest paid industries will follow. The old trend of unfair competition in blighted areas, and starvation wages, which the Fair Labor Standards Act was intended to prevent will be upon us. Our group numbers 350,000 members of the Amalgamated Clothing Workers of America, employed in the men's clothing and cotton garment industries, and allied fields, * * *

Thirty-five years of industrial experience convinces us that the minimum wage tied to changes in the cost of living will lead to business uncertainty and contribute to intermittent unemployment. It will also lend Government sanction to wage cutting for lowest paid workers who can least afford it if cost of living drops slightly.

On August 5 last I received the following statement from Solomon Barkin, research director, Textile Workers Union of America, and chairman, CIO Committee on the Revision of the Fair Labor Standards Act:

A statutory minimum wage which would fluctuate with changes in the cost of living would defeat the very purpose of minimum wage legislation. A "floor" which moves up and down in mechanical response to a mathematical index is no floor at all. The first requirement of a minimum wage is that it provide a stable base which workers and employers alike can look to for their protection. Workers need protection against reduction in living standards and employers

need protection against unfair competition based on wage-cutting. Only a stable floor under wages can provide this protection.

The arguments of the proponents of a flexible statutory minimum wage can be summarized as follows:

1. Since the minimum wage is based on the cost of a minimum budget, it should be adjusted to changes in cost.

2. If substantial price reductions occur, the maintenance of a relatively high minimum wage would cause unemployment because of unfavorable cost-price relationships.

The first of these arguments falls of its own weight since the premise on which it is based is invalid. The cost of a minimum budget today is far above 75 cents per hour. Even the WPA emergency budget—which was designed to cover the minimum needs of a typical family of four for only an emergency period during which adequate sustenance could not be provided—would now require an hourly wage of $1.07 for 2,000 hours a year. Moreover, the cost of a minimum health and decency budget for an employed woman living alone is far in excess of the income derived from wages of 75 cents per hour. Eleven such budgets of recent date are available; they were prepared by State labor departments for use in determining State minimum wages for women workers. The cost of all of them at present is well above 75 cents an hour.

Thus, even a substantial decline in consumer prices would merely enable the workers who receive 75 cents per hour to come closer to meeting the cost of a minimum health and decency budget. It is hardly conceivable that prices could drop so far in the foreseeable future as to make 75 cents an hour a luxury wage.

The second of the above arguments is reminiscent of the debates of 1937 and 1938, when the theoretical economists predicted dire consequences from the adoption of the 25 cents minimum wage. Hundreds of thousands of workers were to be thrown out of work because their employers would be "squeezed" between high costs and low prices. Actually, employment did not decrease; on the contrary it increased in the months following the effective date of the act (October 1938).

Employment in manufacturing increased by 80,000 between mid-October and mid-November. By May of 1939, 680,000 more workers were employed in industry than in May of the previous year.

The fact of the matter is, the maintenance of a floor under wages at a time when prices are dropping is a potent stabilizing force in the economy. Keeping wages up means keeping purchasing power up. More jobs are created as purchasing power is translated into consumer expenditures. Only the premiums are being cut out of high prices.

In his midyear Economic Report, transmitted to the Congress July 1949, President Truman said, "Business cannot be prosperous unless the purchasing power of workers is maintained. While price reductions are desirable, they should not be attained at the expense of wage cutting." This statement recognizes the crucial importance of maintaining wages in order to reduce unemployment. The argument that a minimum wage of 75 cents would increase unemployment is preposterous because it ignores the salutary effects of a floor under wages on purchasing power and consumer expenditures.

A "flexible" statutory minimum wage would tie the minimum wage to just one of the factors on which it is based (cost of living) and ignore all of the others. No consideration would be given to the growing productivity of our economy; the profitability of our industries; the general movement of wages under collective bargaining; the expansion of our national income. The wage levels of the dominant American industries which are over $1 per hour, President Truman has said, "the life and spirit of the American economy is progress and expansion." (Midyear Economic Report of the President, July 1949, p. 5.) Are we to deprive the lowest paid of our workers from all of the benefits of our progress? Shall we freeze their pay to the present cost structure so that any of the benefits of the technological progress which may be passed on in the form of lower prices will be taken out of their meager earnings? Shall the men and women who are unable to protect themselves against exploitation be denied the protection of law?

Wage cutting in line with living costs reductions is not typical of the collective bargaining relationships in American industry. A provision which tied wages to the cost of living in the 1948 General Motors Corp. agreement with the United Auto Workers, CIO, was greeted with amazement and disapproved by the American labor movement. This principle has since been disavowed by the UAW, which decided in its 1949 convention to cancel the escalator clause when the General Motors agreement expires in 1950. Shall this principle—which is repugnant to American labor generally—be applied only to the lowest-paid of our workers?

The complications which a constantly changing minimum rate would introduce into the administration of the act would make it impossible to achieve an effective degree of enforcement. Many violations of minimum wage laws and orders are unintentional even under a long-established minimum wage. The confusion which would be created by frequent changes in the minimum would confound any attempt to enforce the act and leave the question of good faith always in doubt. Thus the entire attempt of the Congress to provide protection to workers and employers through fair labor standards would be nullified by this device. The movement for a "flexible" minimum wage tied to cost of living is nothing but a back-door attack on the effectiveness of the minimum wage itself. It would favor the unscrupulous employer and discriminate against the fair one.

State Department's White Paper and the Wedemeyer Report

EXTENSION OF REMARKS

OF

HON. JOHN DAVIS LODGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 9, 1949

Mr. LODGE. Mr. Speaker, many Members of Congress are seriously disturbed by the grave crisis in the Far East. While there is no easy solution, we can be sure of one thing and that is that a do-nothing policy will result in the eventual victory of the Communist forces over this entire area.

Constantine Brown, a celebrated student of foreign affairs, has written a most interesting article in connection with the State Department's white paper and the Wedemeyer report. I am inserting in the CONGRESSIONAL RECORD this article which appeared in the Washington Star.

THIS CHANGING WORLD—FAILURE OF UNITED STATES POLICY IN CHINA BLAMED ON THOSE WHO IGNORED WEDEMEYER

(By Constantine Brown)

Publication of the long-suppressed Wedemeyer report on China in the State Department's white paper yesterday makes clear the terrific burden of responsibility for the failure of the American policy in China which falls on those who made the decision to ignore the recommendations in that report.

Lt. Gen. Albert C. Wedemeyer determined on his 1947 mission for President Truman that there was an imminent threat of China becoming wholly Communist-dominated, particularly if Manchuria were permitted to fall to the Reds; that a Communist China would be inimical to American strategic interests; that a 5-year program of moral, economic and material aid should be undertaken (strengthening military assistance already going to the Nationalists) and that this aid program should be coupled with drastic reforms both in the Nationalist government and the Army which would solve to some extent China's age-old problems of graft and inefficiency.

The State Department's white paper gives no indication that any effort was made to put the Wedemeyer recommendations into effect, but makes it clear that the standing policy of wait and see was persisted in up to the present time, when the Nationalist government has practically collapsed before the Communist advances.

FINDINGS KEPT FROM PUBLIC

Not only were the recommendations ignored as a course of policy for the American Government, but the American people were denied factual knowledge of General Wedemeyer's findings by official suppression of the report, on the excuse—which friends of Nationalist China will find pretty thin—that the regime of Chiang Kai-shek would have been offended seriously by General Wedemeyer's proposal for a trusteeship over Manchuria as a means of halting Communist expansion.

General Wedemeyer believed that China could be saved, and he made proposals which, if carried out, at least would have stemmed the tide of communism in this vast part of Asia if it did not completely extirpate it. His report shows his belief that our full-scale support to the Nationalists might impel Russia to even greater assistance to the Communists than she had been giving, and the consequent possibility of a third world war. This, in his view, was a calculated risk which should be taken in order to check the advance of a system which had demonstrated its complete incompatibility with the western nations.

The President's special investigator expressed the view that the loss of Manchuria to the Communists would mean the creation of a new Soviet satellite and the eventual fall of all China to Moscow's puppets. This is now in process of being accomplished. Manchuria fell to the Reds long ago and is firmly in their grasp. But since then they have taken Peiping, Nanking, and Shanghai, and now are on their way to the conquest of all south China, whose metropolis is Canton.

COURSE NOT EXPLAINED

Secretary of State Acheson does not explain why the State Department, even after receiving General Wedemeyer's report, pursued its same old course of obstructing every proposed measure to help the Nationalists.

That is where the burden of responsibility will fall. To send a top-ranking general, who was familiar with the Chinese situation from World War II days, to make an investigation and then to ignore completely his advice in favor of the slanted opinions of State Department functionaries ranks as a major blunder which cannot be explained away.

The question now is whether it is too late to do something about the Wedemeyer report and to apply the recommendations he made. It is too late, of course, to do anything about Manchuria, but it is not too late for the United States, with its resources, to step into the Chinese picture and to throw its weight against any further progress by the Communist armies.

As Mr. Acheson makes clear in his letter of transmittal of the white paper to President Truman, American policy is being reworked to fit into the realities of the far eastern situation. If this means adoption of the policy of active help to those Chinese who will fight the Reds—and General Wedemeyer makes it clear that the Chinese people do not want communism—the new policy will be applauded on all sides. If it means simply vague moral support to passive resistance the policy will fail.

A Shocking Document

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 9, 1949

Mr. CASE of South Dakota. Mr. Speaker, I have just completed reading a shocking document. It is a report of an audit of the United States Maritime Commission for the fiscal year 1948 by Comptroller General Lindsay C. Warren. It was sent to the Senate on July 11.

The report deals with the subsidies paid to three shipping lines—American President Lines, Ltd., American Export Lines, Inc., and United States Lines Co.—for the construction of six passenger ships. These subsidies are entirely proper under the law, the Merchant Marine Act of 1936, which provides that ship operators shall receive Government help in order to keep the American flag in foreign commerce. But the subsidies have been paid out in a manner and for purposes never dreamed of by Congress when it passed the law.

This law sets up two kinds of subsidies to be paid by the Maritime Commission—construction-differential and national defense subsidies. Construction-differential grants are designed to place United States shipowners on a par with their foreign competitors through payment of the difference between United States and foreign construction costs. These subsidies are limited by law to 33⅓ percent of the actual cost of construction, except that they may go as high as 50 percent if there is convincing evidence that the actual differential between United States and foreign costs is that great. In addition, in the case of national defense subsidies, the Maritime Commission is authorized to pay the entire cost of any features put in the ship for possible military use.

The mechanics of the subsidy arrangement are that the Maritime Commission contracts with a shipyard for the construction of a vessel, and then it turns around and contracts at the same time for the vessel's sale to a shipping line at its estimated foreign cost.

Of the six ships involved in Warren's report, two are large passenger vessels for American Export Lines, three are combination passenger and cargo vessels for American President Lines, and the sixth is a large trans-Atlantic superliner for United States Lines.

The six ships are costing the Maritime Commission a total of $150,000,000. The Commission has sold the ships to the three lines for $70,000,000. Who pays the balance of $80,000,000? The taxpayers, of course. They are handing over to the shipping lines a subsidy of 53 percent of the vessels' cost.

Merely on the face of it, this cost distribution would call for serious scrutiny. But then Comptroller General Warren goes on to say of the Government's $80,000,000 gift:

> Not less than $25,000,000 must be considered as excessive due to various irregular procedures, inaccurate calculations, and unjustifiably liberal interpretations of statutory language.

Let me emphasize that isn't just an off-the-cuff opinion of mine—it is the sober and expert judgment of the Corporation Audits Division of the General Accounting Office.

Comptroller General Warren says the law controlling the payment of subsidies has been ignored:

> The Commission has authorized construction subsidies in excess of 33⅓ percent on evidence which in our opinion falls far short of the standard of convincing evidence required by the Merchant Marine Act, and without the Commission itself having heard the evidence. * * * Furthermore, it has utilized its authority to pay the entire cost of national defense features as a vehicle for paying subsidies in excess of those authorized by the act.

Mr. Warren describes exactly how the Commission went about safeguarding the Government's money:

> The subsidy calculations were made * * * primarily on the basis of fragments of information supplied by the Commission's foreign representatives and foreign publications. Moreover, in interpreting this information and filling in the gaps, the Commission's staff made a large number of assumptions without foundation and its calculations were replete with errors and inconsistencies.

To cite a few of the Commission's many blunders:

First. It assumed, without any basis whatever, that foreign and domestic material costs were equal. Actually, the only available data indicated that some foreign costs were 60 percent above domestic.

Second. An error of $1,500,000 was made as a result of using shipyard bids which were not comparable.

Third. An error in simple arithmetic changed a cost figure by 5 percent.

Mistakes like these, said Warren, "completely discredit the subsidy calculations." Even the Commission's staff admitted that one important calculation was worthless. It is incredible that $80,000,000 would be doled out in such a helter-skelter way, as though they were lollipops.

For an eye-opening example of the Maritime Commission's prodigality let us look at the 2,000-passenger trans-Atlantic superliner for the United States Lines Co. This will be the greatest passenger ship in the world, exceeding in speed, comfort, and service any vessel now afloat. I am proud that this marvel will fly the American flag, and I recognize its importance to American commerce and national defense. But I am not proud of how the ship is being paid for.

The superliner will cost the Maritime Commission $70,373,000. The Commission has contracted to sell it to the United States Lines Co. for $28,087,000, or 40 cents on the dollar. That is the kind of shiny bargain I would like to find in my own shopping, but it is no bargain to the taxpayers who have to make up the other 60 cents—or a subsidy of $42,286,000.

The sale price of the superliner purports to be based chiefly on British costs. Yet the amount charged the United States Lines Co. is not more than half the cost of replacing either of the British *Queens*—the *Queen Mary* or the *Queen Elizabeth*. Furthermore, the superliner is designed not only to compete with the *Queens*, but to be superior to them, especially in speed.

Authoritative estimates of the replacement costs of the *Queens*, including one by the Maritime Commission's own foreign representative, all range between $50,000,000 and $65,000,000. Thus, I cannot see how the superliner could possibly be built in England for $28,087,000—the Maritime Commission's sale price. I would like to hear the Commission's explanation of how that miracle could be performed.

Obviously, the Maritime Commission has been flouting the law. It has ridden roughshod over the specific wishes of Congress. It has been guilty of perfectly amazing largesse with the taxpayers' money. Perhaps the Maritime Commission, in writing its own laws, has been seeking to set an extravagance record for other Federal agencies to shoot at. If so, it should feel quite satisfied with the $25,000,000 irregularity discovered by Comptroller General Warren.

But the taxpayers do not share the Commission's feelings. The Warren report has shown that a careful watch must be kept on the Commission's spending. I think, as does the Comptroller, that one way to do this would be to require that the Commission hold open hearings before awarding subsidies for ship construction. All the evidence upon which the subsidies are based should be presented there. I also think that the cost of ship features included for military purposes should be paid from Navy Department appropriations and should be permitted only if the features had no commercial utility. No longer would the Maritime Commission be able to concoct the national-defense device in order to shell out even larger sums of Federal money.

Hoover Commission Recommendations

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 9, 1949

Mr. PATTERSON. Mr. Speaker, the Connecticut Council of Women's Republican Clubs, at a meeting held on July 19, 1949, adopted a resolution calling for affirmative action by the President and the Congress in bringing about the governmental reforms embodied in the Hoover Commission recommendations.

I submit the text of the resolution for the enlightenment of the Members—in the realization of the salutary effect such reforms will bring about:

Whereas the bipartisan Commission on Organization of the Executive Branch of the Government has presented to the Congress of the United States its report, which is virtually a blueprint for progress and prosperity through economy; and

Whereas Connecticut, with over 100,000 of her workers out of jobs, is feeling the pressure of economic unrest caused by the burdensome tax levies, the bureaucratic interference and the strangling red tape of our topheavy and unwieldy Government structure; and

Whereas these obstacles to job-producing business and the resultant dangers to enterprise and investment have acted as a deterrent to new business and production by established firms, in a state where unemployment is reaching new peaks daily and where the bankruptcy rate is three times what it was a year ago; and

Whereas the President of the United States has publicly stated that he would extend his full cooperation to the end that the objectives sought may be obtained; and that the present organization of the executive branch, in many instances, imposes handicaps on effective and economical administration and must be brought up to date, and that the "task * * * is to crystallize this general belief into concrete and wise proposals for action": Therefore be it

Resolved, That the members of the Connecticut Council of Women's Republican Clubs, fully recognize that to translate into action the recommendation of the bipartisan Commission will cut the costs of government, reduce personnel, eliminate duplication of effort, promote the freedom of the individual stimulate production and employment, inspire business competition and bring the cost of production and resultant prices down within the reach of mass purchasers as an aid to mass production and full employment: and be it further

Resolved, That we urge the Connecticut Members of the Congress of the United States to endeavor to obtain prompt consideration of the recommendations of the commission as submitted to the Congress and to support all necessary and proper legislation which will most effectively carry forward these recommendations, and that we urge the President of the United States and his various subordinates in the executive department to cooperate and act at once to put into effect the findings, reforms and changes recommended by the Commission on Organization of the Executive Branch of the Government.

Election of Roybal—Democracy at Work

EXTENSION OF REMARKS

OF

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 9, 1949

Mr. HOLIFIELD. Mr. Speaker, it is not commonly known, but within the city of Los Angeles and its immediate environs is located the second greatest Mexican-American population center in the world. Mexico City, Mexico, is the No. 1 population area in this respect.

We are proud of the contribution which American citizens of Spanish and Mexican descent have made to the cultural, social, educational, and political life of our community. Within my congressional district many thousands of these good citizens reside. One group in my district which has organized and achieved a highly respected position among my constituents is the Community Service Organization. I want to compliment them on the active leadership they are taking in assisting their fellow citizens integrate themselves into every phase of our community.

In the recent Los Angeles City councilmanic elections, one of our highly respected American citizens of Mexican ancestry, Edward R. Roybal, was elected to the important position of city councilman of the ninth district, which is located in my congressional district.

Mr. Roybal was supported not only by Spanish-speaking citizens but by other good American citizens of Jewish, Negro, Japanese, Italian, and Philippine descent. In fact, people of all races and religions joined together to elect this fine young man to one of our most respected civic positions.

The election of Edward R. Roybal proves that the people of my district respect the intrinsic worth of the individual; it also proves that the majority of the people of my district are willing to rise above the prejudice, intolerance, and bigotry which precludes an individual from leadership because of his racial origin or his religious affiliation.

I am proud that the people of my district really believe in democracy. I am proud that they have demonstrated their belief by joining together and electing this worthy young man to public office. I am confident that Edward R. Roybal will acquit himself with great honor to the citizens of all races and religions, who have shown their trust and confidence in him by electing him to this position of leadership in our community.

Mr. Speaker, under leave to extend my remarks, I include in the RECORD, an editorial which appeared in the Los Angeles Daily News of July 1, 1949, on the subject matter of my remarks:

THE LATIN ONE-EIGHTH

Today something new is being added to Los Angeles' city government.

When Edward R. Roybal takes office today as Ninth District city councilman, he becomes the first local citizen of Mexican-American ancestry to win councilmanic stature in more than 70 years.

Roybal's election also says that after nearly a century of civic silence Los Angeles' Spanish-speaking citizens—who constitute the city's numerically biggest minority—have raised their voices clearly and unmistakably. The estimated 250,000 residents of Mexican-American descent—those who comprise the Latin one-eighth of metropolitan Los Angeles and make it the largest Spanish-speaking city outside of Mexico—are learning to make use of the most effective channel open to democracy's cultural minorities—the ballot. Through this channel they may succeed in drawing the attention of the rest of the community to the needs of their neglected neighborhoods.

More importantly, the rising political consciousness of this Latin one-eighth promises the beginnings of a valuable bridge-building job.

During the modern years of Los Angeles' emergence as the third city of the Nation, a gulf has separated most Mexican-American citizens from the rest of the community. This gulf has been caused by many things: by language, by custom, by educational and economic factors. It's a gulf that isn't going to be bridged overnight. But a start toward bridging it at its most strategic point can be made and is being made at the precinct polling place. For it is here citizens begin to achieve social recognition and municipal attention on a par with that accorded other segments of the population. It is here citizens start to become responsible coparticipators in the life stream of the community and Nation.

What happened May 31 in Los Angeles' populous east side ninth councilmanic district was no accident. Councilman Roybal received more than 20,000 out of a total of approximately 35,000 votes cast because 2 years ago a civic-minded group known as the Community Service Organization set about to accomplish a task of social engineering among residents of the east side. In 6 months' time prior to the 1948 elections, the community-service group registered 15,000 Spanish-speaking residents and many other thousands from the Jewish, Negro, Japanese-American, Italian, Filipino, and Anglo neighborhoods of Los Angeles' most cosmopolitan area. What followed was a great upsurge of intergroup cooperation which rolled up a total of 138,132 votes for Richard Ibanez as candidate for judge of Superior Court Office No. 2 and gave to Jose Chavez nearly quadruple the 1946 votes cast for him in the fifty-first assembly district contest. Neither candidate was elected; but the way was paved, nevertheless, for strengthened future effort, as the Roybal election testifies. On May 31, 1949, the ninth district registered 7 percent more votes than any other district in the city.

The Community Service Organization is the local project of the Chicago-founded Industrial Areas Foundation. Established 10 years ago in the stockyards neighborhood by Bishop Shiel, head of Chicago's Catholic Charities, and G. Howland Shaw, former Assistant Secretary of State, the foundation went to work with adults in slum communities to solve the problems of juvenile delinquency. Most notable IAF innovation was the Back-of-the-Yards Neighborhood Council, a small, tightly knit citizens' group dedicated to neighborhood improvement.

In east side Los Angeles the community service people are furthering the back-of-the-yards objectives. And they seem to be proving, by orderly, democratic methods, that it's possible for any people, regardless of race, religion, or national origin to tear down the ripped and twisted remnants of the old barbed barriers of hostility and prejudice, walling off citizens of various religious and ethnic backgrounds—proving it's possible for people to go forth arm in arm and become sharing partners in all the manifold, rich experiences that make up the thing we call the democratic process.

Yes, something new has been added to Los Angeles' civic life. The municipal household has a brighter, more up-to-date look. And the local precedents shattered by Roybal's election indicate democracy is stepping steadily forward on the home front—that the distance of caste and culture is shrinking to fit the shrunken world.—R. E. G. H.

Youth in the Community—Our Christian Responsibility

EXTENSION OF REMARKS

OF

HON. CARL ALBERT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 9, 1949

Mr. ALBERT. Mr. Speaker, I take great pleasure in calling to the attention

of the House an inspiring essay written by Robert H. Smith, of McAlester, Okla. The essay of this young man, who has just graduated from high school, was not only a State winner in the Oklahoma United Christian Youth Movement PARSHAD contest but in the national finals it was adjudged the top regional winner, one of six in the Nation, in a contest based not only on the essay itself, but also on the church, school, and extracurricular activities and a vocational plan of the author. The essay follows:

YOUTH IN THE COMMUNITY: OUR CHRISTIAN RESPONSIBILITY

(By Robert H. Smith, McAlester, Okla.)

THE CHALLENGE

Today our country faces the greatest challenge that ever confronted a nation. The answer that we make to it may well change the destiny of the world as well as the lives of the people involved. It is not one that can be fought with guns and tanks, but is none the less dangerous to our world's safety. I refer to the morally and physically decadent state of our Nation's youth, and that of every other nation existing today.

Boys and girls who should be in school walk the streets in search of excitment and action; pool halls are packed with youth who seek entertainment and companionship but who do not know how to find it elsewhere; over-crowded cities set the stage for gangs and mobs; wealthy, exclusive residential districts are sometimes so lacking in warmth and love that children will run away to find their lives. These are just a few of the situations which exist within our country and within our every communities. If unchecked this unrest and desire for fast living will undermine our Nation, making it easy prey for any conqueror. Something must be done and done immediately, or we must suffer the consequences.

Who are these young people to whom we refer? They are the boys and girls next door, your friends in another State, your brothers in a distant country. They vary in age from early childhood to maturity; that is, from the time they first begin to come into contact with other people and know what is going on in the world about them until about 23, or older in many instances. Each and every one of them must be reached and helped.

OUR PART

What can we do about these conditions, and what are our responsibiilties to these young people? The word "responsibility" carries with it a great deal of meaning. Its very definition indicates the seriousness of our work. We must feel deeply the sacred trust to which we commit ourselves. Certainly we must have enthusiasm and zest for our work, yet we must always remember that upon us lies the chance to redeem our youth and help them become useful citizens and personal witnesses for Christ.

In thinking of our responsibilities, we must not overlook those which we have to ourselves, to live our own lives in such a way as to practice what we advocate. We cannot gain the respect of anyone unless we ourselves live as an example for them. It is often a difficult thing to stand up for what we believe is right when the crowd is favoring something else. But if we had no problems as Christians, life would no longer be a challenge, and Christianity would be dead. None of us can ever reach perfection, yet it is this striving for it that builds in us character and strength. A strong Christian character is the first responsibility we have.

Using our personal Christian character as a basis, let us now look at our Christian responsibilities toward others, particularly toward the youth of our communities. No city, town, or village is free from some sort of youth problems. In small towns it may be finding something for young people to do at night instead of their loafing on the streets; in cities it may be creating new interests to replace gambling, drinking, and other vices. In the country, clubs may be needed to broaden boys' and girls' interests. No young person in our Nation is safe from temptation to do the wrong thing. Naturally those who have little or no home life are the ones who will give way first. Our responsibility to those youth is to remedy these and the many other things which contribute to their downfall. But we must offer them something with which to replace them, something which will help them to find themselves.

But there is a greater field than just that of our own communities. Today more than ever before, young people all over the world are confused, afraid, and bewildered. This has come about because of the great war from which we emerged only a few years ago, and the wars which continue in some countries today. It is no wonder that boys and girls turn to anything that offers them escape from horror and fear. The economic and political state of many nations today is also at such a low ebb that food, clothing, and shelter are difficult to find. And hungry people will serve anyone or anything that will feed them. The recovery plans cannot do everything. The church must go in and help these people to piece together their broken lives. There is a tremendous opportunity for Christian youth work.

THINGS WE CAN DO

By now we should have some idea of what our responsibilities as Christians are. First, we must live our own lives as much in accord with Christ's life as we can, making the most of them. Secondly, we must realize our responsibility toward others and do all we can to help those less fortunate than ourselves. Only in this way can we do our part toward making Christ's kingdom a reality.

What, then, are some specific things we can do to help us live Christ-like lives? Each person could make a list of his own, and no doubt each one would be different in some respects. But we can follow a few simple rules for daily life, such as these: practice the teachings and commandments found in the Bible; read your Bible often, and know how to use it; pray daily and spend a certain amount of time learning God's will for your life; think of Christ in your daily life and do everything you can to show Him your appreciation for His many blessings to you; stand up for your convictions no matter when or where the test might come; do not be discouraged, regardless of adverse conditions; be a personal witness for Christ; and always feel Him by your side. Whenever something comes up that you cannot quite solve, ask yourself, "What would Jesus do if He were in my place?" and the answer will be there. You cannot expect complete results at first; you must be patient and let God come to you slowly, yet ever so surely. Be patient and serve Him humbly, and you will not be disappointed.

But what about when we come into contact with others? Personal preparation is half of the job, but it must be followed up with practical applications of these principles. First, let us take our local youth. These are the boys and girls across the street, in the next block or on the other side of town, many of whom have never been inside of a church. They need the church badly. Even some of those who go to the various churches in town seem to be uninterested. All of these must be helped.

In an attempt to reach these young people, many churches have established missions in the slum districts of large cities. In addition to their regular activities, these missions frequently offer young people a place to go at night for recreation and relaxation. They do not limit themselves to entertainment and recreation only; they also give the young people something to do that requires of them the use of their time and skills. And there is religion also, beginning simply at first but leading to final acceptance of Christ as their personal Saviour.

Less impressive, but nonetheless important and effective are some other methods of winning young people to Christ. Most churches conduct periodical canvasses to bring into the churches boys and girls outside the regular groups. The churches of many cities sponsor youth rallies designed to unite the local groups in a closer bond of interdenominational fellowship. In the country, 4-H clubs and granges are doing much to help youth discover a place for itself in rural life. Boy scouts, girl scouts, campfire girls, and other such movements were organized specifically to give boys and girls something constructive to do, yet something that would afford an outlet for their energy and enthusiasm.

But there are responsibilities beyond our local communities. We must work for cooperation among all churches in our States and Nation. We must strive to make all men truly brothers, regardless of creed, race, or any other barrier. To be strong, our Nation must be united in a common basic faith. This can be accomplished only by sincere and consecrated devotion to the cause of Christ and an earnest zeal for His work.

Then there are still wider horizons to which we may look. Nearly every country in the world is in need of help today. We can send CARE packages and other relief supplies to those in other countries and contribute to the various restoration and reconstruction funds. Most churches have plans for rebuilding churches and bringing new life and faith to those who at the present have so little for which to live. We can correspond with young people in these countries and exchange information and ideas. The least that we who are so fortunate can do is to share our blessings with others who have not been so fortunate. Here, indeed, is a bountiful harvest for Christ that is waiting for the gleaner.

We have seen how we individually and corporately can do our part to help young people everywhere. But this is only the beginning; we must not hesitate but continue our work with undiminished energy. And we are not alone. Christ is beside each of us all of the time, speaking to us if we will but heed His words. Surely if each of us does his part, we will indeed be helping to fulfill our Christian responsibility to the youth in our communities.

Wartime Excise Taxes

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 9, 1949

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and table:

TWENTY PERCENT CABARET
TAX COMMITTEE,
Washington, D. C., August 5, 1949.

DEAR CONGRESSMAN: We have obtained the latest release in the collection of excise taxes from the Department of Internal Revenue as released on July 30, 1949, and attach same hereto for your immediate information.

You will note the tremendous sums listed in the decrease column on practically every item.

The diminishing returns as shown by this Government report alone should more than

justify the repeal or reduction of the wartime excise taxes.

In our own field, a number of well-known dining and dance rooms in connection with the hotel industry have closed in the past 60 days resulting in the additional unemployment of a great number of people.

We sincerely hope that you will support the passage of H. R. 3905 with its amendments, and also sign the discharge petition in connection with H. R. 2100, now pending at the Speaker's desk.

Very truly yours,

S. P. HAINES,
Special Representative.

Collections of internal revenue

Sources of revenue	Receipts for month of June 1949 (current collections)	Receipts for month of June 1948 (prior year)	Increase	Decrease	Receipts from July 1, 1948, to June 30, 1949 (current fiscal year)	Receipts from July 1, 1947, to June 30, 1948 (prior fiscal year)	Increase	Decrease
Manufacturers' excise taxes:								
Lubricating oils	$10,523,263.91	$6,448,139.00	$4,075,124.91		$81,759,611.97	$80,886,921.61	$872,690.36	
Gasoline	48,154,758.22	47,103,138.63	1,051,619.59		503,647,470.24	478,637,625.15	25,009,845.09	
Tires and tubes	12,082,442.83	13,678,938.36		$1,596,495.53	150,899,047.96	159,284,138.65		$8,385,090.69
Automobile trucks and busses	8,312,172.71	11,065,956.38		2,753,783.67	135,797,379.13	91,962,891.20	44,834,487.93	
Other automobiles and motorcycles	40,044,513.97	24,252,653.49	15,791,860.48		332,812,342.27	270,958,392.21	61,853,950.16

Address of Hon. Clifford Davis, of Tennessee

EXTENSION OF REMARKS
OF
HON. PAUL C. JONES
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 9, 1949

Mr. JONES of Missouri. Mr. Speaker, it was my pleasure a few weeks ago to attend a luncheon sponsored by the District of Columbia Division of the American Automobile Association on the occasion of the presentation to the District of Columbia of the grand award in the annual AAA national pedestrian contest.

The principal speaker on this occasion was our colleague, the Honorable CLIFFORD DAVIS, of Tennessee, my good friend, who, before his election to this body some 9 years ago, had attained national recognition as commissioner of public safety in the city of Memphis, Tenn., and who, throughout the years, has continued to enjoy an enviable reputation as an authority on safety.

Since many of our colleagues have never had the opportunity of listening to this forceful speaker, who, despite the fact that he has rendered a distinguished service to his district, State, and Nation, rarely ever takes the floor, but whose services are frequently sought by organizations who appreciate the wealth of information which he has gained throughout a career of service, I feel that

it will be not only interesting but informative to include in the CONGRESSIONAL RECORD the address which he delivered.

The address follows:

Thank you, Mr. Chairman, and you distinguished ladies and gentlemen.

Insofar as the FEPC Act has not yet become law, I think I can tell a story in reply to the introduction accorded me by the chairman.

Many years ago, as a young fellow, I was judge of a city court. In those days we tried a great many Negroes. On one occasion I had a Negro before me, and I said, "Hold up your right hand and be sworn, as all others have done who have gone this way before you."

I hear somebody laughing back there.

I said, "Do you solemnly swear the evidence you are about to give in this case will be the truth, so help you God?"

He replied, "Part of it is and part of it ain't."

That was the most honest witness I ever saw in my life.

I am not going to talk to you long. My devoted friend of many years, Washington I. Cleveland, wrote me a perfectly marvelous speech. I have reduced it by three-fourths. I got tired of reading it myself, and I knew you would be even worse off than I.

I am going to enroll in the Russ Young School of Oratory. I may be his only graduate. I never heard of anyone graduating from the institution, but it is grand to be here.

Some years ago my delightful colleague, Noble Gregory, from Kentucky, both surprised and amazed me when he said that all Congressmen were visitors to Washington, according to a man on the second row of the House floor. He inquired of me his name. Not being at all sure, I replied that I did not know. Whereupon he immediately suggested that the man was a tourist. Just as quickly, I said, "Noble, you know better than that. He would not have the privilege of the floor if he were not a Member." "Oh, but he is a tourist."

As a matter of fact, we are all tourists. Some just stay a little longer than others. So I have been a tourist in Washington for some 10 years. When we came to Congress, we bought a house out on Butterworth. That was just about the time when George Kenelpp was criticizing the city government so substantially about the handling of traffic. The Commissioners really put him in his place. They told George that if he had all of the ills, they would give him a chance to correct the problem, and accordingly gave him the job that he now holds.

That is one of the smoothest things Russ Young ever did—in other words, "jine 'em."

I told Toastmaster Tompkins that a moment ago, and he said that in the contracting business, when they get a tough inspector, especially if he is very, very tough, they hire him. So they hired George Kenelpp. Washington I. Cleveland is on Russ Young now. If he keeps up like he is going, we will find a place for him too.

I am delighted to be among such distinguished guests. I should like to go ahead and ad lib, but, Mr. Commissioners, you will pardon me because I was a police commissioner. I think a man should get some credit as he goes along. But don't let him die before you send flowers.

Major Barrett, my old friend was Ernest Brown. I am sorry he isn't here. He and I were contemporaries. That makes us oldtimers in the safety movement, but Major Brown, former Superintendent of Police, told me in 1940: "Cliff, we are bringing up a young fellow named Miller, and I think he has a long and honorable and successful career ahead of him."

Mr. Commissioners—and I wish you would stand, Inspector Miller—I want you to know that I have watched this man. In his quiet and efficient way, after a decade he is known as one of the country's finest recognized authorities in traffic.

You know he doesn't cry from the housetops. Mr. Justice Neilson and Mr. Justice Kronheim, and all the rest, it is the type of man and the type of character like Miller's, who does a job. I am proud of him, and I am proud as a resident of the District of Columbia that we have our traffic planning and execution in the hands of so able a man.

While I could say nice things about many present, I will get into the formal part of the speech that Washington I. Cleveland prepared for me.

There is an old Latin maxim: "Salus populi est suprema lex," "The safety of the people is the supreme law." That should be foremost in our minds today.

Senator, again I am about to depart from this prepared manuscript. Ladies and gentlemen, we are facing a rather serious situation in the country today. We owe $252,000,000,000. We voted an appropriation of $15,000,000,000 for the security of the country; almost $5,000,000,000 goes toward the Marshall plan; we have the Atlantic Pact, which must be implemented, and I am afraid we will be in deficit spending by the end of the year by about a billion, and at the rate we are going, with a reduced national income, we may have a deficit by next year of around $3,000,000,000. We want to do all of those things which will make for a better life, but can we do it all at once?

I simply throw that out to you. You can go just so far. When we figure the enormous cost of accidents, cannot all of us participate in a program of conservation to the end that we shall save the lives and dollars expended in needless accidents and at the same time use those lives and those resources in contributing to these programs in which we are so intently interested.

I am pleased to be able to congratulate the city of Washington upon winning this national award on pedestrian protection and pedestrian care and efficiency.

The city of Washington won eight grand awards last year. This shows good government. Give me a bad government and I will show you a city winning no awards.

Not content with winning the grand award for the 1947 national pedestrian protection contest, sponsored by the American Automobile Association, Washington has done it again by winning the grand award in this same contest for the year 1948.

If this were all, it would be a great achievement, but this is only a portion of what is coming to the Nation's Capital as the result of its outstanding record in the field of traffic safety for the year 1948.

Washington also won the grand award in the national safety council contest, and first place award for enforcement by the International Association of Chiefs of Police.

This celebration will have failed in its true purpose if we do not realize that the winning of this grand award was not a mere coincidence nor the result of exceptionally good luck. The winning of this award was the result of careful planning and energetic, intelligent administration on the part of all the agencies of government concerned with the administration of traffic law enforcement and accident prevention as well as the enthusiastic cooperation of the general public as a result of the excellent safety education program promulgated by such civic organization as the District of Columbia division of the American Automobile Association, the Commissioners Traffic Advisory Board, the Washington Board of Trade and the scores of other groups engaged in similar work all of which was made effective by the spendid cooperation and support of the press, the radio, the television.

It is impossible to enumerate all of the agencies and specific groups to whom credit is due for this achievement; in addition to the effective work of the police department, the traffic department, and the highway department.

Mr. Robertson, I pause here for a moment to tell you that I think, in sweet memory, of my grand old friend, Capt. H. C. Whitehurst, the late director of highways for the District of Columbia.

Credit is also due the corporation counsel and his assistants and the judiciary for the excellent administration of justice carried out by our traffic courts. The outstanding work of the schools—public, parochial, and private—in teaching traffic safety to our children, is well exemplified in the activities of the school safety patrols, sponsored jointly by the schools, the police, and the American Automobile Association.

This program has been so successful that for many years Washington has had an almost unbroken record of no accidents or injuries to the more than 100,000 school children going to and returning from school. These are but a few of the many groups, far too numerous to mention, whose interest in promoting traffic safety have contributed to the over-all results we are celebrating today.

While it is true our city has the outstanding safety record of any city in the country for the year 1948, a fact which we all deeply appreciate, there is still no real basis for complacency or satisfaction. Sixty-seven persons were killed in traffic in Washington during the year. Thirty-nine hundred injury accidents and about 9,000 property-damage accidents totaling at least $675,000. Insurance rates, based upon the financial losses which underwriters are required to pay, are higher than they have ever been and insurance companies have found it necessary to refuse coverage where persons under 25 years of age drive the car, in the case of persons with bad traffic records, and in the case of motorists over 60 years of age. So long as these conditions prevail we have no basis for being sanguine about the traffic-accident situation in Washington.

We, in the city of Washington, have by no means exhausted all the remedies available to improve the traffic condition of our community.

Our safety responsibility law is inadequate. It should be amended to conform to the uniform code. The neighboring States of Maryland and Virginia have modernized their safety responsibility legislation and a motorist from the District of Columbia who has a motor-vehicle accident in either of those States must meet the requirements of the more stringent laws, whereas Maryland and Virginia drivers who are involved in accidents in the District of Columbia are only required to comply with the provisions of the less rigid District of Columbia law. The difference between the two laws is that under the uniform code, all parties to a motor-vehicle accident involving a death, personal injury, or property damage of $50 or over, must show financial responsibility or their operators' permit and registration are suspended. Under the District of Columbia law in similar cases, financial responsibility is required only where a judgment has been secured and the defendant does not satisfy the judgment within 30 days. Although the original intent of this law was to eliminate from the highway the irresponsible driver who is involved in a serious accident, the law of the District of Columbia has the opposite effect, because a motorist who has been damaged by an irresponsible driver will not waste his time to secure a judgment against a person who is not financially responsible, and the irresponsible driver continues to operate his car.

Another remedy of which we in the Nation's Capital have failed to avail ourselves, pertains to the machinery for accurately determinin the degree of intoxication of a person charged with driving while under the influence of alcohol. Our courts will admit in evidence the results of tests made of specimens of blood, urine, or breath, from a person charged with drunken driving where there is an expert witness who will interpret the results of the test to show the degree of intoxication which the test discloses. Now it just so happens that Dr. Oscar B. Hunter, the celebrated pathologist, is the expert witness who has been donating his services in these cases for years. There are times, all too frequently, when Dr. Hunter is unable to leave his patients to come to court and testify. In such cases, the court will not ordinarily accept as evidence the results of the scientific tests and the defendant usually goes free. Legislation has been drafted by the Corporation Counsel's office which would establish as a matter of law the degree of intoxication based upon the quantity of alcohol found to be present in the specimen tested. If such a law were enacted, the court would take judicial notice of the degree of intoxication of the person whose specimen was tested. Such a law would take the guesswork out of drunken-driving cases and would result in convictions of the guilty and would prove the innocence of persons improperly charged. Since the use of alcohol tests have been used by the courts, convictions have improved but it is believed with the passage of the proposed law, the conviction rate will be substantially increased.

A third remedy for our traffic ills which has been tried out on an experimental basis, and has been demonstrated to be highly effective where used, is the program of driver education and training for high-school students.

Doctor, I know it takes money, but out of 16 high schools in the District of Columbia, only four are giving any driver education and behind-the-wheel training to students. In many communities the authorities have realized the advantages of such courses and have established them in every high school. The city of Cleveland has conducted such courses in every high school for a number of years. A study made of over 3,800 Cleveland high-school drivers, approximately one-half of whom had received this driver education and training, disclosed that the trained drivers had about one-half as many accidents as the untrained high-school drivers. Delaware is a State where driver training courses are conducted in practically every high school. Closer home is Montgomery County, Md., the county adjoining the District of Columbia on the northwest. In Montgomery County there is a course of driver education and training in every high school, both white and colored. About a year ago, when one of the county commissioners characterized driver training as one of the frills which should be eliminated from the school curriculum, the superintendent of schools asserted there was nothing being taught in the school system of Montgomery County that was more important than the courses of driver education and training.

Many years ago the American Automobile Association came forward with the proposal that one of the best ways to promote traffic safety was to teach beginning drivers to be safe, courteous, skillful operators of motor vehicles. They pioneered in this field and today, when practically every safety authority in the country is urging the expansion of this program, we find it in the President's third annual conference, and you and I participated in that program 2 years ago, with the President of the United States, and the conference convened here only this last week, made the program of driver education and training of high-school students one of its major objectives. The city of Washington cannot afford to lag behind in this all-important program. It is just as imperative that our boys and girls live to become men and women as it is for young people of other communities to escape the tragedies of traffic accidents and fatalities. "Teach them to drive" is a slogan that will go far to insure their future security.

There is another phase of the traffic problem in the city of Washington which baffles our highway authorities and which constitutes a challenge to the community. I refer to the abnormally high percentage of fatalities which occur among that portion of our population which approaching the sunset of life.

During the year 1947, 49 pedestrians were killed in traffic. Ten were between the ages of 60 and 70; 11 were over 70; and 6 were over 75. The group of citizens 70 years of age and older constitute 1 percent of our population. This 1 percent of our population over 70 years of age was involved in 23 percent of the pedestrian fatalities.

For the year 1948, 52 pedestrians were killed in traffic. Of this number, 7 were between 60 and 70; 14 between 70 and 80; and 2 over 80. You will note that 16 of these pedestrians were over 70 years of age. This means that the 1 percent of our population over 70 years of age was involved in 31 percent of the pedestrian fatalities. This is all the more significant when you realize that 52 out of the 67 traffic deaths for the year 1948 were pedestrians. If the elderly pedestrians were involved in fatal accidents in proportion to their percentage of population there would be only be one and a third elderly persons killed in 2 years; as compared with the 33 actual deaths. In attempting to solve this problem we are confronted with some baffling factors. The elderly pedestrian cannot see, hear, nor react as well as a younger person. An injury is far more apt to prove fatal. The difficulty involved is tragically illustrated by the story told by a young State trooper of the highway patrol. Driving into town he saw an old man walking in the roadway. The State trooper pulled up alongside the old man and said, "Dad, you better walk over on the edge of the road; it's pretty dangerous out here with all this traffic." "Son," said the old man, "I've been walking along this road since before you were born and I ain't goin' to stop now." A week later the old man was found lying on the roadway killed by a passing motorist.

If this contest, this pedestrian protection contest which the District of Columbia has just won, would stimulate interest in this problem and help solve this problem, it would make an even greater contribution to traffic safety than it has made to date. My own guess is that we will have to depend more upon the automobile driver than upon these elderly pedestrians if we are going to reduce the percentage of fatal traffic accidents among this 1 percent of our population which is 70 years of age or older.

Most any accident—fatal or otherwise—could be prevented if each driver and pedestrian would obey the Golden Rule "Drive or walk as you would have others drive or walk."

Emily Post, foremost authority on etiquette, wrote an article some time ago entitled "Mind Your Motor Manners" in which she pointed out that good manners on the streets and highways mean even more than correct social behavior—they mean the saving of lives. She wrote, "Nothing more clearly proclaims the quality of a thoroughbred than his skillful courtesy, which quite literally is life insurance to all whom he encounters on the road; perfect motor manners necessarily are acquired only by one whose skill at the wheel is outstanding." And I would like to add, a skillful driver never brags about getting out of tight spots; he stays out of them.

There is little or no evidence to show correlation of intelligence with safe driving. Persons with high I. Q.'s are not superior drivers; some contend they are less expert than the average intelligent driver.

It is apparent, too that most drivers are guided by emotions and attitude, instead of knowledge and intelligence. How to control emotional drivers and those with improper attitudes is the real problem today.

When the average person gets behind the steering wheel of an automobile something happens to his ego. He becomes power drunk. Most of us have committed acts—and still do—that would shock and disgust us if we saw another motorist do the same thing. We must curb our ego.

The first step toward being a safe, smooth driver is to have the right attitude—toward the driving rights of others, toward law enforcement, toward the pedestrian, toward the condition of the car, toward safety.

When you drive a car you are assuming a great responsibility—to yourself, to your family, and to your friends and neighbors. If you are to succeed as a smooth, safe driver, you must face this responsibility with the proper attitude.

We are all pedestrians at some time or another, but we must realize that not only do we have rights, but we have duties. Just as drivers have duties and must abide by certain rules and regulations, we, as pedestrians, have duties and pedestrian control laws which we must observe. We must remember also that they are promulgated as much for our protection as for our control. Laws are made to be observed, not to be enforced.

We all have a part in this traffic-control program, and each of us, as a pedestrian or a driver, has a definite obligation and responsibility to one another, as a good citizen, to do our part by obeying the rules of the game. It makes for the orderly movement of things and a much safer operation and everyone will profit by it. If drivers behaved as considerately when behind the wheel as they do in their homes. the accident rate would be cut to a mere fraction of its present proportions.

So then, I commend to you ladies and gentlemen, all of you distinguished, all of you successful, all of you having a very vital interest in the affairs of the Nation's Capital—I commend you the serious and sacred responsibility of continuing to do what you can to make that Capital City a safe place in which to live.

Washington I. Cleveland wanted me to close with a little story, a serious one, and I give it to you because without my knowledge, he was in the amphitheater on the same Easter morning with me.

Some years ago, on an Easter Sunday morning I went over to Arlington to attend the Easter sunrise service conducted under the auspices of the Knights Templar. During the war an English boy lived behind us, where we live on Butterworth Place, and I wanted him to see that scene. I took my boy, the youngest of my three children, with me. We got there very early, and fortunately we had a seat. The sun was rising in all of its beauty and the crowd swelled in. I am told by reading the papers the next day that there were some 35,000 of us there. As we sat there on that beautiful morning, we heard in the distance a military band playing that old familiar hymn known to all of us, Onward, Christian Soldiers.

I noticed that immediately to the right of the speaker's stand there was a vacant box. All of a sudden, an old soldier came in on the arm of a handsome military aide. I shall never forget that. His coat was much too large to protect the frail body on which it hung, and by the way, this was the last time this grand old soldier ever appeared in public. He came in and stood there. Quietly, all of us rose and that grand old soldier

looked over that great crowd and it seems that many minutes passed, but of course it was but a matter of seconds. He looked over the entire audience, and as he took his seat, all of us, just as quietly, took ours.

I pulled those two boys up close to me and I said: "Boys, you have been privileged to participate in a moving and dramatic historical event. That great old soldier was Gen. John Pershing, the general of our armies. We stood to honor him because of his great contribution to his country," and I said, "but in a moment we shall stand again, this time, however, we shall stand not to honor a great active old soldier, but we shall stand honoring the great Prince of Peace."

Ladies and gentlemen, with all the sincerity of my soul, I am happy to be here today to celebrate with you the evidence of the work well done in 1948, and may it ever be said of this Nation's Capital, that it is a safe city. I hope it shall be a cleaner city and I hope it shall in the future be a model city among all the cities of this earth, exemplifying the great principles of happiness and true enterprise and with a future and with an inspiration and with a challenge to all others to do likewise.

I apologize to you ladies and gentlemen for having spoken much too long. I did not intend to do it, but you are a great crowd and my fellow citizens, you have made me very happy. (There was loud applause.)

Investigation of Post Exchanges

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 9, 1949

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I include therein a recent editorial from the Boston Herald which very generously and thoughtfully comments upon the investigation by the Subcommittee of the House Armed Services Committee of post exchanges and related activities.

This editorial is one of many favorable comments which I have received since the close of the investigation evidencing approval of the work of the subcommittee in checking abuses of the post-exchange systems and securing remedial action by the armed services by which these activities may be continued without damaging and unwarranted impact upon our retail distribution system.

PHILBIN'S CLEAN-UP

The last place one would look for socialistic activities in the Federal Government would in the armed services. But Representative PHILIP J. PHILBIN, of Clinton, found it there and has just obtained agreement from the services to get out of the mail-order business and stop competing with private retailers. Good for the genial Representative from the Third District of Massachusetts.

As chairman of a House Armed Services Subcommittee, Representative PHILBIN found that during last year the services operated 215 commissaries, the equivalent of grocery stores, and did a gross business of $79,670,000 in the United States. In addition they ran 374 post exchanges and ships' service stores with a gross business of $251,388,000 and a net profit of $15,455,000.

To the extent that these operations were in competition with legitimate retailers they were grossly unfair. The service stores pay no taxes of any kind and in most cases their rent is paid by the Government. Most citizens, particularly those with members of their family in one of the services, know how easy it has been for unauthorized persons to take advantage of their cheap prices.

Under threat of legislative action, PHILBIN got agreement from the services to cut out their mail-order business, use more effective means to keep unauthorized customers out of these stores, and to close by the end of this year all commissaries in metropolitan areas.

For these and other improvements resulting from his investigation, Representative PHILBIN deserves a great deal of thanks, not alone from retailers. For everybody who benefited from the leaks in the service-store system was really being subsidized by everybody else.

Gift of Farm by Paul Mellon to the State of Virginia

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 9 (legislative day of Thursday, June 2), 1949

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a newspaper article from the Washington Post, describing a gift made by Mr. Paul Mellon, of Upperville, Va., to the State of Virginia, for the purpose of conducting a grass and forage crop research project under the administration of the Virginia Polytechnic Institute.

There is great opportunity in this field to improve the nutritious value of these crops, and I confidently predict that what Mr. Mellon has undertaken will result in great value to the farmers, not only in Virginia but elsewhere.

I also ask for inclusion in the RECORD of the remarks of the chancelor of the Virginia Polytechnic Institute, as well as the speech made by Mr. Paul Mellon in transferring the 420-acre farm to be used for this purpose.

There being no objection, the matters referred to were ordered to be printed in the RECORD, as follows:

(By John W. Ball)

MIDDLEBURG, VA., July 15.—Paul Mellon of Upperville, today gave his adopted State a 420-acre farm near Middleburg to be used for grass and forage crop research by Virginia Polytechnic Institute.

The gift includes this year's crops which Mellon has partly harvested, four houses and other buildings, all equipment and work stock so research can get going immediately.

The gift is about equal to an earlier gift of $125,000 by the late Andrew Mellon's son to help finance the grass research project.

Although not a native of Virginia, Mellon told a large audience at Middleburg, "during almost 15 years of residence here I have come to love this State. I wished to do something for it, and it occurred to me that anything I could do to improve Virginia's soil and to further the economic well-being of a large portion of its citizens would be fitting and most gratifying."

NEWMAN CONGRATULATES STATE

In accepting the gift Dr. Walter S. Newman, president of VPI, declared he wished "to congratulate Virginia for having such people and qualities that it attracts men like Paul Mellon to become residents."

Chancelor John R. Hutcheson of VPI related the advances Virginia has made in recent years in agriculture. "Potato yields have increased from 102 to 140 bushels to the acre," he said, "tobacco from 685 to 1,161 pounds, cotton from 259 to 422 pounds, peanuts from 810 to 1,208, wheat from 12 to 18 bushels, corn from 22 to 35 bushels, etc."

Dr. H. M. Young, manager of the VPI Experimental Stations, predicted Virginia's farm income will increase by $50,000,000 in 20 years.

Dr. Ray E. Blaser, former professor of agronomy at Cornell University, who will manage the project at the Mellon farm, explained the tentative plans for the operation, and took visitors on a tour of the place.

ADDRESS BY CHANCELOR JOHN R. HUTCHESON

Ladies and gentleman, to me this is a momentous occasion. We are met here today to inaugurate a program of research for which there is insistent demand and great need. If this research is done well it will mean much not only to every person in this audience but to every citizen of northern Virginia and every alert livestock producer in the Old Dominion. Indeed, if this project is properly supported and wisely conducted it will redound to the interests of livestock producers throughout the Nation.

There was a time in the history of this country when a successful farmer was defined as a man "who was early to bed, early to rise, work like h—— and economize." This is still a pretty sound formula for success in any business. But today a successful farmer is a man whose business is agriculture and who succeeds or fails in direct proportion to his willingness and ability to apply scientific techniques and sound business practices.

Some of our friends in other sections of the Nation are inclined to think of Virginia as a slow and backward State. It is not my purpose to either confirm or dispute this opinion. However, during the last quarter century I have kept in pretty close touch with what is happening in agriculture, and I am glad to be able to say that Virginia farmers have made more progress in crop and livestock production during the last 25 years than have the farmers of other southern States. At a matter of fact, their application of scientific techniques compares favorably with the record made by the farmers of our most progressive States. If there be those in this audience who doubt this statement I ask them to take a moment to look at the record.

During the last 35 years the acreage planted to alfalfa in Virginia has increased from less than 5,000 to more than 100,000, the acreage of lespedeza from less than 1,000 to nearly a half million, and the total acreage of all hay crops from 840,000 to 1,400,000. During this same period the use of lime for agricultural purposes has increased from less than 100,000 tons annually to more than 1,000,000 tons, and the use of fertilizers as topdressing for pastures from less than 1,000 to more than 100,000 tons annually.

This increased use of lime, legumes, and fertilizers has brought about an increase in the per acre yield of every important crop produced in this State in excess of the national average increase. Crop estimate figures for Virginia for the 5-year periods 1909–13 and 1944–48 indicate that the average yield per acre for potatoes has increased from 102 to 140 bushels, for tobacco from 685 to 1,161 pounds, for cotton from 259 to 422 pounds, for peanuts from 810 to 1,208 pounds, for wheat from 12 to 18 bushels and

for corn from 22 to 35 bushels. In 1948 the average yield of corn in Virginia was 43 bushels, and with continued favorable weather conditions we believe the yield for 1949 will be at least 45 bushels.

During this same period the number of chickens on Virginia farms has increased from less than 6,000,000 to approximately 11,000,000, and the total value of all poultry products has more than doubled. But of still greater significance is the fact that from 1914 to 1948 the annual egg production per hen in Virginia increased from 80 to 150 eggs. As a result of the combined efforts of all agencies working on this program the number of milk cows in Virginia has increased from an average of 335,000 in 1909–13 to an average of 469,000 for 1944–48; and the average annual production per cow has increased from approximately 2,700 pounds to more than 4,200 pounds per year.

Practically all of these increases are the result of the application of scientific techniques to agricultural production, and most of the scientific techniques now being used by our farmers have been developed through research carried on by our experiment stations. If you did not recognize the truth of this statement you would perhaps not be here today.

Although we have made notable progress in the development and application of scientific techniques during the past quarter century, those of us charged with the responsibility for this work know that we have scarcely scratched the surface. Every day brings new problems, and we are constantly confronted with the fact that if we are to meet the demands of our farmers for new information regarding soils, crops, livestock, and marketing procedures we must immediately speed up and intensify our research program.

With its soils, climate, and proximity to markets, Virginia can become one of the greatest livestock-producing States in the East. However, this will not be accomplished until we know more about our soils, and unless and until we increase both the quantity and quality of our pastures and forage crops. We must breed and bring in new and better varieties. We must develop better systems of management and fertilization, and we must determine what effect this increased production has on both animal and human nutrition.

That is why we were so delighted when a group of farmers from northern Virginia visited us about 2 years ago and urged the establishment of a pasture and forage crops experiment station in northern Virginia. What pleased us so much was that these men did not stop with urging us to do something, but did something themselves. When we told them our existing appropriations would not permit us to establish any additional field stations they immediately got busy and secured an appropriation from the general assembly to initiate this work. When they were convinced that the appropriation made by the general assembly was not sufficient to support the kind of research needed, one of them made a private contribution of $125,000 to the VPI Educational Foundation to supplement the State appropriations. There were no strings whatever tied to this gift, and the only stipulation was that we endeavor to do the best research with pastures being done in the United States and that we secure the services of the best-trained grass scientists in the country to head up the project.

The man who made this very fine contribution has continued his interest and, since he is with us today, I want to present him at this time and ask him to tell you of another gift which he has recently made to VPI in order to insure the permanency and success of this undertaking.

It gives me pleasure at this time to present to you Mr. Paul Mellon, of Upperville, Va.

ADDRESS BY PAUL MELLON

In the summer of 1946 I was invited to join a committee of northern Virginia landowners who had become interested in certain ideas for the improvement of pasture land and forage crops in this portion of the State. My own farm, where I live permanently, is near Upperville (about 10 miles from here), and the main produce of that farm is cattle, steers which we feed, pasture, and sell. It was apparent to the committee that, regardless of the extremely high quality of the personnel in our local extension service, and the progressive nature of the information which they distributed, true experimental work in pastures and cattle nutrition had been consistently neglected, not only in Virginia, but in the Nation as a whole. The opportunity seemed ripe for constructive service to agriculture in general, and to the cattle and dairy people of this State in particular, and we determined to see what could be done.

Shortly thereafter, a subcommittee consisting of Mr. Howell Jackson, Mr. Robert McConnell and myself called on Senator BYRD for advice on procedure and plans. Senator BYRD, most wisely and most kindly, suggested that we open negotiations with Dr. John Hutcheson, then president of VPI, indicating that the institute was the natural and most efficient vehicle through which our plan could be carried on. He gave us much encouragement and his official blessing.

Mr. Jackson, Mr. McConnell, Mr. Roger Lamdin and myself met Dr. Hutcheson and Dr. H. N. Young, director of the Virginia Agricultural Experiment Station, in Blacksburg and outlined our ideas. We received their wholehearted cooperation and support, and it was agreed that an effort would be made to raise a substantial and continuing appropriation in the legislature for such an experimental project, to be located somewhere in northern Virginia, and a first-class research scientist would be found to head it. At that time, the legislature had already met and it was too late to secure an appropriation for the next year, 1947. Because VPI had long been interested in such a program itself, however, and because our committee was eager to help with time, effort, and money, a great deal of interest was created, and the first real appropriation was voted, to be expended in 1948. The appropriation for 1948 and for 1949 was $25,000 each year.

During this time, my own interest in pasture improvement in particular, and in farming in general, was mounting. Also, pasture improvement and the consequent increased economic status of the cattle industry appeared to me more and more to be an important link in soil conservation, in the growing realization throughout the Nation that our soil must be rehabilitated and conserved. More and better pasture means to me a better balanced and an improved general agriculture. It means the checking of erosion and leaching, the rebuilding of worn-out soil, the replacement in the soil of organic matter toward its rebirth. In addition, although not a native of Virginia, during almost 15 years of residence here I had come to love this State and to wish to do something for it, and it occurred to me that anything I could do to improve Virginia's soil and to further the economic well-being of a large portion of its citizens would be fitting and most gratifying.

To carry this idea a little further: I felt that anything I could do, directly or indirectly, to increase even one farmer's production would, in the long run, be a boon to his immediate community. To help the community is to help the county. To help the county is to help the Commonwealth. To help the Commonwealth, however infinitesimally, is to help the Nation.

With these ideas in mind, and with the kind cooperation of Dr. Hutcheson and Dr. Young and the advice and encouragement of Mr. Jackson, I found that I could be of real assistance to the proposed project by making a substantial grant which would assure the immediate and solid establishment of such an experiment station, and provide for the employment of an absolutely topman to run it. I was assured by VPI that in addition to the present and proposed State appropriations, private funds of $125,000 would see such a program firmly established and well launched by the first 5 years of its existence. From then on it is confidently expected that future State appropriations will adequately maintain it. I, therefore, made that grant to VPI.

In the meantime, this community center had been established, in great part through the generosity and the untiring efforts of Mr. and Mrs. Howell Jackson. It is a model of its kind for every other community in the country. It, therefore, occurred to me that Middleburg would be a most fitting place for the experiment station, and that through cooperation with the community center, the use of its facilities for lectures, farm exhibits, farm-club meetings, and so forth, a great opportunity was available for the dissemination of, and the discussion of, information originating in the experiment station.

I had for many years owned a farm near Middleburg. (It is in reality two farms combined, Edgewood and Green Hill, formerly owned by J. Walter Cochrane and Albert Fletcher, respectively.) It is comprised of about 420 acres, and is situated about 2 miles due south of Middleburg on Route 15. It has been very ably managed by Mr. Robert Fletcher, of Upperville, as I think you will all agree when you see it this afternoon.

After a thorough survey of this farm by representatives of VPI, I was informed that it was eminently suitable for the purposes of the experiment station. I am, therefore, very pleased indeed to give this farm, with all of its equipment, to VPI for use as an experiment station for grass and forage crops research.

In addition to my profound belief in the vital necessity of conservation of the land, and my conviction that the cattle and dairy farmers of Virginia deserve the best that can be given them as a result of science and research, I have an even deeper and more personal urge to further this work. Many of my forebears were farmers. My great-great-grandfather was a farmer when he migrated from Ireland early in the last century. My great-grandfather and my grandfather as a boy followed him shortly after. My great-grandfather cleared with his own hands the land in Pennsylvania that he first settled on, and with his own hands he built his own house. His son, my grandfather, was brought up behind the plow, and it was behind the plow that he (to quote his own words) "perfected myself in Murray's Latin Grammar, committing to memory the entire 76 rules of syntax so that I could repeat them from beginning to end without once referring to the book. I accomplished this by repeating the rules when following the plow; keeping the book in the crown of my hat, I resorted to it whilst the team was turning at the end of the furrow, until finally I mastered the whole so perfectly that I could dispense with the book altogether." He also says that "whilst thus engaged in plowing I read the most of Shakespeare's plays."

When my grandfather was 17 (this was in 1830) his thirst for education had become

such that he gave up farming in a very definite way. His father wished him to remain on the land, and offered to give him a farm of his own which he could purchase for him nearby. He believed (also to quote my grandfather's autobiography):

"That for me to abandon the honest and noble pursuit of an independent farmer, and become a doctor or teacher or miserably dependent preacher; or what was in his eyes worst of all, to enter the tricky, dishonest profession of the law was a proposition which seemed to him too preposterous to contemplate."

Nonetheless, on the morning of the day that his father had gone into the town of Greensburg to arrange the purchase of this new farm he suddenly stopped the immediate chore he was engaged in, splitting rails, and he ran the whole 10 miles into the town, arriving there at the last moment, to prevent the purchase. From that day on he was through with farming, worked his way through an education in Pittsburgh, studied law, was called to the bar, and eventually became a judge of the circuit court. In short, he entered the tricky, dishonest profession of the law. Later he became a banker and founded his own bank in Pittsburgh—and in recent years we have heard some pretty hard things said about that profession, too.

I do not claim to be a dirt farmer, or a knowledgeable cattleman, or a soil scientist; but the soil is in my blood, and I feel a deep debt of gratitude to the soil of America. When I moved to Virginia and became interested in farming I felt that, symbolically at least, I had run back that 10 miles from Greensburg to the farm. By the same token, I look on these two gifts to VPI as a partial repayment of what I owe personally to the soil of my native land and to the Commonwealth of Virginia, my adopted State.

In making this gift to VPI I would like to add my own thanks and express my heartfelt appreciation to several men of great good will who are equally responsible in many ways for bringing this project into being. To Senator BYRD, who gave us much-needed advice and tremendous encouragement. To Howell Jackson, who organized the landowners committee, fired them and myself with enthusiasm for the plan, and helped us continuously to bring it to fruition. To Dr. John R. Hutcheson, of VPI, and Dr. Young, of the Virginia Agricultural Experiment Station, who worked out all the details of the project with the utmost friendliness and cooperation. To Dr. R. E. Blaser, professor of agronomy at Cornell University, who gave up his important post at Cornell to take charge of the project in the belief that the most important grass and forage research in the country can and should be done right here in Virginia.

There is one other name which I have not mentioned, but it is a very important one. It is a name that most of you know, the name of a kind man, an able administrator, a man wholly devoted to his soil, his fellow farmers, and his State, the late Mr. Walter B. Nourse, county agent of Fauquier County. I did not know Mr. Nourse for very long, but everything that I knew about him in the years I did know him I liked. I speak with great reverence of his ability, his great interest in this project, and his wholehearted support of it. I know that we all miss him and feel his absence from this inauguration ceremony with great regret. Although I understand that it is not within the policy of VPI to attach individual names to research stations as memorials, I am sure that you will all agree with me that we can, most appropriately, dedicate the results, both tangible and intangible, that emerge from his project, to the spirit and to the memory of Walter Nourse.

The Profit Incentive—The Power Companies Have Seen the Light

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 9, 1949

Mr. WHITE of Idaho. Mr. Speaker, after years of a determined fight by the power companies to keep the Government from coming in and building dams and hydroelectric power plants in an effort to keep the field for the generation and sale of electric power all to themselves it now develops that these power monopolies have seen the light and had a change of heart and have hit upon a more profitable plan to make big profits on a small investment as more fully set out in my letter in response to a piece of propaganda that has reached my office in a reprint from an Oklahoma paper which is inserted herewith and my reply thereto:

Senator ELMER THOMAS and Senator BOB KERR find themselves on opposite sides of the fence when it comes to voting Federal funds for the Southwestern Power Administration. You might like to know what it's all about, since it is your money they are proposing to spend.

KERR wants the Senate to approve $9,800,000, which is the amount passed by the House for the SPA. THOMAS is a member of a Senate committee which, in reporting the bill to the Senate, voted to recommend $4,358,210 for the project. Both sums were divided into a cash appropriation and a contract authority sum.

Reduced to its simplest language, Senator THOMAS wanted to cut out appropriations for transmission lines and sell the Federal power at the point where it is generated. He thinks power companies would be glad to build transmission lines at their own expense, buy the power, and save the taxpayers the cost of building duplicate lines.

Senator KERR would have the Federal Government to use the taxpayers' money and build competing facilities. In that stand he is supporting some of the campaign pledges that Mr. Truman made on a political tour of the Western States. On that trip he referred to power companies as monopolies and said they wanted the power so they could charge what they want for power.

In this instance we find our thinking is more sympathetic with THOMAS than with KERR. We reject the argument that power companies can charge what they want to for power, because their rates are regulated in the same manner that freight rates and telephone rates are. There are regulatory State bodies which determine fair charges.

Nor do we think all monopolies are bad for the Nation simply because they are monopolies. The Government itself has approved them when it is economically impractical to have two competing companies with parallel and duplicate facilities. The Government approved Western Union buying Postal Telegraph service. It operates a monopoly itself in the Post Office Department.

Regardless of the stand of either THOMAS or KERR, the question reverts back to Federal power from such generating points as the Denison Dam. There, water has been dammed up as a so-called flood-control measure. When power can be developed as a byproduct of flood control, it seems senseless to waste the opportunity.

Equally senseless, in the opinion of a good many taxpayers, is the idea of the Federal Government paying for transmission lines to deliver that power into areas already adequately served by private, taxpaying utilities which find the Government in competition with them.

The development of rural electrification lines, we would like to point out, is not part of the power program to which we object. Federal aid there has brought benefits of electricity faster than might otherwise have been expected, with the power supplied in many instances by private utilities.

But REA and SPA are two different things. One does not duplicate the other. Extensive and costly duplication of existing high-line facilities, at the taxpayers' expense, when private companies could meet the needs without that expense, could be avoided. It looks as if Senator THOMAS is seeking to prevent waste like that.

AUGUST 6, 1949.

The EDITOR, DUNCAN BANNER,
Duncan, Okla.

DEAR SIR: What is behind the statement made in your release in the circular entitled "Today's Comment" sent to me under date of July 21?

You say, "Senator THOMAS wanted to cut out appropriations for transmission lines and sell the Federal power at the points where it is generated. He thinks power companies would be glad to build transmission lines at their own expense and buy the power." Certainly they would like to buy the power wholesale at Government rates and cinch their monopoly on the sale of distribution of Government power to all consumers for industrial and domestic use. Their generosity would relieve the Government of the trivial expense of building the transmission lines after the Government has made the huge outlays in building dams, installing electric generating equipment, paying for land damaged by overflow and financing the cost of operation and maintenance.

The cost of construction of the transmission lines would be a small price to pay for the sweet monopoly of buying the power for a quarter of a cent—2½ mills and retailing this same power for 1¼ cents per kilowatt-hour to industry and at current rates to the domestic users.

The power companies in their struggle to keep the Government out of the power production field and retain the business of generating and the sale of power all to themselves, have now seen the light and have a much better and more profitable plan to make money out of electric power.

Let the people, by an agency of their Government, come in and produce the hydroelectric power by shouldering the tremendous expense of paying for the damage of overflow land, the cost of the dam and the power-generating facilities, also the cost of operation and maintenance, and deliver this valuable and indispensable commodity electric power at the lowest possible wholesale rate to the power companies at the bus bar of the power plant. The power company, by building the transmission line, will have a monopoly with the minimum of investment and a maximum of profit in distributing the product of the taxpayers' investment in most cases back to the taxpayers themselves.

As chairman of the House committee that put through the provision of the law giving preference to municipalities (towns) and cooperatives (REA), I don't believe the general public will be fooled by the specious argument made in your comment. There may be reasons why some men in key places

would be willing to have the power consumers saddled with the profiteering scheme of these power monopolies, but I can't bring myself to believe that the great American public will permit themselves to be victimized into paying inordinate profits to these monopolies on the excuse of making a petty saving for the cost of construction of the transmission lines.

Sincerely yours,

COMPTON I. WHITE,
Member of Congress.

Preserve Polish Territory

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 9, 1949

Mr. SADLAK. Mr. Speaker, in view of certain articles appearing in recent American publications pertaining to the western boundaries of Poland and the opinions of United States officialdom expressed therein, the executive board of the Polish Falcons of America at their last board of directors meeting, decided upon the attached resolution. It has the unanimous endorsement of its many chapters or nests, as they are properly called, throughout the United States. Among the large membership are many United States veterans of World Wars I and II. In the sincere hope that their plea will strike a responsive chord in the hearts of the Members of Congress, I include the resolution of the Falcons herewith:

POLISH FALCONS OF AMERICA,
Pittsburgh, Pa., July 26, 1949.

Whereas the heroic Polish nation was the first to fight against the tyranny of a Nazi Fascist Germany with all its inherent evils; and

Whereas the Polish people for centuries past, and to this day, have done all that is in their power to promote democracy for all nations, even to the extent of deliberately sacrificing their own lands and lives so that we might enjoy our liberties; and

Whereas the lands granted to Poland on their western borders are historically and ethnically Polish and it is surely small compensation to offer the Polish Nation in return for the misery and sufferings that were their lot under the yoke of the most sadistic enemy of mankind that the world has ever seen; and

Whereas the Government of the United States and other Allied Powers decided to deprive Poland of approximately half of her territories in the east and to compensate Poland, our ally, with recovered territories from an enemy who has killed and maimed thousands upon thousands of our American boys who fought in two world wars under the impression that they were fighting for truth, liberty, and justice; and

Whereas millions of Poles were arbitrarily forced to leave their homes that had been occupied by their families for centuries when Russia was given Polish territory leaving them only the western lands to migrate to; and

Whereas Poland, who has never killed one American boy in the course of history, was never asked if she agreed to the rendering away from her of her territories in the east, who suffered more than did any nation in this last war, whether victor or vanquished, is now prostrate in the ruins of once beautiful cities and prosperous farm lands with her population decimated and suffering from malnutrition and disease; and

Whereas we watch with apprehension the sacrifice of American ideals of democracy and fair play wherein we see our Government playing into the bloody hands of the German imperialists, the very things our American boys gave their lives against: Now, therefore, be it

Resolved, That the Polish Falcons of America, a national fraternal and gymnastic association, does hereby strongly decry the efforts of United States officials in Germany to appease these self-same German imperialists by trying to return to them these historically and ethnically Polish lands now rightfully held by the gallant Polish people to relieve the artificial overpopulation of western Germany, the same plaint that was made after the First World War, to these same Germans who thought nothing of crowding millions of innocent women and children into concentration camps under the most horrible conditions and then sending these millions to their deaths in the gas chambers; and, therefore, be it further

Resolved, That in view of the heroic deeds and the unswerving loyalty for which the late Franklin Delano Roosevelt called them the "inspiration of nations," we beg against any further abusing or mutilating of the boundaries or lives of Poland or her people who, after all, are also human beings, such as we, this should not be tolerated and certainly not advocated by United States officials either here or abroad.

Dr. T. A. STARZYNSKI,
President.
T. R. BUCZKOWSKI,
Secretary.

From the Doctor's Mouth

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 9 (legislative day of Thursday, June 2), 1949

Mr. MURRAY. Mr. President, because of the great interest among Members of the Congress in the way the British health program is actually working, I ask unanimous consent that a brief but most interesting article from the August issue of the Progressive be included in the Appendix to the RECORD. The article explains how enthusiastic about the plan some of Britain's outstanding doctors—who once opposed it—have become. It also makes crystal clear why they have changed their opinions.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FROM THE DOCTOR'S MOUTH

The Progressive has never been regarded as regulation reading matter in doctors' and dentists' offices, and now it is disappearing rapidly from the waiting rooms of some hardy professional souls who believed in our progressivism up to a point—the point where we supported a national insurance program.

If we read our mail right, some of the doctors and dentists who have canceled their subscriptions prefer not to have the Progressive come to their office where their patients may get, to quote one doctor of medicine, "a lot of undigested and half-baked idealism which could set the medical profession back a half century."

Our sin isn't only that we support the Truman administration's national health-insurance program, but, to quote a St. Louis surgeon, "your reports of the * * * British socialized medical program are so flagrantly false throughout and carry hardly a single word of truth."

Emotional outbursts of this kind have tempted us to share with our readers as devastating a reply to the smear campaign against British socialized medicine as we have encountered anywhere.

The scene is Memphis, Tenn. The occasion is the conference of the American Cancer Society. The characters are Dr. Edward H. Skinner, of Kansas City, Mo., a leader of the National Physicians' Committee, violently opposed to health insurance; and two highly regarded visiting British specialists, Dr. Sir Stanford Cade and Dr. Brien W. Windeyer. Dr. Skinner, anxious to make the most of the visiting Britons, invited them to be interviewed on the British program over the radio. The Britons politely accepted. Here's a report of the proceedings, as written by Conwell Carlson for the conservative, antisocialized medicine Kansas City Star:

"What is the effect on the income and social status of English doctors?"

"Fine," said Sir Stanford.

"Fine?" Dr. Skinner said, as if his ears heard wrong.

"Fine," repeated Sir Stanford, and he leaned forward. "More patients, more income."

This is not what Sir Stanford had predicted of the health scheme he had opposed so vigorously during Dr. Skinner's 1947 visit to England.

"Exactly," said Mr. Stanford, "it hasn't worked out as I feared. I must tell you frankly the doctors of England are being disillusioned in a pleasant way.

"We still have our essential freedom. We have more work, more pay. And the people, I am sure, are getting better medical care."

"But the cost, Sir Stanford, the cost," said the Kansas citizen.

"The cost," he said. "What did the atomic bomb cost? What did the last war cost? Destruction costs billions, so why not some billions for everybody's health, say the people."

"What are the results in terms of effectiveness of service to the patient, in office consultations, and in hospitals?" Dr. Skinner asked.

"Good," said Dr. Windeyer. "The poor see they no longer have to depend on charity for medical care."

"Is a patient allowed to transfer from one doctor to another?"

"The patient has this choice, and the doctor, too, has the right not to continue to treat a patient if he feels results are not what they should be," Dr. Windeyer replied.

"Isn't there a lack of enterprise and initiative on the part of doctors? If they have a stipulated income from each patient, paid by the government, why should they seek to give improved service?

"Dr. Skinner," said Sir Stanford in response to these questions, "we are finding that the standard of care the doctor gives is as good as under the private-enterprise method. A man is inherently honest and a seeker of better ways toward health, or he isn't. That applies to different doctors in either type of service.

"We assume that the people trust competent doctors, under a national medical service or otherwise, and are finding that the

doctor more than the politician is the determining factor in the actual control of socialized medicine. So I say to you and other doctors of America, when a national health service is wanted, go into it as leaders and planners of a comprehensive enterprise desired by the majority of the people."

Editorial by Guy Easterly

EXTENSION OF REMARKS
OF
HON. JOHN JENNINGS, JR.
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 9, 1949

Mr. JENNINGS. Mr. Speaker, Guy Easterly, the editor of the La Follette Press, publishes one of the newsiest and most forthright papers in Tennessee.

La Follette is situated in Powell's Valley, Campbell County, at the foot of the Cumberland Mountains, south of the entrance of what was known as Big Creek Gap, until the city of La Follette was founded and Big Creek became Indian River.

Guy is a thinker, and he has the courage of his convictions. Those who wish to know what the people are thinking and who desire to get in step with them would do well to read the columns of papers like the La Follette Press. The men who edit them are close to the people and what they have to say is like a breath of fresh air from the hills whence cometh our strength.

Under unanimous consent I ask that an editorial from the La Follette Press of August 4 be included in the Appendix of the RECORD as a part of my remarks:

WHEREIN WE BORE FROM WITHIN OUR OWN PARTY

For years we have been thinking and saying this and we're going to repeat it. We'll probably come a little nearer to being thrown out of the party for it, but certainly a party which has failed to win a national election in 21 years needs something, and we may as well bore from within. Here it is, anyway.

Within the next 3 years there are two vital elections facing the Republican Party. One is the congressional elections of 1950 and the biggest is the congressional and presidential elections of 1952. The two wings of the party are now in a squabble over a national chairman. The Dewey wing of the party, consisting of the eastern Republicans want a national chairman, representing them. Another wing of the party wants another man. It is not our purpose to argue the merits of any two men, or the rights of either wing. Republicans should get to thinking nationally. They should begin thinking of the best interests of the Nation. They should not only begin to forget—but forget immediately—control of the party. There is not much honor in controlling a one-horse buggy which is going nowhere with no horse attached.

If we were a policy maker for the party we would insist that the work of the party be arranged along certain principles—that the party stand for something as it did in former years. That the party leaders forget to shout the merits of Abraham Lincoln and William McKinley, and begin to see the present and future, and the bearing of the party on the present and future. Our policies would be something like the following:

1. A return to American principles of Government.
2. Service to the people.
3. A return to constitutional government and a recognition of the rights of State governments.
4. Efficiency in Government.
5. Lower taxes.

Yearly, monthly, and almost daily since the last administration of Grover Cleveland the National Government of this Nation has become more and more complex, and since that time every administration has sought to make it easier for people to milk the national teat.

There has not been, nor will there ever be, any such thing as democratic government in America. The Nation was planned as a representative Republic. It could be planned no other way. Democracy can only be exercised when the whole people can come together in one mass and transact their business. We use elected representatives to transact ours. And just as the Democratic Party has nothing whatever to do with the word "democracy," the Republican Party has nothing to do with the word "republic." Both parties were born or came "down the river on a raft" long after the early Greeks had worn the words out.

No one thought of America as being a democracy until Woodrow Wilson came along, and the great man though he was, used the word absolutely out of place and without rightful meaning. The phrase "save the world for democracy" likewise had no meaning. It became a slogan simply because people are looking for slogans when danger develops. "Remember the Maine" was one. "Remember Pearl Harbor" was another.

The phrase was and is a misnomer. No one can save the world for democracy, not even the Democrats, who aren't democratic, and the Republicans, who are not republic. One can save a small commuity for democracy because all the people in that (we repeat) small community can come together to thresh out their problems. (There, that's off our chest.)

Hence our return to American principles of government, in which all may be represented—not only special interests, not only special classes, but everyone.

We have never questioned the right of the Federal Government to be of service to the people. But that service has been misused, and extended to special classes for political purposes, for so many years that it is meaningless as it now stands. Service to the people must be to the whole, and must not consist in giving every man, woman, and child a rocking chair and $50 a month.

A return to constitutional government is imperative if we are to escape either a totalitarian state or a communal state. We have drifted toward socialization now for more than 45 years. Unless we are planning such a nation as Russia now is, we must soon veer from this course. Rights reserved to the States under the Constitution must be given back to them. The Federal Government has held the States in prison for too long already under the guise of better administration of certain wartime and economic-stress powers.

We would stand for efficiency in government. For more than 25 years we have had no efficiency. Beginning under Hoover to the present we have spent recklessly for anything and everything, including programs of work so people might eat and for war purposes. We have crowded Washington and all other Federal offices with twice as many people as were needed to do the work and we have paid for all this in less efficiency and an abandoned disregard for pouring out the people's money by the carloads. This should and must stop.

Following this we would pledge a cut in taxes and we'd carry out our promise. Taxes can be lower and should be lower. We are not thinking of big corporations. We are thinking of the workingman who pays hidden taxes which amount to about 40 percent on everything he must buy.

And lastly we'd forego Tom Dewey and BOB TAFT. Neither is the Republican Party. Both are small potatoes in the life of the party. The large masses of Republican voters constitute the party. The masses who went to the polls last November and voted for Tom Dewey and the masses who stayed away because they could not stomach him and for what he represented the party to stand.

Conditions in Poland and Czechoslovakia

EXTENSION OF REMARKS
OF
HON. THOMAS S. GORDON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 9, 1949

Mr. GORDON. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include an article written by a known journalist, Irving Pflaum, the foreign editor of the Sun-Times newspaper of Chicago, who in his unbiased views tells the present situation in Poland and Czechoslovakia.

RED GRIP IS FIRM ON POLES AND CZECHS
(By Irving Pflaum)

VIENNA.—The Moscow-trained Communists who are running Poland and Czechoslovakia are awaiting the collection of bumper harvests before renewing their slow but steady liquidation of the class enemy—the remaining small capitalist, the urban middle-class storekeepers, the successful peasant farmers engaging in private enterprise and the Catholic Church as a social, political, and economic institution.

The people thus identified as the class enemies consider themselves doomed unless there is a war in which the Russians and the Communists are defeated by the Americans. Moreover, most of the Polish and Czechoslovak people—whether called class enemies or not—believe that they are doomed to be swallowed up in the Soviet Empire, perhaps even deported to Siberia, unless a war comes within 5 or 10 years.

TOP IMPRESSIONS

The Poles, Czechoslovaks, and other satellite peoples therefore are the world's foremost warmongers.

These are the most striking impressions of Poland and Czechoslovakia where we traveled during July. Today, I want to report our conclusions without attempting to support them with details which will be given later.

SILENCE FOES

1. Active, violent, or effective resistance to the Warsaw and Prague Communists does not exist. There is much ineffective passive resistance, sabotage, and grumbling, but the Red regimes can ride out these storms.

2. Without using obvious methods, the Communists have successfully intimidated and coerced whole masses of the population that they haven't killed or locked up. In addition, they have won over many persons by making it worth their while to support their regimes.

3. Soviet Russians hold the top jobs in the security police and armed forces of both countries, and, in addition, can use the Red army any time they wish. Moreover, the

Polish and Czechoslovak Communist leaders in key jobs are trusted, trained Stalinist party agents and obedient branch managers for the Kremlin. Many of them are not Poles or Czechoslovaks.

RUSSIA'S COW

4. The economic and trade policies of both countries often are against their national interests. They are primarily aimed at serving Soviet Russia. Moscow is carefully, but not too obviously, milking Poland and Czechoslovakia at the expense of their peoples.

5. The growing official accounts of satellite production and reconstruction largely are whistling in the dark. Poland is doing better than Czechoslovakia, but this is in part due to the German Silesian coal and transport industry now in Poland. In both countries, but especially in Czechoslovakia, the export industries are having grave difficulties producing and holding markets. Inefficient distribution, plus the reluctance of the peasants to serve the regime, has resulted in spotty food supply for the cities.

Is This the Third Degree?

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 9, 1949

Mr. SHAFER. Mr. Speaker, I am sure that many of my colleagues and most of the thoughtful citizens of the United States will agree with me when I say that the sly, tricky manner in which the administration is attempting to keep Congress in session throughout the summer and on until Thanksgiving is nothing in the world but an attempt at legislative third degree.

The President is trying subtle torture methods, not unlike many practiced in ancient China. There they wore a man down by drops of water on his forehead, you remember.

When Mr. Truman came into office with all his assorted pledges for all the assorted pressure groups he represents, he knew that he could not fulfill those pledges. Unluckily for the Nation, the gullible people who voted for him did not know that fact, and he still has them fooled.

By keeping Congress in session, he and his legislative leaders are making a show at trying to pass the worst series of bills ever presented to an American Congress. These bills would socialize our Nation, communize our way of life, and destroy representative government as we know it.

Who can blame the majority of Congressmen for rebelling against such legislation? It has not passed and it will not pass.

The Legislative Reorganization Act of 1946 clearly states that Congress should adjourn on July 31 each year unless war or national emergencies intervene. Now we have the Democrats telling the people that we are still at war—4 years after the fighting has ceased, and also telling the people that we are in the middle of a national emergency originally proclaimed 10 years ago. When is an emergency over? The late F. D. R. proclaimed so many emergencies the people were crisis-crazy even before World War II. Now we are told that one of these emergencies is still here. Which one is it?

San Joaquin Valley's Water Problem

EXTENSION OF REMARKS

OF

HON. THOMAS H. WERDEL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 9, 1949

Mr. WERDEL. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include copies of a series of five articles, publishcd on July 24, 25, 26, 27, and 28, 1949, in the Bakersfield Press of Bakersfield, Calif. These articles summarize the subject of the drastic water shortage that threatens Kern County and the San Joaquin Valley in the State of California. The articles are as follows:

[From the Bakersfield (Calif.) Press of July 24, 1949]

KERN DROUGHT PERILS FARMS

(This is the first in a series of articles dealing with the critical water situation in Kern County and the San Joaquin Valley.)

(By J. R. McKinley, Press farm editor)

More than half of Kern County's fabulously rich farmland is doomed to return to desert unless additional sources of water, not now in prospect, are made available.

Twice as much water is being used to irrigate crops in this area as the total annual supply, with the deficit being drawn from vanishing underground reserves.

Water, which originally converted these desert lands into some of the world's richest and most productive acres, is being used up at a rate which threatens stagnation for the agricultural industry. And the total use continues to mount alarmingly.

To get an idea of the problem, consider the fact that more than 531,895 acres in Kern County are in cultivation this year, all except 46,500 acres of it requiring an average of 3 acre-feet of water to raise the cotton, alfalfa, potatoes, grapes and other products for which the county has become noted.

That amounts to some 1,402,185 acre-feet of water, almost twice the total supply in normal years, and three times the supply of the last two "dry" years.

For years annual use of water has exceeded supply as thousands of additional acres have been leveled and placed in cultivation.

To water those thirsty acres, farmers have been forced to draw more and more on the underground supply, with the result that the water table in the county has dropped to the point where successful farming cannot long continue unless relief is found—and soon.

This table, or static water level, has declined steadily since 1941, the last "wet" year, and between 1932 and 1947 dropped a total of 14.17 feet. Last official records were for 1947, but since then the rate of drop has increased proportionately.

In some parts of the county, this rate has been much more rapid, depending, of course, on the distance the lands are from the water source—the Kern River.

Some parts of the Edison area shcw a drop of 50 feet since 1939, with the water level now nearly 300 feet below the surface.

At a point where the Friant-Kern Canal will enter the county, the water level dropped from 200 feet in 1939 to 280 feet in 1947, with corresponding decline until the present.

South of Arvin and east of Wheeler Ridge in township 32 south, range 29 east, the level dropped an even 100 feet from 1933 to 1947.

As this water table drops, larger pumps are installed, wells are deepened and new wells drilled, and the farmer is forced to pull his water higher and higher.

How long farmers can meet increased irrigation costs and still operate at a profit depends on a number of items.

Any sudden drop in the price of the product he raises might force the farmer to the wall.

But a critical point eventually must be reached where irrigation costs more than offset the expected returns. When this time comes, his acres will lie barren.

The increased efficiency of deep turbine pumps has matched the declining water level for the past several years. But their efficiency must reach a performance ceiling.

Consensus of agricultural and farm experts, engineers, soil conservationists and farmers themselves is that the future is not too bright.

Water stored underground for centuries is being drawn out at an alarming rate. It is like overdrawing a bank account and amounts to virtually the same thing.

This underground water supply, literally the life blood of the country's economy, is exhaustible.

Probably 95 percent of it comes from the Kern River, forming in the Sierras near Mount Whitney. The winter snow pack, feeding the various tributaries, is all-important.

Buena Vista Lake, which in times of normal Kern River run-off stores the excess water of that stream, is "bone dry" and has been for some time.

Normally a fishing and boating resort, it has covered as much as 40,000 acres, and before it was diked, years ago, extended over an area reaching almost to what is now Highway No. 99.

Boat races were held there in 1938, and that same year Frank Latta made an 11-day trip in an outboard motorboat down the Kern from North Chester to the lake, thence through Goose Lake Slough to Tulare Lake, up the Kings River to White Bridge Slough and into the San Joaquin River.

Buena Vista Lake filled up in 1927, went dry in 1930, and remained dry until 1937 when the big rains came.

It was still considered a good fishing spot in the summer of 1945, but has dwindled rapidly since then, until now it is completely devoid of moisture.

The snow-pack run-off for the last several years has been far below normal, and the California cooperative snow surveys, division of water resources, estimates that the river flow for the April 1 to July 31 period was only 52 percent of normal.

The water flows to the mouth of Kern Canyon and thence into the various canal systems that divert it to farm land.

To get into the underground strata it percolates slowly down through the surface sands and becomes trapped in subsurface-sand reservoirs.

The rate of percolation depends on permeability and porosity of surface deposits. Depth of this underground water varies with the depth of subsurface-sand reservoirs.

Poso Creek contributes a comparative trickle to the underground total, as do other small streams from the Tehachapi and San Emidio Ranges.

But the Kern is the chief source and for centuries the underground reservoir it built up was undisturbed.

Originally the annual run-off of the river—710,000 acre-feet, averaged over a 55-year period—more than took care of all irrigation needs.

But the county's arid land was adaptable to many crops, most of them heavy water consumers.

As the market demand for these products increased, more land was irrigated, until eventually it was necessary to pump water to bring the total up to requirements.

As early as 1878 the potential water shortage in the valley was recognized, and it was then predicted that the southern part of the San Joaquin Valley, including Kern County, was deficient in natural-water replenishment to take care of foreseeable irrigation needs.

It has grown progressively worse, until today it poses a threat to the county's existence that is far more serious than most people care to admit.

[From the Bakersfield (Calif.) Press of July 25, 1949]

KERN'S CROP ACREAGE LOWERS WATER TABLE

(This is the second of a series of articles dealing with Kern County's critical water shortage, a shortage that threatens our No. 1 industry.)

(By J. R. McKinley, Press farm editor)

Kern County is in the peculiar position of having soil too rich for its own good.

Land that last year raised products valued in excess of $166,000,000 faces the imminent danger of becoming wasteland simply because the water supply is rapidly running out.

It takes from 2½ to 4 acre-feet of water to raise the cotton, alfalfa, potatoes, grapes and other products that make the county agriculturally rich.

When an additional thousand acres of land are leveled, that means an additional 3,000 acre-feet of water are necessary to irrigate that land.

The water is there; deep underground where it has been stored for centuries as the Kern River carried the melting snow of the Sierras down the canyon to the broad plains of the county.

But as this underground water is overpumped at a rate of almost a million acre-feet a year, the level drops lower and lower.

The water won't disappear completely, but it will soon reach a depth where pumping will be too costly to allow profitable farming.

What has contributed to this present water shortage?

The present so-called dry cycle has been a dominant factor, not so much for the surface rainfall that might otherwise have sprouted certain crops, thereby saving irrigation, but for the lack of snowfall in the mountains.

It is generally agreed that the Kern River is the source of 95 percent of the water supply.

The average annual run-off of the river, tabulated over a period of 55 years, is 710,000 acre-feet, or enough to cover that many acres of level land 12 inches deep.

Yet, during 1948, the run-off was less than half that amount, or 328,602 acre-feet. The previous year, 1947, the total was 406,070 acre-feet, slightly more than half of normal. Even in 1946 the total was almost 100,000 acre-feet below the average.

The result was that the water table suffered a terrific drop because irrigation requirements, instead of diminishing during this period of deficiency, increased tremendously.

The total amount of land farmed in this county in 1937 was 270,169 acres, including dry-land farming. Dry-land farming involves the raising of grain in low-lying hill areas where the rainfall usually is sufficient to insure a crop.

Some 10 years later, this acreage had almost doubled as cotton contributed heavily to the increase.

There were 78,000 acres of cotton in 1937. Last year the cotton acreage figure was 216,000.

Lack of acreage quotas and the support program naturally contributed to this increased acreage. Thousands of acres, particularly in the Wheeler Ridge-Comanche Point area, have been leveled and placed in cultivation the past few years.

The fact that Kern cotton land returns a record per acre yield and the absence of boll-weevil infestation make it ideal for this crop. But cotton requires water in large quantities.

The present drought has further complicated matters. Surface rainfall in the valley admittedly is of small over-all help. Usually our showers come in one-fourth-inch amounts or less and evaporation virtually takes care of it.

But in recent years even this small amount has not been forthcoming.

The few rains that did fall were either so small they could barely be measured, or else they came in flash floods which contributed only to erosion.

Ordinarily, domestic consumption of water in an area would be a negligible percentage of the total used for irrigation purposes.

But Kern County residents are among the heaviest consumers of water in the world.

As the county's population has grown from 156,000 in 1944 to 174,000, 183,000, 195,000, 214,000, and finally to an estimated 223,000 this year, domestic consumption has hit astronomical figures.

The California Water Service Co., serving between 80,000 and 85,000 people—or roughly a third of the county's population—shows domestic consumption figures that are hard to believe.

Consumption by the 85,000 people in the Greater Bakersfield area this year probably will hit 8,000,000,000 gallons. That's a gain of 3,000,000,000 gallons in 5 years.

Water level of the company's wells has dropped between 8 and 11 feet since 1940. Twenty additional pumps were lowered last year and about the same number this year.

The company has 71 wells serving its thirsty customers, and 2 years ago deepened them from 300 to 600 feet as insurance against a further decline in the underground levels.

During the peak consumption day in 1948 the average use per consumer (not individual) was 2,301 gallons. Inasmuch as the average in the East and Midwest is between 90 and 100 gallons for a peak day, this figure assumes terrific proportions.

Don Windlack, manager of the water firm, attributes the difference in totals of this county and other sectors to lawn watering and coolers.

It takes plenty of water to raise a lawn in Kern County, and plenty more to raise the fruit and shade trees that are almost a necessity in this climate.

Domestic consumption is not a big factor in the total water shortage, but tends to accent that shortage when it is realized that the county's total use, reduced from gallons to acre-feet, equals 73,700 acre-feet, or enough water to irrigate some 24,000 acres of farm land.

Kern County's lands are thirsty, and its people are thirsty, too.

[From the Bakersfield (Calif.) Press of July 26, 1949]

COUNTY MUST WAIT FOR FRIANT WATER

(This is the third in a series of articles dealing with the critical water situation in Kern County and the San Joaquin Valley.)

(By J. R. McKinley, Press farm editor)

A half-completed concrete canal represents the only hope at present for Kern County farmers who have on their hands the worst water crisis in the history of the area.

The Friant-Kern canal, extending some 160 miles from Friant dam, near Fresno, to the Kern River, will eventually furnish supplemental water to the county's thirsty acres.

The only catch is that the canal is not finished, and the contract for the last 36 miles—the vital section insofar as Kern is concerned—will not be let before next year.

Down this canal, a part of the vast $400,000,000 Central Valley project, will flow both class I and class II water. Some of the water already is being used to supplement diminishing water tables in Tulare county.

The Bureau of Reclamation expects to have the canal entirely completed in 1951, at which time Kern farmers will begin to feel some of the benefits. But a lot of water will be pumped before that time.

This canal water will help ease the water problem in more than one way.

It will directly irrigate thousands of acres, thereby eliminating the need for pumping in those areas.

A certain proportion of it will eventually percolate back into the underground strata, and its use on the surface will help check the receding water table.

Just how much of this water Kern farmers will receive is anyone's guess. It has been estimated that 600,000 acre-feet annually are scheduled to go south of Friant dam.

Even if Kern received this entire total—which it certainly will not—it would not completely solve the water problem here. But in an area where nothing but sagebrush and wiregrass will grow without water, every single drop is precious.

Two rivers—the Sacremento and the San Joaquin—are the source of Central Valley water.

The Sacramento, flowing from the north, and the San Joaquin from the south, meet in a common delta near Stockton, mingle in a myriad of channels and issue together into San Francisco Bay.

Shasta Dam, located north of Redding, will create a large reservoir which will check Sacramento floods during the stormy seasons and store surplus water for relase during dry months.

The delta cross-channel below Sacramento will divert surplus Sacramento River water to the pumping plants of the Contra Costa and Delta-Mendota canals.

The Contra Costa canal, starting at Rock slough, will serve an industrial and agricultural region as far west as Martinez. The Delta-Mendota canal, starting near Tracy, will carry a new water supply up the San Joaquin Valley as far as Mendota to serve lands previously irrigated from the San Joaquin River.

This exchange will make possible the storage of San Joaquin water behind Friant Dam in Millerton Lake for diversion into the Friant-Kern and Madera canals.

It is small comfort to Kern County and San Joaquin Valley farmers to realize that the dam itself (Friant) was finished in 1942.

Inasmuch as the canal was not completed simultaneously, the valley has lost approximately 4,000,000 acre-feet of deperately needed water—water that has flowed down to the sea. This water was in excess of all diversion rights below the dam.

And although a comparative trickle is now flowing through the first half of this canal, additional thousands of acre-feet of water are still being lost to the sea.

It is pointed out that the Sacramento River has two-thirds of the total run-off of Central Valley, with one-third of the irrigable acreage.

The San Joaquin has one-third of the total run-off, and two-thirds of the irrigable acreage.

As early as 1874 it was obvious that eventually the water from the Sierra streams would

be needed for irrigation purposes. That year Lt. Col. B. S. Alexander submitted a report outlining a comprehensive system that could be constituted for utilizing this water.

Col. Robert Marshall, chief hydrographer of the geological survey, submitted a plan to the Government March 16, 1919, in which he contemplated a number of storage reservoirs and a system of huge canals following the entire rim of the Sacramento and the San Joaquin valleys.

The plan, after a study, was found to be too costly and complex for construction. But an investigation authorized by the legislature in 1921 led to formation of a State-wide plan developed by the State division of water resources in 1931.

Legislation was passed setting up the Central Valley project in 1933 and was approved by the Governor August 5, 1933.

At a special referendum December 19, 1933, the Central Valley project was approved by the people of California.

The Federal Bureau of Reclamation was authorized by Congress to begin construction in 1935, when it became a Federal project.

Construction was first started in 1937 with the building of a warehouse at the Friant damsite. Construction at Shasta Dam was started in July 1938. In November 1939, actual construction of Friant Dam started.

The Friant-Kern canal was cleared for construction in 1945, prior to the close of the war, after a 4-year delay.

This month the first water was diverted through the southward canal, barely in time to save suffering crops near Orange Cove and in other Fresno and Tulare County areas.

Already years behind schedule, the canal today is of little help to the farmers in Kern County, who are pumping water at an average cost in excess of $3 per acre-foot per 100 feet of lift. This includes power and cost of drilling the wells.

If farm prices should suddenly tumble, a lot of farmers might be out of business by the time the water finally reached its terminus—5 miles west of Bakersfield on the Kern River.

[From the Bakersfield (Calif.) Press of July 27, 1949]

ADDITIONAL ACREAGE DEPENDS ON WATER

(By J. R. McKinley, Press farm editor)

(This is the fourth in a series of articles intended to point out the dangerous water shortage in Kern County and the San Joaquin Valley, and to determine what, if anything, can be done to relieve the situation.)

Kern County needs every drop of the water that will flow through the Friant-Kern canal, and even this wouldn't allow for future agricultural expansion.

But instead of getting the full amount of that water, the county will be lucky if it gets a fifth part of it. Other counties, nearer the source, also have their water problems.

The total volume the canal will carry, even by optimistic estimates, would barely balance the annual county water deficit of almost a million acre-feet.

As originally conceived, the Central Valley program was designed to provide irrigation water for an additional 350,000 acres above what was in cultivation in 1937.

Those 350,000 acres already have been placed in cultivation in the valley—without the additional water.

So the most that could be expected of the project would be that it helped maintain the present acreage with no provisions for future land that could be leveled and which would produce valuable crops.

Long-range planners already are wondering just how, and where, water can be obtained that will allow for future acreage expansion.

County Agricultural Commissioner Lewis A. Burtch estimates that with favorable water conditions, Kern County alone could double its present acreage of 531,895 acres, which includes dry-farming land.

Some of this new land is alkali-infested, requiring a great amount of water. But other potential new land, especially in the Maricopa area, needs only the average amount of water to make it grow virtually anything and in abundance.

Thousands of acres of low hill land would produce bumper crops if the water could be placed on it without a prohibitive expenditure.

Assuming that full use is made of Friant-Kern canal water, the county will merely get a respite, and will have the same problem of dropping water tables and increasing irrigation costs.

But will full use be made of this canal water?

The Bureau of Reclamation cannot contract with an individual.

Therefore, it is necessary for farmers whose lands are in an area desiring water from the Central Valley project, if not already in an irrigation district or other water district capable of contracting with the Bureau, either to have their lands annexed to one of the districts or join with other farmers, if the area is large enough, and organize a district under the laws of the State.

There are a number of different types of water districts, but irrigation districts appear to be the most numerous.

Once the district is organized, the district officials, in cooperation with the Bureau, can determine the district's water requirements and they can then negotiate a contract. They will then be assured of enough water, when it is available, to meet requirements for supplemental water.

The term "supplemental water" is the key to the Central Valley project. It was not intended to furnish water for everyone who wanted or asked for it, but to supplement the amount already available with water that would otherwise have been lost to the sea.

The Bureau is authorized to construct laterals for carrying irrigation water from the main canals throughout the district when it has a contract from the district for such work. Repayment terms are interest-free in accordance with the reclamation law.

It is presumed the districts will operate their own irrigation systems, but that will be determined from the kind of contract they succeed in negotiating with the Bureau.

The first such contract to be signed was negotiated between the southern San Joaquin municipal utility district in the McFarland-Delano area of Kern County and the Bureau.

Several other contracts in Tulare County have been consummated.

At present, negotiations are being carried on by representatives of the Shafter-Wasco irrigation district and the Arvin-Edison water storage district for a contract.

In periods when the run-off of the San Joaquin is in excess of the average, additional water, class II water, will be available. This is water above the mean annual river flow, and will, of course, vary from nothing to perhaps a million acre-feet.

Most people who have studied the county's water problem are agreed that the lake to be formed by completion of Isabella Dam will have little effect on the over-all situation, other than to regulate the flow of the river.

It is a flood-control measure, and insofar as irrigation water is concerned, it will merely transfer what was once Buena Vista Lake to the mountains.

What is not generally understood is the fact that none of the water from the Kern, even during flood seasons, is ever completely lost, except through evaporation.

What isn't used for surface irrigation percolates back into the underground strata.

During seasons of excessive run-offs, the water reaches Buena Vista Lake. If it is too great an amount to be stored in the lake, it is diverted toward Tulare Lake through the Buttonwillow Canal. Meanwhile it builds up the underground reserves along the route.

But Buena Vista Lake has been dry for several years since the run-off of the river fell to approximately half the normal amount, and even its rich bed, farmed sporadically when conditions permitted, now requires irrigation water—water that must be pumped.

The "lake" is a parched, bleak bit of testimony illustrating our critical shortage of water.

[From the Bakersfield (Calif.) Press of July 28, 1949]

WATER SHORTAGE HIT KERN COUNTY FIRST

(This is the final article of a series dealing with a water shortage in Kern County and San Joaquin Valley.)

(By J. R. McKinley, Press farm editor)

"First in oil, first in cotton, and first to feel the effects of California's water shortage."

That isn't exactly the slogan of the Kern County Chamber of Commerce, but it well could be.

Only one county in the United States produced more cotton last year than Kern—Mississippi County, Ark. And Kern's per-acre yield was the Nation's top figure.

Kern County for years and years has led the State in production of oil.

And Kern County needs water more desperately, possibly, than any other part of the State or Nation.

The county's "potato pot," embracing McFarland, Wasco, Pond, Shafter, Cawelo, Edison, Wheeler Ridge, Arvin, and Tehachapi, produces nearly three-fourths of California's potato crop.

Propitious weather and the availability of a ready market contribute to an annual agricultural yield, including livestock, valued in excess of $166,000,000.

But the chief contributing factor to this wealth is the land itself, which, if watered properly, will grow virtually anything in the way of vegetables and fruits.

Were enough water available, the present acreage of the county might be doubled in a few years.

But instead of increasing, the county's agricultural acreage is almost certain to show a decline. The critical point where land can be farmed profitably in the face of mounting irrigation costs has been reached by some of the farmers.

There just isn't enough water to go around, and the chief concern of county leaders at present is maintenance of the present acreage, not an increase in the total amount to be farmed.

This might be done, but only if every available drop of water is utilized and if present good prices continue.

(This is based on a figure of 3 acre-feet for the average crops raised here and is the applied amount. The amount actually consumed by the plant is nearer 2 acre-feet, with the remaining acre-foot either percolating slowly back into the strata, or evaporating.

(By the same token, neither can the 710,000-acre-foot run-off of the Kern River be figured in its entirety. Some of it, too, goes into evaporation.

(Water applied to the surface might percolate back into the strata rapidly where the water level is high. But where it is 200 feet or more below the surface the percolation rate is quite slow.)

For one thing, full use must be made of the supplemental water which will be available when the Friant-Kern canal is completed.

Farmers themselves must save water by eliminating weeds, planting fewer follow crops, irrigating only the amount necessary, and keeping their checks small enough so that part of the field is not overpenetrated.

Many farmers unintentionally overirrigate. If the checks are too long or too wide, the upper part of the check might be penetrated several feet in order to attain 4 inches or so at the lower end.

In isolated instances it has been found that alfalfa growers have used twice the amount necessary because the checks were too large.

Pacific Gas & Electric Co. engineers and officials know the extent of the water shortage, and the firm is a leading advocate of water conservation.

Pump tests conducted by the power firm not only help determine the potential power wastage but lead to corrective measures that save both power and water.

Another hope for the water-desperate Kern farmer might be the overhead sprinkler system.

These systems are coming more and more into popular use, and whereas they were used last year to start certain crops this year some of them have done the complete irrigation job.

They are showing good results, although there are certain types of soil for which they are not adaptable.

The initial cost of installation is higher, but estimates of their total saving in the amount of water consumed run as high as 50 percent.

With sprinklers, soil can be penetrated uniformly. Evaporation is greater, perhaps, than in ditch irrigation, but this evaporation, estimated by agricultural experts at the University of California, Davis, to run between 5 and 20 percent, is more than offset.

If sprinklers continue to show successful results, as in the past, they might contribute their part to the necessary saving of water.

In most agricultural areas the farmer looks to the sky for relief.

The Kern farmer looks at figures of snow pack in the mountains, to pumping-cost charts, water-table figures and toward a ditch that is to be completed sometime in 1951.

He looks at the level land and asks himself how much longer he can afford to water it.

His problem is simple: He and his neighbors are using more than 1,400,000 acre-feet of irrigation water a year. The total supply is slightly more than 700,000 acre-feet a year.

His answer is not so simple.

A return of a wet cycle, with ample rainfall and snowfall, would still leave him with an annual deficit of almost a million acre-feet a year.

He is saving water every way he knows, because water costs him money.

The Friant-Kern canal will contribute but a small amount of the total needed.

And new farm land, needed desperately to feed a hungry world, is out of the question without water.

To date, there is no answer.

Address of Maj. Gen. Clovis E. Byers

EXTENSION OF REMARKS

OF

HON. JOHN H. KERR

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 9, 1949

Mr. KERR. Mr. Speaker, on August 4 the people of Bertie County in the State of North Carolina paused in the midst of their busy lives to pay tribute to the veterans of that county with a day-long celebration. A test of the character of a community is the respect with which they honor their defenders. In this and all other such tests the people of this country rank among the foremost of the Nation. It is with a feeling of deep pride that I point out to this Congress these activities on the part of the people in the congressional district I am honored to represent. The high character and ability of General Byers made him a most appropriate speaker for this occasion. His address follows:

I am touched by the welcome you have given me here, a welcome I am eager to interpret solely as a tribute to the veterans of Windsor whom you so appropriately honor today.

While it is always a pleasure when my duties make possible the renewal of friendships in North Carolina, I do admit to some misgiving when attempting to fill the boots of your good friend and neighbor, the Secretary of the Army, Gordon Gray.

It has been my lot, since entering the military service, to see a good deal of the world and after each tour of duty overseas, I have returned with increased appreciation of these United States. In all of my tours, I met North Carolina servicemen and found them carrying out their duties faithfully, no matter what their assignment—on land, at sea, or in the air. With even greater emphasis was this characteristic sense of duty imparted to me upon my return from the Pacific and subsequent assignment as commander of the Eighty-second Airborne Division at Fort Bragg. Until I had spent the better part of 2 years in Fayetteville, I was yet to grasp the magnitude of North Carolina's contributions to victory in World War II.

The field is so broad and accomplishments so great that it is impossible to cover in a single message. In retrospect, it encompasses the service of 362,000 of this State's citizens in the armed forces; the production of billions of dollars of war materials, and immeasurable patriotic service in every home community.

It is natural for a nation, or a state, to take pride in commanders who have pointed the way to victory. North Carolina can be justly proud of hers—among them, Gen. Hal Turnage, of Farmville, who led marines in the Pacific, and Gen. Thomas J. Davis, of West Union, who was one of the key men on General Eisenhower's staff.

Gen. Bob Eichelberger, leader of the famous Eighth Army in the Pacific, under whom it was my privilege to serve, though not a native Carolinian, married in this State and calls Asheville his home; Gen. William C. Lee, of Dunn, who pioneered and was the first leader of airborne troops, only to have his health fail—largely as the result of his Army work—so that he was unable to lead his troops in combat; Gen. Steve Simmons of Newton, who distinguished himself and saved many American lives by his work in preventive medicine, especially malaria control; Admiral David Worth Bagley, of Raleigh, Pacific battle-force commander, and many others whose names I wish I had time to mention—top men—not only in the Army but all the services.

But as important as these leaders were—and typical as they are of the Carolina brand of leadership—I would prefer talking about the services rendered the country by all of our citizen soldiers and sailors and marines, both officers and enlisted men, during the two World Wars of this lifetime.

Many of us, I know, associate North Carolina service in the First World War largely with two divisions—the Thirtieth and the Eighty-first. I am sure that there are here within range of my voice some of those who served in "Old Hickory" when it cracked the Hindenberg line in 1918. I am sure there are others who were with the "Wild Cats" in their short but creditable contact with the Kaiser's forces at Meuse-Argonne in the weeks before the Armistice.

Wherever they were in either of the World Wars, your fighting men were worthy of the State's highest traditions. We can take special pride in their accomplishments but it is a pride that must be mingled with sadness.

North Carolina paid with the lives of more than 7,000 men. Many others were casualties—who will carry the grievous wounds of war for the remainder of their lives. No North Carolina city, no town, no rural section, escaped. These are men to whom this State and every part thereof must ever keep in mind.

These are lessons we cannot forget but which will be of value only as they serve as an example in the years ahead. One thing is paramount. That is the need of preventing—forever if possible—a recurrence of 1917–18 or 1941–45.

Neither America nor the world can afford another war. We were victorious both times, it is true, but I need not illustrate at what cost.

The war in which these momentous sacrifices were made—just 5 years ago—was in the last analysis the acid test of democratic government—waged on one side for the few and on the other side for the many. Two irreconcilable political faiths—one based on the natural brotherhood of men—the other on exploited differences between men—were locked in struggle for survival.

The forces of democracy won. For a time, at least, we had crushed the gangster conspiracies that would make intolerance a way of life. On the basis of the lessons of that conflict, we are now engaged in the building of a new alliance that will outlaw the gang political philosophy among nations as we have outlawed it in the United States. But more is required if our way of life is to become the possession of the world.

Chiefly, it involves the maintenance of military strength in keeping with our position as the world's leading exponent of democratic government.

I know that the expression of this view may arouse some inclination to draw a sharp line between our internal welfare on one hand and our national security on the other. The general inference is that there is a wide divergence between the two objectives. I believe that this is somewhat exaggerated. I am more confident that with a reasonable approach, both goals can be attained. To every person here—to every American wherever he makes his home—it is important that both of these goals, internal welfare and national security, should be attained.

After considering the need for unity and strength, the United States has a far more vital world role to fill in the chaotic interim than the occupation of conquered countries, the manning of protective bases, and the direction of men and organizations in our security structure. We can either take or fail to take our national position in the world as a rallying point for those who yearn for the way of life we and our Nation fought for in 1945.

Thousands of hopeful but fear-ridden people are watching us to mark our posture, both militarily and economically. With a needy world clamoring for our products, our employment and production have continued at high levels. We have work to do—good, honest, and productive labor. By material assistance now, we are bringing hope to despairing hearts and building into the framework of human relations an increase of good will, an increase in faith in the democratic way of life.

Only through this effort are we inspiring, rather than disappointing, the uncounted millions who seek assurance that we, the world's most powerful stronghold of democracy, will stand firm and strong for the justice and freedom that form the only secure foundation for peace.

These things, I believe you approve. But approval cannot be given and forgotten. It implies a determination to face the sacrifices involved, including those countenanced in maintaining a sound national security. Modern armies, navies, and air forces are forbiddingly expensive and this interim period of heavy draft on our resources—if protracted indefinitely—would result in the requirement of even greater financial sacrifice. Yet, I could not stand here at this moment urging the vital importance of national strength, as the world understands such strength, unless I was completely convinced that the alternative is too fearful to contemplate.

The Army is thoroughly aware of the vital need for avoiding unnecessary expenditures in contriving and administering its part of the national security. We are resolved that insofar as our intelligence can devise, the country shall receive maximum security with maximum economy. We shall work unceasingly with the Air Force and the Navy to maintain a Military Establishment in step with the pace of scientific advance and efficiency, constantly striving to cut the cost. The adjustment of our security forces so that they shall be in balanced effectiveness to meet the Nation's needs is a task at once complicated and urgent. In the light of our present needs, the whole problem of security by sea, air, or land, must be examined and reassessed so that all sectors can be covered without duplication, and even more important, without neglect. This is a problem to which we invite the continuing concern of every veteran. The uniformed services belong to the American people—not to the officials temporarily commanding them. Their size, their nature, their organization—all these deserve your fullest attention, first, to assure yourselves that the Nation is not recklessly exposed nor flaunted and ridiculed as it labors to promote world order; next to see that we do not go bankrupt to support duplication or obsolete formations.

Above all, this is a time for confidence in our country. If we have the common bond of faith, one with the other, we shall be able to continue in the even tenor of our ways and not allow fear, attended by doubt, force us into an endless international armaments race—and its consequent doom of national economy.

This, my friends, is the choice. This is the decision Americans must make. No one—least of all the Army—can make it for them.

Nor is there any easy or popular alternative to armed security through top-heavy trust in supersonic weapons or the atomic bomb at the sacrifice of our remaining arms. All of us are familiar with the push-button theory, based on the idea that sea power and the foot soldier are outmoded and that the air arm should be relegated to the role of an aerial quartermaster freight service because guided missiles will be the bomb carriers of the future. This leads only to the danger of reckoning our safety on fantasy rather than fact.

It is not my purpose to depreciate the vast advancement of scientific weapons or their further development as priority weapons in event of attack. Nor can anyone deny that their development, existence, or utilization in the event of attack by any aggressor is the greatest deterrent to war today.

By any yardstick, American armed strength will only be as strong as the combat capabilities of its weakest service. Overemphasis on one or the other only obscures our most compelling needs—not for sea power, air power, or land power—but military power commensurate to our world requirement. When you think of balanced security then, the simplest comparison is that of a college football team. The team may boast a string of all-American backs, but it still needs 11 men on the field. The backs couldn't even get started if their line wasn't in front of them.

National security is a condition that cannot be qualified. We shall either be secure or we shall be insecure. You cannot have partial security. If you are only half secure, you are not secure at all. You cannot lock your front door and leave the back door open. No matter how strong the Army, Navy, or Air Force may be, no matter how well trained or extensive its reserves, how big our stock piles or weapons, we can still be attacked if we do not have the common faith and unity. They lock that back door through which doubt and fear might enter.

I leave these thoughts with you because I know you veterans have a particularly alert concern for all those matters which affect the welfare and security of the Nation. You are marked men—you cannot escape positions of influence, particularly in moulding thought in that field in which you have had personal experience in the defense of this Nation. That experience, both in foreign fields and here at home, has fitted you for special and specific leadership.

While a strong United States is necessary for our own well being, the task of world peace demands that our country be the stabilizing influence in the world community of nations. You, in your daily work and associations, can help build within our people a solid conviction of that fundamental fact. You owe the effort to your comrades who in two world wars stopped at no sacrifice to preserve their country from enslavement by aggressors. To build that conviction, I believe, is the mission and duty of every citizen worthy of the calling. Democracy can never be stronger than the willingness of its citizens to sacrifice for it. Its privileges cannot be indefinitely enjoyed unless there is always an equal zeal in meeting the obligations of citizenship under it. For all of us, it is clear that there is still work to do—work that puts our country above all else, but performed in the realization that by devotion to America, we are assisting world progress.

America's veterans are entitled to a better world than the one into which they were born.

Remember the lessons of two World Wars in this lifetime and you shall have it.

Three West Coast States Have Worst School Jam

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 9, 1949

Mrs. DOUGLAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following newspaper article which appeared in the Washington Post, July 10, 1948:

THREE WEST COAST STATES HAVE WORST SCHOOL JAM

(By David L. Leonard)

SAN FRANCISCO, July 9.—California is one of three States with the worst school overcrowding in the Nation, a survey showed today.

The other two States are California's northern neighbors—Oregon and Washington. They, too, were caught in a tide of west-bound immigration during the war. The war workers didn't go home again.

State and county school officials back the belief of Dr. Charles Bursch, director of California school planning, that it is hard to choose which of the three States is worst. But they believe, like Bursch, that California alone accounts for about 10 percent of the Nation's total needs for more and bigger school buildings.

A survey of school authorities conducted in California showed that overcrowding was the worst in history; and that the situation probably won't get any better for at least 8 years.

School officials have built four times as many new and expanded units as in 1940. But they say that about 112,000 California students through the first 12 grades are forced to attend classes on half-day or split-session schedules. Some areas hold three split-sessions daily.

Educators blame a great influx of children in the 1- to 14-year-old bracket. The California birth rate since 1940 has nearly trebled, they point out.

The San Francisco Bay region alone had 76.1 percent more under-14 population in 1947 than it had in 1940. Los Angeles chalked up a 122,000 total population increase in 1948.

Henry Magnuson, State department of research and statistics, said that by March 1949 there were 146,914 more students in the first 12 grades throughout the State than there were in 1941. The 1941 figure was 1,149,963. "And it's still increasing," he added.

School construction is up 400 percent over prewar years; but even that isn't enough. State Architect Anson Boyd said that in the first 5 months this year $49,955,000 in school-construction funds cleared through his office. The record postwar year was 1948 when school-building allotments totaled $113,-174,000.

The average for prewar years was $14,000,-000 annually, Boyd said.

Los Angeles gets most of the construction. Officials there say they need 3,600 more classrooms by 1960—or one room built every day for the next 10 years.

Los Angeles predicts its peak year will come somewhere between 1948 and 1964. In 1964 that city estimates it will have 127,000 more students than it has today. Of this figure, 90,000 will be elementary pupils.

Some 27,000 students in Los Angeles attended split sessions last year. This year the number of split sessions was cut in half. But there is a kindergarten waiting list of 2,000; officials hope they can eliminate it by the end of the 1949–50 school year.

Austrian Peace Treaty

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 9, 1949

Mr. LODGE. Mr. Speaker, as I warned repeatedly in the past, we must be most wary in approaching the Austrian peace treaty. I am reliably informed that the chances are that an Austrian peace treaty will be concluded some time in the fall. I submit that this is cause for grave apprehension since in Austria the western world has a free territory pointing 120 miles behind the iron curtain.

In this connection I am inserting in the CONGRESSIONAL RECORD an interesting article, by C. L. Sulzberger, which ap-

peared in the New York Times on Sunday, August 7:

RUSSIAN TOEHOLD IS SEEN ON THE FUTURE OF AUSTRIA—SOVIET HAS ATTAINED POWERFUL POSITION IN ECONOMY OF "LIBERATED" COUNTRY

(By C. L. Sulzberger)

VIENNA, August 5.—Despite the fact that Austria is technically a "liberated" country and the treaty that will decide her future is called a "state treaty" and not a "peace treaty," a fact remains that cannot be negated by semantics: Four armies of occupation remain on Austrian soil.

Actually, they have far less disagreeable mutual relationships than is customary, for example, in Germany. To some degree this may be occasioned by the fact that the Allied Council deals with a government in being and has specifically limited functions.

Additionally such complexities as travel corridors from the Western zones to Vienna were specifically worked out and agreed to in writing from the start. Western troops are allowed in the Soviet zone with proper permits—which take about 3 days to obtain. Soldiers of all four nations stroll unconcernedly in each other's sectors of Vienna.

All told the Russians are said to have about 45,000 troops in this country (including some who switch in and out of Hungary) and the combined Western forces are about 25 percent less. These are mostly restricted to specific areas. Driving from the Czechoslovak frontier to Vienna, this writer saw only six Soviet soldiers, including one supervising customs at the border and three who were riding in the same jeep.

Through geographical proximity and military ascendancy the Russians have managed to attain a powerfully influential position in the Austrians' future. The Soviet has more than a toehold on the nation's economy through its oil field and Danubian waterfront possession.

Some people say that if the treaty now being discussed in London does not specify that the Austrian Government shall be charged with the security of these properties, Moscow may insist on maintaining its own police forces on them.

Few western-power spokesmen believe the Soviet Union will seek to take control of Austria through an internal Communist putsch after the treaty finally is signed. The party's limited membership is largely concentrated in three towns—Vienna, Wiener Neustadt, and Leoben. Its greatest trade-union strength is in the chemical workers (12 percent) and mine and metal workers (10 percent).

While as much as 25 percent of the Vienna political police are Communists, the national forces have been considerably purged since the first provisional government's Soviet-picked Interior Minister was eased out. Despite the minority position of the Communists, however, there are fears that the Soviet Union will gradually seek to expand its economic grip and "muscle in" if a depression ever strikes the United States or if Austria defaults on any of her stiff schedule of payments. Worries by some high American officers that Communist "goon squads" could seize the Vienna Government are discounted by diplomats.

The resurgency of nazism is another matter giving concern. Such papers as the Graz Alpenruf, the Salzburg Neue Front, the Berichte und Informationen, and the Freie Stimmen are beginning to produce familiar paragraphs.

The Freie Stimmen of July 23 encouraged Nazi youth to bide its time until the Allied withdrawal when it could build a parliament to its own liking.

The Neue Front of July 16 said: "Without doubt, thanks to the Fuehrer principle, much was done during the dictatorship of the Third Reich that could hardly have been accomplished in a democracy."

All but what are termed "implicated" Nazis are now free to participate in Austrian affairs. Most politicians agree that they should be absorbed into the normal social life to avoid the creation of a dangerous group of malcontents.

This is a subject that certainly must be handled delicately. This correspondent remembers vividly being in Vienna in the spring of 1938 after anschluss and seeing Nazi formations marching groups of Jews and Socialists to do "physical jerks" or going into the city morgue to check on lists of recorded suicides.

As the October 9 elections approach the Nazis find themselves wooed by political leaders who hope to gain their votes. The support of two groups—the Austrian Democratic Union and the League of Independents—is being quietly solicited.

The Austrian Democratic Union may obtain Allied permission to register as an approved fourth party. The League of Independents stands no chance of that but may put up its own candidates, although not constituting an approved party, under a peculiar electoral clause allowing persons sponsored by more than 100 voters in any locality to stand.

Since the Nazis are strong in Styria, Carinthia, Salzburg, and upper Austria their vote may be important in the autumn. The dominant People's Party hopes to have it and perhaps gain a majority.

As things now are the great powers each have their favorite party. The Russians, of course, sponsor the Communists. The British fairly openly support the Socialists. The Americans give encouragement to the People's Party, the only non-Marxist group, and the French also more or less favor its Catholic flavor.

More Recognition of Vast Benefits Tennessee-Tombigbee Waterway Would Bring

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 9, 1949

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks, I am inserting an editorial from the Mobile Register, Mobile, Ala., dated July 30, 1949.

I am also including a news item from the Mobile Register dated July 29, 1949, entitled "Idea on Growth for Mobile's Port Outlined by Philanthropist Here," in which news article Hon. Erskine Ramsay, of Birmingham, Ala., emphasizes the potentialities of the Tennessee-Tombigbee waterway project.

[From the Mobile (Ala.) Register of July 30, 1949]

MORE RECOGNITION OF VAST BENEFITS TENN-TOM WATERWAY WOULD BRING

On a visit to Mobile this week, Erskine Ramsay, long prominent in the business life of Birmingham, emphasized the potentialities of the Tennessee-Tombigbee waterway project.

This project, of course, would connect the Tennessee and Tombigbee Rivers by canal and thus open a navigation route between the Gulf Coast at Mobile and the inland country of the United States.

Mr. Ramsay revealed a keen awareness of the economic benefits that could be expected from this improvement in the Nation's system of inland waterways.

"I was and am exceedingly pleased with the advancement being made by the docks in Mobile," he said in speaking of the Alabama State docks. "But I feel there is nothing that will help Mobile and the whole Southeast so much as that Tennessee-Tombigbee link. With that, Mobile would become a big city and in a big hurry."

Mr. Ramsay's observations stand as another example of the great value placed on the Tennessee-Tombigbee project by those who have closely and carefully studied it.

Opening of the new route by constructing a canal to connect the two rivers would mean a great and continuing service to the transportation of commerce.

It would mean important savings in time, distance and cost of water transportation between the Gulf Coast and a wide inland region of the country. The benefits thus available would be permanent and far-flung.

The Tennessee-Tombigbee waterway is so meritorious that it should have been established and placed into use many years ago. It deserves and should receive high priority at the hands of Congress in the allotment of future funds for inland waterway purposes.

[From the Mobile (Ala.) Register of July 29, 1949]

IDEA ON GROWTH FOR MOBILE'S PORT OUTLINED BY PHILANTHROPIST HERE—ERSKINE RAMSAY WANTS TO SEE CANAL LINKING TWO RIVERS NORTH OF CITY

(By Ted Pearson)

Erskine Ramsay, a spry octogenarian from Birmingham, whose very name is synonymous with mining and philanthropy, came to Mobile Thursday with an idea on how Alabama's lone seaport may grow by leaps and bounds.

Carrying his personal trade-mark, a genuine Scotch walking cane of hickory given him by a Scotch coal miner on his sixty-seventh birthday in 1931, Ramsay voiced his amazingly simple idea during an hour-long interview at the Battle House.

His idea calls for concentration of congressional appropriations on one vital project, the oft-discussed yet never-realized canal linking the Tombigbee and Tennessee Rivers, creating a waterways system with the port of Mobile at the southern terminus and the gateway to the sea.

MANY APPROPRIATIONS

As Ramsay sees it, Congress has made many appropriations for many rivers and harbors projects here and there. Together, they add up to gigantic proportions.

"But why not get our Senators and our Congressmen to put all that money available into this one single project that will bring dividends beyond the imagination?" he asked. "As it is now, a lot of Government money is going into many small projects to please a lot of districts."

Mobile is one of the finest ports in the country, Ramsay asserted, and he was saying this only 3 hours after making a tour of the vast and expanding Alabama State docks system. Of the State docks, he said:

EXCEEDINGLY PLEASED

"I was—and am—exceedingly pleased with the advancement being made by the docks in Mobile. But I feel there is nothing that will help Mobile, and the whole Southeast, so much as that Tennessee-Tombigbee link. With that, Mobile would become a big city, and in a big hurry."

Ramsay, an 84-year-old native Pennsylvanian of Scotch ancestry who heads the largest independent coal-producing company in Alabama, was in Mobile as part of a trip through Alabama, Mississippi, and Louisiana.

While in this section, he is staying at the Grand Hotel at Point Clear. Accompanying him on the trip are his sister, Mrs. M. K.

Kelly, of Big Stone Gap, Va., and a niece, Mrs. Huston LaClair, of Birmingham.

ON TO NEW ORLEANS

After leaving Mobile, the trio, which is traveling by automobile, driven by Ramsay's colored chauffeur of 50 years, William Bondurant, will go to Pascagcula, Miss. Also on the itinerary is New Orleans.

The industrial career of Erskine Ramsay is one of personal initiative and an inspiration to youth. At 22, he left his native Pennsylvania to take charge of coal mines in the then young Birmingham mining area operated by Tennessee Coal, Iron & Railroad Co.

Today, among many positions which he holds, Ramsay is chairman of the board of Alabama By-Products Corp., half owner of the Newcastle Coal Co., and serves as director of a number of concerns in and around Birmingham. So well known is his name that, once, he received a newspaper addressed simply, "Erskine Ramsay, Alabama."

SCOTCH JIG

Even in his middle eighties, Ramsay is just as active as ever. He goes to his office in downtown Birmingham every morning, and regularly attends Rotary and Kiwanis Club meetings in the Magic City. He is so spry, in fact, that while expounding the quality of the hickory cane he carries, he arose from his chair and demonstrated how the cane is used to add effect to a traditional Scotch jig.

As a philanthropist, Ramsay has given quite freely, in amounts totaling thousands of dollars, to the cause of education as well as other institutions. In the twenties, after he served as president of the Birmingham school system, Erskine Ramsay Technical High School was named in his honor.

His name leads all other Alabamians in the four-volume Story of Alabama, compiled by the Alabama Department of Archives and History, which says of Ramsay:

PERSONAL FORTUNES

"Although under the urge of his mechanical genius he frequently refused to pay attention to his personal fortunes, he has had the thrift, foresight, and the readiness to back his own judgment, that has eventuated in the accumulation of great wealth. In so doing, however, he inevitably contributed immensely to the prosperity and welfare of thousands of less capable folk."

Attending the meeting of the Rotary Club in Mobile Thursday, Ramsay told of birthday parties he gave up until 10 years ago at his Red Mountain residence in Birmingham.

"At the last party," he told Rotarians, "there were 4,000 guests. I am inviting all of you to attend my next birthday party—to be given on my one hundredth birthday, which will be September 24, 1964."

How many guests does he expect.

"Perhaps 400,000," he suggested with a grin.

Our No. 1 Problem

EXTENSION OF REMARKS

OF

HON. HUGH J. ADDONIZIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 9, 1949

Mr. ADDONIZIO. Mr. Speaker, as one of the sponsors of the world-federation resolution, I was happy to read the following editorial in the Maplewood-South Orange (N. J.) News-Record of August 4. The author of the editorial, Mr. Louis B. Dailey, president of the Oranges and Maplewood Chapter, United World Federalists, presents the case for some form of world government most convincingly and recommends, with the sponsors of the resolution, that we should start with the United Nations. I should also like to commend the editor and publisher of the News-Record, Mr. Gregory Hewlett, for encouraging interest in this vital problem among the readers of his excellent paper.

(The following editorial was written at the request of the News-Record by Louis B. Dailey of Maplewood, president of the Oranges and Maplewood Chapter, United World Federalists.)

OUR NO. 1 PROBLEM

Each of us has his own particular problems—personal, family, and business. We see them, definite and immediate. We feel their direct impact on us. They are with us every day. We separately struggle to solve them.

But there is another problem, bigger, more important, and more difficult of solution which we share with all others. Simply stated, it is: How can we live on the same planet with other individuals and resolve the manifold conflicts for food and shelter without, at the same time, suffering the death and destruction that come from war?

But to many people that seems remote from their lives, too big, too difficult—something for President Truman, Secretary of State Acheson, Members of Congress, or the "peace crackpots" to wrestle with. Besides haven't there always been wars? These represent ideas and attitudes which in centuries past perhaps had some validity, but will they stand critical analysis under present conditions?

During times of actual conflict we as individuals are made painfully aware of the horrors and sufferings of war. Our civilians have been spared much of this in the last two wars. Must we wait until the bombs start dropping on New York, Newark, the Oranges, and Maplewood before we realize our important stake?

Just consider some of the direct effects of war on us during a so-called period of peace.

First. We live in a tense, nervous, unsettling atmosphere, even though we rarely consciously think of the possibility and destructiveness of the new weapons. The very continuance of our lives is at stake as never before.

Second. Our children are now compelled to divert their time from constructive education to learn how, efficiently and artfully, to murder other human beings.

Third. Out of each $1 of Federal taxes (income, excise, excess profits, etc.) more than 75 cents presently goes to pay for war, past and future—but largely future. War—not governmental inefficiency and waste—is the great thief.

Fourth. Our standard of living sinks ever lower as we squander our irreplaceable natural resources in stockpiling for war, which, by inflating the currency of our Nation, reduces the real value of all insurance policies, all bank accounts, all Government bonds now so widely owned.

Then, if this is a problem of supreme importance, from what point do we start in its solution? We have had two major wars since 1914. They get increasingly destructive. In addition to those maimed or wounded, 78,000,000 died in the last war—32,000,000 troops, 46,000,000 civilians. Written obligations in many international treaties were flagrantly violated. The League of Nations existed. No world government of even limited jurisdiction was then, or is now, in existence. National sovereignty was and is intact. Every nation had, and still has, the "right" to declare and wage war for what reasons it alone deems just. The United States did not wish to enter either war, but was compelled to do so through pure self-interest. We proved we were not "free" to avoid war (our national sovereignty was powerless to achieve that)—only "free" to wage war. How valuable is that kind of freedom?

Big national defense forces are illusory. They induce like forces in the hands of potential enemies and give no security against the possibility of development of new means of mass destruction. We want no new Maginot line.

The Marshall plan is no permanent solution. Respect and friendship cannot be bought with dollars, but only with a willingness to treat others with equality and justice.

Mutual defense treaties like the Atlantic Pact are observed only so long as the component nations all have identical economic interests to protect. When they diverge, the pact becomes a scrap of paper. Even consultations of military chiefs of staff will not change this.

The only real hope (not guarantee) of solution is some form of limited world government. Man has never been able to obtain security of life and property except by a system based on law. The sacrifices of individual freedom necessary to create government have always proved worth the price, for man has never turned back to more primitive systems. Government on all levels of society has for centuries proved not only successful, but absolutely necessary.

Opinions vary as to just what form this world government should take or what powers it should be given. Many organizations are offering somewhat specific suggestions and are encouraging discussions of this matter. However, our final decision should be reserved until after some sort of international convention is held and we have had the benefit of the views of other nationals.

The United Nations, though never intended to be a world government, deserves our support in every possible way. Why not start with it, use it, strengthen it with constructive criticism? Increasingly, it is apparent that the UN, as it is, will not be able to prevent international bloodshed. Time will not solve the problem—only aggravate it. Others alone cannot solve it. Various resolutions are now pending in Congress. Specific information about these resolutions, organizations, books, etc., is available to those who are determined to do something.

If this problem must be solved, it can be solved. So was the revolutionary atom bomb born. If it is our common problem, and if it is our lives that are at stake, we are the ones who should solve it. What are we waiting for? World war III?

The State Department White Paper on China

EXTENSION OF REMARKS

OF

HON. HOMER FERGUSON

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Tuesday, August 9 (legislative day of Thursday, June 2), 1949

Mr. FERGUSON. Mr. President, the State Department white paper on China is a typical example of government after the fact, of a government seeking to convince its citizens of the reasons why it acted in a particular way. Such a procedure is in contrast to the better policy of having the government take the people into its confidence and permitting public opinion to have full sway in the formation and administration of policy.

The contrast underlines what I consider the most serious barrier I know to sound and progressive government, that of a government's acquiring a vested interest in error.

Ray Richards, of the Washington bureau of the Hearst papers, has written a brilliant series of five articles on the background of the white paper. I ask unanimous consent at this time to insert the second of this series in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

(This is the second of five articles relating America's part in the successive events which have driven Nationalist China to the wall.)

(By Ray Richards)

WASHINGTON, August 8.—The Communist world propaganda machine spent 22 years in cultivating the soil which sprouted American attempts to mediate the civil war in 1945.

Lies about the virtues of the Chinese agrarian reformers were plenty but an immense amount of the propaganda was falsehood about persons.

To preach Marx was dull, but to spread the false whispers that Chiang Kai-shek was smoking opium and keeping concubines and that Madame Chiang would divorce him for those reasons, was certain to tickle the world's gossipy imagination and create pious horror.

Lenin of Moscow faced several China problems in 1923, when bolshevism had consolidated its hold on its first national capture, Russia.

A Communist China first of all, and then a Communist Asia, was necessary before the Red hierarchy could rule the rich and advanced Western World. Attila, Genghis, and Kublai failed in Europe because they did not first subject Asia.

Even in 1923 the Western World was suspicious and watchful.

So, in ordering his first organizing agents to Russia—Ambassador Joffe and Bleucher-Galen and Barodin—Stalin decreed that their Chinese converts should not be called Communists, but mere peasants seeking reform of an ancient and unfair land division—agrarian reformers.

The heavily predominant party in the Chinese Government was the Kuomintang, headed by Chiang, who was still struggling to suppress the northern war lords.

These were the ambitious and extremely reactionary generals and governors who had aimed for control of the Republic after the overthrow of the imperial throne in 1911 by plot and uprising of the elements which were to form the Kuomintang.

It was Stalin's order that the Kuomintang be discredited.

Tell the big lie of wholesale corruption often enough, Stalin's Second Communist Theses of 1923 hinted, and it would be believed.

While the Generalissimo concentrated on the northern war lords, the Kuomintang was kept strongly organized by Chen Li-Fu.

Dr. Chen had a party secret service with which to meet Communist conspiracy.

The Communists went after him first of all, and a good part of the world's leaders have been convinced, unless they investigated, that he is a genuine Fu Manchu, plotting evil tirelessly. His personal interest is preaching the ethics of Confucius.

Financiers of the Kuomintang are T. V. Soong and his brother-in-law, H. H. Kung. Bankers are fair game in the eyes of all who are communistically inclined. Soong and Kung have had it.

Military genius of the Kuomintang is Gen. Ho Ying-chin. He has been portrayed by the Communists as an excessively beastly Tamerlane; yet in fact he is an austere and selfless man.

Always willing to treat the Communists as a rival political party, Chiang welcomed to the wartime capital at Chungking a pleasant-faced Communist representative named Tung Pu-yi.

The wartime order of the day and every day at Chungking was Spartan life, and jovial Tung was relief to all foreigners at Chungking. He was an entertainer, an all-around good fellow.

Particularly did his hospitality extend to the American Embassy staff of those early war days, including those two outstanding liberals and let's-be-fair-to-the-Communists boys, John Carter Vincent and John Stewart Service, Embassy counselors.

The press found Tung's information office a pleasant place to be.

In contrast, there was no good cheer, just fact, to be found at the information office of the Nationalist Government.

Service and Tung were to participate in related events in the United States in 1945.

Tung was the Chinese Communist delegate to the United Nations organization meeting at San Francisco, but quit the conclave cold to fly to New York for a highly secret conference with Philip Jaffe, publisher of a pro-Russian magazine called Amerasia.

This was shortly before Service found himself among the six indicted for removing top-secret information from State Department files for Jaffe's use—including the location and strength of every Nationalist military unit in China on the eve of the civil war.

For reasons which even a congressional investigation could not bring to light, FBI charges were ignored, the indictment against Service was dismissed, and he was restored to State Department duty.

Another somewhat obscure individual indicates what conditions have been.

He is Liu Tsing-chi, on whom, during the war, United States Government officials depended to keep them informed on what the Chinese newspapers of the world were saying, so they might better judge Chinese political drifts.

Liu directed Chinese press translations for the Office of War Information. He was in position to distort reports so the drift seemed to the left.

He is now the Communist press dictator at Nanking.

Air Power and the Military Assistance Bill, H. R. 5895—Statement by Gen. Bonner Fellers

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 9, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, on yesterday Brig. Gen. Bonner Fellers, retired, appeared as a witness before the House Committee on Foreign Affairs. His statement was so interesting and pertinent that I am extending it in the RECORD at this point. H. R. 5895 will soon be before the House:

I. THE NORTH ATLANTIC TREATY

The North Atlantic Treaty, in itself, has enormous psychological value. It is the symbol of unity and determination of the western powers to resist aggression from a source which the President has defined openly as Russia. It lifts the morale of the western European powers because it pledges that in war the United States will come to their assistance. But there are grave implications in the proposed military implementation.

II. ERRONEOUS CONCEPTS

So many intelligent people are so insistent on the military-aid program that I have endeavored to examine the probable basis of their reasoning. My conclusion is that their conviction stems from faulty or erroneous concepts, possibly somewhat as follows:

1. That the average European has the will to fight an organized, sustained war. In spite of the devastation of two wars within a quarter century, European morale is improving. In both wars defeat was inevitable had not America intervened. American pledges now assure ultimate victory should world war III come. But neither our pledges nor our armed forces can prevent the occupation of Europe by the Red army. Should war come, the Red army will sweep rapidly over Europe before American assistance could possibly arrive. Our allies will blame us for their fate; their will to fight will collapse.

2. That the quality of leadership in Europe today is better than it was in 1940. France is torn with internal dissension; Socialist leadership is dragging Great Britain into oblivion; Italy cannot deliver its military power as effectively as did Mussolini; under him the Italians failed. All Europe is war weary.

3. That once donated, our military equipment will be maintained on the same standard as our own. Based on experience, equipment in the hands of our allies will deteriorate rapidly. Among them preventative maintenance is almost unknown. They find it easier to demand new than to maintain the old. After our donated equipment deteriorates we would be blamed for having furnished faulty material.

4. That our donated equipment will not be used to blackmail us for more equipment and for American peacetime garrisons. As long as the cold war lasts, and under the program contemplated, Allied demands could be endless. All requests are likely to be shaped to intimidate—"give us this, or else." To comply would collapse our economy.

On July 25, in his debate on the Atlantic Pact, M. Monteil, member of the French Parliament, disclosed what they expect in the way of American military aid—it implies American troops.

After an accurate summary of Russia's military might, he declared:

"We fear that we shall again have the glorious but dangerous role of being foreguard. Our army cannot be of immense numbers but must be of highest quality. The Atlantic Pact can prove to be the best or worst measure, dependent upon how military agreements are implemented. We have the right to await from our allies all the assistance we need in order to win the first battle."

5. That 60 European divisions can stop 500 Russian divisions. The Red army will advance with such overwhelming power and air superiority that neither 60 nor 100 divisions can stop her. But there is more to this picture. Russia need not resort to World War I methods of invasion. Her some 6,000 transport aircraft can lift 75,000 troops in one flight. As her first act of war, she can easily and simultaneously attack Allied aircraft on the ground and drop a Red corps in England or Europe.

6. That Allied ground units stationed on the Rhine or Elbe can somehow defeat the Red Air Force. The great lessons of World War II are that only air power can defeat air power and that ground troops cannot win unless they control the air above them.

7. That air supremacy is not essential to ground victory. No claim is being made by the sponsors of the aid program that we shall have mastery of the air over the defending forces. To ignore the principle that air supremacy is essential to ground victory is an

unpardonable blunder. Russia probably has six or seven thousand fighters, and a like number of bombers. There can be no hope of holding the Red army out of Europe, even if we were strong on the ground, unless we could neutralize the Red air force.

8. That we can afford to rearm Europe. To present even discouragement to the Red army would require a peacetime garrison of at least 60 divisions. The cost of one division, from inception to combat readiness, is about $400,000,000, or $24,000,000,000 for the entire force. Were we to furnish our proportionate share of troops we would need an annual $4,000,000,000 universal-military-training program, with all its moral costs also. The cost of tactical air support for the European force is difficult to calculate, as part will be provided by European powers—a curbstone estimate for the United States possibly would be a cold $3,000,000,000 annually. This is all an expenditure separate and in addition to our own national defense.

9. That military might can solve the problem of communism. Communism was born in World War I; spread over Asia and central Europe after World War II; the next war will enable it to complete the cycle. Bayonets and bombs cannot destroy ideologies.

10. That the Red soldier can fight in and occupy Europe without deterioration of his morale. Were the Red forces permitted to see Europe, they would find there a way of life, a freedom, a human dignity beyond their widest stretch of imagination. Never again would they submit with docility to totalitarianism. Stalin fears this more than anything except our Air Force and the atomic bombs. He can only hold his totalitarianism leadership by keeping his people in ignorance of western peoples. The iron curtain is proof that Stalin dare not permit the Russian population to learn the truth about the outside world.

11. That war against Russia can be won on the ground. In the last war—before lend-lease—11,000,000 Red soldiers, equipped entirely by Soviet industry, were thrown against the Nazi attack. When the war ended, Stalin was using 502 Red army divisions to push Hitler back into Germany, while on the western front the Allied strength was 91 divisions, of which 63 were American.

There are other factors favoring Russia. Her great allies are distance, winter, and manpower. Russia without its satellites is nearly three times the area of the United States. Russian winters are so severe that Americans and western Europeans cannot stand them. Russia has an inexhaustible supply of manpower, which its leadership deems expendable.

Terrain favors Russia. Europe is actually a tapering peninsula on Russia's western frontier. As armies advance westward the front narrows, the road and rail nets become more dense, the climate milder, and the Atlantic puts a stop to further retreat. But as armies move eastward the front rapidly widens, from 750 miles between the Baltic and Black Seas to 2,000 miles from Murmansk to Caucasia. The road and rail nets thin out. Winter immobilizes ground action. And for 6,000 miles there are no barriers to an eastward retreat.

Napoleon invaded Russia with half a million troops fresh from European victories. He captured, sacked, and burned Moscow. Then the Russian winter got him. He escaped into Europe with 30,000 sick and hungry stragglers.

Hitler threw 220 crack divisions against the Red army. He advanced to the Leningrad-Moscow-Stalingrad line. There winter and distance and Russia's inexhaustible supply of manpower held him. He lost 5,000,000 troops and failed. If American ground forces ever accept a major engagement with the Red Army in Europe, our losses will be enormous. Our people would recoil in horror and belatedly examine the quality of our leadership.

12. That war with Russia is inevitable. This is an admission that our leadership has failed. There is, in America, the resourcefulness and genius to avoid war and compose our differences with Russia if we conscientiously dedicate ourselves to the task.

III. CALCULATED RISKS

There are risks, which I presume we have calculated:

1. That our weapons in the hands of the western European powers will not be used against us. This might happen in two ways. Should war come, the weapons might be captured by the enemy and turned against us, or governments might change radically and aline themselves with the enemy.

2. That our weapons will not be used against colonials. It is not in keeping with American tradition to supply European governments with weapons which might be used, or make it possible for other weapons to be used against colonial peoples. The prestige of the United States, which is worsening in the Orient, could not stand this added shock.

3. That Russia will permit us to rearm Europe. Stalin might be tempted to strike the Allied forces before they are strongly equipped, when his occupation of western Europe would be quick and certain. There is no assurance that such ground forces as our allies can create and equip with our weapons will act as a war deterrent. In view of his vast Red Army, Stalin will scarcely be impressed with any peacetime Allied ground force.

IV. SUGGESTED SOLUTION

Fortunately, there is a brighter side to the picture.

The United States has a powerful deterrent to aggression in our atomic bombs and the long-range bombers. This, and not our ground and sea forces, is the one threat which impresses Stalin. Russia's eternal allies—distance, winter, and manpower—are impotent against air power. So long as we maintain the lead in bombs and bombers, this war deterrent is likely to continue effective.

Against the active opposition of the administration, the Eightieth Congress approved a 70-group air-force program. Now a cut-back to 48 groups is contemplated. It seems that the $1,450,000,000 initial military-assistance program, plus the $15,000,000,000 current defense budget of our own, total more than we can afford. The future security of this country hinges on how the essential cut is made.

We can achieve national security, and at the same time cut expenditures, if we create a tailor-made force to meet the combat characteristics of our designated enemy. The formula is simple, yet the defense establishment has not so far found it: The best air force in the world supported by an adequate army and navy. Since Russia is immeasurably strong on land we must avoid large-scale ground combat. A ponderous and expensive ground force, therefore, is unnecessary. Russia has only a small fleet; our navy is exceedingly powerful.

For the present, therefore, we can hold back on army expenditures; we can safely skimp the navy budget. But Russia has announced that she will build the most powerful air force in the world. And our Moscow observers recently have been deeply impressed by the progress already apparent. It is vital to the survival of the United States that we retrieve and maintain air supremacy.

The use of air power as the striking force, supported by ground and sea forces, is in keeping with the necessity of economy. An annual expenditure of $6,000,000,000 for the air force, $3,500,000,000 for the Army and $2,500,000,000 for the Navy would, within 5 years, place us in a position to insure the peace of the world. This is a total of twelve billion as against fifteen in the present budget. This we can afford. It is a drastic cut for Army and Navy, but now is no time to let tradition and sentiment overshadow the proved trends in strategy.

The placing of our principal reliance in air power would not mean that the United States is abandoning the Western European peoples. Since the attempt to hold the Rhine would be futile, it might actually be better to permit the Red army to occupy Europe than to suffer the devastation which inevitably follows in the wake of tanks and guns and bombs. One more sweep of ground forces locked in combat across Europe would be all too likely to end its civilization.

Occupation by the Red army is not an easy path to prescribe for our allies. Only one thing could be worse—and that is the total destruction from war on the ground.

The Red army in western Europe, through destruction of Russia's war potential by strategic bombing, would be cut off from bread and bullets. Its deterioration would follow.

Our principal reliance must be placed in air power because massive ground forces with tanks and artillery and mechanized vehicles are vulnerable to air attack and must be classed as the Maginot line of world war III. Tank tracks are easily broken by near-miss bombs and strafing. Air destruction of fuel immobilizes all vehicles. Control of the air is everything. Our strategy today is in transition. Things challenged as radical departures now will be accepted tomorrow as sound principles.

Our allies won't like this concept of air power in the dominant role but they will, in time, understand and approve. It is the only concept which America can afford. And it is to America that this Congress owes its primary responsibility.

Keeping the peace by air power safely based in America but capable of striking instantly is a modern concept in keeping with America genius and resourcefulness. It lifts itself out of the sordid hates, national and religious and racial prejudices and intrigues of the old world which knows only balances of power and war.

If we send guns and tanks and planes to the Rhine or Elbe frontiers, the Kremlin clique would have tangible evidence that the capitalistic, democratic, Christian countries are creating the military might to destroy Russia. The Russian people, being patriots, will respond. Russian armies fought for the two worst governments on earth—the Czars' and Stalin's. They will again fight for their homeland, if their leaders are able to give them a cause.

Our refusal to extend military aid to western European powers would at once throw the complete responsibility for an aggressive action upon Russia. It would make it more difficult for the Kremlin to lead the Russian people into war.

We should advise the Atlantic Pact countries that we possess the strategic striking power to paralyze Russia in case of war. They need provide, from their own resources, only the minimum weapons to insure law and order. It leaves all their energy free for the achievement of economic stability—the best weapon against communism.

Failure to arm Europe would relieve our taxpayers of the insufferable burden of implementing an erroneous concept for our security.

Russia must be viewed as an entity. If she were blocked by ground forces on one front, it still leaves her free to cross frontiers elsewhere. A containment policy against her is sound provided we do not endeavor to build the strait-jacket with ponderous infantry divisions—possesed of strategic immobility—dedicated to World War I methods of combat. There is an effective means of containment.

South of Russia are 400,000,000 people whose religion precludes them from becoming Communists. The mere exercise of American leadership among those Moslem

peoples would give us a reasonably effective psychological barrier against Russian expansion southward.

In the Orient we have air bases in Alaska, Japan, Okinawa, and the Philippines. We can't hold basis on the continent but they are available in England and North Africa. These bases can be defended without bringing on a general engagement with the Red Army. From them, if we have mastery of the air, air strikes can be unleashed which will destroy Russia's war potential and hold her forces within her borders.

In the meanwhile—since Russia is, psychologically, the most vulnerable country in the world—a full-scale campaign should be launched to carry the truth to the Russian people. Then their demands for a liberal government would keep the Kremlin so busy at home there would be no time for political and military aggression elsewhere.

V. PRINCIPLES—SOUND VERSUS UNSOUND

If the United States were to devote its entire resources and effort to military assistance in Europe, we might still fail to win over the Red army for the odds would be against us.

If the principle on which our plan is based is unsound, no amount of perfect execution can achieve success. On the other hand, if the principle which we follow is basically sound, we shall succeed, even if the implementation contains faulty execution.

The peoples of western Europe are understandably fearful of being overrun by the Red army. The type of military equipment which they want traces back to a frantic desire to hold the Rhine, possibly the Elbe, with tanks, artillery, machine guns and bayonets, with air support. They know that only by successful ground combat can invasion be prevented. Being desparate, and very human, they rely heavily upon the United States to help.

The proposed military-assistance program places the State Department in the role of determining military strategy, in that it has invited our allies to requisition military equipment to hold their frontiers. Assistance to this program commits us to ground combat should war come. This strategy is faulty and unsound. No amount of blood and treasure can make it succeed. It can lead only to disaster.

The situation parallels Pearl Harbor. It was a diplomatic rather than a naval decision that the fleet be stationed at Honolulu to deter Japanese aggression. Then the Hawaiian commanders were not advised that an attack was imminent. The proposed program could lead to far greater humiliation than the Pearl Harbor debacle.

The task of the Eighty-first Congress is to make sure that our Allies understand precisely what help we intend and do not intend to give them. We must not be placed where we can be accused of welching on the Treaty. Clearly, in this military-assistance program, we have not found the formula for lasting peace. This failure magnifies the responsibility of the Eighty-first Congress.

Why Undermine Idaho's Water Rights With CVA

EXTENSION OF REMARKS
OF

HON. JOHN SANBORN
OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 9, 1949

Mr. SANBORN. Mr. Speaker, since the beginning of this session of Congress, January 3, more than 8,000 bills have been introduced in the House and Senate. Of the 8,000, none is more important to Idahoans than H. R. 4287, which would authorize the establishment of a Columbia Valley Authority—renamed Columbia Valley Administration for obvious reasons. The establishment of a Columbia Valley Authority has been advocated by some people ever since the first days of the Tennessee Valley Authority. But never has the proposal received the impetus or such wholehearted support from the President as it does at this time.

President Truman, in his message to Congress early in this session, indicated that he had in mind developing more authorities. He has since endorsed legislation to establish a CVA. He even sent a special message to Congress urging its adoption. An observer might raise the question—"if authorities are so worth while, why does not President Truman push a Missouri Valley Authority?" The answer is that President Truman supported a Missouri Valley Authority Act in the first session of the Seventy-ninth Congress, but such a proposal received an adverse report from the Senate committee. And now the opposition is so strong that defeat for an MVA is too obvious to risk. Defeated in his own back yard and home State, in his proposals for the extension of authorities, President Truman has now turned to the Northwest in his drive for a further experiment in government with the hope that the Northwest has been sufficiently softened up under the influence of Northwest Federal power development.

At the outset I want to assure you that in opposing the establishment of an authority I am not opposed to development of the great Northwest, and especially Idaho, from a reclamation and power angle. The old Oregon Territory—that vast area served by the Columbia River and its tributaries, and now divided into four great States—has within its borders America's greatest undeveloped resource—approximately 40 percent of the potential hydroelectric power that can ever be developed within the United States. From the standpoint of resources, the Columbia is the mightiest stream on the North American Continent; its potential is almost beyond comprehension, for nature in one of her philanthropic moods fashioned the land with a perfection unequalled anywhere.

Let us not deceive ourselves that such a proposal is just another Government agency. The planners themselves do not consider it so. When valley authorities first came before Congress, former Secretary of Interior Harold L. Ickes said:

> There is before you a major step in the reorganization of the Government of the United States as we have known it for the last 150 years.

The first of the valley authority bills was, of course, for the creation of a Tennessee Valley Authority, known as TVA. Undoubtedly TVA has improved conditions in that area although many acquainted with it deny it has had the success claimed for it. The TVA spent in the few years of its existence, more than the Bureau of Reclamation has used in more than 40 years. During the same period the Northwest has improved and developed very much faster without the aid of an authority.

There was but little opposition to the creation of TVA, conditions favored it. Any change was bound to be an improvement since in that area water was noticed only because of the damage it caused during flood periods. Water was a menace, a thing to be controlled, not something to be used, not something upon which the very life of the area depended. There is no irrigation in the TVA. Water was not something to be safeguarded but rather something to get rid of. Water rights for irrigation were not to be considered—there were none.

Contrast this with what water means to us in Idaho. Remember that it has not been many years since the farmer rode the ditch with his gun to guard his precious water right. It meant and still means life and prosperity. Because of the utilization of water from the Snake and its tributaries, agriculture has now become the most important industry in Idaho.

After TVA came the proposal for a Missouri Valley Authority and I have already mentioned that after careful consideration the Senate committee reported the bill unfavorably and recommended that the bill should not be passed. Now Idaho is faced with this threat.

CVA was a live issue during the political campaigns in Idaho in the 1946 election. At that time I stood firm against such a proposal and promised that I would forever fight against such legislation. I have not changed. At every opportunity, I am fighting against the efforts of the administration to saddle the Northwest with an authority.

My opposition to such legislation is founded in the sincere belief that approval of this type of legislation would be harmful to the future growth of Idaho and that if adopted would change the form of government we are presently enjoying.

I believe that if the people understood the legislation they would reject it. I invite you to study the bills before Congress. By looking closely to the wording of the bill we can determine actually what a CVA is. What it proposes to do and how. Is it needed to accomplish any useful purpose? And most important to us, will, or may it adversely affect us in Idaho?

In my observation I have noted that the bill has been written after the pattern of the fast-talking salesman's contract that gives you everything but the kitchen sink in the bold, large-face type and then takes it all away from you in the fine print. The title of the bill, which is section I, is:

> To reorganize and consolidate certain Federal functions and thereby secure their more effective administration by establishing a Columbia Valley Administration to assist in the achievement of unified water control and resource development on the Columbia River, its tributaries and the surrounding lands.

Now I want to call your attention to the object of the bill as set forth in the title, "To reorganize and consolidate certain

Federal functions." This has been supported by the proponents of the bill as good, because—according to what they say—the duplication and mismanagement of the Corps of Engineers and Bureau of Reclamation would be eliminated and the new Corporation would become the Federal agency to control the projects and the development programs.

The certain agencies of the Federal Government to be consolidated into the Columbia Valley Administration are the Bureau of Reclamation, the Bonneville Power Administration, both in the Department of the Interior, and the Corps of Engineers in the Department of the Army. Supposedly, all the functions of soil and forest conservation, mineral exploration and development, fish and wildlife conservation would remain undisturbed and continue as they are presently authorized by Congress. According to the wording of the proposed legislation this appears to be true but interpreted in the light of President Truman's message to Congress, April 13, 1949, recommending the establishment of a CVA, the picture is very different.

President Truman said in this message:

> I do not recommend the consolidation of any other Federal activities in the Columbia Valley Administration. I do recommend, however, that the Administration be given direct responsibility of preparing definite plans and programs for soil and forest conservation, mineral exploration and development, fish and wildlife conservation, and the other aspects of Federal resource activities in the region, and the means to see that these plans and programs move ahead in step.

From this quotation, it appears there will continue the duplication of the Federal agencies in the territory until through the maneuverings and strong arm tactics of the CVA these other agencies can be frozen out. I use this term "frozen out" advisedly. This procedure appears to be the intent of the administration as indicated by what has happened in the Tennessee Valley Authority and by what the President says further in his message to Congress. The TVA was set up in much the same way. Existing Federal agencies were left in the region but have since been frozen out. It is reasonable to assume that the same procedure will follow the establishment of a CVA and eventually the people of the region will suffer because of the relegation of these other agencies to a back seat to the development of power.

Secretary of Agriculture Charles F. Brannan told the Senate Committee on Public Works, in connection with proposed amendments to the TVA Act last year, that—

> It would not be appropriate to leave the committee with the impression that the TVA and Department of Agriculture have reconciled all of their policy or operational differences or difficulties. To date the Soil Conservation Service program is operative with respect to less than 5 percent of the farm lands within the Tennessee watershed. It is now operative with respect to approximately 66 percent of the farm lands of the Nation.

Thus we see that, although Congress does not authorize the CVA to take over these other Federal agencies, we in Idaho are in danger of losing the valuable service of the Soil Conservation Service and Forest Service through their absorption or obstruction by a CVA.

President Truman approves such circumventing of the law and intent of Congress. In his message to Congress previously referred to, he explains just what they have in mind. I quote:

> I recommend further that the Administration—meaning the CVA—be required, with respect to all phases of its activities, to seek the advice, assistance, and participation of State and local governments, agriculture, labor, and business groups, educational institutions and other representative groups concerned. This can best be done, as the Tennessee Valley Authority experience has shown, not through formalistic statutory machinery, but through the establishment by the Administration of a large number of advisory groups for its different activities and in different parts of the region, and through the use, wherever possible, of established local agencies to carry out the development program.

In other words, this Columbia Valley Administration does not want to be handicapped by laws—they want to create their own statutory machinery. This is the most dangerous doctrine that has ever been advocated. Literally it means that Congress shall be circumvented.

Should a CVA be established it would tend to lead to the establishment of other authorities which in the end result would bring about a system of regions governing the United States through acquisition and control of our natural resources and development of power and industries that would be laws unto themselves and answerable only to the President. Eventually it can mean nothing short of the establishment of an wholly ineffective legislative branch of our Government and the intent of the Constitution would be destroyed. This CVA bill is 47 pages long and written in the vernacular of the law student, but it is vitally important to you and me and everyone in Idaho. To defeat this measure we must understand what is contained within this proposed legislation. If you understand it you will rise up and defeat it.

The bill has 19 sections. I have discussed section I, the title. Section II, defines the boundaries of the region to be included under a CVA. All of Idaho will be included except that southeast region where the streams and their tributaries drain into Utah. This section will continue under the existing Federal agencies and require duplication of offices in our State to maintain the services needed. This I believe would not be good for Idaho. In a sense Idaho would be divided and should another regional authority be developed, this part of Idaho would have still another directing head. This pattern would fit with the over-all plan conceived and advocated by the authority supporters of eliminating State boundaries and establishing representation on a regional basis.

Section III of the bill provides for the creation of the Corporation to be known as the Columbia Valley Administration. This Corporation shall be held to be an inhabitant and resident within the meaning of the laws of the United States relating to the venue of civil suits, of a judicial district. Accordingly, the Corporation could be sued by any business or individual. However, there is a provision in this bill that grants the CVA authority to remove any proceedings brought against the Administration from a State court to the Federal district court. Section III also provides that any suit brought against an individual or corporation by the Administration can be taken to any Federal district court in the region. Literally this means that if a condemnation suit was brought against a farmer in Rexburg to acquire his water right—and this is entirely possible—the case could be brought to the district court in Portland and the farmer would be required to travel to Portland to plead his case. It is not hard to imagine that undue hardship would occur to many farmers and they would default in their defense.

In section IV of the bill, authority is granted for the appointment by the President of a three-man board who have full powers of management of the Columbia Valley Administration. These three men would receive annual salaries of $17,500 each, plus travel expenses while traveling and $10 per day for meals and lodging. The people in the area have no voice or vote in the selection of these men and no right to remove them if they prove to be incompetent or hostile. They may be removed only by the President or by action of Congress. There is no qualification required except citizenship in the United States and that they have no financial interest in any utility dealing in power or business that may be substantially affected by the success of the Corporation. It is not required that they have any training or experience in the work the Authority proposes to do.

This Board of Directors selects or hand picks its own local advisory councils and boards and pays any number of people—it could be thousands—$10 per day and expenses for their advice. In reality, these advisory boards become nothing more than cheering sections for the directors, because on all matters under consideration, the decision of the three man Corporation is final—not even the Governors of the States need to be included on these advisory boards or councils. Our existing laws, under the coordinated plan, expressly protect the rights of States acting through their Governors. Such a board with its directors could easily develop into a tremendous quasi political machine at Government expense which no group or organization could effectively oppose. This can easily provide a means of creating a superstate. The existing Government agencies do not have such power.

In section V of the bill, reference is made to the cooperation and participation of State and local governments and organizations, public and private, in formulating and executing the program designed to carry out the purposes of this act. However, there is the qualifying limitation to the extent of cooperation and participation and I quote:

> The Administration shall seek the advice and assistance * * * of local and State governments * * * to the fullest practicable extent.

It may not be practicable to accept the assistance and advice of certain organizations in Idaho if there was conflict with interests of other organizations in the other more populous sections of the region.

Present Government agencies have planned extensive development for the Columbia River Basin. Their studies have been made and coordinated. Their reports have been presented to the proper committees in Congress and hearings are now in progress on them. These same agencies are now in the field actively constructing huge projects such as Anderson Ranch Dam, the Grand Coulee project and many others. Congress will furnish the necessary money to these agencies just as fast as to an authority. A change-over would be disrupting for a time. I can see why the bureaucrats want to add another huge agency of Government, removing control from the interested people and making large additions to their pay-roll and their power. But what benefits are you, the people of Idaho, going to receive in exchange for losing your water rights and your State's rights in these matters?

This bill is tricky and misleading in what might be interpreted from it if only certain parts are quoted. In one part of the bill promises of everything beneficial and favorable to Idaho are made. Water rights are guaranteed, property rights are preserved, and private enterprise and the freedom of the individual to move about is left intact. But upon closer scrutiny, one finds these rights are circumvented by restrictive clauses.

To continue analyzing the bill let's start with section 6. I quote part of this section:

The Administration (otherwise known as an authority) is authorized and directed to construct, operate, and maintain projects, and to carry out activities, necessary for the promotion of navigation; for the control and prevention of floods; for the conservation and reclamation of lands and land resources; for the development and conservation of forest, mineral, fish and wildlife resources; for the generation, transmission, and disposition of electric energy.

Now I want you to compare this with President Truman's message to Congress:

I do not recommend the consolidation of any other Federal activities in the Columbia Valley Administration.

The President may not recommend such activities but the CVA bill authorizes such and grants full authority to the CVA to enter all fields of development and conservation without reservation.

The bill is full of such references which can only lead us to one conclusion and that is that the bill is confusing or deceptive to bring about a complete change in our way of government. The result can only be the creation of another confusing Government agency that will be costly and duplicating in its administration.

Let us look further to section 6 of the bill. This section contains the references to water rights that are so precious to every farmer and livestock man in Idaho. Remember the slogan 3 years ago "Don't touch that headgate." It appears we will have to revive it again to defeat this encroaching menace of CVA. The proponents of CVA have maintained and strongly insisted that a CVA would maintain our water rights in Idaho. As a farmer, I am vitally interested in such water rights and I want to make sure they are protected. But nowhere in the bill as presented to this Congress can I justify their claim that water rights will be protected.

I turn to the bill itself and ask you to consider it: I quote subsection (C) (1) of section 6:

The Administration (or CVA) shall have no power to condemn any water right except as it may be appurtenant to land acquired incident to the construction of dams, reservoirs, or other projects or facilities.

Note carefully the wording of this clause in the bill. At first reading the interpretation might be construed to mean that all water rights under existing State and Federal laws which have been awarded by entitlement of prior right would continue except where a reservoir or dam might require that adjacent land be flooded. However, looking at it closer it is much more extensive in its rights to condemn. Look again to the wording and I quote: "except as it may be appurtenant to land acquired incident to the construction of dams, reservoirs, or other projects or facilities." "Other projects or facilities" could be construed to mean that upstream water rights could be condemned to maintain downstream navigation works or power development projects. Where does that leave our water rights? The answer is: We would have none, except at the pleasure of the board of directors.

In section 7 of the bill, the Authority is given power to determine what your land is best suited for. I quote:

Such plans and programs shall, among other things, provide for—fostering the use of the lands of the region for the purposes for which they may be best suited.

This is all-inclusive and gives the Authority all rights to determine which land may be cultivated, which may be grazed, and which may be condemned.

Section 8 provides for the transfer of all projects, property, and functions of the existing Government agencies in the Columbia Valley area and region to the three-man closed Government corporation.

Section 9 of the CVA bill grants the Federal Government a complete monopoly in the production, distribution, and sale of electrical energy with provisions to favor certain agencies, cooperatives, and political subdivisions.

The famous section 10 of the bill is often quoted because in the opening subsection there is written these words:

No provision for work of irrigation in or under this act shall be construed as affecting or intended to affect or in any way to interfere with the laws of any State relating to the control, appropriation, use, or distribution of water used for domestic, irrigation, mining, or industrial purposes, or any vested right acquired thereunder.

This sounds wonderful to the farmer and livestock man who has pioneered the development of his land and in many instances built his own dams, ditches, and headgates to obtain water for land and stock. But I hasten to warn you that all the beautiful promises quoted above are empty when considered in the light of section 6 previously mentioned, which limits water rights. This part of section 10 is limited by section referred to on page 23 of the bill.

Also in section 10 of the bill authority is granted the directors to establish the maximum size of farm units. I quote:

No farm unit shall contain more than 160 or less than 10 acres of irrigable land.

This applies to new farms to come under projects developed. Under this authority the size of farms could be reduced to as low as 10 acres per unit.

But, one may ask, what will happen to the farm units larger than 160 acres that are already established and may come under this authority? The planners have taken care of that also. It appears to be in the plan of those sponsoring this authority to reduce landowners to such holdings that they become peons and serfs of the Government. Let me quote further from section 10:

No benefits from any such project—

Referring to projects developed under the CVA—

shall be made available to the owners of lands whose individual holdings exceed the maximum area so prescribed by the administration (which limit is 160 acres or less) until and unless such owners shall have agreed, for and in behalf of themselves, their heirs, executors, and assign, by contracts in form, substance, and legal sufficiency satisfactory to the administration to sell such part of their lands as may exceed the maximum area so prescribed by the administration at the appraised fair value thereof, without reference to or increment on account of the construction of the project.

This all-inclusive language would force all owners of the region to bow to the will of the authority and the three directors.

Sections 11, 12, 13, 14, and 15 have to do with the accounting and procurement systems to be established by the authority and are the implementation of the objectives of the other provisions of the act.

In section 16 the Columbia Valley Authority officials are given authority to acquire Indian lands under condemnation proceedings. I quote:

The administration may exercise any of its powers under this act, including the power of condemnation, with respect to Indian lands or property, irrespective of the manner in which title to such lands or property is held.

This part of the bill is in direct conflict with subsection (b) of section 17—I quote this section:

Nothing in this act shall be deemed to repeal or supersede the provisions of any treaty or to impair any obligations thereunder.

The bill is replete with such conflicts and duplications of interpretation and leaves much to the discretion of the board of three men directors.

Under this CVA bill all Federal agencies engaged in natural-resource development in the Columbia Basin would find it necessary in a large measure to conform with the policies of the Authority. By express provision of the bill respecting the functions of the Authority and as a result of its repeal section—section

17—the reclamation and other laws relative to various phases of development would be rendered inoperative in the Columbia Basin and State water rights could be repealed.

Section 17 provides:

All acts or parts of acts in conflict herewith are hereby repealed to the extent of such conflict.

No one can determine from this section what laws affecting water, and its utilization and control, or for that matter what laws for any other purpose, are repealed by this section as far as the Columbia region is concerned. All the laws that Congress has—through long experience and much study and debate—gradually evolved for the development of the Columbia region, particularly as to its water uses, are either expressly repealed by this provision or else like Mohammed's coffin, left suspended in midair, subject to being brushed aside whenever the directors determine that such laws stand in the way of operations of this act. This applies to the great body of reclamation laws and to State laws which have been enacted for the orderly, just, and beneficial uses of water in the great regions of the Columbia Basin and adjacent territory. These laws, both State and Federal, have been crystallized by the interpretations of our courts in many decisions, are understood by the people in the area involved, are proving satisfactory, and are perpetuating their long-established private and vested rights in the utilization of their water resources. Where express functions are delegated to, and performed by, the Authority, which are in conflict with existing law, repeal of the latter is apparently intended. As an example, the reclamation law of 1902, and acts amendatory thereof, relative to costs allocated to irrigation and repayment by water users of such cost, without interest, would no longer be effective.

The two final sections of the bill are short and not restrictive except for the last section—19—which provides that the Administration has authority to do anything within the realm of general welfare for the region. This is similar to the other sections of the bill which gives almost unlimited power and authority to the CVA directors and extends the scope of its supervision over people of the entire region and into every phase of living.

In considering the proposal for a CVA I have not resorted to accusations and generalizations discrediting such a proposal but rather have taken the bill and quoted from its pages to show you its real threat to the future of representative government and individual rights of property.

In a recent radio broadcast on this series, I called attention to the threat of CVA as a socialistic program. Some have criticized my statement. To support it I quote from a release made by the Pacific Northwest Socialist Party on CVA made May 13, 1949:

We realize the urgent need for a CVA, we also realize that CVA is a Socialist venture, but the proposed CVA measure centralizes power in the President and three of his appointees, thereby in some measure justifying the charge of opponents of Federal public power and regional planning that CVA will be a step in the direction of the authoritarian state.

The proposed CVA bill now pending in Congress and receiving so much support by the President and a political league in Idaho is too socialistic for the Socialists. In reality the proposed CVA bills tend to create a Soviet state.

This is a serious problem we must face. I ask you to consider it seriously and think not only of yourselves but the generations to come and the continuation of the constitutional rights of Government in this great land.

IMPARTIAL REPORT BY THE LEGISLATIVE REFERENCE SERVICE OF THE LIBRARY OF CONGRESS ON THE CVA MEASURES BEFORE CONGRESS

The following are the objections raised by this investigation and technical study:

1. Neither the TVA plan nor any existing proposals for valley authorities have provided for fusion of Federal and State powers, nor for the means by which they are to be exercised over the Authority. Much dependence therefore must be placed on the willingness of the State Governments to cooperate voluntarily with the Authority. Furthermore, there are many means available to the States whereby operations may be hindered.

2. Local subdivisions stand to lose a large proportion of tax revenues as a result of any valley authority which withdraws from taxation, large areas of land within the subdivision.

3. Valley authorities' powers are Constitutionally limited to the Federal Government's powers which in turn rest on the constitutional power to regulate commerce and navigation. Any powers beyond these are assumed at the expense of the States, and such assumption is unconstitutional.

4. Drainage basin areas transcend State and other boundaries. Carried out to its logical conclusion, the dividing of the Nation into many valley and other regional authorities would render the State as an institution nearly obsolete. Thus the Constitution would be circumvented.

5. A valley authority might well become a superagency, above any control by any other agency. The act creating such an authority would need to be carefully drawn lest the only check on its power be solely that of approval or disapproval of an already accomplished fact. Most of the bills so far introduced to establish valley authorities provide for a minimum of control by Congress.

6. Experience with the TVA would seem to justify the accusation that authorities engage in activities which are in direct competition with private enterprise. "Government in business" is not a constitutional activity of the Federal Government.

7. Accent upon power revenues leads to the suspicion that regional authorities based upon water resources are only an excuse for the Federal Government to take over the power industry of the Nation, through subterfuge.

Hugh Scott's Report

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 9, 1949

Mr. CASE of South Dakota. Mr. Speaker, under leave to extend my remarks, I include the outstanding report of Chairman HUGH D. SCOTT, Jr., to the Republican National Committee, August 4, 1949.

Mr. SCOTT's report follows:

PART I

Today is scheduled to mark the conclusion of my 4-year term as chairman of the Republican National Committee. It has been one of the shortest 4-year terms in history, although there have been times when it seemed unduly long.

In any event, it has not been boring. Some of it, I suppose, could be classified as just good clean fun—or, at the least, fun. My own traverse of this obstacle course, known as the national chairmanship, comes to an appreciated end with this theme uppermost in my mind: "Shoot if you must this battered head, but spare the GOP, he said."

But a time is reached when fun must end, when we must all put away our toys and get to work. In my opinion, that time has come.

Recent tests indicate that the inhaling of oxygen relieves those unhappy people who suffer from the DT's. Perhaps some candid talk may oxygenize us out of some of our party tremors.

In the words of the philosopher, Montaigne: "I speak truth, not so much as I would, but as much as I dare, and I dare more as I grow older."

Take a good hard look at what your Republican Party is up against. Face it squarely and meet it with the full sense of your responsibility as the party's board of trustees. The July 29 issue of U. S. News & World Report has this to say:

"Finances are a problem. Money is slow about coming in. A new chairman of the Republican National Committee must be trained before campaign time. Republican leaders are divided and squabbling among themselves. Some have their eyes on 1952 and the White House instead of 1950 and Congress. Some want jobs. Some want power in the party. Some are fighting for their political lives. There are sharp divisions over policies. There is little agreement on what line the party should take on issues such as labor, foreign relations, a farm program, spending, social plans.

"While Republicans are trying to get themselves straightened out internally, Democrats are making hay. Labor is raising huge campaign funds and organizing to back many Democratic candidates. State Democratic organizations are tying together their activities in States, counties and local governments that are Democratic controlled. And reports from farm areas tend to convince Democratic leaders that farmers who shifted to their side in 1948—and gave them the election in strategic States—are not moving back to the Republicans in any large numbers.

"There is an air of confidence among Democrats. They speak of broadening their margin of control over Congress, despite the fact that the party in control usually loses ground in mid-term elections. Republicans are less confident. This in part is due to the fact that they have controlled Congress only 2 years out of the last 19 and have not had a President in the White House in 17 years. But chiefly it comes from the internal troubles that are plaguing the party.

"The internal rows are slowing down all plans for the campaign. Until party leaders can get these ironed out, they have little hope of conducting a coordinated campaign."

For the benefit of the national committee, and particularly for the benefit of whoever may be directing the destiny of our party after today, I believe it is worth while to review what has happened since last we met—to bring the picture up-to-date so we will know exactly where we start from.

At the Omaha meeting you will recall that I obtained the approval of the National Com-

mittee for the appointment of 10 subcommittees to deal with, and make recommendations, concerning various fundamental national problems. These subcommittees were appointed without delay, while we were still at Omaha. Some of them have been active since then, as you no doubt have noted from the reports submitted here today by the various chairmen. The appointment of these subcommittees meant that for the first time in its history every single member of the National Committee was given a specific assignment and an opportunity to assist in the creation and promotion of a party program.

Substantial progress has been made. A Midwest conference on agriculture has been set up to meet in Sioux City, Iowa, on September 23 and 24. Another regional conference is planned for sometime in October at Hartford, Conn. It will deal with problems of industry, taxation, labor, and unemployment.

Still a third regional conference is to be held in the West, probably somewhere in Colorado, early in 1950 to consider the problems involved in conservation of our natural resources, reclamation, and similar subjects of particular interest to the Western States. This conference, I may add, was approved by the Western States Regional Republican Conference which met in Los Angeles last June.

All of these conferences have been arranged after consultation with responsible Republican leaders in both Houses of Congress and, so far as I am informed, with their full approval. The very fact that the actual convening of any of these conferences has been deferred until after the anticipated date for adjournment of the present session of Congress, constitutes proof of the desire of the national committee to avoid anything which might seem to be in the nature of an infringement upon the asserted policy-making prerogatives of our elected Representatives in the House and Senate.

I am very hopeful that out of the conferences now scheduled, and others which I hope will be scheduled, will come a substantial strengthening of our party organization throughout the country and a clarification in the public mind of our party objectives.

It will also be recalled that the Omaha meeting of the national committee approved a resolution calling for the creation of what was then termed "an organization policy committee." Subsequently, this group voted to change its name to the Republican strategy committee. The strategy committee includes representatives of the national committee itself, of the Republican Members of the House and Senate, of State central committees, State finance chairmen, and Republican governors. Those members for whose appointment I was directly responsible—namely, the representatives of the national committee—were appointed without delay. Four such members were named befor I left Omaha at the time of the national committee meeting. Subsequently, when the executive committee authorized an increase of two in the representation of the national committee, these two additional members were also named promptly. The other members of the strategy committee were named by the leadership of the respective groups concerned.

I regard the formation of the strategy committee as a very important development because, for the first time in our party's history, it provided an opportunity for representation of all elements in the party. Whether or not it will become an effective agency, will depend in part upon the degree of cooperation and support it receives from all party units. If it functions as a policy coordinating or strategy coordinating agency, it should succeed.

I wish to make it very clear that I have not favored, and do not favor, any impairment of the prerogatives or jurisdiction of the national committee.

The strategy committee has held two meetings, both in Washington, one on April 24 and the other on June 28. At the April 24 meeting the strategy committee gave its approval to the types of conferences to which I have referred heretofore. It also proposed that a series of rallies be held in all congressional districts in order to stimulate organizational activity. The action taken by the strategy committee on April 24 was approved by the executive committee of the national committee which met in Washington on April 25, At the April 24 meeting of the strategy committee, on motion of Senator BREWSTER, of Maine, the appointment of an executive committee of the strategy committee was authorized, the motion stipulating that I, as chairman of the national committee, should serve ex officio on the executive committee of the strategy committee. Because I felt that other party groups deserved recognition in the coordination of strategy, I named Mr. Whitney Gilliland, State chairman for Iowa, to this post.

Later, at the meeting of the strategy committee on June 28 I asked to be relieved of active responsibility as ex officio chairman of the full group and proposed the selection of an executive chairman, the creation of this new office to be subject to the approval of the executive committee of the national committee. The strategy committee appointed a nominating committee to recommend an acting executive chairman with the understanding that he would be chosen only after the approval of all members of the strategy committee, and then only if the creation of the new office be approved by the executive committee of the national committee. The nominating group reached an accord upon an able and energetic acting executive chairman, and this action was reported promptly by wire to the members of the strategy committee and, at the same time, the members of the executive committee of the national committee were asked to indicate their views with respect to the creation of this new position.

So that this report may not be overlong, I attach—but shall not read—a more detailed report of activities with particular reference to:

A. State chairmen's meeting and suggestions.

B. Cooperation between local groups and national headquarters.

C. Conference with party leaders in their States.

D. Services to Senate and House Republican leaders.

E. Expansion of publicity activities.

F. Increased use of radio broadcasts and headquarters radio services.

G. Young Republican plans.

H. Energetic program for 1949 and 1950 of Women's Division and Federation of Women's Republican Clubs.

I. The problem of the nonvoter.

A highly important factor in the operation of any political organization is the state of its finances. I do not propose to discuss that factor today because, under our plan of organization, the financing of the national committee is not the responsibility of the national chairman. The chairman of the national finance committee, Mr. Talbott, and our national treasurer, Mr. Kemper, are scheduled to make their reports during this meeting and I assume that subject will be covered adequately in their reports. I believe I should say that earlier this year it was decided by the responsible officials of the party that any large-scale fund-raising operation should be deferred at least until September.

As to the problem of money raising I would like to suggest one thought. Money maintains party organizations. It cannot, in and of itself, win national elections. Financial help usually follows an idea. It does not of itself produce ideas. When the party, or a business organization, has a specific product to sell it is much easier to obtain the necessary money. I know that most of you are constantly confronted, as I am, with the query, "What does the Republican Party stand for?" I also know that in 1948 we had what I regarded—and, judging from the vote in the national convention, most of you likewise regarded it—as an excellent statement of party principles and objectives in our 1948 platform. For one reason or another, however, the demand for a restatement of objectives continues. The strategy committee took cognizance of this fact recently by voting to set up a committee to consider the feasibility of attempting to redraft or summarize the Republican Party position. Naturally, if any such project is undertaken it can hope for success only if it has the wholehearted cooperation of Republican Members of the Senate and the House of Representatives. There was a time when the Republican Party won elections on the slogan of the "full dinner pail," which undoubtedly was an effective slogan in the situation which prevailed during those campaigns. As a matter of fact, if the ravages of the Truman depression continue to be manifest in increased unemployment a modern equivalent of that historic slogan might well be effective in the near future.

But until we search our souls and stand very clearly in the public mind for things which people instinctively feel are good for them, no amount of well-financed public relations will make up for the lack of such a public policy. For 17 years we've been taking in each other's washing without enough outside business to break even. We can be optimistic about Republican prospects in 1950 and 1952 provided we all subordinate our differences to the general welfare of the party and the Nation and get down to work right now and during every day between now and the 1950 election.

We had a tragic demonstration last year of the effects of overconfidence. You may recall that last September Mr. Elmo Roper announced that the election of the Republican ticket was so much of a foregone conclusion that he would discontinue his polls of public opinion for the remainder of the campagin. Like every other Republican, I suppose, I was gratified by that announcement, but just to keep the record clear I would like to refer to a statement which I made on September 9, 1948, in which I stated, "I never regard an election as over until election day," and, I added that overconfidence can lose an election. In addition, in that same statement I said, "In the midst of the jubilation which will inevitably result from Mr. Roper's announcement, I wish to call upon all Republicans to increase their efforts to elect Republican candidates to every office at stake this year."

Now with the advantage which always comes from hindsight, I can state unequivocally that that was good advice. I wish it had been taken more seriously. We cannot do anything now about 1948, but we can do something about 1950.

A great Republican leader once sounded the solemn warning that a house divided against itself cannot stand. He spoke of a nation divided against itself, but it is dead true of the Republican Party, my friends. We would be serving only the ends of the opposition party if we continue quarreling amongst ourselves, if we indulge much longer in useless recriminations about the conduct of past campaigns. The only campaigns we can win are those in the future. If we do not win some of them pretty soon we will be face to face with the grim prospect of the liquidation of the Republican Party as a force in national affairs.

We are in a cold war against a one-party nation. Our best hope of liberty is to remain a strong two-party Republic. Out of this meeting there had better come effective steps toward the creation of a strong, harmonious, fighting organization which will concentrate on defeating Democrats, rather than Republicans. Let us build better for the future than a fragile house of cards resting on compromises and evasions. Too many knaves in such a deck could topple such a structure. Strong candidates, firm principles, and sound organization are the way of wisdom and "upon wisdom is a house builded, and with knowledge shall its chambers be filled."

We are face to face with a situation in which our party offers the only hope for the preservation of the American Republic and the economic system which has made that Republic the envy of the world. But, unfortunately, the machinery of our Government is now in the hands of Treasury-busters whose only proposed solution for every problem is to concentrate more and more power in the White House and in the executive departments and bureaus of our Government—and always to the accompaniment of expenditures of billions upon billions of dollars out of the rapidly growing national deficit. The inevitable result of the continuation of such policies will be some form of what we refer to generically as statism—meaning the domination and control of all individual activities by an all-powerful central government. Part of the tragedy of this situation is that in my honest belief whose who are pushing such measures do not really know what they are doing. Nikolai Lenin would know. He wrote, in 1924, "Some day we shall force the United States to spend itself into destruction."

During early years of this century there was an unfortunate woman who, through no fault of her own, became the agent for spreading disease throughout wide areas of the country. She was what is known as a typhoid carrier. Typhoid Mary, I am sure, didn't want to hurt anybody. She was certainly against typhoid fever. She didn't know she carried it and wouldn't believe it when people told her. But an awful lot of people got typhoid fever after Typhoid Mary had been around helping in the kitchen.

I am sure that Mr. Truman is against the Stalinist or brass-knuckle state; that Mr. Truman is against statism; that he doesn't know and doesn't believe that he carries the malignant germs of the police state around in his ideologies and his promise-a-lot programs. But he is the "Typhoid Harry" of statism, and his program is the program of the believers in the all-powerful police state.

At the moment, the only effective check upon Mr. Truman is the Congress of the United States. Thus far, during the present Congress, I am happy to state, Republican Members, with the cooperation of patriotic Democrats from all sections, have been able to block most of his socialistic program. But that is not enough; we need Republican majorities in the House and the Senate in order to enact constructive legislation, as well as to defeat bad legislation.

The election of those Republican majorities will be the principal task immediately confronting the man to be selected by you as chairman of the national committee. There is a special congressional election for Congress in western Pennsylvania in September. With proper work, and a reasonable degree of peace in the party, we ought to win it. To the new chairman I extend my best wishes for success and my offer to be of any service within my power which he may request.

When I called this meeting of the national committee I announced that I would submit my resignation as chairman. I now do so, to be effective immediately upon the election of my successor.

PART II

Since February, I have addressed many Republican meetings and conferred with hundreds of Republicans around the country on methods of improving our party organization and bringing about closer cooperation between the local groups and national headquarters. I am satisfied that substantial progress has been made in that direction and more could have been made had I been free to devote my entire energies to these proper functions of a national chairman without irrelevant distractions.

I have held personal conferences with party leaders of more than a score of States including: North Dakota, South Dakota, Ohio, New Hampshire, Massachusetts, Pennsylvania, Maryland, Connecticut, Kansas, Oklahoma, Virginia, Colorado, Utah, Arizona, New Mexico, California, Washington, Oregon, Montana, Idaho, Wyoming and Nevada.

There have also been numerous meetings in Washington with party and congressional leaders.

In March of this year in Chicago there was a meeting to which the Republican State chairmen of all the States were invited. This was the first time a meeting of this kind on a Nation-wide scale had been held. It was sponsored by the Midwest State Chairmen's Conference and was a most enthusiastic and cooperative affair.

There has been close liaison between national committee headquarters and the Republican Members of both Houses of Congress. With the cooperation and approval of minority leader JOSEPH W. MARTIN, of Massachusetts, I have been privileged to sit with the House Republican Policy Committee. The Senate leadership, has upon occasion, invited me to discuss with various members of the Senate Policy Committee matters affecting the party as a whole.

Meanwhile, there has been gradually increased utilization of the services provided to Senators and Representatives by the national committee headquarters staff. Because we recognize that the agricultural issue will be of primary importance next year, we have assigned two experienced members of the headquarters staff to work with Senators and Representatives in the farm States and with agricultural groups and individual farmers. One of these staff members works out of Kansas City, Kans., and the other, a former county chairman from Indiana, works in headquarters here in Washington.

The heads of each division at national headquarters have spent considerable time with Republican Senators and Representatives to make sure that all of them are aware of the services available to them. From the reactions I have had from my colleagues on the Hill, I am satisfied that this part of our program has been proceeding efficiently and effectively.

The publicity department has continued and expanded the service it supplies to weekly newspapers in the various States, and its material is now being sent out to approximately 7,500 publications each week. A recent survey indicates that a very substantial number of these papers are making use of the material supplied through this operation, and a recent poll of Members of the House into whose districts such material is being sent shows that they value this service highly. The letters from individual Members of the House on this subject are available for inspection at headquarters. The normal activities of the publicity department have been continued within the limits of available funds, and members of its staff have worked in close cooperation with Republican Members of the Senate and with the recently organized public-relations office, set up by Republican Members of the House of Representatives.

Simultaneously, the radio division has expanded its services, with the result that Republican Members of the Eighty-first Congress are now being heard over 565 stations each week by transcription. Several Senators who come up for reelection next year have availed themselves recently of this service on a State-wide basis. Perhaps I should explain that the radio platters are paid for by the National Committee, which also distributes them to the individual stations. This operation is, of course, entirely separate from obtaining radio network time for national speakers, which has been done very frequently during the past few months.

During the period January–July 1949, the research division has continued to function as a research and service agency for the National Committee headquarters staff, National Committee study subcommittees, Republican Members of Congress, State party organizations, and the rank and file of party members. The following significant research studies and reports have been prepared and sent to party leaders: The 1948 election, a statistical analysis, pledges, and promises of the Truman administration; the use of words in selling the Republican Party to the American voter; and the Hoover Commission reports (now being assembled for mailing). The division compiles a detailed record of the Truman administration and the record of tbe Eighty-first Congress, emphasizing the lack of accomplishment as against campaign promises. The division has acted as a general secretariat for the 10 national committee study subcommittees, and has prepared and sent study material to members of the Agriculture, Civil Rights, Conservation of Natural Resources, and Social Welfare Committees. It is also preparing voting records of Democrat Senators and Representatives and cooperating with the Senate and House campaign committees in preparation for the 1950 elections.

We have all been very much encouraged by the evidences of growing Republicanism among the younger generation of voters, as evidenced by the recent convention of the Young Republican National Federation in Salt Lake City. As you probably know, that convention selected Mr. John Tope, of Michigan, as chairman, and Miss Louise Replogle as cochairman. I am convinced that under the leadership of these two able young people the Young Republicans will contribute heavily toward the anticipated victory in the congressional elections of next year.

The women's division of the national committee, working closely with the Federation of Women's Republican Clubs, has been carrying out its regular program of meetings and the production of study and informational material. It has also encouraged a four-point program for 1949 and 1950 which calls for improvement of the regular organization, assistance in fund-raising, establishment of effective liaison with nonpartisan women's organizations, and the promotion of qualified women for public office. Women deserve more recognition in the Republican Party. Their work and their qualifications entitle them to it. I hope that they will grow less and less modest—in their political demands, that is.

At the meeting of the executive committee here on April 25, national headquarters displayed a chart illustrating as our target for 1950 and 1952 the enlistment of support from among the 45,000,000 persons who did not vote in 1948. The executive committee, and also the strategy committee, recommended that this chart be reproduced and made available to party officials. Copies were sent to members of the national committee, State chairmen and vice chairmen and Republican Members of the Senate and House. The simple fact is that not enough Republicans are voting, because not enough Republicans are working effectively to get that vote out.

Dr. Daniel L. Marsh

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 9, 1949

Mr. McCORMACK. Mr. Speaker, an outstanding educator, recognized as such, and one of the great Americans of this era, respected by all, is Dr. Daniel L. Marsh, president of Boston University.

I have known Dr. Marsh for many years. I am proud of and I value very much his friendship. My respect and friendship for him are based on the fine qualities he possesses, charity, understanding, ability, a leader for good.

His nobility of character, evidenced with simplicity and humility, is such that he is an example for all to follow. Dr Marsh inspires others to develop the strength, the goodness, and the greatness that is within them.

His patriotism is above reproach.

To term him "a great American", as I do, is stating the simple truth.

[From the Boston (Mass.) Globe of June 10, 1949]

GROTESQUE

The outrageous smear leveled in a secret FBI report publicized at Washington against President Daniel L. Marsh, of Boston University, again raises question as to just how far irresponsible defamations of character and anonymous accusations are to be permitted to go before common sense resumes its proper role in governmental inquiries.

The charge that the eminent head of the largest university in New England is a fellow traveler is so utterly ridiculous as to stir wonder whether legitimate purposes of inquiry are not being distorted and made use of by crackpots or, actually, by subversive-minded individuals, seeking to bring all the institutions in our society into public disrepute.

President Marsh properly labels this fantastic accusation as grotesque. The thousands who have worked with him during the many years of his labors at BU and others throughout this country and in Europe who know him well will not need to be reminded of his high integrity, his vision, his courage and his unsparing dedication to the finest traditions of this Republic.

As was the case with Dr. Condon, head of the Bureau of Standards at Washington, who was smiliarly smeared more than a year ago, the injustice, unfairness and un-American nature of accusations born of anonymity and obsessed minds constitute an outrage upon the entire community. Such goings on would be funny, were it not that they assault the most precious possession of any citizen—his good repute. Dr. Marsh's civic stature will easily withstand this foul blow. The question is, how much longer will the American community tolerate it?

[From the Boston (Mass.) Post of June 10, 1949]

COMICAL AND GROTESQUE

Dr. Marsh, president of Boston University, needs no defense on the charge of the unidentified informant of the FBI, that he is a Communist fellow traveler. His retort to the amazing allegation that it was really comical and simply grotesque, speaks for everyone who knows Dr. Marsh personally through his writings or addresses or by his unstinted activity in civic and patriotic affairs. Whatever truth there is in the secret report read at the Washington spy trial about some of the prominent personalities who have been publicly flirting with Communists and Communist-front groups, is weakened by the inclusion of an American of the standing of Dr. Marsh. It is an interesting and happy coincidence that his name should be mentioned at the very moment he was protesting, in concert with other Greater Boston ministers, against the very name calling of which he is made a victim. It high lights the unjust habit of some to dub as Fascist or Red, people who dare to express alarm at ultra-liberalism or ultraconservatism. Thereby innocent people are harmed and the real culprits given the benefit of a doubt which stymies their complete exposure.

Senator Byrd Wins in Old Dominion

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Tuesday, August 9 (legislative day of Thursday, June 2), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial recently published in the Washington Observer, entitled "Senator BYRD Wins in Old Dominion." I should like to call the attention of my fellow Senators to the quotation from Thomas Jefferson, in which he states:

I place economy among the first and most important virtues, and public debt as the greatest of dangers to be feared.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATOR BYRD WINS IN OLD DOMINION

State Senator John S. Battle was nominated by the Democrats of Virginia Tuesday as their candidate for the next Governor of the Old Dominion but the real victory was achieved by United States Senator HARRY F. BYRD.

Senator BYRD, who has been one of the stanchest advocates of sensible handling of public funds, both in Virginia and the Nation, was the center of attack. Virginians have been approving Senator BYRD's policies for more than a quarter of a century and have done so again.

Senator BYRD was dubbed as a conservative and reactionary by his opponents.

Senator BYRD and his protégé, State Senator Battle, are in reality liberals and they are still faithful to the policies advocated by one of the greatest liberals in the history of the world, Thomas Jefferson. Jefferson, generally regarded as the founder of the Democratic Party, would be the first to denounce the policies advocated by the New Deal and the Fair Deal.

In one of his forceful statements on the reckless use of public funds, Thomas Jefferson said:

"I place economy among the first and most important virtues, and public debt as the greatest of dangers to be feared. To preserve our independence, we must not let our rulers load us with perpetual debt. We must make our choice between economy and liberty, or profusion and servitude. If we ran into such debts, we must be taxed in our meat and drink, in our necessities and in our comforts, in our labors and in our amusements. If we can prevent the Government from wasting the labors of the people, under the pretense of caring for them, they will be happy. The same prudence, which in private life would forbid our paying our money for unexplained projects, forbids it in the disposition of public money. We are endeavoring to reduce the Government to the practice of rigid economy to avoid burdening the people and arming the magistrate with a patronage of money which might be used to corrupt the principles of our Government."

Back in the days when our great Nation was being created by liberals of the type of Washington, Jefferson, Franklin, and others, the danger of political use of public funds was realized.

Most forceful of the statements in Jefferson's declaration is the utterance:

"We must make our choice between economy and liberty, or profusion and servitude."

The people of Virginia have declared that they still stand for "economy and liberty." They have refused anew to approve the policies of profusion and servitude used by many politicians today to gain public favor.

United States Imports Equally Essential

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 9, 1949

Mr. JAVITS. Mr. Speaker, one of the fundamental causes for the slow pace of economic recovery in the world is the disparity between United States' imports and exports. The appended analysis from the New York Times of August 7, 1949, shows this disparity for the first 6 months of this year to be $3,226,400,000, compared with $3,031,000,000 for the same period in 1948. So long as this critical disparity persists and most of the world's currencies remain "soft currencies" the economic recovery of all peoples will be retarded, the Communists given an unparalleled opportunity for expansion and the future economic security of the United States will be imperiled. Efforts to close this dollar gap are the No. 1 problem for all Americans who understand that balanced mutilateral trade is the lifeblood of a healthy world system for freemen:

UNCERTAINTY HERE WIDENS TRADE GAP—UNITED STATES HOPES FOR CLOSER BALANCE DASHED BY DECLINING PRICES AT HOME, INFLATION ABROAD

Despite hopes for progress toward a closer balance between United States imports and exports this year, the "trade gap" is again beginning to widen. For the first 6 months of this year the gap was $3,226,400,000, compared with $3,031,000,000 for the same period of 1948.

Declining prices and business uncertainty here, in contrast to high prices abroad, pulled down import volume in recent months. This, and not a heavy rise in imports, was chiefly responsible for the widening gap. Renewal of confidence in the business outlook here may increase imports during the second half of the year, but it appears questionable that the record import volume of $7,070,000,000 in 1948 will be exceeded this year. Hopes have been voiced in official

quarters of getting imports up to $10,000,000,000 a year by 1952.

Actually, according to Department of Commerce figures last week, imports for the first 6 months totaled $3,390,700,000 against $3,520,000,000 in the corresponding period of 1948, a decrease of about 3.6 percent. Exports on the other hand rose about 1 percent to $6,617,100,000, as against the comparative 1948 figure of $6,551,200,000.

The gap is chiefly significant as a measure of the progress toward a healthy international trade between the United States and the rest of the world. Increased imports from abroad mean more dollars in the hands of foreign buyers to pay for our exports on a sound rather than "give-away" basis. Conversely, any decline in imports means fewer dollars in world areas already suffering from a severe dollar shortage.

The gap is closed to some extent by the spending of American tourists abroad and payment for foreign services, but the fact that it is again beginning to widen may have considerable bearing on future international trade transactions.

Foreign trade circles here were interested, for example, in reports from Washington last week that consideration is being given to application to other import commodities of the principles of the world wheat agreement. This would set top and minimum prices for such commodities as tin, wool, rubber, cocoa, and perhaps other items. This, it was indicated, would involve Government trading and participation, to a marked extent, with effects upon so-called normal channels of purchase and distribution that cannot be fully appraised at this time.

The most immediate cause of the decrease in imports during the first half was the decline in prices in the United States and accompanying business uncertainty which made importers here cautious and caused them to cut down on their commitments.

In many instances, it was pointed out, a period of several months must elapse between the time commitments are made by importers and arrival of goods in the United States. Thus the lowered imports during the last 2 months reflects the effects of the price decline which began to get under way in this country last fall.

Meanwhile, foreign-trade executives returning from Europe find the price levels there still far too high to induce purchases for the American market. On the other hand, there has been some softening in prices of goods from the Far East, with complaints now arising that Japanese goods are undercutting the American market. Some imported raw materials prices have also eased and this may account in part for the lower dollar import volume.

However, with the belief gaining ground that the price readjustment in the United States may be nearing its end, temporarily at least, import commitments in raw materials and some finished products may be increased for the remainder of this year.

The United States and the Western Hemisphere

EXTENSION OF REMARKS

OF

HON. HOMER FERGUSON

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Tuesday, August 9 (legislative day of Thursday, June 2), 1949

Mr. FERGUSON. Mr. President, in the course of my remarks at the time when the North Atlantic Pact was under consideration, I commented upon the need for a review of our relations with the Latin American and South American nations. I remarked at that time that relations with those countries were deteriorating to an alarming degree.

On August 3, it was announced that our Government has taken steps to consult with the other American republics to the South over the continuing threat to peace in the Western Hemisphere growing out of the unrest and political imbalance in the Caribbean area.

The situation commands thoughtful study by all Americans.

I ask unanimous consent to have placed in the Appendix of the RECORD the views of Prof. Manuel Garcia-Mora, of the University of Detroit political science department. The text is an address by Professor Garcia-Mora on the United States and the Western Hemisphere, delivered at a panel discussion on defense of the West, sponsored by the University of Detroit March 19, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Since the Second World War the states of the Western Hemisphere have been forced to reconsider their relationships, not only with regard to the remainder of the world, but among themselves as well. Despite their relative geographic security, conditions of life in the Americas have felt the inevitable impact of European politics. Thus, we today are not concerned with how to defend the United States against a possible attack by an American country, but rather with the problem of how to defend the whole Western Hemisphere against the possibility of an attack by a non-American country, especially, the Soviet Union. Therefore, from the very beginning we must make it clear that the Latin-American countries are part of the western civilization, and as such, they have certain things in common with the United States. To be sure, we have the same European cultural tradition, we live in the same continent, we have the same tradition of justice, freedom and equality for all, and we have the same conviction that we must stand together in order to survive the threats of expansion and world domination from across the seas. Hence, the problem reduces itself to fighting a way to promote a more effective cooperation between the American states in the interest of continental defense. For this reason, the task of bringing about cooperation in the Western Hemisphere should be the first concern of every foreign office of all and each one of the American republics.

This continental cooperation has been promoted in the past through pan-Americanism. But a profound analysis of the pan-American system will quickly prove that it has not accomplished anything in its 70 years of existence. The pan-American system has developed within a framework of suspicion and jealousy on the part of some countries. The good-neighbor policy was not the beginning of a new era in inter-American relations, if we look at it from the standpoint of the nations to the south. It marks the beginning of a new period insofar as the foreign policy of the United States is concerned. But in the field of South American politics, the good-neighbor policy has been considered as another instrument of the United States to maintain the Latin American countries under her exclusive leadership and control. There is no doubt that the good-neighbor policy was a sincere and spontaneous movement on the part of the Government of the United States, as proved by the radical change of its foreign policy. But suspicion, and what is more, the memory of armed intervention in the past, made the Latin American people feel that the good-neighbor policy was just another weapon of a new form of imperialism.

That is why friction, jealously, and suspicion, and at times, unfriendly attitude toward the United States, have characterized the so-called pan-American system. Thus, international cooperation in the Americas has to spring from convictions. It is paramount that our peoples approach each other without fear of aggression from outside or among ourselves. That can be done through the abolition of many disturbing factors that are still sources of friction between the countries of this hemisphere. These sources of friction may be grouped in two categories: one group may be called political; the other, financial.

From the political point of view, the Latin-American countries are characterized for resorting to revolutions in order to change their political institutions. Some people consider this as the most vulnerable spot in the hemispheric defense, since there is the belief that they are communistically inspired. Whether or not this is true, we will see after we look into the colonial and political history of these countries. This will give us the final answer to this problem.

Students of Latin-American political history have overlooked the fact that revolutions in Latin-American countries can be classified in two distinctive groups: One group which I call "purely intraclass revolutions" of roughly 1821–1930; and secondly, the "social revolutions" of the last 20 years.

By and large, the Latin-American countries have only two economic classes: the extremely wealthy class and the extremely poor class. These countries lack a middle class, which since the time of Aristotle has been considered the backbone of democracy. "The purely intraclass type" of revolutions took place only within the wealthy class, the primary aim of such revolutions being to get control of the reigns of governmental power. These have been horizontal moves that shifted the control of government from one wealthy family to the other wealthy family. The lower class was a mere pawn in the hands of oligarchic leaders. Furthermore, the wealthy classes have been extremely conservative, opposed to any social change that might jeopardize their privileged status. The wealthy classes have further controlled all the means of production; they owned virtually all the land of the country. For instance, it has been reported that in Peru, that has a population of 7,000,000 people, the land is entirely owned by 10 families. There have been some other economic groups, particularly those representing foreign interests, that have allied themselves with the wealthy classes in order to obtain special privileges for the exploitation of these countries.

From the political point of view, this category of purely intraclass revolutions has had the effect of developing countless political factions under the leadership of particular families. This may in part explain why Latin America has developed a multiparty system as opposed to the two-party system of the United States. Thus, from the political and economic points of view, what we actually have in most of Latin America is feudal society, where the means of production as well as the political institutions of these countries are controlled by the few.

On the other hand, under the impact of changing conditions, especially with the rapid development of democratic ideas, a transition is taking place within those countries. Members of the lower class begin to participate in the political process, and therefore, a clash was inevitable, since the political institutions of these countries were not flexible enough to accommodate the new dynamic. Thus, there broke out the social revolutions of the last 20 years. The aim of this type of revolutions is social change, aim-

ing to break through the status quo rigidly maintained under the traditional conservative rule. My personal opinion is that there is nothing communistic about these revolutions. They are social revolutions that started in Mexico in the tens, and which are spreading to all the other Latin-American countries. As a matter of fact, revolutions in Latin America today can be explained in one word: poverty. These social revolutions could be further characterized as vertical moves that try to shift power from the top to the bottom of the social hierarchy.

These revolutions break the constitutional continuity of the Latin-American countries, because whenever there is a revolution there will consequently be a new constitution. A revolution always implies a break with the past. This may be explained by saying that the Latin-American peoples have not achieved an agreement on the fundamental political institutions of their countries. Words like liberty, civil and political rights are still in the process of being accepted as part of the democratic creed. They are still fighting words. Here I must warn you that this does not necessarily mean that democracy does not exist in Latin America. On the contrary, these countries are working out their own democracy according to their own peculiar conditions. Just as in Europe democracy is different in France and England, so in this hemisphere the democracy of the United States is different from the Latin-American democracies.

Furthermore, the development of democratic institutions is being handicapped by chaotic economic conditions. It is very difficult to have a healthy democracy unless people have economic stability. In other words, the pan-American system must first create economic conditions that will eventually bring about political stability in these countries. The leaders of the pan-American movement seemed to have overlooked this fact, because they have tried to put an end to revolutions by using political methods completely divorced from the economic reality. To this end it was proposed in 1945 by the Minister of Foreign Relations of Uruguay that democracy will come about by practicing collective intervention in three specific cases: (a) When there is a dictatorship that attacks the rights of man and of the citizens, (b) when this dictatorship develops the ideology of force, and, finally, (c) when a dictatorship creates false notions of superiority.

This proposal is all right on paper. But as a practical matter, the whole question of collective intervention raises many complicated problems. At the moment, two of these problems come to my mind. In the first place, what form, or forms such intervention would take: Is it economic? Is it military? And secondly, in the case of military intervention, would it be put to the United States, as the most powerful nation of this hemisphere? If so, what consequence would this have on inter-American relations?

If it is economic intervention, we will encounter difficulties. In this hemisphere, there are some countries that depend to a very great extent upon their neighbors for their exports and imports. Such is the case of the Central American and Caribbean countries that have closer economic ties with the United States. But in the southern part of South America, some countries, such as Argentina and Uruguay, have closer economic ties with Europe, that is, their import and export trade is mainly done with European countries. Assuming that economic sanctions are to be taken against these countries, the possibilities are that they will fail, for their economies are tied up with countries outside of the continental orbit. In this particular case, therefore, economic intervention will work in the case of some countries, and fail in the case of others. The success of that policy will ultimately depend upon how close their commercial relations are with the rest of the countries of this hemisphere. The particular case of Argentina during the period of the nonrecognition policy of the United States proves that fact. At that time economic sanctions did not work, because Argentina's main customer was Great Britain, and the latter needed as much import as she could get. Along the same lines, it is a well known fact that the economies of this hemisphere are antagonistic, not complementary. Argentina produces the same products as the United States does, and therefore, there exists a bitter economic competition between these two countries that has brought about political hostility.

Another source of friction between the countries of the Western Hemisphere has been the usual policy of imperialism, which at times has taken the taint of a cultural imperialism or a policy of the superiority of certain races. In this respect the United States takes the first place, followed by Argentina.

The United States and Argentina have assumed from the beginning that they have a manifest destiny to police the rest of the continent. This, of course, has brought about a policy of domination. The issue, therefore, between the United States and Argentina has also been political. The question seems to be, Who is going to be the leader of this hemisphere? In deciding this, the whole hemisphere has been divided into two main spheres of influence—the Caribbean countries, including Colombia, Venezuela, Peru, and Ecuador, belong to the sphere of influence of the United States; and the rest of South America is supposed to be under Argentinian control. This seems to be a policy of balance of power, the equilibrium of which seems to be maintained by Brazil. That is why today experts on this problem contend that whoever controls Brazil will control the whole continent.

The United States has practiced imperialism in the sense that she used armed intervention in order to protect American investments in Nicaragua, Honduras, and the rest of the Central American countries. Further, the United States has practiced a cultural imperialism by assuming the doctrine of superiority of North Americans. Such is the case of Panama where the United States has discriminated against the Panamanians who work in the Canal Zone. A distinction is made between workers of the "gold roll" and those of the "silver roll." The North Americans who work in the Canal Zone are automatically classified in the "gold roll," whereas the Panamanians belong to the "silver roll." This discriminatory classification further implies discrimination with regard to wages and conditions of employment, completely independent of skill or ability to perform a given task. This may in part explain why the Panamanian Government rejected the last defense-sites agreement for the defense and protection of the Panama Canal.

But similar imperialism has been practiced by Argentina with regard to the tiny Republic of Uruguay. Historically, this Republic was part of Argentina, but later became an independent Republic with the help of British interests. Since its independence down to the present times, Uruguay has been a football in the political game between Brazil and Argentina, and these two countries fought a war in the nineteenth century for the control of Uruguay. Even the smaller countries of the Western Hemisphere have managed to engage in imperialistic wars. For instance, the Chaco War, which lasted 8 years, was fought by Bolivia and Paraguay, both countries backed by Chile and Argentina, plus some North American economic interests that were helping both sides. Also, the bloodiest of all South American wars was the War of 1865–70, between the combined forces of Argentina, Uruguay, and Brazil against Paraguay. The population of Paraguay was reduced from a million people to some 225,000 women and 25,000 men. This will prove that in the Western Hemisphere there are the same sources of friction that have characterized the European countries. It is difficult to have cooperation between these countries as long as these sources of friction continue to operate in the political scene. Today an attempt has been made to end this policy of aggression through the Inter-American Treaty of Mutual Assistance signed at Rio de Janeiro in 1947.

Finally, the other sources of friction that stand in the way of real pan-American understanding are the financial difficulties undergone by the Latin-American countries. Today they are in default on more than a billion dollars in United States loans floated by private bankers during the 1920's. Recently there has been the propaganda that the nonpayment of these loans was responsible for the depression of 1929. This is not true. The loans were not paid because of economic conditions. The United States raised her tariffs in 1929, and, therefore, the currency of Latin America fell sharply. Brazil, in 1929, could have paid back $1,000,000 by shipping 5,780,000 pounds of coffee. But 4 years later, after the United States had raised her tariffs, she had to ship more than three times that amount; that is, 18,470,000 pounds of coffee in order to pay the same amount. The same thing happened to Argentina. She could have paid $1,000,000 in 1929 by sending 11,830,000 pounds of beef; 4 years later she had to ship 20,780,000 pounds of beef to pay the same amount.

Furthermore, today there is shortage of dollars in Latin America. These countries are not getting as many dollars under the Marshall plan as had been expected. Therefore, Latin-America's dollar shortage threatens to become more and more acute in spite of Marshall plan purchases. This in turn will mean that Inter-American trade will not get the help once counted on. Thus, we may easily conclude that the Marshall plan is not helping the countries of this hemisphere financially, which means that pan-Americanism will still lack that sound economic foundation long needed.

I am not against a Marshall plan for Europe, nor do I advocate financial help for the Latin-American countries in the form of a Marshall plan for them. I simply want to make it clear that the Western Hemisphere counts with the raw material necessary to make western civilization survive in case of a war between the West and the East. Therefore, the attention should be concentrated in developing these natural resources. The foreign policy of the United States, of course, is based on a simple fact: the United States does not want war. But the decision of war or peace will not be the United States' decision, as proved in Pearl Harbor in 1941. The possibility of a war cannot be dismissed, and the base of the armament that we must have to survive, does not lie in Europe but here in our own hemisphere. In the Western Hemisphere the United States has ready and sure access to practically every strategic raw material. Therefore, the financial obstacle will be taken care of by increasing intrahemispheric trade.

All this boils down to one simple fact: To meet and to overcome the grave danger of communism we must cooperate politically and economically. Politically we must eliminate the sources of friction that have stood, and still stand, in the way of inter-American understanding. Economically we must concentrate our efforts upon developing the resources of the Western Hemisphere. Only then can we look forward to a healthy inter-American system which will indicate what an enlightened regionalism might contribute to the future welfare, not merely of the Western Hemisphere, but of the wider international society as well.

Not Wages, Security

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 9 (legislative day of Thursday, June 2), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Mr. David Dempsey entitled "Not Today's Wage, Tomorrow's Security," which appeared in the New York Times Magazine of August 7, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"NOT TODAY'S WAGE, TOMORROW'S SECURITY"

(The steelworker, who has come a long way, believes it is time for another advance.)

(By David Dempsey)

HOMESTEAD, PA.—The main entrance to the enormous Carnegie-Illinois steel works in Homestead is at Amity Street, and Henry J. Mikula is one of 14,000 workers for whom, in a city freighted with a legacy of strife and bloodshed, it symbolizes a new era in peaceful labor relations. Ever since the gate went up in 1942, when the plant was expanded for war production, Amity Street has pretty much lived up to its name. Except for a 3-week strike in 1946, steel and labor have worked in harmony; the open hearths, slabbing mills, structural works, and the big blast furnaces across the river in Pittsburgh have operated without interruption and at record capacity.

A few weeks ago labor called the second industry-wide strike in the history of steel. Narrowly averted at the last minute, the dispute is now in the hands of a three-man fact-finding board which will report its conclusions and recommendations to President Truman. If management or labor fails to go along, the gate at Amity Street will be closed.

Henry Mikula does not want to see this happen. To him—to most of the 940,000 steelworkers across the Nation—a strike means a belt-tightening that would be costly and unpleasant. Yet the belt has been tightened before, Henry says; as a union man, he believes that labor has gained in the end. His attitude is especially significant in view of the fact that the present dispute is not primarily over wages—which are reasonably good for a noncraft industry—but the less immediate factors of better pensions, more sick benefits, and other aspects of social security.

To find out just how pressing this issue is, I spent several days with Henry Mikula and his shop buddies at the Homestead plant. For, as a worker who is in most aspects typical of the men who make up this largest of CIO unions, Henry is the keystone in the Amity Street arch. What kind of person is he, how does he feel about his job, why is he willing to strike if necessary for a cause that will chiefly benefit men 30 years his senior? These are simple questions, but in a complex situation such as this they do not admit of simple answers.

On the plantward side of the big Amity Street gate is emblazoned the slogan: "Steel Is Permanent." Henry sees this sign on his way home and he says it reminds him—at a time of day when he is all too conscious of the irony—that although steel is permanent, men are not. And this is the crux of Henry's dispute with the company. If he goes on strike, it will not be out of hunger or desperation, but for the new principle of welfare that has been added to labor's arsenal of demands, now that the basic wage-hours fight has been largely won.

To know Henry—to understand even the most ordinary facts about his life—you have to visualize Homestead, which might fittingly be called Steeltown, United States of America. Although its sprawling mills, gushing clouds of smoke that settle over the city in a hazy smog, make up but a fraction of the plants that stretch for 22 miles along this industrial river valley, they dominate life in Homestead. Visible from almost every point in the city, which leans its way up the steep bluffs of the Monongahela River, they are the only major industries here, and nearly all of the wage earners work in them.

Henry has been employed in the Carnegie-Illinois plant—a subsidiary of United States Steel—for 20 of his 36 years. Most of his fellow-workers also started at 16, although the minimum age is now 18. Most of them will work until they are 65, the compulsory retirement age. Most of them—like Henry—have fathers who worked in the mills and the great majority have children who are already helping to "cook" steel, or soon will be. Henry's stepfather, for example, is still a millhand; his oldest son, Jack 14, will probably follow in the tradition. In Homestead, people talk, think, make, and "breathe" steel. Steel is the hard, pervasive fact of their existence, the image of their future, and the substance of their memories.

Memories here are long, and go back 57 years to the great Homestead steel strike of 1892. To this city's steelworkers and their families, the strike is symbolically as important as is the Easter Week rebellion to an Irishman. Old-timers vividly recall the pitched battle between Pinkertons and workers. A plaque on one of Homestead's main streets commemorates the seven union men who were killed. The incident is still good timber with which to fire up a mass meeting or a memorial service.

Henry was born here in Homestead, and thus grew up in the strongly labor-conscious tradition of its people. Not only his immediate family but his five brothers-in-law are employed in the mill. It would be strange if he were not biased in favor of the wage-earner. Yet, in a significant sense, Henry Mikula's bias is not born out of a feeling of exploitation or a sense of hopeless injustice. When his stepfather went on strike in 1919 it was in an effort to organize.

Today, after 15 years of legally protected unionism and a company policy of harmonious labor relations, Henry is motivated by different reasons. It is security that has become the touchstone of Henry's world.

Nothing symbolizes so strikingly the gap between two generations of workers than this preoccupation with the intangible, or fringe, benefits of the job. Until recent years most union demands centered on a fuller lunch pail. Today they are being extended to include the concept of a fuller life. To put it another way, in a phrase peculiar to steel, emphasis has been shifted from the hearth to the hearthside.

And as a result of this evolution in tactics, Henry now finds himself a sort of industrial guinea pig. No longer merely employee No. 45,118, a tractor operator in a slabbing mill, he is the subject of university research projects, Government surveys, newspaper interviews, fact-finding boards, and a bewildering amount of solicitude on the part of both management and union.

And no longer is he an industrial Caliban, bumping his head against the lintel of an outdated system. Two wars, a New Deal, and a Fair Deal have indoctrinated him with a new sense of importance in society. And thanks to a never-ending flow of union literature, he has grown amazingly articulate. Curious phrases like "unilateral action" have crept into his vocabulary. Statistics on the cost of living, company profits, and wages are at hand to buttress his arguments.

Even the end product of Henry's labor has become more meaningful to him. During the war much of his time went into the production of armor plate and other necessary implements of battle. Right now the plant where Henry works is turning out steel for the United Nations headquarters in New York. The significance of this is not lost on him. He has bridged the barriers of his own small world to help build the physical core of a new one. All of this has given him, as an industrial worker, a new dimension largely unthinkable a generation ago.

Having learned to make new demands on the industrial system, Henry nevertheless no longer thinks of a strike as the only way of getting them. "We were relieved when the truce went in," he says. "Striking is no fun, especially when it's for something you won't get the main benefit from until you're an old man. We'd like a raise, of course, but this pension thing is more important. As long as the cost of living kept going up, pensions had to wait. Now seems like a good time to get started on them. We hope the whole thing can be settled without a showdown."

If Henry does go out, the placard that he will carry as a publicity weapon will be secondary to the heavy artillery which union brass have already moved into defiladed areas well to the rear of the company gates—the bulky reports on company earnings and workers' needs that have been prepared for them by private research organizations.

Although Henry and his buddies will be on the picket line, if necessary, they know that the real fighting will take place in Washington or New York, around the committee table, in the newspapers, and on the radio. That the statesmen of the Nation, including the President, should make a special effort to solve their problems is something relatively new to the workers in this industry, where violence and bitterness were the order in years gone by. It is one more factor that has convinced Henry he counts for something in America.

Although Henry Mikula is a composite of all the steelworkers in this mill town—a symbol of the industrial wage earner of 1949—he is also an individual, with a wife and three boys, and this, too, bears on the present period of tension. In what way?

First of all, Henry earns a wage that no one would call excessive—$1.45 an hour, or about $255 a month. From this, about $8 is deducted for taxes, group insurance, and union dues, leaving him a net of $247, or roughly $56 a week. Henry's pay is less than the industry average of $1.69 an hour, but it is substantially higher than the Government's enforced minimum of $1.23 for steel mills holding United States contracts, and it compares favorably with the national average for all industrial wage earners of approximately $1.31.

By meticulous budgeting, making many of the children's clothes, keeping a garden, and "making out the grocery order with a pruning knife," the Mikulas have been able to get by and still have a little left for an occasional trip to the movies or a ball game. But there is nothing for savings and the war bonds which Henry bought regularly during the flush period when the mill worked overtime have long since been cashed in. Recently Henry bought a new furnace, and incurred a dental bill of $165. Both of these debts are being paid off in installments.

What might seem like a small miracle to the hard-pressed city worker—living on $55 a week—is explained in part by the fact that the Mikulas own their home, a four-room bungalow purchased 11 years ago, which is now entirely paid for. Taxes run $175 a year, fuel about $125. Maintenance is nil, since Henry does all his own repairs. Furnishings include a 13-year-old washing machine, and the house is surrounded by a good-sized yard in which the Mikulas have planted shrubs, hybrid roses, and a blue spruce tree. Aside

from the house, their only other major possession is a 1935 car, which Henry bought last year for $50.

As a home owner, Henry is no exception among workers here. Management long ago divested itself of company-owned houses and stores, and union officials estimate that half of the steel-mill employees with families own the homes they live in. Homestead is largely free of tenements, and the city's worst slums were razed during the war to make room for a new plant.

Replacing them is a low-cost housing development in which a family can rent a four-room apartment, complete with heat and utilities, for $35 a month. And despite the smoke, Homestead is surprisingly clean, bearing little resemblance to the mining towns close by. Nor does the district appear to be company dominated. In one borough the burgess (mayor) and 10 out of 16 public officials—all holding part-time offices—are steelworkers.

Two years ago Henry Mikula ran for the council in his own borough and was defeated by less than 200 votes. This year he's running again, and thinks he has a good chance of being elected. A Democrat (registration is about 3 to 1 Democratic in this area), he supports President Truman's Fair Deal. As a second generation American, he has no particular feeling of inferiority and casts no longing glances at the new democracies, which do not seem to have improved the old order that his parents left when they emigrated to this country. Henry is a Roman Catholic and the head trustee of his local church. In the union he is assistant grievance chairman of his shop.

But the most important thing about Henry Mikula is the conviction that what is to him a fairly decent way of life can be made even better.

He has seen it happen with the older generation. Moreover, things have improved a lot in his own lifetime. When he went to work in the mill 20 years ago he made $2.28 a day operating the door on an open-hearth furnace. Since then the plant's increased productivity, the general rise in industrial wages and the union's astute bargaining tactics have brought him a long way. It is a measure of his progress—not his poverty—that he wants to go further.

Which brings him once more to the issue of security. In some respects, Henry gets what he calls "a pretty good deal." If he should be killed, or die from any cause whatsoever while in the company's employ, his family would receive $4,000 from a group insurance policy that costs him $1.93 a month. In the event of illness, he and his family are covered by a company medical plan that takes care of hospital costs and pays sick benefits of $15 a week up to 13 weeks. Henry's share of the cost of this plan is $2.81 a month. In addition, he carries $1,000 worth of life insurance on himself, $1,000 on his wife, and $1,250 on each child. His premiums, including hospitalization and his group insurance, total $203.32 a year, or not quite one-fourteenth of his earnings. Henry works about three and a half weeks a year to pay for his "security."

The union is asking that a greater proportion of this insurance burden be shifted onto the company, and Henry makes no bones about the fact that such a plan would ease the economic squeeze for him.

Men earning the industry average of $68 a week, and the more highly paid $80-$90 a week employees, he says, can absorb these payments with less hardship. For the lower-bracket workers, both the high cost of security and its apparent inadequacy loom large. In this sense, Henry is a typical paradox among the industrial wage earners: the man who needs security the most, yet who can least afford to provide for it.

Although it will be another 29 years before he retires, the problem of what to live on is brought home by the fact that his father-in-law, who retired last year after 47 years in the plant, receives a combined pension-social security income of slightly less than $100 a month. And this is considerably above the average.

"We're asking for $150 a month, although I suppose we'll take less if we have to," Henry says. "What really burns us up, though, is that the company subtracts the amount of the Federal social-security benefits from the pension they pay. Instead of getting social security plus the pension, the men only get the amount of the pension, with social security figured in as part of it."

This is not the case with some steel companies, but it is true in the plant where Henry works and remains a rankling grievance which the union has effectively exploited. And since an ever-greater proportion of steel's labor force is approaching the retirement age, the men are becoming pension conscious.

A union study of 722 pensioners, who averaged 34½ years of service, forms the basis for indoctrinating the rank and file with the facts in the current dispute. According to this survey, the average monthly pension for the group studied is $6, which is paid by the company, and $31.83 under social security, or a total of $37.83.

A random check made by this writer of a much smaller—and perhaps not so representative—cross section uncovered a high of $60.90 paid by the company, and a low of 62 cents, with the average amounting to $28.34. Social-security benefits, which were in addition to company pensions, ranged from $40 a month down to $31.64, and averaged $36.05. About half of those interviewed had taken outside jobs in laundries, parks, etc., and earned another $3 to $6 a day. Thirty-eight out of fifty-six employees of the borough of nearby North Braddock, the union says, are retired steelworkers who must supplement their pensions with outside income.

Regardless of the sum now paid, Henry believes, it is not enough to dispel the fear of insecurity. And when union economists argue that the company can afford pensions of $125 a month, a pay rise and other fringe benefits at a rise in labor costs of 11 cents an hour per man, the plan seems feasible to him. Admittedly he is prejudiced in favor of the union's surveys. "But then, they haven't gone off half cocked on this thing," he says. "We're not asking for the impossible."

Management disagrees, and it is worth pointing out that the company regards Henry as a valued employee whose welfare is a matter of concern, since stability of employment—with consequent economy in labor costs—is a significant achievement in the steel industry.

"The fact that we have such a high proportion of men who stay here long enough to earn pensions," a company spokesman said, "is proof that our men are pretty well satisfied. Our company was the first to recognize the union and when Andrew Carnegie was still living, it was the first to institute pensions. We anticipated a lot of social security years before the Government or most industries got around to it."

Henry agrees that his personal relations with management always were cordial. He had no trouble getting transferred from his old job at a blast furnace to his present job when he requested for it 2 years ago. Safety conditions are good and the company has been fair in settling grievances, he says, but when it comes to boosting wages, pensions, and other security benefits—the total package comes to 30 cents an hour per man—management declares that existing prices will not support the rise.

"Our salesmen are fighting for every order they get," an industrial relations representative told me. "Steel is not a sellers' market. Our present cost structure won't stand a 30-cent-an-hour hike without a substantial rise in price of the finished product and we don't think this is the time to raise prices."

It is along this front that the battle lines are drawn. "When a man gives 40 or 50 years of his life to a job," Henry says, "he should be able to retire in comfort—a little comfort, anyway." Thirty years ago, in Homestead at least, this attitude would have been considered an impertinence by many. Today, to a generation of workers that has grown up in the midst of an increasing drive toward the welfare state, Henry's point of view strikes him as anything but revolutionary.

He has, moreover, seen the company give way on three previous demands for higher wages—demands on which both union and management made concessions to avoid a strike—and he hopes for a similar solution this time.

But if it's fumbled, Amity Street will become enmity street; the big gate will be a barrier rather than a bridge, and Henry Mikula will be on the picket line. "It may be tough going," he says, "but if it will help these old guys get a better break, it'll be worth it. After all, I'm going to be in their shoes myself some day."

Atomic Slaughter

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 9, 1949

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I wish to include a very thought-provoking editorial, which is to appear in the forthcoming issue of America.

The editorial follows:

ATOMIC SLAUGHTER

The Atomic Energy Commission has revealed to an already atom-jittery world that the United States is now producing the improved Eniwetok model of the atomic bomb on an industrial basis. Commenting on the Commission's sixth semiannual report, New York Times atomic expert William L. Laurence finds the Eniwetok model embarrassingly big:

"If it is true, as the experts agree, that the Nagasaki-type bomb could effectively destroy the heart of any industrial city so that it would be eliminated as a factor in a nation's industrial economy, what greater harm, save for the additional destruction of human lives, could an improved model do? If the Eniwetok bomb is twice as destructive, it can mean only that it is twice as destructive in terms of human lives and not in industrial potential."

Even after these observations, Mr. Laurence continues to differentiate between "strategic bombing" and "the destruction of lives." He seems to miss the obvious fact that our scientists have obliterated any distinction there may have been by building a bomb that must necessarily destroy not only the industrial heart of a city but the residential districts as well.

If that is the case, what must be said of the United States war policy, which, according to Hanson Baldwin in the July Atlantic Monthly, is based on "the use of atomic bombs against the Russian home front, against Soviet cities, supply centers, oil supplies, factories, and nodal communication points in Russia, such as Moscow"?

"The prophets of the [atomic] blitz," said Rear Adm. D. V. Gallery in the June 25 issue of the Saturday Evening Post, "profess to aim at 'strategic' objectives, but what it

really boils down to in the long run is simple destruction of cities."

If Mr. Laurence is correct in calculating the power of the improved Eniwetok bomb, no one can now even profess to be aiming at a strategic objective when cities are involved. Henceforth it is "one bomb—one city."

Discussing the strategic plans of the Atlantic alliance before the House Foreign Affairs Committee on July 29, Gen. Omar N. Bradley, Army Chief of Staff, said:

"First, the United States will be charged with the strategic bombing. We have repeatedly recognized in this country that the first priority of joint defense is our ability to deliver the atomic bomb."

The general's delicacy of expression is matched only by his vagueness. The latter, of course, is all in the name of "military security." It is time someone told our war lords that our moral integrity must be preserved as well as our military security. Does the strategy of the Atlantic Alliance involve the delivery of the atomic bomb to Russia's forty "strategic cities" with a total population of twenty million? Have the American people, as Lewis Mumford claims, "been committed by their elected officers and their military leaders to a doctrine of war that is utterly repulsive to our own American principles, to the decent opinions of mankind and to the traditions of civilization?"

The editors of this review are not pacifists. We believe the cold war requires that we rearm both ourselves and our allies. We believe that in the present circumstances the atomic bomb should figure in our defensive plans. We do not hold that its use is intrinsically evil. It might, for example, be used legitimately against a fleet at sea, against shore defenses, against a military encampment, against a Hanford or an Oak Ridge. It might even be used against Russian cities with productive military capacity if that use were the only possible defense the western democracies could command against invasion and enslavement by the Russians.

But this highly hypothetical situation is a far cry from what Mr. Mumford calls "resorting in the first instance to the wholesale use of extermination alone."

French military planners are reported to be wondering whether the atomic bomb could be developed into a tactical and defensive weapon as well as a strategic and offensive one—that is, whether it could check a moving army or safeguard a frontier by making a strip of territory untenable. Perhaps that way lies escape from the "one bomb—one city" doctrine, which, if we persist in it, will mean America's moral suicide.

World Peace and World Freedom

EXTENSION OF REMARKS
OF

HON. CLIFFORD DAVIS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 27, 1949

Mr. DAVIS of Tennessee. Mr. Speaker, there is much interest in the resolution introduced on yesterday in both bodies of the Congress which would call on the democracies which sponsored the Atlantic Pact to explore the possibilities of uniting in a federal union of the free.

Much credit is due Hon. Clarence A. Streit for his long and strong advocacy of this sound proposal. As a college student, Mr. Streit exhibited an amazing conception of world affairs. By active participation in the First World War, later as a Rhodes scholar, foreign correspondent, and author, he was able to view and to study world affairs in a most scholarly fashion. In 1938, he published for the first time a limited number of copies of his now well-known book, Union Now. This was done at his own expense. Thereafter his book was published and widely distributed. It has been translated into many foreign languages. It has truly become the textbook on the federal union movement. From the early beginning of his pioneer efforts, he has slowly but surely influenced leading thinkers in our country and elsewhere.

In my judgment no single man has contributed more to the advancing of this philosophy than my long-time friend and former schoolmate, Edmund Orgill, of Memphis, Tenn. Successful in business, a former president of the Memphis Chamber of Commerce, president of the Rotary club, former president of the Southern Hardware Association, active in church and civic organizations, and an extremely busy man, he has found time to organize a chapter of the federal union movement in his own city. Additionally, he has been in demand as a speaker and has delivered his message in many parts of our country. He never made a better speech on the subject than he did in the city of Boston on July 12 last, when he spoke to the National Retail Hardware Association at their annual meeting. He has said so much and has done it so well that I have asked permission to extend my own remarks in the RECORD and to include that magnificent address.

The address follows:

Ladies and gentlemen, I consider it a great honor, and a great opportunity, to be allowed to talk to you. The subject of my talk—world peace and world freedom—is a serious one and, to my way of thinking, the most important one in the world. Feeling this way about my subject, I am particularly gratified to have the opportunity of presenting it to a group of independent individualists who think for themselves—who have made their own way in this world—who for the most part own and operate their own businesses.

We in America want world freedom and world peace. I think we can work out a plan for it, and I think we can sell it to the world.

But we have some selling to do at home first, and that's where you ladies and gentlemen come in. I want to explain my proposition for an Atlantic union to you, and enlist your aid in the most important sales campaign in the whole world.

I said that I think we can develop a workable plan for world freedom and world peace. But this statement must be qualified. It can be done, provided our State Department, and our Congressmen, and our lay leaders (that's you) give the attention, and consideration to world conditions and world affairs, that they deserve in this crucial period. And, I am glad to say, there are many signs that indicate that Congress realizes that it must put its best thinking on the problem of avoiding war, and preserving our individual freedom.

Our President's great speech in Little Rock, Ark., on June 11 indicates that he and the State Department are putting first things first, and should give us all renewed hope.

President Truman made a reasoned report on the results of American foreign policy. In the main it was a calm evaluation of freedom's progress, made in an area whose people are fundamental in their thinking on freedom, and who are in full accord with a foreign policy dedicated to its preservation.

American foreign policy, in relation to our most compelling international problem of Communist aggression is fixed and unswerving. The President's report dealt chiefly with the success so far attained in checkmating that aggression.

We are, he declared, at the midway point.

The tide has been turned in favor of freedom and peace because the American people have been united in determination to use their strength and substance to that end. The disintegration of the democracies of Europe has been halted. Free peoples in many parts of the world have been given new hope and new confidence. The restoration of world trade has begun.

All this, the President pointed out, has been accomplished without closing the door to peaceful negotiation of the differences between the free nations and the Soviet Union.

Even so, he warned "the cause of peace and freedom is still threatened."

Before the free world can be made "secure against the social and political evils on which communism thrives" there is, the President pointed out, "a long way to go."

Prime requisites for a successful continuation of our anti-Communist foreign policy were enumerated by him as being extension of the Marshall plan; extension of the reciprocal trade agreements, and ultimate establishment of a permanent International Trade Organization; early ratification of the Atlantic Pact and adoption of a military-aid program "to increase the effective strength of the free nations against aggression."

The Atlantic Pact and the arms-aid program will, the President reiterated, "bring a stability to the democratic nations of Europe which has not existed since the end of the war. They will, at the same time, contribute directly to the security of the United States."

The President did not but could have added that the Atlantic Pact without an implementing arms-aid program will be useless.

The President's observations on the European Recovery Act (Marshall plan) could well be taken to heart by the Senate Appropriations Committee, now currently considering a considerable cut in the 1950 funds authorized by the House. Said he:

"At the outset, it was estimated that it would take 4 years before these countries could again become independent of special economic aid. Only a little more than a year has passed since we began. If we were to falter now and cut down our aid the momentum of recovery would be destroyed. The people of these countries would be thrown into confusion and their advance toward economic self-reliance would be blocked. A slash in the funds available for European recovery at this time would be the worst kind of false economy. It would cancel the hopes and the plans of the western European nations. It would be a great gain for communism."

The Senate committee's decision must be based on realization of the stark reality of such a gain and not on personalities and the emotion which seem to be unfortunately creeping into the hearings.

As the three essential elements of lasting peace, President Truman named (1) a strong and prosperous United States; (2) a strong and prosperous community of free nations; and (3) an international organization capable of preventing aggression.

No sensible American will quarrel with domestic and foreign policies dedicated to such objectives, and I hold that this shows that our statesmen are giving more study and greater consideration to world affairs. And I am one who believes that when we Americans put our best minds to work on a problem we are going to find a way to solve that problem.

Tonight I bring you the two proposals of the Atlantic Union Committee:

No. 1 is prompt ratification of the Atlantic Pact, and No. 2, after ratification, a congressional resolution calling on the democracies which sponsored the pact to explore the

possibilities of uniting in a federal union of the free.

I hope to prove that this is by far the best way to bring about the three essentials for peace, named by the President: (1) That the United States and the other free peoples can be stronger and at much less cost if they will just unite; (2) that, if we unite we can dispense with European relief at a saving of five billion per year and have much sounder and much greater prosperity than is possible any other way—furthermore, unless we do unite, we are likely to go busted, sending arms and money to Europe; (3) that this Atlantic union of the democracies will be so strong and so united that it can definitely prevent aggression and what's more, preserve individual freedom and the American way of life.

You see, the problem which is facing us right now, is one which involves even more than peace. Even more important, is the preservation of our individual freedom and personal liberty—the concept of the dignity of man—which is the greatest heritage handed down to us by our forefathers. It is the reason why our Government was founded.

We Americans, and other free people, have always put freedom first. Every free people has sacrificed peace, and gone to war more than once to secure liberty.

None has voluntarily sacrificed its liberty to secure peace. However, twice within my lifetime, the free have acted as if peace came first in importance (before World War I and again before World War II) and both times, a world war for freedom has followed.

At this juncture, you may ask, "Why are you so worried? We in America have our freedoms. Who is going to take them away?"

Well, we have seen Soviet Russia communism gobble up central Europe. We have seen its extension into Korea, Manchuria, and China. We have seen what happened in Finland and Czechoslovakia. Italy was saved for democracy, only by the narrowest margin. Fellow travelers are at work in the western European democracies, Canada, Australia, and even here at home. We all know the avowed purpose of the dictators of Russia is the spread of communism throughout the world, with them taking over as rulers. It is no secret that their stated plans call for the use of any possible means to this end, including the overthrow of existing governments and military conquests.

Now, I do not believe that we can stop their propaganda and infiltration by armed force. I do not believe that even the present North Atlantic military pact can stop the spread of this insidious thing. And I do not believe that we in the United States can retain our personal freedoms in a Communist world. I think that if we were surrounded by communism we would be forced to use such a large portion of our wealth for military defense that we would have to go back to Government controls, even more stringent than we are during the war, and very probably wind up as a military dictatorship without liberty.

Now, there may be some here who ask "What's the matter with communism?" who look upon it, as just another economic system or another political party and who favor it or oppose it on that basis. I doubt if there are many. I think most of us detest communism, because it denies completely the dignity of man, and the sanctity of the human soul. It allows no individual freedom, no personal liberty. There is no freedom of religion, no freedom of the press, no freedom of speech. Opposition to the ruling party's candidate is not tolerated. Communist states are governed by dictators, are held together by intimidation and fear—man is the servant of the state. His life is ordered by the state.

We do not want any part of that. But the Communists are bound that we have it, whether we want it or not, and have refused to give up this purpose, and work cooperatively in the world-wide United Nations organization.

If military power is not enough to stop this cancerous infiltration, then what is the answer? What makes me, so sure that our statesmen will find the answer to our problem, if they really put their minds to the task of finding it. I think the answer to communism is to prove that freedom and democracy produce the best results—socially, economically, militarily, and every other way.

I think our statesmen will find a method of proving this, and a framework within which to prove it if they will follow the suggestion of the recently formed Atlantic Union Committee. Its suggestion is that the nations which sponsored the Atlantic Pact explore the possibilities of uniting in a federal union.

The glorious thing about such a federal union is that it is expected not only to bring peace and prosperity, but to preserve our individual freedom—the American way of life. The Atlantic Union Committee does not attempt to blueprint or write the specification for the new federal union. Its aim is solely to help bring about a federal convention to explore the possibilities of forming such a union. This committee thinks that if delegates from the countries which sponsored the military alliance will sit down together and conscientiously explore the possibilities and advantages of a federal union, as compared with alliances and treaties, they will come to the same conclusions as our founding fathers when they met in our Constitutional Convention in 1787.

You will recall that our forefathers had formed an alliance under the Articles of Confederation, and had found that an alliance did not work. They called a Federal Convention to "alter and amend" the Articles of Confederation. But this Convention boldly created a new Federal Government with authority and power to regulate Federal affairs while leaving local affairs to the States.

What they did, of course, was subject to ratification by the people of the Thirteen Original States. Likewise, anything developed by an exploratory convention now would be subject to ratification by the people of the 12 nations involved.

In the United States this would call for a constitutional amendment, and hence nothing could be done without most careful consideration, and complete debate.

Some of the powers which probably would be given to the federal union are:

1. The sole right to conduct foreign relations.
2. Maintain armed forces.
3. Issue currency.
4. Regulate commerce and communications between member nations.

In this new union, you and I would still be citizens of Arkansas and Tennessee, and the United States just as we are now, but in addition, we would also be citizens of the larger union of the free. We would still elect our local and national officials, but in addition, we would elect representatives to the new government. The hope is that the republic thus formed would be modeled on our Constitution and would be the nucleus for an eventual world government. That it would be designed so that other nations could be accepted into the union, provided they had, or came to have our ideals about freedom and proved themselves capable of guaranteeing their citizens their basic rights. The republic would be expected to grow, just as the United States grew, from 13 to 48 States. This great union would stay in the United Nations organization in order to work with all countries throughout the world. This requires no amendment of the United Nations Charter, and would strengthen the organization immeasurably.

If you have never thought about this very much, your first reaction might well be, "It can't be done—the countries are too diverse in their thinking—they speak different languages." Of course, all of this has to be considered, but all of these arguments were brought up in 1787 when our forefathers were making and ratifying our Constitution. That was certainly no easy task. It is true, they were the greatest men of the times—George Washington, Alexander Hamilton, Benjamin Franklin, James Madison, George Mason, Edmund Randolph—to mention a few. It is also true that they made this a matter of first importance. They really put their best thinking into it. They met almost every day from May 13 to the middle of September. But it paid off—they came up with a brand new form of government—a federal union, which has endured ever since, and has given us, in the United States, the greatest freedom and the greatest economic prosperity, the world has ever known.

This form of government has been copied by other countries, and has successfully united peoples of various nationalities, and really worked.

Australia is a federal union.

Canada is, and unites French and English, and both languages are spoken.

The Union of South Africa united the bitterest of enemies—the English and the Dutch Boers, and both languages are official.

Switzerland unites Germans, French, and Italians. Four languages are spoken, and the constitution and the laws are written in four languages.

Did you know, that there has never been a federal union which failed to work? The reason why federal unions are able to unite peoples of different nationalities and tongues, is that only certain powers are turned over to the federal government, while local affairs, and things having to do with local customs, are left to the separate states.

Many difficulties presented themselves to our forefathers just as many difficulties will present themselves to the delegates at the federal convention of the democracies, proposed by the Atlantic union committee. Many compromises had to be worked out.

In the South, were agriculture, and slavery, and landowners.

In the North, fishing shipping, trading, the beginning of manufacturing, and practically no slavery.

There was much more bitterness and intolerance between the various religious sects in the 13 States, than exists today in the 12 nations, jointed together by the military pact.

The area of the United States in 1787 was 10 times larger than any federation in previous history, and the opponents of the Constitution argued, that it was too large, ever to be held together, by a common government. It took George Washington 3 days to get from Mount Vernon to Philadelphia. The delegates from New Hampshire took 2 weeks. Those from far off Georgia, required 3 weeks. Undoubtedly, the same argument will be advanced against our new federal union, although you can now fly from New York to London in less than 24 hours.

Let me call your attention to the fact that during the American Revolution transportation was scarcely faster than it had been under the Pharaohs at the time of Buddha, or of the Incas. But since then, within a little over a century, transportation has changed from animal power to the steam and electric railroad, the automobile, and the 700-mile-per-hour airplane.

The change created by industrialism is almost as startling. Certainly governments must change—with changing times.

The opponents of the Union argued that the States were sovereign.

The supporters said that sovereignty rested in the individual citizens and that the new government would be administered by officers chosen by the people, that the people would simply be transferring part of the duties of the government from the States to the Federal Union, that governments were formed for the people, and that the people had the right and duty to set up the kind of government which would serve them best.

The opponents insisted that the smaller States would be swallowed up by the United States.

The supporters pointed out that a small State is always apt to be swallowed up by a hostile State, but that it finds security and liberty in union with other States.

The large States thought representation should be strictly on a basis of population or wealth.

The small States thought each one should have equal representation. This, of course, was answered by the great compromise with representation in the House being based on population but with equal representation in the Senate.

The opponents of the Constitution were convinced that the rights of the people could be protected only if the States retained complete sovereignty.

The supporters of the Constitution knew that conflicting sovereignties had been the causes of most wars.

The opponents of the Constitution in 1787 could talk only of the difficulties of forming a new government.

The supporters of the Constitution were aware of the dangers facing the Confederation and demanded that a new government be attempted, in spite of all difficulties.

The Thirteen Colonies had been successful in their war for freedom. During the war they had banded together because of a common danger, but after the war was over they had drifted apart.

The Confederation which joined them was just an alliance, not much stronger than the North Atlantic Pact which has just been signed.

Each State had its own currency, and all of it was of questionable value.

There were tariffs and trade barriers between the different States.

Each State had its own army or militia and even felt they had the right to deal directly with foreign countries.

The great nations of England and Spain and France were on the sidelines watching. Undoubtedly, they gloated over the misunderstandings and strife. Undoubtedly, they were planning conquest and domination. It is no wonder that our leaders in 1787 decided that something had to be done.

A similar situation exists today. The democracies of the world have just won a great war for freedom. During the war the free countries banded together, because of a common danger, but now that the war is over, these countries are not united. Each one has its own separate army and navy and air force. Each one has its own diplomatic corps, to deal with each other, and with the balance of the nations of the world. Each one has its tariffs and trade barriers. Each has a different currency, and these currencies are manipulated, to suit what seems to be the national interest.

Yet these democracies, like the Thirteen Original States, have the same basic ideals, they have the same love of freedom, and the same concept of the dignity of man, based on the teachings of Christianity.

But this great heritage of government of the people, by the people, and for the people is threatened. Russia, firmly united with its satellites, is sitting on the sidelines, watching our disunion—planning, and eternally working at its avowed purpose, of spreading sinister communism throughout the world, either by propaganda and infiltration, or by overthrowing existing governments, and becoming the dominant force in the world. They want to rule us.

The Communist states are united.

The free peoples are disunited.

If we take the advice of the Atlantic union committee, we will explore the possibilities of uniting in a federal union.

But, you may say, tell me explicitly, why this Atlantic federal union will be better than a combination of the Marshall-plan aid, which we have given so abundantly, and the military alliance, which we have just signed, and which we hope will be promptly ratified?

Let's consider first, military strength. If the allies were united in one federal union, they would have just one integrated army, one navy, and one air force, all under one supreme command. Aren't you sure, without further argument, that this would be more efficient, and much less costly? On top of this, remember that any country can pull out of an alliance at any time. Treaties and pacts are just scraps of paper that can be torn up any time. Former Secretary of War Robert P. Patterson is a vice president of the Atlantic union committee, and I ask you—whose opinion on this point is worth more than Mr. Patterson's? Here is what he says:

"A union of democracies will convince the Kremlin that the democracies mean business. The Kremlin will immediately see that the creation of a federal defense force for a union of nations would be far stronger than any staff agreements between separate nations. What's more, the saving in cost would be enormous."

Now, let's consider the economic side. We have been sending billions and billions of dollars to Europe. We have been doing this to help restore prosperity and stop the spread of communism, which was making great headway because of the want, starvation, and desperation which existed. This Marshall plan aid has done untold good, in all of Europe, but it really saved the day, in Italy and France and Greece. However, it looks as though this Government aid will have to be kept up indefinitely, and I doubt if even our great resources can stand the strain of this and our tremendous armament costs. In a Federal union, one currency can be adopted, and trade barriers and tariffs done away with. If this could happen, there would be a great expansion, of independent industry throughout this area, which would remove the necessity of Government grants and loans. This Federal union would be greatly in the interest of our own expanding industry, which certainly cannot find full expression, unless it does secure a larger, safe, free-trading area. Business and industry everywhere are now hemmed in, by Government restrictions, trade barriers, and fluctuating currencies.

Mr. Will L. Clayton, head of the Anderson-Clayton Co., the largest cotton company in the world, and former Under Secretary of State for Economic Affairs, is a vice president of the Atlantic Union Committee. He has this to say:

"A Federal union of the democracies would be so powerful, prosperous, and free, that the pull on Russia's satellite states, lying in between Russia and the democracies would be so much greater from the west, than from the east, that in time, Soviet Russia would surely lose them—and her drive for world conquest would end in failure, and without World War III."

Who in the United States knows more about world economics than Will Clayton, head of the world's largest cotton firm and former Under Secretary of State for Economic Affairs?

Former Supreme Court Justice Owen J. Roberts is president of the Atlantic Union Committee. He has this to say:

"While the alliance provided for in the Atlantic Pact is an immediate step to prevent war, it is not enough to insure permanent peace. The purpose of the Atlantic Union Committee is, therefore, to bring about a union of the democracies signing the Atlantic Pact. Such a union would offer four immediate benefits:

"(1) It would strengthen the United Nations.

"(2) It would raise the standard of living for all.

"(3) It would lower the cost of military security for all.

"(4) It would make democracy so powerful, that the Kremlin could not hope to start a war with any prospect of success."

Justice Roberts says:

"We want to hear from all Americans who want to join us."

As a member of the board of directors of this committee, it is a great privilege to tell you the story and solicit your support.

I said in the beginning this is a selling job. Every man and every woman here tonight can help, right now. You can help by joining the Atlantic Union Committee—just the prestige of your name as a member will help a great deal. But the thing that will count for most will be your selling influence with your Senators and Representatives and with your friends.

Is it worth a few dollars and a few hours' time to have a part in a project designed to stop the spread of communism, preserve individual freedom, and lay a foundation for world peace?

I think it is.

This is a matter of life or death—peace or war—freedom or communism.

Remember no alliance has ever really worked. No Federal union has ever failed.

United States and World Trade

EXTENSION OF REMARKS
OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 10, 1949

Mr. HORAN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am pleased to include a speech by Mr. Fred J. Rossiter, associate director of the Office of the Foreign Agricultural Relations.

Both as an agricultural missionary abroad and, for years, a valued member of OFAR, Mr. Rossiter has objectively studied the daily development in world trade.

This speech should provide a valuable outline of a problem growing more and more trying to every American today.

The speech follows:

You will recall that during the war the Secretary of Agriculture, in urging farmers to produce more food, coined the saying "Food will win the war and write the peace." Every American is proud of the way our farmers responded in expanding production to help win the war. This increased output helped feed the large Allied armies. The continued high level of production in the immediate postwar years has helped to feed vast populations in Europe and Asia. Food has not yet won the peace but it has certainly helped keep us from losing it. Our people in Europe are convinced that, had it not been for ECA help, and that was over 50 percent food, communism would have swept over France and Italy and possibly other countries.

In taking a quick look at the world food production, we find a tremendous improvement over the situation of 18 months ago. We note that total world wheat production

in the year 1948–49 was about 7 percent greater than prewar. World rice production was 2 percent greater, potato production 12 percent higher, and corn production 25 percent greater. For most crops, the harvests now beginning, promise to be almost as good. It may be true that world meat production as well as fats and oils may be slightly below the prewar level. I note, however, that in recent months, when our prices for these commodities declined, foreign governments were not very enthusiastic buyers.

The time has obviously arrived for us to take stock and see what is ahead.

The European crops harvested last year were near the prewar average and present prospects for the 1949 European crops indicate the output will be only slightly below last year. Europe, nevertheless, needs to import large quantities of food and feed to meet its requirements, but it can't buy that food from us without dollars. Also, we have noted in recent months that these European countries are now much more "choosy" in their imports.

Farmers in the Great Plains area are vitally interested in the export possibilities of our farm products, particularly wheat. Since World War II ended—that is, in the past four marketing years—the United States wheat exports have averaged nearly 450,000,000 bushels a year. This means that, out of every 100 produced, we have been shipping 36 bushels abroad.

The problem of foreign trade and maintaining export markets is by no means confined to the wheat industry. The problem confronts all commodities which we export in any volume. It is a concern of the cotton industry, the tobacco farmer, the rice grower, the citrus and apple producers, the soybean farmer, and many other agricultural producers.

The roots of this agricultural export problem lie deep in American history. In colonial times our foreign trade was simplified in many respects. History records that George Washington, living on his farm in Virginia, shipped tobacco and wheat to England to pay for pottery, textiles, tools, and other industrial equipment. In other words, our colonial fathers shipped agricultural commodities to Europe for industrial supplies. Later, European capitalists made loans in this country to build factories and railroads, but still we paid our debts largely with agricultural exports.

The importance of agricultural commodities in our export trade began to decline about 1890. The average quantity of agricultural exports didn't decline, but percentage-wise they lost ground to industrial products. By 1910 industrial products represented about 50 percent of our total exports. Except for war periods, this downward trend of agricultural commodities has continued. Immediately before World War II agriculture was furnishing less than 25 percent of our exports.

One reason for this declining importance of our agricultural exports has been the rapid agricultural expansion in such countries as Canada, Australia, and Argentina. About the turn of the century these countries began producing more grain and livestock products for export. World War I accelerated this development. Importing countries were able to obtain their agricultural needs from these countries often at prices lower than from the United States.

Another reason for the declining importance of agricultural exports has been our rapid industrial expansion. Within little more than a hundred years this Nation has built up the greatest industrial plant in the world. Our industrial products are in great demand abroad. For many of them we are the only important supplier. In order to conserve their limited dollars for our industrial products, many nations turn elsewhere for their agricultural supplies.

This brings up the very tough question of trade balances. It is interesting to note that during much of our history we have exported more than we imported. Until about 1920 the extra exports were needed to pay interest and principal on our debts to foreign investors. We were paying off the debts on our railroads and factories. In September 1914 we still owed Europe about a half a billion dollars.

But World War I brought a significant change—we paid off our debts and came out with the rest of the world owing us money. Europe by 1920 owned us a half a billion dollars. It is normally considered good business to pay off one's debts. But since we paid off our debts we seem continually to have been in foreign trade trouble. You know the reason: We have continued to export more than we have imported. The foreign countries couldn't pay us the balance, and trouble ensued.

Following World War I, this country made substantial loans to Europe for rehabilitation and industrial developments. Then came the depression, our imports dropped, and our lending activities came to an end. In order to conserve their dollar balances, foreign governments found it necessary to restrict imports from the United States. This trend in conserving dollars continued up to World War II. Foreign governments applied import restrictions, developed uneconomic food production, subsidized exports, devalued currencies, increased import duties, and applied many other trade restrictions.

Latin America is one region in which this picture changed during the recent war. At the close of the war nearly every country in the Western Hemisphere had large dollar balances. These had been built up by United States purchase of strategic war supplies while, at the same time, our export restrictions limited Latin-America's purchases from us. As export restrictions were lifted, these countries immediately began procuring large quantities of industrial products in this country. As a result, most of them used up large portions of their dollar balances.

In this connection, I wish to mention a few figures from our foreign trade to show how the rest of the world has been using up its dollar balances. Total United States exports of all commodities and goods during the past three calendar years totaled about $37,000,000,000, while during the same period imports into this country amounted to only $17,000,000,000. In other words, imports were paying for less than half our exports. This left a gap of approximately $20,000,000,000 for the 3 years. About 70 percent of this gap was made up by United States Government aid of one type or another to foreign countries. The remainder, however, represented foreign governments liquidating their gold and dollar resources to pay us for these exports. An interesting fact is, that a further analysis of this trade indicates, in the last year or so foreign governments have been using less gold and dollar investments to balance their trade with us. For example, in 1947 about 45 percent of the gap consisted of liquidated gold and dollar resources. Last year this dropped to 15 percent and some believe that it may drop further in 1949. This shows that the gold and dollar resources held by foreign governments are dwindling.

In light of this situation, it is not difficult to understand why foreign governments restrict the use of their limited dollars. As I said a moment ago, many industrial commodities are available only in the United States. Up to World War II, Germany and Japan supplied a large variety of industrial goods. Now their exports are a mere trickle of former years. Countries wishing to obtain such products to improve their standard of living find that now they must turn largely to this country. Therefore they either obtain their needed agricultural imports from some other area or subsidize their own farmers in an effort to become self-sufficient in food.

Such action, of course, works to the detriment of United States agriculture. This country, through hard work and ingenuity, has built up the largest agricultural producing plant in our history. Our total agricultural production for the past 10 years has far surpassed that of any country in the world. In expanding this agricultural plant, we had our growing pains, such as lack of equipment, lack of tractors, and lack of fertilizers. These growing pains have now been forgotten. It appears that during the next few years, it may be necessary for us to reduce our agricultural producing plant and it is probable that our reducing pains will be more painful than were the growing pains.

As never before our standard of living is dependent upon international trade. The more international trade we can develop on a sound basis, the more ocean shipping that will be required, the larger the number of dock workers that will be needed, the more rail transportation that will be necessary—and there will be additional work for many people all along the line. It not only will result in greater employment in this country, but also in the countries with whom we trade. If the United States can help increase international trade on a sound basis, it will mean that other countries will have higher standards of living, more employment, and thus a greater demand for agricultural commodities.

To help build stable international trade, we in the United States must do some constructive thinking and constructive acting which will increase our imports to provide dollars for other countries.

The reciprocal trade-agreements program which has been in effect since 1934 is one important step forward. So far, it has been difficult to measure the value of this program because, soon after it began, war preparations and war itself disrupted normal trade. The principal, however, most people agree, is a good one. It is a step forward—not only toward expanded trade but also toward world peace.

Increased import trade alone cannot solve the problem. Other means must also be employed to help build up purchasing power for our commodities. Encouraging more United States citizens to travel abroad and using more foreign services will assist.

But something more is needed, or else our agricultural exports will shrink materially. Some may feel that the Government should procure our surplus agricultural commodities and ship them abroad at whatever price can be obtained. While this may be a method for continuing export trade, many people do not believe this to be the most healthy way of developing international trade. Everyone recognizes that there are limits as to what the Government can do.

The ECA rehabilitation program in Europe should greatly aid the European countries in restoring their industrial production. This should increase their exports and improve their economies so that, in the years ahead, they should be able to take sizable quantities of our agricultural commodities.

Let us take a look at the world wheat situation. Although world production is 7 percent greater than during the prewar period, the demand for imported wheat remains strong. The world population has increased about 10 percent during the past 10 years. India is a country which illustrates the increased demand as a result of an increased population. India, including Pakistan, in prewar normally produced sufficient wheat for domestic requirements. At the present time India has an import demand for a large volume of wheat. In several European countries the per capita consumption of wheat is higher than prewar. Western Germany formerly obtained some 40,000,000 bushels of wheat and rye annually from eastern Germany. So far only a small volume of bread

grains has moved from behind the iron curtain to western Europe since the war. The Soviet Union and its satellites have been busy feeding their own people.

In the Far East, Japan, with a population of 70,000,000, became about self-sufficient in wheat, prior to World War II, but was still importing nearly 2,000,000 short tons of rice annually. Japan now, with a population of over 80,000,000, unable to materially expand domestic production and unable to obtain but little imported rice, is a market for a substantial quantity of wheat and other cereals.

This brief review indicates that an import demand exists for a substantial volume of wheat during the next few years. But how much the importing nations will be able to finance from the United States is the big question. Undoubtedly the International Wheat Agreement will have some influence in helping this country maintain a greater export outlet. It should also be a factor in discouraging some importing countries from stimulating inefficient wheat production.

In conclusion, the United States must do some serious planning during the next few years, in order to help foreign countries earn dollars so they may obtain the agricultural commodities which they need from this country. I know the members of the Great Plains Council are internationally minded and will do their part to encourage a large volume of foreign trade.

The Reciprocal Trade Treaties

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 10, 1949

Mr. VURSELL. Mr. Speaker, in the Appendix of the CONGRESSIONAL RECORD, I noted on page A5129 an extension of remarks which included an editorial from the Atlanta Journal. It does not take much courage for a newspaper in that part of the South to extoll the wonders of the program, because the South has, up until now, been able to avoid the free-trade approach of these treaties that are full of deception and special privilege.

There is practically an embargo on cotton imports; there is an embargo on tobacco seed—made effective by preventing other countries from raising our type of tobacco; there is an import duty of up to $1 per pound on tobacco imports; there is a 7-cent import duty on peanuts—an amount that is greater than peanuts brought in the market place before the war, and now constitutes a duty of 65 percent on an ad valorem basis. Many people are telling the world of their interest in European recovery, but seemingly their interest fails to include a few pounds of tobacco seed for use of the Europeans.

These treaties may sound nice to the South, but what about the millions of Americans who are losing their jobs as a result of this unwisely administered program? How about the other branches of American agriculture that are being denied equal protection? The disastrous effect of these unsound treaties has not been felt because of the huge exports under the Marshall plan and the agricultural price-support program. But, the day of reckoning is here. We cannot have our cake and eat it too, nor can we have our markets and give them away at the same time. We are importing more pounds and bushels of agricultural products than we are exporting. In fact, we cannot, and are not, giving away our agricultural products as fast as foreign products are being dumped on our shores.

The following is taken from the hearings on the Granger bill regarding fats and oils:

Table of prices taken from the National Provisioner magazine illustrating the extent of the decline that took place in only 12 months time.

	Prices in effect during week beginning Apr. 19, 1948	Prices in effect during week beginning Apr. 18, 1949	Price decline
	Cts. per lb.	*Cts. per lb.*	*Cts. per lb.*
Lard	22	10	12
Tallow and grease	17.5	5	12.5
Cottonseed oil	31	11	20
Soybean oil	25	10.5	14.5
Peanut oil	30.5	12.5	18
Corn oil	30	11.25	18.75

This Eighty-first Congress even went so far as to vote a support price for tung oil though we imported 130,000,000 pounds last year and produced only 16,000,000 pounds in the United States.

American Policy in China

EXTENSION OF REMARKS
OF
HON. HOMER FERGUSON
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES

Wednesday, August 10 (legislative day of Thursday, June 2), 1949

Mr. FERGUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article on United States mediation in China, written by Ray Richards and published in the Hearst newspapers of today.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

(This is the third of five articles relating the circumstance which wrecked the power of the Chinese Nationalist Government. How Russian propagandists worked 22 years to cultivate the blighting American demand for coalition between the Nationalists and the Communists was told in the first two articles.)

(By Ray Richards)

WASHINGTON, August 9.—Chief of Staff George C. Marshall dispatched Gen. Joseph Stilwell to China shortly after Pearl Harbor, to coordinate Chinese and American land efforts against Japan.

The Stilwell episode is only an isolated incident in the China record. It did not give a turn to events.

But it suggests how the coalition move, so dangerous to the Republican side in China, was taking form even in the pressures of a vast world war.

General Marshall had done a tour of duty in China in the early 1930's, and had formed a personal prejudice against things Chinese.

General Stilwell had no knowledge at all of China, no instinctive sympathy for the Chinese people, and no diplomatic talents at all. Moreover, he was not called "Vinegar Joe" because of sweetness of disposition.

His advisers from the start were the three Johns of the American Embassy—John Davis, John S. Service, and John Carter Vincent the let's-be-fair-to-the-Communists lads.

By mid-1944 Stilwell had pressed Chiang Kai-shek so hard for greater use of the Communist troops in the north, and for reorganization of the Chinese Government to admit Communist politicos to high power, that Chiang asked his recall.

Of the wartime conduct of the Communist troops, Maj. Gen. R. B. McClure, who was Deputy Chief of Staff under Lt. Gen. Albert C. Wedemeyer in China, said in an address at the University of Colorado last April 8:

"At this time the Chinese Communist forces were not strong or well equipped, and were fighting only sporadic guerilla actions against both Japanese and Nationalists. * * * During these months the Chinese Communist forces gave neither Nationalists nor Americans real help or assistance when it was so sorely needed."

Chiang's argument was that since 1923 the Communists had been trying to take over the Nationalist Government, and that, because Russia and Japan had a pact of friendship, he could expect no real military assistance from Chinese Communist troops.

Stilwell departed, and in September 1944 President Roosevelt sent two emissaries to China, Donald Nelson, to help the Chinese establish a war-production board, and Maj. Gen. Patrick Hurley as ambassador.

Hurley understood the China situation, knew that the entrance of the Communist camel's nose under the Nationalist tent soon would mean a tent full of nothing but camel.

He was not long in ordering Vincent, Davis, and Service home.

Clever and experienced career diplomats, they retaliated by seizing control of the State Department Office of Far Eastern Affairs during the engrossment of the Department's high command in the struggle with Molotov over Europe.

Vincent became director of the office. He was now Hurley's boss.

When Service was arrested in the Amerasia case, he was denounced by the Acting Secretary of State, Joseph Grew, former Ambassador to Japan, no lover of communism.

But when the Justice Department ordered the Service prosecution dropped, the Davis-Service-Vincent clique was so strong that it could force Grew to apologize and restore Service to duty.

Grew soon resigned.

The nearest anyone came at the time to telling the full truth about the China situation was Pat Hurley.

He began denouncing coalition roundly at Chungking, found himself blocked repeatedly by the State Department Far Eastern clique in Wasington, and, in November, 1945, suddenly resigned and came home to tell all.

He got no official help, however. The Senate and House Foreign Affairs Committees, under Administration control, refused to give him a hearing.

Hurley has since made numerous addresses calling the 1945 Yalta secret agreement the main Communist weapon in wrecking Republican China.

The Yalta pacts that related to China provided:

1. The status quo of outer Mongolia to be preserved. (Outer Mongolia, important in Communist communication with Siberia, had been seized by Russia years before under the pretext of a People's Republic.)

2. Russia to receive preeminent rights in the Manchurian port of Dairen, and Port Arthur as a naval base.

3. The Chinese Eastern Railroad and the South Manchurian Railroad to be jointly operated as a Soviet-Chinese company.

The effect was to give Manchuria to Russia and her Chinese Communists.

The Chinese Government knew nothing about these pacts until Russia refused to move out.

This was not until most of Manchuria had become a Chinese Communist military base.

The stage was set at last for American mediation.

Tribute to Herbert Hoover by George Sokolsky

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Wednesday, August 10 (legislative day of Thursday, June 2), 1949

Mr. SCHOEPPEL. Mr. President, today, August 10, a grateful Nation pays tribute to a great American who celebrates his seventy-fifth birthday at his home in Palo Alto, Calif. I should like to have inserted in the RECORD the column of George Sokolsky which appeared yesterday in the Washington Times-Herald, in tribute to Mr. Hoover.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THESE DAYS

(By George Sokolsky)

On August 10 at Palo Alto, in California, many friends of Herbert Hoover will celebrate his seventy-fifth anniversary. The occasion will be marked, as it was last year, by numerous gifts to the Hoover Institute and Library on War, Revolution, and Peace, now one of the most important repositories of historical documents in the world.

Few men at 75 are as active, as resilient, as mobile as Herbert Hoover. He has just completed one of the most arduous tasks of his life, the conduct of the Hoover Commission for the Organization of the Executive Branch of Government.

He undertook this work while he was suffering from shingles, which beset him after his nervous-exhausting flights around the world on behalf of better feeding for the people of the conquered and liberated countries. Despite great pain in one arm, he commuted between New York and Washington; despite considerable back-biting, he got out just under 20 reports of the most detailed character.

Herbert Hoover was born in the small village of West Branch, Iowa, his father being the village blacksmith. His mother was a Quaker minister, and also at times a seamstress.

There were three children, and when the father died his estate amounted to $2,000. Herbert Hoover's father died when he was 6, his mother when he was 10. Orphaned, he was cared for by relatives, first in Iowa and later in Oregon.

He worked his way through Stanford University, handling a newspaper and laundry route, as manager of student activities, and as secretary to a geological professor. Summers he worked for the United States Geological Survey. Two years after he was graduated from Stanford as a mining engineer he was given the direction of the mining enterprises of a British firm in Australia. From then on his career as a mining engineer and manager was so notable that he came to be acknowledged as one of the greatest in that field.

This Horatio Alger story of Hoover's rise will appear in many articles about him and more will be written of his war work and his Presidency. I prefer to write of the man's growth in defeat.

To me it is infinitely more interesting to note the true greatness of a man in adversity. In the bitter days of 1933, forsaken by many to whom he had given opportunity, smeared, attacked, defamed by a vast and potent machine set up for that purpose, betrayed by his own political party, he took it all with patience, forbearance, and good will.

I used to visit him nearly daily in those bleak years and never once did I hear him answer abuse with abuse. Somehow he maintained total objectivity. It is not that he has no anger; his moral indignation is fierce. It is rather, I think, that the Quakers do not expect too much of people. It is easier for them to forgive.

I wondered about that during the last campaign when, in one of his speeches, Candidate Truman attacked the man who was actually aiding President Truman; yet Hoover brushed it aside and went on with his work on the Hoover Commission. He has a rare capacity for separating personal from public attitudes and responses.

During the last 2 or 3 years, Herbert Hoover has enjoyed a restoration of popularity and public esteem. The reception to him at the 1948 Republican National Convention was so real, so spontaneous, so full, that it wiped away years of antagonism.

Yet he maintained an aloofness from partisan politics, an attitude he adopted when he returned to Government service in the Truman administration.

There have been curious psychological changes in Hoover in recent years. He is younger in spirit than he was 10 years ago. He is gay, at times even effervescent.

He spares himself not at all and laughs at the ailments of age—and he suffers very few of them. He likes young people about him and children and he likes to drive about, stopping at diners and motels, and everywhere he mingles freely with the citizens because he is just one of them. He has no side.

He is never former President of the United States; he is just Herbert Hoover—American.

The Hawaii Strike

EXTENSION OF REMARKS
OF
HON. HUGH BUTLER
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 10 (legislative day of Thursday, June 2), 1949

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Hawaii Strike," published in the Fairbanks (Alaska) News-Miner of August 3, 1949; also an editorial entitled "Hawaiians Help Themselves," published in the Omaha World Herald of August 6, 1949.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Fairbanks (Alaska) Daily News-Miner of August 3, 1949]

THE HAWAII STRIKE

For 95 days the Territory of Hawaii has been at the mercy of the predatory International Longshoremen's union and its CIO leader, Harry Bridges. The union, on strike since May 1, has clamped upon Hawaii a blockade as devastating and as complete as that through which Soviet Russia sought to force the western powers out of Berlin.

There is, however, one noteworthy difference between the two. In the case of Berlin, the United States was willing to do something about it and did. In the case of Hawaii, the United States wasn't and didn't.

Since the 2,000 ILWU workers walked off the job, thereby tying up the commerce and life of a population of 540,000 Americans, the economy of the islands has been strained to the breaking point. The losses which have been saddled on the people of Hawaii and those with whom they do business on the mainland runs into millions of dollars.

Poultry and dairy cattle have been slaughtered because of the lack of feed. Milk production needed to feed babies is down. Citizens having canned milk to spare have been asked to turn in their extra supply to public stations for the benefit of babies whose parents have none to give them.

The pineapple industry is staggering under the impact of a shortage of tin cans. Lack of markets has forced sugar companies to halt the harvesting of cane. Raw sugar which has been harvested already jams all available storage spaces and has overflowed into gymnasiums and temporarily roofed-over tennis courts.

Virtually no food has been unloaded in Hawaii since the strike began. Ships lie in the harbor with food shipments rotting because Bridges and his minions refuse to unload them—they set sail and were on the high seas when the strike began. The supplies of rice, important to the diet of the islanders, as well as other staples are nil.

This is the result of a monopoly more vicious than any ever brought under the purview of the Federal antitrust laws. For a comparable state of affairs, students of these times must hunt back through the pages of history some 150 years to the story of the depredations of the Tripolitan pirates against American shipping. The one is no less a breach of the peace and an affront to the dignity of the American Government than was the other.

Bridges, currently under Federal indictment on the ground that he lied when he denied in 1945 that he was a member of the Communist Party, is no stranger to most Alaskans.

He has foisted upon this Territory the same chaos and economic hardship as that which is now being endured by the helpless Hawaiians. Throughout his campaigns of attrition against both Territories, the attitude of the Federal Government in Washington, D. C., has been marked by the same cool indifference.

Consequently, after repeated denials for aid from the National Capital, the Hawaiian legislature was called into special session last week to adopt legislation to enable the islanders to cope with the strike and save themselves from ruin.

As this is being written, the Hawaiian senate is considering a bill which would place the Territory in the stevedoring business until the end of the strike. The measure has already passed the Hawaii house, 24 to 6. Warnings have been heard that if the bill becomes law, there will be bloodshed.

Whatever the outcome, the situation is one in which the Nation and the national leadership can take little pride. If the disaster which confronts Hawaii could not have been avoided by the Federal statutes now on the books, then it is time that something be done to strengthen the Taft-Hartley law rather than to modify it as the Truman administration is demanding.

[From the Omaha (Nebr.) World Herald of August 6, 1949]

HAWAIIANS HELP THEMSELVES

Reluctantly, and after a good deal of balking, the Hawaiian house and senate have agreed to authorize the Governor of Hawaii to organize and operate a publicly owned stevedoring service. Labor opposed the bill and so did business interests. But there seemed to be no other way of breaking the stranglehold of Communist-line Harry Bridges on the islands.

President Truman might have broken the strike by using the Taft-Hartley law. But, since he has been insisting that it is a bad law, he wouldn't.

Some time, however, Mr. Truman may well have to face a show-down, closer to home, with the Communist conspiracy to seize the world's water fronts, of which the Hawaiian strike is a part. If he does, the Taft-Hartley injunction authority will come in handy.

The Council of Europe

EXTENSION OF REMARKS
OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Wednesday, August 10 (legislative day of Thursday, June 2), 1949

Mr. O'CONOR. Mr. President, in line with the desires of all our people to see the dawn of a just and lasting peace throughout the world, there has developed, as we all have been made aware through communications from our constituents, a wide-spread movement for the establishment of a world federation.

While there are many and difficult obstacles presently standing in the way of any such world federation, the meeting today at Strasbourg for the establishment of the new council of Europe is calculated to stir anew in hearts everywhere the idea of a world united, where problems can be resolved through legislative action rather than on the battlefield.

Great events quite frequently have small beginnings. It is quite possible that the council of Europe scheduled to evolve at Strasbourg, which is slated to be the permanent capital of the European consultative assembly, may be the means of proving to the world that nations can combine in peace to seek their mutual progress and prosperity.

The column in today's New York Times by Mrs. Anne O'Hare McCormick pictures so well the scene attendant upon today's historic meeting and the possible implications, that it deserves the attention of everyone interested in progress of the world toward peace.

I ask unanimous consent, therefore, that it be published in the Appendix of the RECORD as a supplement to my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ABROAD—THE COUNCIL OF EUROPE IS BORN ON THE RHINE

(By Anne O'Hara McCormick)

A few weeks ago this correspondent went down from Paris to Strasbourg to see the capital of Alsace preening itself to become the first meeting place of the Council of Europe and the permanent capital of the European Consultative Assembly. It was a journey in search of something new. The Foreign Ministers Conference was just over. It left in the mouth a less bitter taste than preceding meetings, but nevertheless a stale taste. The daily repeated arguments had been heard so often that the nap was worn off; the pattern of Potsdam, invoked constantly by both sides, had faded out in the wear and tear of disagreement, and even more in the acid wash of events. When the talks ended, with some amelioration of the Berlin situation but with a German settlement as far off as ever, the impulse to look for another approach to European peace, which centers on the German problem, was irresistible.

On the banks of the Rhine something was beginning instead of ending. Europeans—not governments but people—have been talking for a long time of a Parliament of Europe, and now at last the dream was taking shape, under the aegis of governments. Perhaps Strasbourg will be no more than a talking point. The parliament will be composed of representatives of national parliaments but will have no legislative power, and skeptics doubt that governments will ever give it enough authority to come to grips with the real obstacles to European unity.

SICK OF WAR

Nevertheless it is a fresh start, a great attempt, in the words of Georges Bidault. It has behind it the ablest and most realistic statesmen of Europe. Its location on the historic European battle line, where only a bridge separates, or connects, France and Germany, is a bold departure. Andre Phillip, one of the leaders of the French delegation and a fervent apostle of unity, thinks the choice of Strasbourg was a mistake, "Nowhere else in France is anti-German feeling as strong as in Alsace," he declares. That is true; yet nowhere does one hear Franco-German relations discussed with such realism, sanity and broadmindedness. The people in the borderlands understand one another. Without love and without illusions, they are sick of futile wars that always strike them first.

For a century Strasbourg has been a pawn in an endless battle. Now it is the cradle of a new idea. In one of its freshly scarred palaces the writer saw the first flag of United Europe, a green E superimposed on a great white U. The city possesses many fine examples of French eighteenth-century architecture, great buildings with spacious, well-lighted salons which provide beautiful quarters for a capital. Hotel and housing accommodations are not so adequate. Last month the prefect, the mayor, and the nonchalant Monsieur Cunin, of the Quai d'Orsay, who has made the arrangements for no less than 54 conferences since 1946, were requisitioning space for more than a thousand visitors, including 300 reporters, more than covered the Big Four meeting.

THE FIRST SESSION

Today the Council opens. Church bells ring, flags fly, the great rectangle of the Place Kleber is filled with excited people, and in the gay and graceful hall of the Hotel de Ville, the foreign ministers of the 10 founding nations—Britain, France, Italy, Belgium, the Netherlands, Luxemburg, Sweden, Norway, Denmark, and Eire—will hold their first session. Actually they will be 12, for Greece and Turkey have asked and been invited to participate in the inaugural meeting. The Council will decide on the methods of procedure and the broad outlines of the agenda for the Consultative Assembly of about 100 members.

The difference between this and all other international bodies is that it has the character of a parliament and not a conference. It does not represent a group of governments speaking for all parties and maintaining a national point of view. Rather it is composed of representatives of the various parties in each country, and is just as likely to split or combine on party lines—Socialist, Conservative, Christian Democrat, et cetera—as on national lines. If it elects to follow parliamentary instead of conference procedure, it will have such expert parliamentarians as Mr. Churchill, M. Spaak and Leon Blum to help coordinate into a working system the widely different rules and habits of European parliaments.

This will be difficult. The Assembly proposes to recommend at once such practical steps toward unity as a European passport, a European charter of civil rights, a supreme court, a joint patent office, a public-works program. Every one of these projects bristles with difficulties, not the least of which is that no member of the new Assembly has had any experience with a Federal system or is accustomed to think in Federal terms. This is one of many reasons why advocates of Atlantic Union think their project, which would include such great federations as the United States and Canada, offers greater chances of success as well as greater strength. What power, they ask, can Western Europe wield by itself?

Certainly none when broken up into small national units. The importance of Strasbourg is that it recognizes this fact. It gives a local habitation, a name and a program to the idea of unity. The acceptance and formulation of this idea in Europe is an essential step toward that Atlantic community, the union of the free, which developments in the East are forcing on the western world.

Record of National Labor Relations Board

EXTENSION OF REMARKS
OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, August 10 (legislative day of Thursday, June 2), 1949

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an editorial entitled "Diminished Backlog," published in the New York Herald Tribune of August 6, 1949. It praises the excellent record of the National Labor Relations Board.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DIMINISHED BACKLOG

One improvement that has resulted from the Taft-Hartley Act, and that not even the most rabidly opposed union will be disposed to condemn, is the greater speed with which the enlarged National Labor Relations Board has been able to act. Reporting a 137-percent increase in the number of decisions issued in its first full fiscal year over the 13-year annual average of the Wagner Act's three-man board, Chairman Paul M. Herzog attributes the improvement to a rotating panel system. This was made possible by the increase in the number of Board members and under it three Board members sit as a panel with full power to make decisions in cases which do not involve questions of major policy on which the full Board acts. Thus two members are freed for the study of other cases and certain necessary administrative duties. Another measure of the Board's efficiency is the reduction of its backlog of cases by 46 percent from the previous year.

An administrative system which reduces the time element in resolving labor disputes serves the public interest. That such a record has been established in this first full year of administration of the highly controversial Taft-Hartley Act speaks well for the diligence of the Board and its staff.

Failure of Program to Reconvert Liners "Mariposa" and "Monterey"

EXTENSION OF REMARKS
OF
HON. HARRY P. CAIN
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Wednesday, August 10 (legislative day of Thursday, June 2), 1949

Mr. CAIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an editorial from the Call-Bulletin of San Francisco, Calif., of August 4. I am not informed on the merits of the argument advanced by the editorial, but the editorial is being offered as an accommodation to a friend, and for the information of the Senate and others.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FALSE ECONOMY—SENATE ACTION SCUTTLING PLAN TO RECONVERT LINERS "MARIPOSA", "MONTEREY" BLOW TO MERCHANT MARINE

A deplorable instance of false economy and reckless penny pinching, as contrasted to wise budget trimming, is contained in the United States Senate's action in knocking aside the program to reconvert the liners *Monterey* and *Mariposa* into de luxe passenger vessels.

Both ships had been operated, before the war, by the Oceanic Steamship Co., a Matson subsidiary, in the Pacific trade; they served as troopships during the war.

The plan was for the Government to buy, or otherwise assist in the reconversion of, the vessels, and then charter the *Monterey* to the American President Lines and the *Mariposa* to the Matson Lines.

However, legislation which would have authorized the Maritime Commission to proceed toward such a program was stricken from an appropriations bill for independent Government offices—such as the Maritime Commission.

Both of these vessels now are at Alameda. Work on them would strengthen our waning passenger fleet, a vital arm of the American merchant marine, and would give valuable stimulus to the shipbuilding activity which the west coast needs and which is urgently important to adequate national defense.

The current administration is spending, and has spent, billions of dollars to build up industry in Europe.

Much of this reconstruction effort, particularly in the maritime trade, now has reached a point where the foreign competitors of American business are offering serious commercial rivalry to United States firms—with the aid of money which, in effect, has been drained off American industry through taxation.

The Senate, in short, is economical when it comes to offering any help to American industry—and in this case, which involves shipbuilding and the United States merchant fleet, an industry which not only is economically important but which is essential from a national security standpoint. But at the same time the Government is lavish in its proffer of help to foreign industry.

No program which puts America last can be a really effective way of preserving our democracy and our way of life.

Many of the New (or Fair) Deal's subsidy programs are nothing more than gigantically wasteful boondoggles, valuable politically, perhaps, to the bureaucrats in office but certainly not healthful or wholesome economically.

Then along comes a legitimate, useful, and indeed necessary proposal for Government aid, such as the plan for the *Mariposa* and the *Monterey*, and it is ruled out.

This pound-foolishness simply doesn't make sense, and Congress, if there is any way at all to do so, should act immediately to revive the program for these two vessels.

The Panamanian Highway

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Wednesday, August 10 (legislative day of Thursday, June 2), 1949

Mr. SCHOEPPEL. Mr. President, the following excerpt from the Christian Science Monitor of August 3, 1949, appears to me to be of much more than passing interest, and I should like this story of the building of the Panamanian Highway, constructed by the United States of America, to be inserted in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MAINTAINING OF VITAL LINK STIRS DOUBTS

BALBOA HEIGHTS, C. Z.—A transcontinental highway is quite a gift to any nation.

This is the gift that tiny Panama recently received from the United States.

On June 30 the 51-mile Boyd-Roosevelt Highway running from the Atlantic Ocean to the Pacific across this isthmus was formally turned over to the Panama Government. Now it is up to Panama to maintain this $10,000,000 cement highway built by the United States Public Roads Administration.

Panama contributed the necessary land through expropriation. Also, Panama furnished, free of charge, stone, gravel, sand, earth, and other natural products for the construction. All other costs, totaling $9,175,726.35, were paid by the United States, according to John L. Humbard, PRA division engineer.

Named after Augusto S. Boyd, former President of Panama, and Franklin D. Roosevelt, President of the United States at the time of its inception, the roadway is the most important on the Isthmus of Panama.

CANAL AND RAILROAD

Since the opening of the Panama Canal in 1914 there have been only two means of surface transportation between the Atlantic and the Pacific coast, from the Canal Zone to the surrounding nation of Panama.

One method was by boat through the Panama Canal; the other was via the Panama Railroad, a 100-year-old railway much of whose roadway is single track.

From a security angle neither was desirable for quick transport of troops from one location to another. Neither was quickly repairable.

A motor highway across Panama was the obvious answer for speedy movement of military forces defending the world short-cut. It had seemed desirable for years, but only under the stress of military necessity was it accomplished. It seemed an honest military need. Panama, of course, desired it highly for commercial reasons as well as for the opening up of entire new areas of the Republic where roads had never existed.

Panama was committed to pay for a major portion of the roadway, but Panama had no money. If the road was to be built when the military leaders wanted it, the best that Panama could do was expropriate the required land and furnish such natural materials as sand, gravel, and rock, which were at hand.

UNITED STATES BUILT ROAD

Under these conditions, with military urgency demanding action, the United States built the road. And paid for it.

The first vehicle crossed the Isthmus over this highway on January 18, 1942. It was opened to military traffic on April 18, 1942, and to the general public on April 15, 1943. This, incidentally, was the day that Panama and the Canal Zone changed from the left-hand drive to right-hand drive to conform with general driving regulations elsewhere, particularly in the United States.

Despite the fact that this Boyd-Roosevelt Highway has been in daily use in some parts since 1942, and in all parts since 1943, the record will show it was not completed until June 13, 1949—and then formally turned over to the Republic of Panana on June 30, 1949.

What was completed in the intervening years? A 1,150-foot street at the Atlantic end. Officials recall that Panama contemplated an overpass over another highway at this point. Pending Panama's decision, the United States left this section unfinished.

FINANCIAL DISTRESS

Quite recently Panama admitted having no funds with which to carry out any possible plans, so the Panama Canal engineering forces built the last segment.

The State Department in Washington, the American Embassy in Panama City, Mr. Humbard, and other officials insist that the above reason was the sole one for failure to complete the highway at this point in 1942.

One hears other opinions, and they are admitted to have a kernel of truth. Here is what unofficial sources claim:

Panama's ability or inclination to maintain public works was distrusted, and its unending distress in matters financial was recognized by military leaders. Therefore, they hesitated to turn over their newly completed essential highway to Panama in 1942, or even in 1943, because it was important to them to keep it 100 percent operative.

While under American control, slides and other difficulties which hampered traffic could receive immediate attention with the best and most modern machinery and a trained highway staff to work 24 hours a day, if need be.

Could Panama offer even mediocre machinery or men with training in such work?

The answer may be seen in the fact that, during the period most essential to the United States, this highway remained technically unfinished, and, therefore, the United States did all the maintenance and other necessary work on it. Now it has been turned over to Panama, and some Americans are doleful in their predictions of what may happen.

RUMORS OF REVOLT

The latter point to the inadequacy of Panama's treasury, rumors of revolt, several weeks' complete suspension of civil rights, and the downtrend in business.

Americans ask how Panama can be expected to do anything under existing conditions when, in normal times, Panama allegedly has failed to keep many agreements with the United States.

The Boyd-Roosevelt Highway is of extreme importance to both Panama and the Canal

Zone. To the first, for commercial reasons; to the second, for military defense.

Panama City, the capital, and Colón, the second largest city of Panama, are reaching toward each other across a continent crossed by this 24-foot-wide ribbon of cement pushing aside a jungle. Daily, new construction is seen. Towns are springing up. Buses run between the two cities hourly, with a dollar fare for the transcontinental journey.

Commercial transportation, as well as private cars, has taken away the once lucrative business of the Panama Railroad. A legal monopoly on transisthmian transportation was held by the Panama Railroad until construction of the highway. Since the Panama Railroad is 100 percent owned by the United States, the relinquishment of its monopoly was another contribution of the United States to the highway in addition to the money spent.

The question of how Panama will maintain its newly acquired Boyd-Roosevelt Highway furrows the brows of many Americans, and Panamanians, too. Experience has shown the lack of care of hundreds of miles of penetration roads built by the United States Army in Panama during the war. Untouched and unrepaired, they are deteriorating, despite their obvious value to a nation which needs penetration roads.

Local press reports and some personal inspections by the writer bear out the generally reported stripping of important well-equipped bases turned over by American troops to the Panama Government on evacuation of the bases here. Roofs have been ripped off, lumber has been torn from buildings, plumbing fixtures have been removed, and even underground water lines have been dug up for the pipe, it is reported. It is a national scandal, and promised investigations have done nothing but confirm the damage.

If this is a fair sample of what to expect, the Boyd-Roosevelt Highway faces a precarious future. And, from a military standpoint, it is as important today as it was on completion. It still possesses the one characteristic that makes it of surpassing value—it is the only transportation medium for motor vehicles or mechanized warfare vehicles across the Isthmus of Panama.

One long-time Canal Zone resident pointed out that Panama has fiercely and consistently demanded to be considered an equal nation in dealings with the United States. In theory, this has been proper. In practice, says the old-timer, Panama has been unwilling or unable to carry its load in most bilateral arrangements with the United States.

Reciprocal Trade Agreement Legislation

EXTENSION OF REMARKS

OF

HON. WALTER F. GEORGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 10 (legislative day of Thursday, June 2), 1949

Mr. GEORGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Get the Trade Pact Bill Off the Senatorial Sidetrack," from the Baltimore Sun of August 7, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GET THE TRADE-PACT BILL OFF THE SENATORIAL SIDETRACK

There are many points in the American constitutional system where foreign observers find themselves confused. There are some which are confusing even to Americans. Take that report the other day out of Annecy, in France. Most of the major trading nations outside the Soviet bloc are bargaining together at Annecy to work out new trade agreements. And this particular dispatch said that the United States had just closed deals with Denmark, Norway, Finland, and Greece.

But the dispatch then went on to add that the statutory authority on which the American bargainers are operating has not been renewed. It lapsed on June 30, 1948. Thus the Americans at Annecy have been suspended in a kind of diplomatic vacuum, carrying on with their bargaining activities though the law that supports those activities has been jerked out from under their feet. Compared with the American bargainers at Annecy the man who merely walks on water has a relatively simple act.

Of course the only reason the Americans can get away with it is that extension of the Trade Agreements Act is confidently expected. The law has been on the books since 1934 and is the core of our foreign economic policy which makes it vital to our diplomatic policy too. We have seen all over again in practice how economic planning, currency restrictionism, bilateral trade and all the other trade heresies irritate international relations. We know more firmly than ever before that multilateral trade as provided in the Reciprocal Trade Agreements Act is the true and sovereign lubricant of international friction points.

And the truth is, we have not wholly neglected the trade agreements extender bill. It passed the House on February 9, last. It was reported favorably by the Senate Finance Committee March 11. But then it got sidetracked on the Senate calendar by the great rush of other business. It is now scheduled to be taken up after the minimum wage debate has ended. The minimum wage matter should be the order of Senate business now, but it too has been sidetracked by the welter of lagging appropriation bills. So it can be said that action on the Trade Agreements Act is definitely scheduled, though there is no way of telling exactly when it will be reached.

Certainly the action ought to be expedited as much as possible. For the truth is that the trade-agreements bill itself may run into long debate. The Republicans in the Congress are insistent on certain changes which they say will enhance the protections domestic industries enjoy under the act. Yet the difficulties foreigners have in selling in our market is already so great that it constitutes one of the causes of the dollar shortage now devastating much of the western world. Americans would be dopes indeed if, sending aid money abroad by the billions, they reduced even further the possibility of getting goods back in exchange.

Repeal of Wartime Excise Taxes

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 10, 1949

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I include therein the following exceedingly well-written article from the Gardner (Mass.) News containing a summary of my remarks in the House on the repeal of wartime excise taxes:

PHILBIN CALLS FOR PROGRAM TO DEVELOP UNITED STATES ECONOMY—BUSINESS, EMPLOYMENT EXPANSION ASKED BY CONGRESSMAN FOR MAINTAINING AMERICAN STANDARD—WANTS ASSURANCES TO INDUSTRY

Calling for a program to promote and encourage expansion of business and employment, Congressman PHILIP J. PHILBIN, Democrat, of Massachusetts, recently called for positive Government action to develop an expanding, dynamic economy in which American workers can be steadily employed in good jobs and our high American living standards maintained "I am interested," the Congressman said, "in seeking to promote Government action by this Congress which may result in reversing the trend and reinstating conditions under which our great American productive economic machine may be opened up again. Of utmost importance always is the need for keeping employment and labor standards at a high level."

ASSURANCES TO BUSINESS

"I have repeatedly stated," said Mr. PHILBIN, "that national prosperity was inevitably bound up with encouragement of our free-enterprise productive system and the rights of the individual, that initiative and enterprise could be destroyed by oppressive taxation as well as by socialization.

"At the present time it is my considered judgment that this Congress and this administration can and should do two things to stem the tide of recession and unemployment. First, give unmistakable assurance to business and enterprise, large and small, that it is in no danger, through present or contemplated social programs of being liquidated by oppressive taxation and unsound governmental experiments. Secondly, immediately repeal war excise taxes which are now exercising additional recessionary influences on business. Neither of these measures will be unduly costly to the Government. The first can be accomplished by a strong statement of policy; the second, by adoption of a pending repeal measure which in effect would revive business in the opinion of some tax experts to such an extent as to offset very substantially any losses incurred by the elimination of tax revenue heretofore collected from sales of the articles taxed."

LOWER CONSUMER PRICES

"Some of these articles are referred to as luxury items, but in many cases this is a distinct misnomer. I will not argue the matter here, but it is clear to me that a great many of the articles branded as luxuries are in fact necessities which are used in the everyday lives of our people. If the repeal measure can be brought to the floor of the House, it is my intention to offer an amendment including unit sales of electric, gas, and oil cooking appliances presently taxed under excise tax laws. It is certainly ridiculous that we should be taxing such a distinct necessity as a stove in the household of our ordinary working citizens of "a type used for cooking, heating, or keeping warm food or beverages" for consumption in American homes by the American people. It is equally fantastic that we should be taxing at wartime rates, handbags and accessories which women customarily carry on their person.

"Governor Bowles of Connecticut very commendably, I believe, has taken the position that these excise taxes ought to be repealed and that the effect thereof would be to promote and increase business throughout the Nation at a time when encouragement and impetus is urgently required to avoid further distressing effects of the current recession. Senator George is of similar view. Many colleagues are in agreement. My distinguished friend, Congressman MAR-

TIN has filed a discharge petition to secure early repeal which invites bipartisan support.

"I hope that the members of the Congress will take a broad, nonpartisan attitude toward this matter and unite on a sound, constructive, economic policy to check waste and extravagance in the Federal Government and where possible, without impairing essential functions and services, to eliminate onerous taxes upon the American people and also, of course, by our conduct and attitude respecting totalitarian proposals looking toward regimentation of our economy to assure the American working man and the American businessman, that, as Representatives of the people, we intend to maintain conditions in our Government and in the Nation which, instead of discouraging and stagnating, will encourage and promote expansion of business and courageous development of our trade. This is the way to insure an expanding, dynamic economy in which the American workers can be steadily employed in good jobs, and our high American standards which are the envy of the whole world may be maintained."

Those Rosy Reports on the Marshall Plan

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial that appeared in the Detroit Free Press:

THOSE ROSY REPORTS

With another ERP bill, for $5,580,000,000, approaching a vote in Congress, there's something suspicious about glowing reports of how the Marshall plan has saved Europe from communism.

The Italian defense minister, for instance, says that the Italian Communist Party has lost 700,000 members since last April's American-backed election. The Italian Commie boss laughs at that one. Claims he has as many followers as ever.

The loss of seats by Communists in the recent cantonal elections in France was played up in the headlines. When you got down to the end of the story you discovered that they polled a heavy popular vote. They elected few candidates for local offices because of a trick voting system which discriminated against them.

Whether any large number of Communists in Europe have been permanently converted to democracy is doubtful. There seems to be a lot of "rice Christians" over there who are ready to backslide the moment we stop feeding them. They won't stay bought.

This being the case, attempting to contain communism with dollars promises to be an endless, expensive, and futile experiment in political proselyting. Congress should remember that.

Lessons From the Whitewash Paper

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 8, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following penetrating analysis from the New York Times of August 7, 1949, of the incredible miscalculations our State Department made in dealing with the Chinese Communists. Yet, most of the same men who made these mistakes are still in charge of our policy-making. How can anyone trust their judgment to be better now than it has been in the past? We must have a complete housecleaning of those responsible for plans which led to the threatened loss of China to Communist control, and put fresh men in charge who do not have past errors, no matter how well intentioned, to defend:

PROSPECTS FOR CHINA

The Secretary of State has taken the occasion of the issuance of the white paper on China to set forth five basic principles on which future United States policy in the Far East should be based. Presumably this is the answer to the expected criticism that the white paper is largely negative and largely defeatist. Presumably also these principles will serve as the starting point for the advisory group on Far Eastern policy that is shortly to begin its deliberations.

An examination of these principles alongside the white paper will indicate that there has been a fundamental change in the official United States outlook on China. How this change can be implemented will be in part the problem of the new advisory committee and even more largely the problem of the Congress of the United States. That problem is to turn mistakes into correct judgments, despair into hope, defeat into victory.

The white paper, in spite of its length, is limited, and one of its critical limitations is its narrowness in ascribing responsibility for the debacle in China. The upshot of the document is to place that responsibility solely upon the alleged incompetence of the government of President Chiang Kai-shek. Beyond dispute the incompetence was there, but it was by no means the only cause. Other large factors, such as the foreign-inspired dynamism of the Chinese Communist Party, have been omitted or minimized, and they are now supplied, if by implication only, in the statement of principles made by Secretary Acheson.

What must stand out in any honest approach to the China problem is the fact that there has been a complete change of attitude on the part of the United States toward the aims and objectives of the Chinese Communists and of the Soviet Union. What is now quite clear is that President Chiang's estimate of those aims was right and that the State Department's estimate was wrong. The white paper does not and apparently cannot say that, but it is there in a dozen places.

The long process of attempted mediation with the Chinese Communists was based on the assumption that they were an honest, indigenous Chinese political party earnestly desirous of social and economic reform and free from control by the Kremlin. This assumption was made and cherished in spite of warnings from our diplomatic representatives in Moscow. Parallel to this was the assumption that the Soviet Union was acting in entire good faith in negotiating the Sino-Soviet treaty of 1945 and that its provisions would be faithfully carried out. As a corollary to that ingenuous assumption should be placed the singular supposition that the Soviet Union required inducements to enter the Pacific war; that we had to pay, at the expense of China, what Secretary Acheson calls a price. It is now well established that we were wrong, if high-minded, in these various beliefs.

Out of those mistakes we are apparently attempting to rewrite an Asiatic policy and are starting out by dissociating ourselves from the still existing and still recognized Nationalist Government of China and from President Chiang Kai-shek. Nevertheless, the Secretary's statement must at the very least mean an equal dissociation from the Communist regime that has been set up. The white paper has been interpreted as a body blow to President Chiang. The Secretary's statement will fall short unless it is interpreted as a body blow to Communist chieftain Mao Tze-tung.

Point 1 is the development of China as an independent nation playing a role suitable to a free people. Let us hope that the Secretary now knows that the Chinese Communists are by no means independent and that Chinese, as well as nationals of other states, cannot be described as a free people if they are under Communist rule. Point 2 suggests that the United States will support conditions that will safeguard basic rights and liberties in China. By no stretch of the imagination can that include the Chinese Communists. Point 3 expresses the opposition of the United States to the subjection of China to any regime acting in the interest of a foreign power, or the dismemberment of China, whether by open or clandestine means. This should put us on the record against recognition of the Chinese Communists and against the by now probable detachment of Manchuria by the Soviet Union. Point 4 commits us to continuing consultation with other interested powers and point 5 brings this program into the sphere of the United Nations.

Against the background of the white paper some of this reads more like pious wishing than a blueprint for action. It is now up to the Congress and the people of the United States to see to it that this statement of purpose does not remain in that category. Just how we will express our opposition to a regime acting in the interest of a foreign power is an immediate problem in implementation. It will not be solved by a pontifical disclaimer of responsibility nor by the creation of a convenient Chinese scapegoat. The white paper has served its purpose in those respects. It is time now to get at the new policy.

Glenn L. Martin

EXTENSION OF REMARKS
OF
HON. GEORGE H. FALLON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 10, 1949

Mr. FALLON. Mr. Speaker, under leave of the House to extend my remarks in the RECORD, I wish to include an editorial from the New York Times, Sunday, August 7, 1949, commending Mr. Glenn L. Martin, founder of the Glenn L. Martin Co., who, in my opinion, has contributed more to the advance of aviation than any other man in the history of our country.

His contribution is not limited to civilian development. It is proper to state here that the successes which the Army and the Navy achieved in the air during the war were in no small part the result of his untiring efforts in behalf of his country.

FORTY-YEAR FLIER

Before the first August dawn broke in 1909 an odd procession wound through the streets of Santa Ana, Calif. The first airplane constructed by Glenn L. Martin was being towed to a level field outside of town for its

initial flight. Fashioned of bamboo and silk, and braced with thin wires, it had a 4-cylinder, 15-horsepower engine amidships, and behind that was mounted a long wooden propeller, hand-carved by Martin himself. He had not only built the airplane but had taught himself, theoretically, to fly it. When the little engine caught and the throttle was open, the biplane waddled and lurched, but the nose wheel of the tricycle landing gear finally lifted a bit and there was open space beneath the plane.

Today, after developing transports and bombers, great flying boats, jet aircraft, pilotless aircraft, and rockets, Glenn Martin says that that first self-taught flight of 100 feet at a 2-foot altitude gave him the greatest sensation of his life. The company which this early pioneer and barnstormer developed has produced 10,724 airplanes of many sizes and types, and reflected his spirit in many examples of bold imagination and design, for civilian and military use. We offer Glenn Martin congratulations on four decades of contribution to the age of the air.

What's Wrong With the North

EXTENSION OF REMARKS
OF

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, August 10 (legislative day of Thursday, June 2), 1949

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an article entitled "What's Wrong With the North," written by Mr. Hodding Carter, one of the most distinguished editors and writers of our country, and published in Look magazine for August 16, 1949.

I wish to call the attention of our northern friends in particular to this article. I believe they will find it instructive and enlightening. If studied carefully, it will promote a more intelligent consideration of legislation by this body.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHAT'S WRONG WITH THE NORTH

(By Hodding Carter)

(Author's note: The locale, North, within the meaning of this southern exposure, is in general limited to the metropolitan areas of the eastern seaboard States, because that is where most of the South's difficulties arise. There is no intent, however, to discriminate against Pittsburgh, Detroit, Chicago, and other population centers east of the Mississippi and north of Kentucky, by excluding them from the accusations and advice hereinafter presented.)

In a way, I am writing this as a tribute to the late Sherlock Meriwhether. He was a reporter on our newspaper—I should say, a crusading journalist—who was known admiringly to the staff as Ol' Fearless.

One afternoon last spring, Fearless and I were having a quiet chat in my office. We are very democratic down here in Mississippi except during some Presidential campaigns.

I happened to mention that our circulation was slumping. No oomph on the front page. Nothing to help street sales. Then Ol' Fearless got an idea. His eyes lit up.

"Boss," he said, "I've got it! Let's do some crusading."

"There's nothing left around here to crusade about," I answered pessimistically. "Everybody's reforming. Mr. Truman's civil rights has got 'em all scared to death."

"You don't understand," Fearless interrupted. "Not a crusade here. Up North."

"All right, Fearless, you can go," I agreed. "But you've got to travel in disguise. It wouldn't be safe for you otherwise."

Ol' Fearless had it all planned out. He would pass as a northern Progressive.

For 3 weeks he lived in a cellar, where he acquired a pale, sallow, skyscraper-shadow complexion. During the entire period, he dieted exclusively on barbiturates, martinis, black coffee, and tongue on rye—except for a corn-pone, salt-meat, and turnip-green jag one unfortunate week end.

By prearrangement, he divorced his wife, married again, and divorced his second wife, with the secret understanding that he could remarry his first wife when he came home.

Poor devil. He never did.

But that lay in the future. Fearless subscribed to three left-wing periodicals and the CONGRESSIONAL RECORD. He memorialized the campaign speeches of Henry Wallace. He cultivated a habit of shaking his head disparagingly at any mention of the South. And in 3 weeks he was ready. Then he left.

The arrangement was that he would telegraph coded summaries of his findings at intervals to keep me posted.

He was to write his series after he returned. We had great hopes for it and planned to title it "In the Land of Grim Snow."

Alas, the full story Ol' Fearless unearthed will never be written, for I never saw him alive again. But I do have the decoded messages he sent me.

I am sure that for all his courage, Ol' Fearless was scared as hell. His first message from New York indicated his anxiety.

"Boss," it read, "I feel that I am being followed. Murder stalks these streets, brutal, unprovoked murder. Up in Harlem, the bodies of mugging victims are piled high for the white wings each morning. Along the water front, the fishes feed on the ghastly remains of longshoremen and social workers.

"Gangsters torture and kill, just to try out a new headline. Grim-faced policemen patrol the streets, armed to and including the teeth, but to no avail. Rapine and horrible death threaten the New Yorker at every turnstile."

His second message, 6 days later, was calmer. But its implications were clear.

"Boss, I am frankly disturbed. From Philadelphia to Chicago, I haven't found a plain American voter yet. It's worse than the poll tax.

"Everyone is a Polish-American voter, an Italian-American voter, a Negro-American voter, a Jewish-American voter, a German-American voter, an Irish-American voter, a Labor-American voter, an American-way-of-life voter or an un-American voter. As a matter of fact, most folks don't even vote up here at all. They are voted. In the North, democracy is doomed."

And so his coded reports went. He was almost detected one evening at a peace rally when he forgot to boo the Atlantic Pact. But he was getting the low-down on the North.

Suffice it to say that his was a grisly tale. A tale of northern slums and ghettos, of racial and religious strife, and the defiling of tabernacles and churches. A tale of northern-class warfare, in which men raged like beasts outside of struck factories, clubbing, and knifing and shooting, in wild Yankee orgies of hate. A tale of Red northern traitors, plotting the Nation's overthrow, stealing state secrets, and even pumpkins.

Then the tragedy. Two nights before he was to come home, Ol' Fearless collapsed in a hotel lounge. Callous, indifferent northerners let him lie there for 76 hours. Later, he was dragged off to jail for the third degree before being taken to a hospital.

By then, he was beyond human aid. But as he lay dying, he managed to scribble a final message. It was smuggled out and mailed by a kindly interne—a native of South Carolina, by the way. That message explained the cause of Fearless' death.

"I MET TWO DECENT NORTHERNERS"

"Boss," it read, "I hate to go out this way. * * * What happened was that I met two decent northerners in the hotel bar. That ruined the series, and the old heart couldn't stand it. So long, boss. * * *"

You needn't believe this story about Fearless and his adventures. As a matter of fact I don't either. But neither do I believe the reverse stories about the South upon which the adventures of Fearless are patterned, all as like as like and with the same monotonous theme: What's wrong with the South?

For a hundred years, the South has been investigated, harpooned, lampooned, pestered, and exposed. One-sidedly and grotesquely, the South has been presented as a region of utter hopelessness, depravity, and brutality.

A lot of things are wrong with us. But not as wrong as the endless exposés make out. And it seems to me that it's about time to discover what's wrong with the North.

I can't do the kind of job Ol' Fearless would have done. But I have spent more time in the North than any six northern experts on the South together have spent down here—about eight scattered years.

The most obvious defect of the North, though not the most dangerous, is happily one that time will cure.

Its people have not yet attained the homogeneity so necessary for national or regional stability. America's strength is generally credited to the diverse national background of its settlers. But that strength has actually been developed through the fusing of many peoples into one people, and not through the perpetuation of diversities.

The South was a melting pot for generations before the great waves of immigration in the latter nineteenth and early twentieth centuries. It was largely bypassed by the newer immigration. So for more than 200 years, a homogeneous folk, a truly distinct people, has been created in the South.

But the North has not yet had time for this fusion. In the industrial cities of the North, one can find even now a distinct pattern of settlement by nationalities.

I am astounded at the number of foreign-language newspapers that are published in the North. I don't object to them because they are printed in another language than our own; but their editorial content is too frequently slanted toward Old World yearnings and issues.

And I am alarmed by the nationalistic, racial, or religious importance in northern politics of the antecedents of local office seekers. No less importance is given to their attitudes toward such matters as the partition of Ireland, the recognition of Palestine, the Polish problem, the restoration of the Italian colonies, and aid to Spain.

The dishonest dexterity with which the politican plays for national bloc votes in the North is a shameful thing. And it is something less than wholesome that the only problem on which they can unite is the southern problem.

This is not to say that the newer Americans are any less loyal or valuable citizens than those whom time has severed from their national origins. And I would not deny them their nostalgic pleasure in the food, the customs, and the language of their forebears.

But it is not good for them to continue to identify themselves with the aspirations or animosities of the past. It endangers their stability, makes them too suspicious of each other, and weakens the North's role as the only region that has all the answers. But all this will pass, as every southerner knows.

HATRED IS INTENSE IN THE NORTH

More serious is the intensity of racial and religious hatred. There is actually more of it in the North than in the South; and while intolerance is decreasing in the South it is increasing in every northern city

Take anti-Semitism, for example—the most tragic and longest-lasting expression of man's inhumanity to man.

We never had a bund or a Christian front in the South—and it should be remembered that in the twenties the Klan flourished also in the North. We don't desecrate synagogues or enter into widespread conspiracies, openly or covertly, to exclude Jews from our community life. The average business or social gathering in the South is not tainted with anti-Semitic jokes and repetitious conversation about Jewish business practices.

Nor, among the laity, is there the bitter anti-Catholic—and, conversely, anti-Protestant—feeling that one discovers so often in the North.

I know what you're about to say. The Negro. I am ashamed of the discrimination which the Negro suffers in the South; and a good many people are trying, with some success, to end it.

But neither our discriminators nor those who protest discrimination pretend that it doesn't exist. That pretense is assiduously practiced in the North.

And, despite the restrictive one-sidedness of the white-Negro relationship in the South, the individual members of the two races are not preoccupied with hating or fearing each other. But so many northerners do hate, fear, or shun the individual Negro.

They are disturbed by his accelerating migration to the northern land of opportunity. And it might be pertinent that the race riot, the most hideous expression of racial tensions, is a Northern rather than a Southern phenomenon.

I say in all honesty, and from observations made over a long period, that men hate and fear each other on more counts and with greater intensity in the North than anywhere else in the Nation.

NORTHERN LIFE IS ARTIFICIAL

Perhaps the artificiality of the principally urban life of the North, and the sense of insecurity it creates, may be responsible for these harsher tensions. At any rate, I would cite an insecurity psychosis as the third item in my bill of particulars.

This feeling of insecurity is most dangerously evidenced in the deplorable mistrust of employer for employee and employee for employer that is so characteristic of the sprawling industrial kingdoms of the North.

It is easier to panic ants when they are concentrated in the anthill than when they are scattered in smaller foraging groups across the fields.

In their teeming anthills, northerners worry about war, about peace, about the stock market, about national elections, about atoms, and about the South far more than do Southerners. And this is largely because existence in a crowded, industrial society is so delicately balanced between order and chaos, so artificial, so sensitive to the slightest strain.

Bus strikes, subway strikes, coal strikes, longshoremen's strikes, elevator operators' strikes—these can paralyze the northern city. But come hell or high water—and we've had both—the southerner can somehow get to work, eat fairly regularly, and keep from freezing.

The northern insecurity complex has many unpleasant expressions. Yankees may not drink more than do southerners, but they have less fun doing it. Just from the size of the mental hospitals, the number of mental specialists, and a nonscientific personal survey through the taproom conversation technique, I would say that the North has almost a monopoly on neurotics.

The same goes for dipsomaniacs, abnormal sex delinquents, divorced couples, Communists, crime-comics readers, phony artistic faddists, and gin-rummy addicts.

Nor are such states of mind helped by the provincialism of the average northerner, especially the northern city dweller. He hasn't been anywhere else and doesn't want to go.

Even in his native haunts, he is a lonely man. Relatively few northerners go in for good neighborliness except on a Pan-American basis. There are documented stories of New Yorkers who don't know who lives in the next block and don't care; and I have been told—though I refuse to believe it—that there are apartment house dwellers who are unacquainted with families living on the floor below them.

Finally, there is the centralization of wealth, political power, and population in the North—and particularly in the Northeast. It is not an unmixed blessing for northerners; and it is a distinct liability for the rest of the Nation.

The pursuit of wealth and the emphasis upon monetary values is important only where wealth abounds; we gave up dollar-chasing in the South a long time ago because there were so few dollars to chase. But it seems to me that in the North, money making is too frequently a substitute for good citizenship.

Since they are packed together in a sardine-can anonymity, the North's citizens either have no sense of personal responsibility for their society or they are frustrated by a feeling of individual helplessness.

At the same time, their material achievement and their political strength—an accident of population density—create a false conviction. They believe they are superior to the yokels down in the southern hinterlands.

This superiority complex justifies the continued economic exploitation of the southern colonies. It also engenders a missionary zeal to save the savage soul by forcibly imposing new social and political concepts upon our benighted region.

HOW TO PUT THE NORTH IN ORDER

This is all very sad, and I have only one program for putting the North in order. It is actually simple:

Scatter the North's industries in a southerly direction, with Mississippi as the focal point, disperse its population in a different direction and end its political domination by reducing New York, Pennsylvania and possibly Massachusetts to territorial status.

This program ought to result in a lot of letters if nothing else. And if Federal bayonets are required to effect these overdue reforms, so let it be. We've got a lot of surplus Federal bayonets down here anyway. They were swapped for contraband cotton right after reconstruction.

This brings me to a last comment on what's wrong with the North. Like the South and the West, the North is a proving ground for a still unachieved ideal which we call the democratic way. Our imperfect society is a long distance yet from that idea.

Our failures in the South are not unlike the failures elsewhere; and our southern predilection for shutting our eyes to our faults and telling the North to go to blazes complements the northern tendency to rail against southern shortcomings while ignoring its own.

Whatever the differences in regional examples of democracy's imperfection, the imperfection itself is universal.

Some day we'll realize it, and the sooner the better. Some day, Ol' Fearless and the crusading investigator from up North will get together and decide to look at the Nation instead of at its separate parts. Together they may discover that no region in America has a monopoly on democratic virtues or undemocratic vices.

Take the North, for instance.

Military Assistance to Western Europe

EXTENSION OF REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 10, 1949

Mr. HALE. Mr. Speaker, we shall soon be considering the subject of an armament program in support of the Atlantic Pact, which will doubtless involve our supplying certain arms to our cosignatory nations.

The greatest test of statesmanship is the capacity for foresight. It seems to me rather noteworthy that just over a year ago, in the special session of last summer, our colleague, Mr. LODGE, of Connecticut, made a speech in which he called our attention to one great piece of unfinished business—concrete military assistance to western Europe in its undertakings of mutual self-defense. This speech is so illuminating that I think it well worth setting out in full.

ACCOMPLISHMENTS OF THE EIGHTIETH CONGRESS IN THE FIELD OF FOREIGN AFFAIRS—THE NEED FOR SUPPORTING THE WESTERN ALLIANCE

(Address by Hon. JOHN DAVIS LODGE, of Connecticut, in the House of Representatives, August 6, 1948)

Mr. Speaker, before this special session of the Eightieth Congress draws to its inexorable close, it is appropriate, I think, to review briefly its accomplishments in the field of foreign affairs and point a finger in the direction in which we should move if we are to keep pace with the rapid crescendo of international events.

This Congress, which the Chief Executive has assailed as the worst in our history, will some day be recognized as one of the greatest Congresses.

This Congress created the legal basis for the establishment of the United Nations on these shores when it enacted the UN Headquarters Agreement Act. On yesterday it underwrote the United Nations headquarters with a $65,000,000 loan.

Fourteen months ago this Congress provided relief assistance to war-devastated areas in Public Law 84, sometimes known as post-UNRRA relief. It continued and strengthened the undertaking of promoting world peace through economic assistance in the Foreign Aid Act of 1947, which was passed after Congress was summoned back into session last November to deal with the economic crisis in Europe. This was an interim measure to bolster western Europe until the European recovery program could go into effect. Finally, after protracted hearings, careful study, and much devoted

thought, the Congress worked out a formula for long-term European reconstruction in the Economic Cooperation Act, which was passed last April. This may be described as a strategical measure with relief characteristics. It constitutes an effort of gigantic and unprecedented proportions in the international arena.

This Congress legislated assistance to Greece and Turkey to buttress them against the Communist tyranny. It originated the principle of assistance to China, similarly threatened.

The Committee on Foreign Affairs, of which I am a member, has reported and the House of Representatives has acted upon a total of 31 public laws dealing with foreign affairs. I have mentioned the significant ones relating to economic policy and to the United Nations. In addition positive forward steps were taken in the general sphere of international organization and cooperation. This Congress passed legislation authorizing American participation in the World Health Organization, the International Refugee Organization, the Carribbean Commission, and the South Pacific Commission. This Congress authorized acceptance of the trusteeship for the territory of the Pacific islands. It reincorporated the Institute of Inter-American Affairs to carry on our mutual programs with various Latin-American Republics.

This Congress legislated the United States Information and Educational Exchange Act of 1948—better known as the Voice of America Act.

This Congress developed the policy of the 70-group air force, passed the Armed Forces Unification Act, and renewed selective service. There were concrete measures to show the world that we intended to back our word with our strength; that in our opinion peace is a product of strength; war, a derivative of weakness.

A lesser measure of the same sort was the legislation extending authority to arm merchant ships in time of emergency.

This is a record of which any Congress, indeed any President, could be proud.

It would be fortunate if one were able to say that the slate is clean. The current accelerated tension is ominous and abundant notice to us that such is not the case. Since last February our ship of state has been moving gingerly through very dangerous and turbulent seas. Somewhat paradoxically this danger arises in great part from the success attending our economic legislation. The Soviet tryanny, finding itself unable to capture the governments of western Europe by outward pressure and by infiltration is, it is feared, considering more forceful means of encompassing its objectives. The fact that we are in the process of translating some of our war potential into actuality might, it is apprehended, induce the Soviet Union to force the issue.

This is a matter largely for delicate diplomatic handling. Surely we can glean some satisfaction from this evidence of the effectiveness of our legislation. There is, however, one great piece of unfinished business—concrete military assistance to western Europe in its undertakings of mutual self-defense. It is on this subject that I wish to speak.

More than a half century ago Lord Bryce wrote that the United States could not indulge its easy optimism "had Canada or Mexico grown to be a great power, had France not sold Louisiana, or had England, rooted on the American Continent, become a military despotism."

"America lives in the world of peace—"

He said—

"Safe from attack, safe even from menace, she hears from afar the warring cries of European races and faiths. For the present, at least—it may not always be so—America sails upon a summer sea."

Lord Bryce's warning came true when the balance of power system was wiped out in World War II. No longer could America afford to rely upon the great nations of the other continents to neutralize each other's power. Only two great areas of military might were left. The strategic objective of the United States—borne of the necessities of the new situation—became that of insuring that the whole of the Eurasian land mass, with its vast resource in manpower and economic strength, should not fall into the possession of the one power which might threaten our security. For should the great Eurasian continent become united against us, we would find ourselves under siege in this hemisphere.

The Nation was slow in recognizing the dangers and the requirements of the new situation. Before we came to face reality, diplomatic mistakes of huge consequence had been made. Our present dilemma is due in large part to the failure of our diplomats to understand and accurately to appraise the postwar conflict.

Finally, however, there emerged a doctrine by which America hoped to secure the position of the west while waiting for the United Nations to mature as an agency capable of realizing its mission of peace. This doctrine was worked out by the Executive in closest collaboration with congressional leaders.

It may be described as the policy to support free peoples who are resisting attempted subjugation by armed minorities or by outside pressure.

This is the cornerstone of our strategic foreign policy. The ERP is the economics expression of that policy. We must develop a military policy to match it. Otherwise our great effort may well result in frustration, failure, and insolvency.

The new doctrine is not confined by geographic limits. It is an invitation to free peoples everywhere to stand up against the aggressor. We and the world must never forget that this Nation alone cannot supply the military sinews to guarantee security in every continent. We can do it only with the help of allies.

Now the requirement for winning allies is the willingness to be an ally.

To be an ally means to engage in the common defense. It requires more than a mere promise to liberate allies after they have been victims of conquest. The peoples of western Europe fear that liberation may mean annihilation by the atom bomb and other terrible new weapons of destruction. It means the willingness to take protective measures.

The United Nations Charter provides for regional and other undertakings of mutual self-defense.

We have used the formula of article 51 of the Charter as the basis of the Pact of Rio de Janeiro tying together the republics of this hemisphere in a common front against all potential foes.

Five of the governments of western Europe have been drawn together in a similar undertaking of mutual defense. Evidence of this Nation's support of the western European alliance is found in the fact that this Government has participated in staff conversations to implement the Brussels Pact. This support is manifested also in various Executive pronouncements, the Vandenberg resolution passed by the Senate, and H. R. 6802, which was reported by the Committee on Foreign Affairs and for which the leadership of the House has promised early consideration in the Eighty-first Congress.

Pronouncements and staff conversations are, however, not enough. We must affirm our support in concreate, measurable steps.

Let us rid ourselves of the illusion that support of the western alliance is a question for debate. The fact of the situation is that we are in Europe. We are involved whether we like it or not. The question is whether we shall be involved for the protection of our national security and of free peoples the world over.

Our forces occupy parts of Germany, Austria, and Trieste. A putative enemy could attack the western powers only by attacking us first. We could not be more inextricably involved if we had signed and ratified the Brussels Pact.

The only remaining question is: What steps should we in prudence take to support the undertaking?

We must develop a military counterpart to the European recovery program. Had the Military Staff Committee of the United Nations Security Council been permitted to function it would not be necessary for us to consider political guaranties and military lend-lease as strategical sequels to the European recovery program.

Until this comes to pass the responsibility of freedom rests largely upon us. We have taken steps to protect western Europe from internal aggression. We must now face the portentous problem of protecting western Europe against external aggression.

In approaching this problem we must recognize that the organization and disposition of the military forces of western Europe should be based on European rather than on national considerations. Such a step would have many beneficial results:

First. The military establishments of the western European countries are a great burden on their national economies. To organize them on the lines I have suggested will eliminate much duplication and waste and thereby help the European recovery program and relieve the burden on the American taxpayer.

Second. Such a step will also help to achieve the goal of a European economic federation as the foundation for a United States of Europe.

Third. It will quite obviously result in far greater strategical strength.

Fourth. It will diminish the possibility that we may blunder into war because of any misunderstanding with respect to our intentions.

In order to encourage the western Europeans to undertake such an over-all coordinated integrated military plan, we must be prepared to sell or lend-lease to them certain items of military equipment. We can also help them to manufacture such equipment for themselves. The details of such a move should be worked out with great care in order to insure maximum effectiveness at minimum cost.

I need hardly point out the gravity and the delicacy of the Berlin crisis. I believe that an indication of our determination to implement our policy in western Europe as we have implemented it in Greece, Turkey, and China will act as a powerful deterrent of war.

Mr. Speaker, it is a matter of regret that the President, in defining the mission of the reassembled Congress, did not see fit to include concrete proposals in support of the Western Alliance.

That project remains one of the items in the first order of business for the next Congress and the next administration.

Navajo Rehabilitation Act

EXTENSION OF REMARKS

OF

HON. ANTONIO M. FERNANDEZ

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 10, 1949

Mr. FERNANDEZ. Mr. Speaker, in answer to my statement on the floor with respect to John Collier's opposition to

section 9 of the Navajo Rehabilitation Act, I have received a letter from Mr. Collier. I felt that, in all fairness to him, his letter should be put in the RECORD. I therefore contacted Mr. Collier and, with his permission, I have obtained unanimous consent to insert it in the RECORD. The letter reads as follows:

WASHINGTON, D. C., *August 7, 1949.*

DEAR CONGRESSMAN FERNANDEZ: I have read with strong appreciation your remarks, in the August 2 RECORD, concerning my criticisms of section 9 of the Navajo-Hopi relief bill. They are generous, courteous, and considerate remarks, just as you always were in the years when I knew you. I do not suggest that the few paragraphs below be placed in the RECORD, although they might interest some among your constituency, and some others.

The burden of this communication of mine is that Navajo administration in the years when I was Commissioner was a partial failure; and that it is a partial failure now for reasons similar to those of the earlier years. A tragic human failure, I would say, in spite of brave and intelligent effort that has gone into it and goes into it now. It is I, myself, who have publicized and analyzed the record of partial failure, in many documents. (See, as examples, Social Research, a magazine, September 1945; my Indians of the Americas, 1947 and 1948; News Letter of the Institute of Ethnic Affairs, March 1948; The Land, spring issue, 1949; and my forthcoming book on the tribes of the Southwest.)

As this letter seeks to be brief and to deal only with the single main issue, it does not deal with criticisms, incorporated in your remarks, of the conduct of Navajo affairs 10 and 15 years ago. Your informant in these items is extremely misinformed as to the record of livestock reduction, etc., as to the wilderness area proclamation (which I wish that I had inspired and written, but did not), as to the day school record, etc.; but these matters are rather aside from the present issue. And I doubt whether you would entertain, much less proclaim, the rather vulgarly low estimate of some of your constituents (the Navajos) which perhaps you inserted without reading it closely. To the present issue:

I state the nature of the past and continuing partial failure of Navajo administration below, but at once I remark: Section 9 of the Navajo-Hopi bill appears as an unwise proposal for a number of reasons, but the chief reason is that section 9 would continue, and widen in scope, and give statutory support to, that cumulative failure of Navajo administration which has extended from 1933 to today.

What has been, and is, the essence of the failure of Navajo administration? It is that pressing exigencies have existed, or have been believed to exist; and that white men have programed the meeting of these exigencies (a) without genuinely consulting the Navajo native leadership and rank and file, (b) without taking the indigenous leadership and rank and file into partnership in the execution of programs, and (c) without paying any earnest attention to the facts known to anthropology—the facts as to what the Navajo native society actually is, how it functions day by day and decade by decade, and what its motivations, inhibitions, values, and powers really are. Administration has bypassed the native society of the Navajo—the factually predominant, omnipresent, extremely vital native society; it has cast this native society, as I have elsewhere written, into an outer darkness. Therefore, Navajo administration has bypassed the Navajo individual; for like other human beings, and more consciously than many others, the Navajo knows himself and knows his world, and loves and hates and resists and strives, within and through the medium of his own society.

Since 1933 this extreme, fundamental blunder has not been committed toward most of the other Indian societies or tribes. In your own State of New Mexico, for example, it has not been committed toward the Pueblos and the Apaches, and the happy results of not committing the most damaging of all colonial blunders are known to yourself and to many people in New Mexico, and certainly to the Pueblos and Apaches. The blunder—almost, if not quite, a fatal one, and surely fatal if persisted in—in the Navajo case has been due to two main causes. First, always there have seemed to be emergencies—looming, glowering emergencies—that had to be met in a great hurry and with money thrown about, and therefore to be met by high-pressure, do-or-die-before-tomorrow methods which have made the slow, inconspicuous methods of self-help appear contemptible. And second, reliance has been placed on a political and sociological fiction—the fiction that the Navajo are a politically integrated tribe and that democratic dealings require nothing beyond the persuasion or manipulation of the elected tribal council: Whereas actually, authority and responsibility in Navajo life are diffused amid a thousand of local communities, extended families, outfits, headmen, etc.; and administrative pride and haste have committed the deadly waste of ignoring these vital centers of decision and responsibility which are, even if ignored and even if silent, quite controlling.

Hence it has seemed enough if the tribal council could be brought and dubiously held within administrative control. But the tribal council is a recent and most unstable institution, with few roots as yet in Navajo life, few roots in that deep, strong sense of responsibility and of continuity which lives on in the local societies of the Navajo. It lives on, in banishment from governmental administration. And Navajo personality lives on in it—in the local society; no Navajo personality lives on in banishment from governmental administration.

Debate and recrimination are idle, as to whether this actual paramount Navajo society is beautiful, morally significant, endowed with wisdom (as many, including myself, believe), or is an abode of original sin, as some whites believe—some missionaries, some frustrated administrators actually take this latter view. There it is; there is the Navajo society; the Navajo must go forward from where he is, his energies and hopes are there contained, and the blunder and administrative self-indulgence of ignoring the fact has made failure and will make greater ruin yet, if persisted in.

Where, now, does section 9 of the Navajo-Hopi bill enter the picture? I will state it thus:

Navajo Indian service has developed in a fashion essentially alien and tacitly hostile toward Navajo society and personality. But Indian service has not thus developed in other parts of the Indian country. Hence, there still is hope that the Navajo Indian service may discipline itself and reorient itself and start moving away from improvised managerial paraphernalia toward grass-root effectiveness. It is the business of Navajo Indian service so to move, so to reform itself.

Here enters section 9. It is offered as one more post-haste, omnibus, broadax Navajo salvation program, imposed from without and attached as a rider to an appropriation authorization. The many criticisms of it which I and others have voiced are not repeated here. In the context of this letter I state only one of the criticisms, as follows:

It is the business of the Indian Service and of the Navajo tribal set-up, to accommodate to the realities of Navajo life. It is not, and cannot be, the business of the States of Utah, Colorado, New Mexico, and Arizona to thus accommodate. Specifically, but not limited to this item: It is not, cannot be, the business of the four States to accommodate their civil and criminal codes and the precedents and customs of their courts to Navajo life. These codes and precedents were developed wholly out of reference to the Navajos (and Hopis) and their dispositions, backgrounds, and problems. Anyone who would assert that the Navajos and Hopis now are, or by the turn of a hand can become, on their sides, accommodated to laws and precedents which are unrelated to their inner realities, would be speaking out of great ignorance or else out of antipathy toward the Navajos and Hopis.

The vice of Indian Service has been—still is—to ignore and violate Navajo (and Hopi) society and personality. The Hopis, I remark, are caught within a sort of geosocial illusion, which you in your remarks seem to endorse. That is: their physical territory overlaps with Navajo physical territory, hence their societies and personalities, profoundly differing from the Navajo, must be strait-jacketed along with the Navajo society and personality. Strait-jacketed within easy dogmas, oversimplifications, and administrative conveniences, and then rather despised than pitied because within the strait-jacket, and within the process of kindly or not kindly spiritual assassination, they exhibit, sometimes, confusion of will and desperation of soul. The reference here is to Navajos and Hopis alike, but the Navajos' social-psychological plight is the worse of the two.

Section 9, thus viewed, is a kind of suave qui peut, a counsel of despair. One who had no hope that common sense, well-understood principles of dependency administration, and human wisdom might even yet enter the Navajo Indian Service, might say: "Let's take a plunge anywhere, a desperate plunge into State jurisdiction if you will." Or one who believed that the silent suffocation of Navajo society and manhandling of Navajo personality is the right way, even if it brings physical ruin and enormous taxpayers' cost in its train, might say, "Go along, hurry along the fatal road." There are a good many who do believe just that; the voices of some of them are disharmoniously audible in your otherwise humanitarian and civilized remarks. Those who have hope for Indian (Navajo) Service, and who know from experience that there is greatness in Navajo and in Hopi life, will not agree.

One more item, purely factual. You remark that the organic acts of New Mexico, Arizona, and so forth, disclaim jurisdiction over Indian lands—and lands only. They disclaim jurisdiction over Indian lands and Indians on Indian lands. Have the courts, or Congress, or the State legislatures, ever construed them otherwise? Section 9 throws away the reservation which the Federal Government insisted upon in the organic acts. That is what section 9 is for.

Sincerely and cordially yours,

JOHN COLLIER.

Aid for China

EXTENSION OF REMARKS

OF

HON. JOHN DAVIS LODGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, August 8, 1949

Mr. LODGE. Mr. Speaker, in connection with the China crisis, I am inserting an interesting article by Charles Lucey, Scripps-Howard staff writer for the

Washington Daily News, which appeared on Tuesday, August 9, as well as an article by Walter Trohan from the Washington Times-Herald of August 10 which brings out the significant fact that the directive given General Marshall for his China mission was not included in the white paper.

I am also inserting an editorial from the Washington Daily News of August 10 which I think is well worth reading.

They follow:

[From the Washington Daily News of Tuesday, August 9, 1949]

SENATOR KNOWLAND PLEDGES FIGHT FOR $175,000,000 IN ARMS AID FOR CHINA

(By Charles Lucey)

Senator WILLIAM F. KNOWLAND, Republican, California, announced today he would carry to the Senate floor a fight for $175,000,000 in military aid—plus a United States military mission—for Nationalist China.

Declining to accept the State Department view that China has been lost to the Communists, Mr. KNOWLAND said he would press his proposal in the Senate committee studying European military aid, and that if it failed there he would make the fight on the Senate floor.

"The Senate," he said, "will have an opportunity to express itself on the issue of aid to China, a country worse off today than if she had been one of our enemies."

Japan and Germany were our enemies, Mr. KNOWLAND observed, but "we're rehabilitating their industries and communications, maintaining law and order, helping to feed their people, and giving them a sound currency.

FOUR-ALARM FIRE

"I believe in the general theory of an international fire department to put down blazes and I favor providing sprinklers and fire extinguishers to France, England, and other allies. But in China—where we've got a four-alarm fire, we're doing nothing about it."

Mr. KNOWLAND said he did not complain of emphasis on Europe in stopping communism. He recalled that we had to make a decision to concentrate first in Europe during World War II—but at the same time we also maintained a steady offensive in the Pacific. So it should be now, he asserted.

"Peace is indivisible," the Senator said. "We can't have chaos in the far Pacific without affecting this country and ultimately the peace of the world.

CALL MAC ARTHUR, PLEA

Mr. KNOWLAND urged that Gen. Douglas MacArthur be called home to provide on-the-spot judgment of the far eastern situation at a time major policy decisions are being taken.

"The United States Joint Chiefs of Staff are now completing a study of European defenses but they can hardly have the time to make a similar trip to the far Pacific. The only alternative—before we put all our eggs in the European basket—is to call in our responsible commander from the Far East," he said.

HOW COME?

Mr. KNOWLAND tackled State Secretary Dean Acheson yesterday on the discrepancy between present plans to arm Europe from United States surpluses and earlier statements that surpluses had been exhausted. The Senator cited a statement of Brig. Gen. T. S. Timberman to the House Foreign Affairs Committee in June to make his point. The general had said:

"By August 1948 (when procedure for military help to China was being discussed), the Department of the Army had disposed in the main of all surplus supplies of World War II procurement, and particularly of those items which the Chinese listed as their priority requirements."

Now, Mr. KNOWLAND observed, there's an estimate of $450,000,000 of surpluses for western Europe.

"How come?" the Senator asked Mr. Acheson.

Mr. Acheson admitted an inconsistency. He said he'd have the military people look into it.

COMPARES AID FIGURES

Comparing aid to China with that of other countries, Mr. KNOWLAND said total lend-lease to the British Empire had been $31,000,000,000; to Russia, $11,000,000,000; to France and possessions, $3,200,000,000; to China, $1,600,000,000. He said after the war ended there were $5,500,000,000 of unconsumed lend-lease supplies in Great Britain, for which we were paid $472,000,000, or 8.5 percent of cost.

Since VJ-day, he reported, grants and credits to the United Kingdom have totaled $5,600,000,000; to France, $3,000,000,000; Germany, $2,000,000,000; Italy, $1,500,000,000; Japan $1,300,000,000; and to China, $1,700,000,000.

PRICES OUT OF LINE

Mr. KNOWLAND also intends to press his contention that prices charged China for military goods have been out of line with those charged Greece and Turkey.

"They talk of risks involved in China," the Senator said. "There are risks. But there were risks in the Greek-Turkish program and the Berlin air lift, too."

Mr. KNOWLAND estimated there are 1,000,000 to 1,500,000 Nationalist troops in China that could be built into an effective fighting force, and pointed out the area still held by the Nationalists is almost equal to that of the United States.

[From the Washington Times-Herald of August 10, 1949]

WHITE PAPER SUPPRESSES MARSHALL—MISSION ORDER

(By Walter Trohan)

The State Department has suppressed one of the most important documents on Chinese-American relations in its 1,054-page white paper defense of the administration for the fall of China to communism.

The compilation of documents does not include the directive General Marshall, wartime Chief of Staff, was given when he undertook a mission to China with the rank of Ambassador late in 1945.

It was reported within the State Department that the directive was purposely omitted because it did not jibe with State Secretary Acheson's statement: "Nothing that this country did or could have done within the reasonable limits of its capabilities could have changed the result; nothing was left undone by this country has contributed to it."

MARSHALL'S EFFORTS CRITICIZED

It has long been reported that the Marshall directive instructed the general to bring the Chinese Communists and Nationalists together, a project regarded as impossibly visionary.

Marshall's efforts to fulfill this directive have been blamed in China and the United States for the victory of the Communists in Asia. Observers hold that Marshall could have saved China had he not been prejudiced against Generalissimo Chiang Kai-shek and had he followed the advice of American military observers on the scene.

Marshall is credited with a hand in President Roosevelt's decision at Yalta secretly placing the control of Manchuria, the heart of China, under the Soviets, and also giving the Soviets the Kurile Islands, Dairen, Port Arthur, and the southern half of Sakhalin in return for entering the war against Japan.

MAC ARTHUR IGNORED

As Chief of Staff, Marshall advised Roosevelt it would take several years to defeat Japan without Soviet help. General MacArthur had reported Japan was ready to surrender and had advised against letting the Soviets in the Pacific war. Marshall disregarded MacArthur's advice, as did Roosevelt.

When Marshall went to China for 3 months late in 1945 and early in 1946, he was prejudiced against Chiang by the bitter reports of the late General (Vinegar Joe) Stilwell.

American observers on the Chinese scene told Marshall that the issue was one of communism versus any other form of Government.

MISSION A FAILURE

Ignoring this advice, Marshall worked to force the Communists and Nationalists together. This effort broke down when the Communists insisted on maintaining their own army. When Marshall returned with his mission a failure, he hit at both the Nationalists and Communists in a plague-on-both-your-houses report.

The white paper does contain the directive of Lieutenant General Wedemeyer who undertook a special mission to China in 1947. Wedemeyer proposed a program of aid to China and warned that sovietization of China was a grave danger to world peace. The inclusion of the Wedemeyer directive served to emphasize the suppression of the Marshall directive.

[From the Washington Daily News of August 10, 1949]

DISHONEST REPORTING

The State Department appears to be guilty of some flagrant distortions of history in its efforts to discredit China's part in the war and to malign Chiang Kai-shek.

Chiang, according to Secretary of State Acheson, "saw an opportunity" to let up on the war effort against Japan as soon as the United States entered the war.

That doesn't seem reasonable. Hong Kong, Singapore, Rangoon, Bataan, and Corregidor all fell after that. The Japs moved on into New Guinea and the Solomons, bombed Port Darwin, and cut the Burma Road, China's only overland supply line. There was nothing in this dismal chain of events to cause Chiang to relax, on any theory that Uncle Sam would do his fighting for him.

The famous Flying Tigers weren't reorganized as an American Air Force until 6 months after we entered the war. We had no other troops in China of a tactical or strategic importance until long after that. China in fact furnished the ground forces throughout the war.

To continue the fiction, Gen. Joseph W. Stilwell is quoted as saying on September 26, 1944, that "Chiang Kai-shek has no intention of making further efforts to prosecute the war." But the "whitewash" paper fails to add that Vinegar Joe wasn't a good prophet.

On November 3 Chiang's forces recaptured Lungling, key city on the Burma Road, and by late January had reopened that road to convoy traffic. That took some fighting.

Of course, these events occurred after General Stilwell had been relieved by General Wedemeyer. But the one-sided white paper ignores General Wedemeyer's estimate of Chiang while quoting General Stilwell, who failed in China where General Wedemeyer succeeded. General Wedemeyer has been quoted elsewhere as terming Chiang "our most faithful ally."

An answer to what had been wrong in China, not found in the State Department's brief for the defense, was given by General

Odlum, Canada's Ambassador to China, in an interview with Freda Utley. He said:

"Wedemeyer changed the spirit of everything. Whereas Stilwell and Gauss (our Ambassador) were inclined to build up both sides in China (the Communists as well as the Government forces) thereby weakening her and preventing her from ever becoming strong and united, Wedemeyer has given America a logical role and a consistent policy in line with American interests and the maintenance of world peace."

This is the testimony of an impartial witness who was on the scene during the period in question, as Mr. Acheson was not.

Unfortunately, when General Wedemeyer returned to the United States, the State Department reverted to its policy of double-dealing. This was climaxed by withdrawing all assistance from Chiang Kai-shek when he failed to make a deal with the Communists.

The deterioration of Nationalist China dates from that decision—made by Gen. George C. Marshall with the approval of President Truman.

Four Students Discover the South

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES

Wednesday, August 10 (legislative day of Thursday, June 2), 1949

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Four Students Discover the South," originally published in the Next Voter, a student newspaper published twice monthly by members of a course in political science at the Brooks School, North Andover, Mass., and reprinted in the New York Herald Tribune of August 6, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FOUR STUDENTS DISCOVER THE SOUTH—REPORT OF A VACATION JOURNEY BY YOUTHFUL EDITORS BELOW MASON AND DIXON'S LINE

(The Next Voter is a student paper of political opinion published twice monthly by members of a course in political science at the Brooks School, North Andover, Mass. In preparation for the next issue four of its editors, aged 17—Guilford Dudley 3d, Morgan Harris, Jr., John Keating, Jr., and Geoffrey Kimball—have been traveling through six Southern States accompanied by their faculty adviser, Peter F. Wiener. A preliminary report of their trip follows.—Editor.)

When it was decided to publish the Next Voter everyone expected it to be a purely local affair. But we have been unbelievably lucky. Our paper has been read by people of prominence far outside the expected circle. The State Department's Voice of America used it in broadcasting to the Union of Soviet Socialist Republics. We have had friendly comment from Walter Lippmann, Governor Dewey, and President Dodds, of Princeton.

Among our first subscribers were Ambassador Douglas and Governor Talmadge, of Georgia, Senators BYRD and MCKELLAR, Representative CHRISTIAN HERTER, Mr. Newbold Morris, and many others. We put all this down, not in self-congratulation, but to explain why we feel it is essential that we get our information, wherever possible, at first-hand.

In our editorial discussions last year, as well as in our ever-increasing correspondence, one subject occurred more frequently and more passionately than any other. This was not Russia; it was our own South. What was the truth about race relations in the South? What kind of men were the "Byrds" about whom President Truman complained so bitterly? Was the split between the Dixiecrats and the Trumanites beyond repair?

We felt that the only way to find the answer to questions like these was to ask the people concerned what they really thought and to see the South with our own eyes. We gave up our original plans for the summer and decided to make a political-study tour. We got hold of an old Ford and left the day our vacation started. We have been away for 6 weeks and have covered some 4,000 miles.

We stopped first in Washington. We had an afternoon inside the White House and attended the President's press conference. We had long talks with Mr. Justice Frankfurter, with President Johnson, of Howard University, and above all with many Southern Senators and Congressmen, from Senator MCKELLAR to Senator PEPPER, or vice versa, according to your political opinions.

Then we toured Virginia and Tennessee, with a day each at Knoxville and Oak Ridge. When we arrived in Nashville, we were asked by the Nashville Banner to report the proceedings of the Institute of Race Relations, which was having its annual meeting at Fisk University. Then we traveled through the Carolinas and deep into Georgia.

Every single governor received us and talked to us about the problems of his State. Mayors of almost every town we passed spoke to us frankly and at length. We visited farms and industries, invaded private homes in towns and in the country, spoke to laborers and editors, to priests and waiters. We had meals at big mansions and we stayed in filthy slums. We spoke to men and women, rich and poor, young and old, black and white. We talked, talked, and talked.

It would take a whole book to describe all the events and all our impressions. It will take time to digest it all and our reactions were by no means unanimous. But there are some points on which we all agreed and which might be worth mentioning.

The racial relationship in the South is quite different from what we were led to expect. We thought we might find some kind of racial persecution and real misery among the Negroes. We can truthfully say that the Negroes we have seen and spoken to seemed, almost without exception, happy and that on the whole the relationship between black and write in the South was more friendly, more cooperative, more understanding, and more constructive than many relationships between, say, white management and white labor in the North.

For this there are, probably, a number of reasons. First, the southern Negro seems happy by nature. Therefore his contentment is not necessarily a sign that conditions—especially economic and educational ones—are what they ought to be.

Second, everybody agreed that enormous progress had been made in recent decades. The Negroes are the first to appreciate and to acknowledge this. As one of the colored university professors said to us: "We are in a healthy and constructive process of evolution."

While educational facilities in particular are by no means what they should be and, let us hope, ultimately will be, there can be no doubt that an educational evolution is in progress in the South. The mere fact that at Fisk University colored and white students study, work, live and eat together is an indication of the direction in which the South is moving.

Whether this is due to the political wisdom and the human initiative of the southerners or to the permanent pressure from the North—a frequent and not altogether popular phrase in the South—is debatable. It is probably a combination of both. The southerner claims that the northerner's interference is merely harmful; the northerner is convinced that without his permanent pressure nothing whatever would be done.

We did not come across one single southerner who objected to all the provisions of President Truman's civil rights program. The poll tax is already in the process of being abolished by the individual States. Lynching is extremely rare (but widely advertised whenever it occurs) and not really an acute problem. As for the Fair Employment Practices Commission, most southerners told us it was something to be aimed at but that it could not possibly be achieved by Federal legislation.

And, strangely enough, while the Negroes themselves are anxious to have full economic and educational equality (but much less anxious than some of their white northern friends) they would certainly not welcome the abolition of racial segregation. This fact constituted, perhaps, our greatest surprise.

Over and over again, Negroes said to us that they are proud of their race, that they would like to keep their race apart, and that while there should be human and other equality, while there should be the friendliest cooperation, they themselves would like to see the continuation of segregation.

The real objection made by southerners to the President's proposals is that some are not realizable, owing to local conditions and traditions, and that others are already being translated into practice by the States themselves. It seemed to us that the real quarrel beween the Trumanites and the Dixiecrats was not a human or an ethical one concerning the status of the Negro, but a constitutional one.

The southerner resents any encroachment upon the powers of the individual States and fears that an increase in the power of the Federal Government would mean unavoidably the end of real democratic government and the establishment of a dictatorial machine. Rightly or wrongly, he feels that this constitutional struggle is being fought over civil rights in order to confuse the real issue and catch votes.

There are two other points which impressed us considerably. First, much has been written about the differences between North and South. One might gain the impression that either the Civil War is not yet over or that there exists a fundamental cleavage within the Nation.

True, there are many differences of opinion, approach and practice. But divergence and disagreement are the basis of every democratic government. If one comes down to fundamentals, such as a political philosophy, ethical values and human beliefs, then there is no difference between the South and the rest of the country. The southerner seemed to us as God-fearing and fighting a Democrat as anyone can be.

The last point we wish to raise may seem altogether too personal. The fact remains that we learned more political science in 6 weeks than we could have done in 3 years of book study. And in the process we had a wonderful vacation, what with the beauty of the country, southern food, and the friendly hospitality we found everywhere we went.

And yet, throughout our trip, we did not meet one single other group of students from the East, the North or the West. We feel certain that if we had gone to France, or Italy, to England or to Scandinavia, we could not have moved a mile without meeting American students.

There is, no doubt, an immense value in international travel, but is it not as important or even more important to get to know our own country first? We had to revise or to reverse most, if not all, of our preconceived ideas about the South. We felt throughout our trip that most southerners our age have equally erroneous ideas about the parts of the country we know: Boston, Chicago, New York.

We return with the strong feeling that some plan should be started to make it possible for young people of the various parts of the United States to get to know each other and to get to know each other's part of the country. At the moment we are spending millions of dollars every year in order to tell foreigners what America is like. Is it asking too much to spend a small part of this money to help young Americans see for themselves and understand what our own country is like?

We Sit in With the Rothschilds and Uncle Sam Banks the Game

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 9, 1949

Mr. WHITE of Idaho. Mr. Speaker, it is interesting to learn from a recent issue of Time magazine how the European game is being played with our money. The following taken from the July 11, 1949, issue of Time:

ECONOMICS—1952?

In Paris everybody knows the Château de la Muette as a mansion of the De Rothschilds. Last week the men who now govern Europe's finances sat in the same gilt and cream chamber where the De Rothschilds once practiced their financial wizardry. Delegates from 19 OEEC areas had come to La Muette to work out a new intra-European payments plan. After hours of futile argument, Belgium's Paul-Henri Spaak suggested that the meeting adjourn. Britain's Sir Stafford Cripps cut him short with a crisp insistence. "Gentlemen, I have to go back to England tomorrow," he said, "but my plane does not leave until 6 in the morning. I am at your disposal until then."

Sir Stafford's system of planned austerity and bilateral deals, under attack at La Muette, had met still graver difficulties in London. A near panic on London's exchange had sent government bonds plummeting to new lows for the year; in a single week the value of gilt-edged consols (government bonds) dropped by close to £250,000,000. Said the London Economist: "The truth is that the crisis which the British did not expect until 1952—and hoped to be prepared for by then—is already upon them."

High prices, the world's shift from a sellers' to a buyers' market and the reluctance of foreign traders to buy British as long as rumors persisted that Britain would devalue the pound, had cut deeply into Britain's dollar and gold reserves. The danger point, many Britons had long thought, would be reached if the reserves fell below £500,000,000. Last week they stood at closer to £400,000,000. To Cripps' many critics it looked as if the crisis was the final proof that his policies should be scrapped. They renewed their demands that Britain abandon bilateral deals and compete freely in a world market.

Cripps had no such intention. His remedy for the crisis was still the same: more austerity and more import cuts. This week he will meet with Dominion Finance Ministers who have been invited to London to discuss ways and means of conserving the sterling area's dollars.

At Paris, his colleagues in the OEEC (Organization for European Economic Cooperation) proposed nothing so drastic as a complete revamping of the Cripps policy. All they wanted was a little greater—but carefully circumscribed—freedom of currency exchange.

In the first year of Marshall plan grants the United States had tried to spice its aid with a small inducement to encourage intra-European trade. Some $800,000,000 of the United States grants were conditional. To get them, the receiving country had to surrender an equal amount of its own currency to a third nation. Thus Britain, in order to receive ECA dollars, made sterling available to France, enabling France to buy British machinery. Such secondary grants were known as drawing rights.

ECA's W. Averell Harriman, Belgium's Spaak, and some other continental delegates have been seeking to liberalize the arrangement on drawing rights so it would become a greater stimulus to intra-European trade. At one point French Finance Minister Maurice Petsche proposed a compromise, known in OEEC's as 40 percent transferability of drawing rights. Under the Petsche plan, a typical triangular trade situation would have worked out like this:

Britain would give France £40,000,000 of drawing rights to cover the expected French deficit in trade with Britain. France, by efficient production or persuasive salesmanship or by cutting purchases from Britain, might succeed in reducing its expected deficit from £40,000,000 to £25,000,000. Under the old plan this reduction would give France no advantage within the OEEC system. Under the Petsche plan, however, France could transfer 40 percent of its British drawing rights to another OEEC country, for instance, Belgium. That way the Belgians would wind up with part of the United States dollars originally allocated to Britain. In other words, United States conditional aid would follow the drawing rights and act as an incentive to trade.

Cripps, horrified as a Scottish housewife would be at an invitation to gamble with the grocery money, feared that Britain could not budget through bilateral deals if transferability destroyed its certainty about how many dollars it would have.

As the clock in the Château de la Muette struck 12, Cripps was still droning on, and the old payments scheme had expired. No new agreement had been reached.

In the hall weary newsmen despaired when Claude, the beer and sandwich man, went home muttering, "No one pays me to stay after 12." Even an OEEC official said: "The West can never agree without Russia. When Russia is present we have no trouble agreeing to stand together, but when Russia is away," he shrugged his shoulders, "look at this." He spoke too soon. At 2 a. m. the delegates emerged. They had agreed on a new program.

Cripps had agreed to transferability, although the amount of drawing rights that could be transferred was cut from 40 to 25 percent. Since this would cost Britain only $50,000,000 a year at most, Cripps had won a victory in terms of cash. ECA and the Belgians were content in having established the principle that ECA was working toward multilateral trade, not bilateral budgeting and bartering.

It has not been so long since we were called to the rescue of England and asked to make a $3,500,000,000 loan. We were solemnly told then by our Government officials, including the then Secretary of the Treasury, how the British, if rescued from their financial plight with over three billion of our money, would release trade restrictions on international commerce with the inference that in the end the people of this country stood to gain more from international trade than they would be out of pocket in making the British loan. But if we read press reports aright, the recent application of British trade policies and commerce restrictions on international trade is now more stringent than they were before the loan was made.

More Opinions Concerning a National Minimum Wage Law

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 10, 1949

Mr. O'SULLIVAN. Mr. Speaker, in the August 9, 1949, CONGRESSIONAL RECORD at page 11118 and in the Appendix at page A5147, I called attention to some of the things which in my opinion should be considered before a minimum wage law should be acted upon by Congress. I now wish to submit a report issued by the research department of the Amalgamated Clothing Workers of America, 1034 Warner Building, Washington, D. C., which I think presents some new thought upon the subject:

NOTES ON TYING THE MINIMUM WAGE TO CHANGES IN THE COST OF LIVING INDEX

1. Would make Congress a wage-cutting agency with only slight decline in prices.
2. Result in business uncertainty.
3. No analogy with farm parity prices.
4. Drastic drop in prices not imminent.
5. Prices relatively stable, 1921–29, years following World War I.
6. Fear of unemployment because of fixed base minimum unwarranted.
7. Government sanction or encouragement of wage reductions to lowest paid workers based on cost of living changes runs counter to collective bargaining practice.
8. Stable or rising minimum needed to enable lowest wage workers to attain decent standard of living and share in increasing national income.

PROPOSAL WOULD MAKE CONGRESS WAGE CUTTING AGENCY

A minimum wage tied to cost of living puts Congress into the business of wage cutting even if prices drop only a few percent.

Employers who might not otherwise reduce wages will be encouraged to do so if the minimum wage goes down only a few cents, following on a drop in the cost of living and blame the cut on the Government. Many employers who could legally have raised wages during the war hid behind the Government. The inducement to do so again would be offered by this proposal.

A minimum wage tied to the cost of living index is an open invitation by government to employers to reduce wages in the lowest

paid industries if prices drop even slightly. It gives Government sanction to wage cuts to workers who can least afford them.

BUSINESS UNCERTAINTY AND INJUSTICE WILL RESULT IF MINIMUM WAGE TIED TO CHANGES IN COST OF LIVING

Contracts will be uncertain. The minimum wage may rise during the life of a contract for manufacture taken during the latter part of the year. What price shall the manufacturer quote? Workers will be unemployed if the firm waits to see what the new minimum will be.

Firms placing contracts may wait if it appears that a reduction in the minimum will take place. Perhaps the principal can find a firm that will cut wages with a reduction in the minimum and quote a price a few cents a dozen lower. That may cause unemployment among the workers where the buying organization normally placed its contracts.

Reasonable stability is replaced by chronic instability and uncertainty.

NO ANALOGY BETWEEN FARM PARITY PRICES AND MINIMUM WAGE TIED TO COST OF LIVING

Changes in the parity price affects all producers of the particular farm product. A change in the minimum wage based on changes in the cost of living does not affect all wages and salary earners: It affects only those in the lowest-wage industries. (It is not proposed to tie the salaries of corporation executives, for example, to changes in the cost of living, but only the incomes of the lowest paid wage-earners.)

COST OF LIVING OUTLOOK DOES NOT WARRANT TYING MINIMUM WAGE TO CHANGES IN COST OF LIVING

"There are almost no signs of sharp and sudden price breaks such as occurred in the early 1930's, or in 1921."

"Cost of living has taken about a 3-percent drop to date and may decline another 5 percent. The prewar level of living costs is not likely to return any time soon."

The above quotations are from United States News and World Report, August 5, 1949, page 11. They represent the general trend of thinking as expressed in current published analyses.

Minimum wage rates, 1920–30, as affected by changes in cost of living if 75-cent base rate had been in effect

Date	Cost-of-living index	Ratio to index, December 1920	Minimum rate, base 75 cents changed in ratio to change in cost of living
December—			*Cents*
1920	138.3		75
1921	123.6	89.4	67
1922	120.4	87.1	65
1923	123.5	89.3	67
1924	123.2	89.1	67
1925	128.2	92.7	70
1926	126.1	91.2	68
1927	123.8	89.5	67
1928	122.4	88.5	66
1929	122.8	88.8	67
1930	115.3	83.4	63

If a 75-cent minimum had been established near the peak of the postwar price rise after World War I, the variation in the minimum, based on changes in the cost of living, would have ranged from 63 to 75 cents during the ensuing 10-year period.

Is this range over a 10-year period so wide as to warrant a yearly tinkering with the minimum wage? To warrant a recurrent invitation to employers in the lowest-wage industries to reduce wages with implied governmental approval?

If prices after World War II remain relatively as stabilized as they did from 1921 to 1929, cannot Congress take care of such problems as may arise 10 years from now?

MINIMUM WAGE TIED TO CHANGES IN COST OF LIVING AND LEVEL OF EMPLOYMENT

The assumption of proponents of the minimum-wage-tied-to-the-cost-of-living theory that employment opportunities will be decreased if the cost of living drops and the minimum wage does not likewise drop seems to be based on the idea that the X Manufacturing Co. will fire John Jones if he has to pay him 75 cents per hour, but will keep John Jones if the X company can pay John only 73 cents per hour if the cost of living has dropped 2 or 3 percent.

This reasoning overlooks the fact that John Jones is not an individual employee who is just worth a marginal amount to a company. John Jones is in actuality the hundreds of thousands of low-paid workers (many having considerable skill) in the highly competitive industries. These industries will not go out of business if the minimum wage does not drop with a decrease in the cost of living. Workingmen will still wear work shirts, for example. The industry will go on. The workers will have jobs. With a stable or rising minimum, and a small decrease in the cost of living, the chief result will be that they will enjoy a slight rise in their depressed standard of living and will be able to buy more goods and thus create jobs for others.

TYING MINIMUM WAGE RATES TO CHANGES IN COST OF LIVING RUNS COUNTER TO COLLECTIVE BARGAINING PRACTICE

Workers and employers across the bargainnig table have worked out wage practices which have tended to give the lowest wage earners the benefit of greater percentage increases during periods when wage increases were obtainable, and, in reverse, to apply policies which gave greater protection to workers in the lowest wage categories, during depression peroids.

The proposal to adopt a policy which will encourage wage reductions for the lowest wage workers if the cost of living declines slightly runs counter to these practices.

INCIDENTAL NOTES—PECK BULLETIN DOES NOT SUPPORT MINIMUM WAGE TIED TO CHANGES IN COST OF LIVING INDEX

The impression has been conveyed in some quarters that Public Affairs Bulletin No. 73, entitled "The Question of a Flexible Statutory Minimum Wage," by Gustav Peck, issued by the Library of Congress, Legislative Reference Service, supports the arguments of the proponents of a minimum wage tied to the cost of living. Such is not the case.

Various types of flexibility are discussed, and arguments pro and con set forth, but the concluding sentence reads: "Flexibility in the light of changing conditions can be obtained by periodic legislative scrutiny of the effects of the statutory minimum and of the proper course to follow under changing conditions."

Chamber of Commerce of the United States, statement of policy relative to fluctuating minimum wage adopted at annual meeting, May 2–5, 1949: "It should be a constant and not a fluctuating minimum wage standard."

NO STATE MINIMUM WAGE LAWS TIE MINIMUM RATE TO CHANGES IN COST OF LIVING

If a minimum wage tied to cost-of-living changes had substantial advantages, almost certainly some individual State would have experimented with such a provision. Since none have, the implication is clear that the effects of such a provision have been considered and found undesirable. Why experiment on a national basis with something the States have deemed it unwise to try?

CHANGES IN PRICE LEVEL AND NATIONAL DEBT

A severe drop in the price level will make the burden of the war debt unbearable. Many factors which were not operative in the 1930's (including unemployment insurance) militate against such sharp declines.

On August 6, 1949, I received from Elzabeth S. Magee, general secretary for the National Consumers League for Fair Labor Standards, Engineers Building, Cleveland, Ohio, an analysis of the minimum wage bills introduced by Representative WINGATE LUCAS (H. R. 4272) and Representative JOHN LESINSKI, chairman of the House Committee on Education and Labor (H. R. 5856) which I now quote verbatim:

THE LUCAS VERSUS THE LESINSKI BILL AMENDING THE FAIR LABOR STANDARDS ACT

MINIMUM WAGE

H. R. 4272 would raise the minimum from the 40-cent rate decided on by Congress in 1938 to 65 cents, the same rate which the Senate approved in the spring of 1946 and which was reported then by the House Labor Committee. Since that time, the cost of living, as measured by the Consumers' Price Index of the Bureau of Labor Statistics, has increased by a third. (Parenthetically, we must point out that the BLS index admittedly does not measure total living costs for low paid workers throughout the country, but is rather a measure of prices for moderate income families in large cities. In other words, the real rise in living costs in the period mentioned is significantly higher than even the 30-percent increase indicated by the index.)

A 65-cent minimum wage would benefit less than 500,000 workers, or about 2 percent of those now covered by the Fair Labor Standards Act. Most workers who get less than 65 cents are barely below that figure. The direct cost of raising their wages to 65 cents would be less than one-tenth of one percent of the wages of workers now subject to the Act. By comparison a 75-cent minimum would directly benefit three times as many workers. Even then lifting the minimum to 75 cents would raise wages of covered workers by less than 1 percent.

COST OF LIVING TIE

H. R. 4272 would tie the minimum wage to the cost of living, placing a lower floor of 50 cents as the rock bottom below which the minimum would not be permitted to go. The bill would use the Consumers' Price Index of the Bureau of Labor Statistics as the measuring rod. This would certainly be to the disadvantage of the lowest paid wage earners.

H. R. 4272 thus would establish an uncertain, rather than a stable floor under wages, which would provide no real support for the wage structure in times of recession. Except in periods of war or serious economic upheaval, employers, employees, and the Government alike would be plagued by frequent (perhaps yearly) changes in the minimum.

EXEMPTIONS

Like H. R. 5856, H. R. 4272 would extend new minimum-wage exemptions to those taxicab companies at present covered; to certain weekly or semiweekly newspapers with circulation between 3,000 and 5,000; and to telegraph agencies in otherwise exempt retail or service establishments where the monthly telegraph revenue does not exceed $500. H. R. 4272 would also exempt many establishments not now regarded as retail, provided 75 percent of the sales are "not for resale" and are "recognized as retail sales or services in the particular industry." The effect of using such ambiguous terms would be to leave it up to employers in such industries as to whether they want to be covered by the law or not. This language is clearly intended to open a loophole rather than define the scope of the law.

By contrast, only one of the minimum wage exemptions is narrowed, that for employees of airlines. On this point, former

Congressman Robert Ramspeck, now executive vice president of the Air Transport Association of America, told the Education and Labor Committee that he doubted that "any air line that we represent has got as many as half a dozen employees" receiving less than $1 per hour.

H. R. 5856, on the other hand, would also bring under minimum-wage coverage about 150,000 seamen, and about 90,000 employees engaged in the onshore processing or handling of fishery products. It would add some new exemptions, but would result, nevertheless, in a net addition of about 115,000 workers to minimum-wage coverage. There would be a net addition of about 675,000 workers to the protection of the overtime provisions. Among the groups of employees who would be placed under the overtime requirement would be more than half a million employees of motor carriers, more than a hundred thousand employees of pipe lines and air carriers, 90,000 employees engaged in handling or processing of fishery products onshore, and more than a hundred thousand employees handling or processing farm products (through elimination of the present section 7 (c)).

BASIC COVERAGE

H. R. 5856 would not change the established meanings which the term "commerce and the production of goods for commerce" have under the Fair Labor Standards Act. H. R. 4272 would, however, deny the benefits of the act to at least three-quarters of a million employees, by narrowing the definition of the word "produced."

This definition would change the phrase "necessary to the production" to "indispensable to the production," whatever the difference between "necessary" and "indispensable" may be. It also would require that processes or occupations indirectly covered must be "closely related" to production for commerce. These phrases are deliberately unclear as to intent and purpose nor would the application of such language become clear until after years of litigation.

REGULAR RATE OF PAY

Both H. R. 4272 and H. R. 5856 are designed to clarify the meaning of the words "regular rate" on which overtime is based under the act. Both bills incorporate the substance of the overtime bill H. R. 858, which became law last month, and specify how many other types of payments (other than night, week-end, and holiday premiums) are to be treated. H. R. 4272, however, fails to outlaw the Missel formula, under which workers with irregular hours of work and a stated weekly salary have a constantly decreasing "regular rate" as the hours of work during the week increase. H. R. 5856 sets up a number of safeguards to prevent abuse of the Belo plan (under which weekly salary may be regarded as including overtime payments up to a specified number, in one case up to 84 hours a week), whereas H. R. 4272 may seriously modify the present court restrictions on the use of such plans.

CHILD LABOR

H. R. 4272 would directly prohibit oppressive child labor in interstate commerce or in the production of goods for commerce. The bill would also prevent parents employing children under 16 in hazardous occupations, just as they are now prevented if the children are 16 or 17. H. R. 5856 also includes these two provisions, but also improves the child-labor exemption for employment in agriculture by recasting it on a "outside of school hours" basis. H. R. 4272 continues the present unsatisfactory, and highly variable basis, "while not legally required to attend school."

ADMINISTRATION

H. R. 5856 contains three important improvements in the administrative provisions of the act: (1) It gives the administering agency authority to collect wages due under the act (giving employers who pay under such suits or otherwise under the supervision of the administering agency, protection from employee suits for liquidated damages under section (16 (b)); (2) it provides rule-making authority similar to that provided many other agencies, providing greater certainty to employers and employees alike; and (3) it would make the Secretary of Labor responsible generally for administration, thereby accomplishing one of the proposals of the Hoover Commission.

H. R. 4272 makes none of these important administrative changes. Instead of power to collect back wages due under the act, H. R. 4272 merely provides immunity from employee suits for liquidated damages if employers pay wages due under the supervision of the administering agency. Instead of clear-cut rule-making authority, H. R. 4272 merely copies certain phrases from the Portal-to-Portal Act, which would in any case be applicable to regulations or interpretations of the Administrator. Instead of centralizing authority for administration under the Secretary of Labor, H. R. 4272 disperses authority by transferring from the Administrator to the Secretary of Agriculture the authority to define "areas of production."

From all of the foregoing it is my firm belief that the Lesinski bill, H. R. 5856, with some slight amendments, is the bill which received my support and which I think should have been adopted by the Congress.

Eglin Field's Great Work

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1949

Mr. SIKES. Mr. Speaker, one of the most interesting of recent publications is an article in the August issue of the Martin Star telling of the very important work currently carried on at the Eglin Air Force Base under the command of Maj. Gen. William E. Kepner. I am glad to call it to the attention of the House. It is as follows:

AT EGLIN AIR FORCE BASE THEY'VE PROVED MARK TWAIN WRONG—THEY'VE DONE SOMETHING ABOUT WEATHER—3,000,000 CUBIC FEET OF IT, ANYWAY

Some years ago engineers working on air conditioning for movies, night clubs, public buildings, and homes began to make Mark Twain's classic remark about the weather look silly. With the passing years, the Twain bon mot has become even more silly, but it took a group of inquisitive and imaginative Air Force officers and engineers to do the job in a big, big way.

The result of their needs and ingenuity is a building at Eglin Air Force Base, Fla., called the climatic hangar, where weather the likes of which Mark Twain's era never even dreamed about is manufactured to order. In the 2 years it's been completed, the hangar, according to reliable estimates, has paid for itself in the savings made possible by being able to find out things in the hangar that formerly called for long, tiresome, and expensive field trips.

Eglin AFB is the Air Proving Ground of the USAF Air Matériel Command, which has headquarters at Wright-Patterson Air Force base near Dayton, Ohio, writes the specifications and does the buying for just about everything the United States Air Force requires. A lot of the things used by the Air Force are developed at Wright-Patterson, manufactured under contract. Whether the item is a complete airplane, a new parachute, uniforms, helmets, engines, or a food container, it goes back to Wright-Patterson for testing to see that specifications have been met, the product is what was anticipated.

Safely past the first hurdle, the item goes to Eglin, where it really has the book thrown at it. The airplane or engine or clothing submitted to Eglin must prove itself under rigorous and extensive simulated conditions—then through operational conditions in the field.

As far as is humanly possible, nothing is left to chance. In a future conflict too much will be at stake to take chances on anything that is not of top quality and has proved itself—and it's Eglin's job to see that the Air Force's equipment is the best there is.

It's part of the job, also, to develop uses and tactics for new materials, so that by the time an accepted article is being delivered in quantity to the Air Force, not only has it been tested and proved, but just what can be done best with it has been determined.

The climatic hangar is a long and time-saving step forward in the work Eglin does to prove Air Force equipment. Will a certain airplane engine perform at peak efficiency at 40° below zero in a howling blizzard? Will a certain lubricating oil do its job when the thermometer is 125° above zero? Will a canned food or a new type uniform cloth be able to take the heat and high humidity of the jungle? Will a machine gun operate properly under any climatic condition in which it may be used? With the help of the climatic hangar, Eglin officers can come up with the answers in short order without disturbing their well-ordered routine. These answers are subject to later further proving in field tests in Alaska or Panama or the Mojave Desert, but the climatic hangar will doubtless have uncovered the majority of bugs, if any existed, and pointed out corrections before field tests were made.

Being the only one of its kind in this country, the hangar has been extensively used by other services, too; the Navy sending airplanes and other equipment, the Army sending tanks, ordnance, and a wide variety of miscellany.

Eglin Air Force Base is not just the climatic hangar. Far from it. Located on the coast of the Gulf of Mexico in northwest Florida about 50 miles east of Pensacola, Eglin is a group of airdromes and proving fields scattered over an area roughly 50 miles from east to west and 20 miles from north to south. Eglin Field, where headquarters is located and most of the proving work done, is almost in the center of the base, on Choctawhatchee Bay. It's sparsely settled country, covered with scrub pine and a few pineapple palms, which makes the location ideal from a security angle, as much of the work is confidential.

The location also proved ideal last fall when Operation Combine III was held at Eglin. Combine III was at that time and still is the largest simulated amphibious assault exercise held jointly by the Air Force, the Navy, the Marines, and the Army. During the operation an imaginary invader made a successful landing and captured an "enemy country." It was a full-dress affair and officers at the base are still justly proud of the success of the exercise.

Scattered throughout Eglin are 10 airdromes and numerous bombing and gunnery ranges. Aircraft are actually only a part of the program, which includes bombing, electronic equipment, photographic, and weapons. The growth of guided missiles has put additional work on the test units although this will probably be relieved shortly when the new joint missile-testing range at Banana River, Fla., is opened.

All of the work is not confined to Eglin, either, as Air Force personnel, services, facilities and assistance are supplied to the Army's Ordnance Department and Chemical Warfare Service to successfully complete engineering and development tests on specialized types of equipment. This work is handled at the Aberdeen Proving Ground, Md., the Edgewood Arsenal, Md., and at the Muroc Lake (Calif.) Proving Ground. These widespread operations of the air proving ground, midway between the procuring and operating agencies, is giving the United States Air Force the best possible equipment and operating techniques, leading to superior air power.

Since the climatic hangar was completed and went into service a couple of years ago, however, it has proved just about the most important single thing at Eglin.

The floor of the hangar provides a clear working space, 200 by 250 feet, with curved ceiling rising to 60 feet in the center. It's big enough for the Air Force's largest bomber, the B–36, to get inside, although there's not too much room left. A number of smaller rooms surround the big hangar, each for a special purpose, each operating independently of the others.

Several airplanes will be placed in the hangar at one time for testing and it's not unusual to find a Navy fighter cheek by jowl with an Air Force B–50; an Army tank in one corner opposite a shelter hut, with miscellaneous gear filling up any empty floor space that may be left.

Name your weather, and it can be reproduced inside the hangar. Any temperature from minus 70° to plus 165° can be made to order, with relative humidity from 10 to 95 percent when the temperature is not lower than 50° F.

As weather on a world-wide basis is not merely temperature and humidity, to these conditions in the hangar can be added wind storms up to 100 miles per hour in combination with sleet, snow, rain, dust, or sand to order. The sun's rays being the important item they are in lasting qualities of matériel, sun lamps can be turned on that give the equivalent of the noonday sun in the desert.

In this roughly 3,000,000 cubic feet of northwest Florida, then, you could have a desert sun beaming down on a 75-mile wind that's blowing sand through hot air that's only 10 percent humid. It's a condition that could and does exist, but for testing purposes the Eglin hangar has it all over putting an airplane out in the Sahara—because the conditions can be kept constant for days on end, speeding up the test immeasurably with no relapses for lack of natural wind or the sun going down in the evening.

The same thing is true, of course, when Arctic conditions are required or a hot, teeming equatorial jungle. As Air Force and other military equipment is required to be able to operate under all these extremes of conditions (with possibly only minor modification), it's easy to see why the climatic hangar is paying off in rich dividends of time, money and effort saved.

Not that field trips have been eliminated by the hangar. No matter how carefully a product may be made, there are bound to be some bugs discovered when it goes into actual service, so field trips are still necessary to further prove products after the climatic hangar tests, but a lot of time and trouble has been saved.

The smaller test rooms surrounding the hangar have a wide variety of uses, including block testing for reciprocating, jet and turbo-jet engines; motorized vehicles and ground equipment, clothing, food, small items—under any conditions that can be reproduced in the big hangar. The small rooms have the added advantage that they can reproduce in a matter of two or three hours a complete cycle of heat, humidity, sun and storm, the conditions that would occur in a 24-hour period in the desert, a jungle or the Arctic.

In block testing engines, special provisions have been made to provide air and take care of the exhaust or reciprocating engines. Jet engines consume a terrific amount of air and in a sealed room to provide this air was quite a neat piece of engineering, but a jet on test can be supplied with 8,600 pounds per minute of air, at temperatures as low as minus 62° F. when the outside wet bulb temperature is 40° F. Jet engines cannot be run more than 20 minutes in each hour with a maximum of four such tests before the refrigerating equipment has to be defrosted. Exhaust from the reciprocating engines is taken directly from the engines to the outside through insulated pipes. Baffles prevent the sound of engines on the test block from traveling throughout the hangar through air ducts.

The spectacular room is the hangar, the one which has received the most publicity, however, is the all-weather room for physiological proof testing of personnel and personal equipment under extreme weather conditions.

In this room, which is 34 by 13 feet and 11 feet high, temperatures can be lowered from plus 70° to minus 70° in 24 hours, or raised from plus 70° to plus 170° in a mere matter of 2 hours. Windstorms, rain, snow, and sand can be introduced into the room, which may also be partially flooded with water for testing of life rafts, immersion suits, and such.

Equipment is not the only thing tested in the all-weather room, however. Personnel is frequently introduced into the chamber and the men undergo the same wide variety of climatic conditions as the matériel, are closely watched and given frequent medical examinations to see how they stand up. After all, the best of equipment is not worth a whoop if the men who must operate it break down under climatic conditions. The Air Force knows a wonderful lot about just how much a man can stand physically and mentally—much of it coming from the controlled conditions of the all-weather room at Eglin.

Smaller rooms are devoted to many specialties as their names indicate; hot test, cold test, jungle test, tropic-marine test, and desert test. Each room has its own complete air-conditioning system and can operate for long periods at cycled day and night weather conditions, putting in the equivalent of a year's actual conditions in a couple of weeks. This permits determination of the effects of long weathering on equipment and material.

All test rooms and the hangar are provided with observation windows or rooms where watchers can see what is going on inside, the while recording instruments are telling exactly the conditions.

During tests, of course, men are actually working inside the hangar, clothed to provide protection against the extremes of weather conditions being reproduced. If the hangar is making a desert test with temperatures well over the 100° mark, then the men in the hangar are provided with hooded coverall clothing to which is attached a tube carrying a stream of cooled air which exhausts at the wrists and legs—a real air-conditioned suit. There should be a fortune in it for the man who can adapt the idea for commercial use during hot summer days. If the hangar is operating under cold conditions the men, naturally, wear Arctic clothing, including electrically heated suits.

Observers who want a closer look-see than is provided by the observation windows of the hangar may enter one of two portable observation rooms which can be wheeled out onto the floor. Air conditioned for normal temperatures, the portables are provided with antifrosting windows.

Engines are, naturally, run in the hangar as well as the block test room. The exhaust gives off heat, but so vast is the room and so efficient the refrigerating equipment that a 2,500 horsepower engine can be run at full power for 20 minutes and only raise the temperature from its minimum of minus 70° to minus 65°. Such 20-minute tests run at intervals of an hour will finally stabilize the temperature at minus 60°.

Machine guns and aerial cannon likewise need to be tested under extremes of temperature, and Eglin has a very neat arrangement for that, too.

Three ports in the south wall of the hangar, at varying heights above the floor, can be opened so that guns with live ammunition may be fired through them. The loss of air during this operation is negligible and causes no fluctuations in temperature.

In aircraft testing there is naturally the hazard of fire, but a flame would have its head soaked off instantly if it appeared at the climatic hangar—there are seven different sytsems of fire alarms and fire extinguishing. In addition to the usual manual hand extinguishers and water hose lines, there are water fog, carbon dioxide, foam and water deluge systems for putting out a fire. A flame wouldn't have a chance.

Eglin Air Force Base is a big place physically, where thousands of officers, enlisted personnel and civilians are using every device at their command or that their ingenuity can dream up to see to it that the USAF is the best there is in the world. Should another war come, Air Force men from the Poles to the Equator will be able to give thanks to the men of Eglin who have tried and proved every item the fighting man is provided with.

National Housing Act Great Victory

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 10, 1949

Mr. KLEIN. Mr. Speaker, I believe that you and all other supporters of an adequate Federal housing program will agree with me that the passage of the National Housing Act, Public Law 171, was a great victory for those who believe that Government has a right and a duty to fill those areas left vacant by private enterprise.

The National Housing Act is not, as its detractors have said, a creeping socialism but a dynamic program of economic expansion to fill a genuine need—the need for stimulation of the housing industry, with accent on providing the opportunity of decent shelter at a price they can pay for American citizens of low income, both in the cities and on the farms.

The declaration of policy in the preamble of the act is itself a monument to the advance of the contemporary philosophy that in our complex social and economic structure democratic government has a duty to its people.

I quote the preamble:

DECLARATION OF NATIONAL HOUSING POLICY

SEC. 2. The Congress hereby declares that the general welfare and security of the Nation and the health and living standards of its people require housing production and related community development sufficient to

remedy the serious housing shortage, the elimination of substandard and other inadequate housing through the clearance of slums and blighted areas, and the realization as soon as feasible of the goal of a decent home and a suitable living environment for every American family, thus contributing to the development and redevelopment of communities and to the advancement of the growth, wealth, and security of the Nation. The Congress further declares that such production is necessary to enable the housing industry to make its full contribution toward an economy of maximum employment, production, and purchasing power. The policy to be followed in attaining the national housing objective hereby established shall be: (1) private enterprise shall be encouraged to serve as large a part of the total need as it can; (2) governmental assistance shall be utilized where feasible to enable private enterprise to serve more of the total need; (3) appropriate local public bodies shall be encouraged and assisted to undertake positive programs of encouraging and assisting the development of well-planned, integrated residential neighborhoods, the development and redevelopment of communities, and the production, at lower costs, of housing of sound standards of design, construction, livability, and size for adequate family life; (4) governmental assistance to eliminate substandard and other inadequate housing through the clearance of slums and blighted areas, to facilitate community development and redevelopment, and to provide adequate housing for urban and rural nonfarm families with incomes so low that they are not being decently housed in new or existing housing shall be extended to those localities which estimate their own needs and demonstrate that these needs are not being met through reliance solely upon private enterprise, and without such aid; and (5) governmental assistance for decent, safe, and sanitary farm dwellings and related facilities shall be extended where the farm owner demonstrates that he lacks sufficient resources to provide such housing on his own account and is unable to secure necessary credit for such housing from other sources on terms and conditions which he could reasonably be expected to fulfill. The Housing and Home Finance Agency and its constituent agencies, and any other departments or agencies of the Federal Government having powers, functions, or duties with respect to housing, shall exercise their powers, functions, and duties under this or any other law, consistently with the national housing policy declared by this act and in such manner as will facilitate sustained progress in attaining the national housing objective hereby established, and in such manner as will encourage and assist (1) the production of housing of sound standards of design, construction, livability, and size for adequate family life; (2) the reduction of the costs of housing without sacrifice of such sound standards; (3) the use of new designs, materials, techniques, and methods in residential construction, the use of standardized dimensions and methods of assembly of home-building materials and equipment, and the increase of efficiency in residential construction and maintenance; (4) the development of well-planned, integrated, residential neighborhoods and the development and redevelopment of communities.

Title I of the National Housing Act makes provision for planned slum clearance and community development and redevelopment in practical terms.

Title II provides temporary extension of title I and section 608 of title 6 of the expiring act.

Title III carries the provisions for low-rent public housing—a vast program designed to rehouse almost a million low-income families by local enterprise. This is the heart of the act; and you will recall that while the House sat in Committee of the Whole, by a deft parliamentary maneuver, this entire section was struck out, so that no liberalizing amendments could be offered, but it was later restored, without change.

This is not to say that I had strong objections to the title as it stood; but many of us wished to clarify the language and spell out a more flexible policy of eligibility.

Title IV makes provision for an extensive program of technical research in the production and improvement and cost reduction of housing.

Title V makes the same kind of guaranteed local financing and construction available to American farmers living in slum conditions.

There are important general provisions in title VI, including authorization for extending benefits of the act to the District of Columbia.

LOBBIES OPPOSED BILL

The vast real-estate lobby—a lobby which, in its broadest sense, includes the builders, the manufacturers of materials, the dealers, the contractors, and even some of the organized artisans, fought this act with every resource at its command.

When all else had failed the opponents of public housing, who worked for generations to fasten on American life the objectionable and extra-legal system of religious and racial covenants, cynically fell back on a so-called civil-rights amendment which would purport to prohibit segregation in projects built under this act.

The fact is, as every Washington observer knew at the time, that this skillful and cynical maneuver was intended to kill the bill, both in House and Senate; and its diabolical cunning is demonstrated by the fact that in my own district, where there is unanimity of opposition to all discrimination, a few of my own constituents swallowed the bait and wrote to me, upbraiding me for having voted against these spurious proposals.

TO CLARIFY PROVISIONS

Mr. Speaker, in order to clarify the provisions of title III for the people of my district, to whom these sections are of paramount importance, I am inserting in the RECORD, under consent, an exchange of correspondence between myself and Mr. Raymond M. Foley, Administrator of the Housing and Home Finance Agency, which will, I am sure, be followed with interest:

JULY 25, 1949.

Hon. RAYMOND M. FOLEY,
Administrator, Housing and Home Finance Agency, Washington, D. C.

DEAR MR. FOLEY: As you are aware, I am among the most ardent supporters of public housing in the present Congress. It is a subject of very great importance to my own congressional district and to the great metropolis of which the Nineteenth District is is a part. You are equally aware of my militant opposition to discrimination in any form or in any place against any person and arising from any specious cause.

You will also recall that I consulted your office in regard to a widely expressed desire among my constituents that I offer certain clarifying and liberalizing amendments relating to eligibility for entrance and continuing tenancy and to computation of rental when H. R. 4009 was taken up by the House, and that Mr. Berchmans T. Fitzpatrick, your general counsel, was kind enough to come himself to my office to discuss the amendments with me.

When, in Committee of the Whole House, all of title II was struck out, I was necessarily precluded from offering my amendments, under the rules of the House; but the text of the proposed amendments is given in my remarks appearing on pages 8644–8646 of the CONGRESSIONAL RECORD of June 29.

In view of all this, you can imagine my surprise when I was accused, in newspapers circulated among tenants of public-housing projects in my district, of having championed discrimination by joining in the teller vote against the Fulton amendment (p. 8718, June 28), and of having refused to offer the amendments requested by my constituents.

I should be grateful to you for an expression of opinion from you as to necessity and desirability of the Fulton amendment and of my own amendments, with comment as to standards of eligibility and computation of rentals under title II in Public Law 171.

Sincerely yours,

ARTHUR G. KLEIN,
Member of Congress.

HOUSING AND HOME FINANCE AGENCY,
Washington, D. C., August 5, 1949.

Hon. ARTHUR G. KLEIN,
United States House of Representatives, Washington, D. C.

DEAR CONGRESSMAN KLEIN: This will acknowledge and thank you for your letter of July 25 with reference to H. R. 4009, now Public Law 171, Eighty-first Congress, approved July 15, 1949.

I can certainly appreciate your interest in the problems of the tenants in a federally aided low-rent housing project operated by the New York City Housing Authority in terms of possible eviction. I also appreciate your discussing the matter at length with our general counsel and realize, of course, that, due to the parliamentary situation which prevailed in the House when H. R. 4009 was debated, you were prevented from offering amendments to the public-housing title of the bill through circumstances entirely beyond your personal control.

I believe, however, that there is a reasonable amount of flexibility under the bill, as passed, to meet the situation which your amendments would have been directed. For example, with respect to your proposed amendment relating to the exclusion of income derived from veterans' disability pensions, I call attention to the fact that, under section 502 (c) of the Housing Act of 1948, the Public Housing Administration is authorized to exclude amounts paid by the Government for disability or death in connection with military service in determining net income for the purposes of admission and continued occupancy of federally aided low-rent housing projects. Also, with respect to your proposed amendment that, for the purpose of determining net income for continued occupancy, at least 40 percent of the income of any member of the family other than the head of the family should be excluded, I desire to call attention to section 306 of the Housing Act of 1949. This permits a hundred-dollar deduction for each minor member of the family, or, alternatively, the exclusion of all or any part of annual income of any minor member of the family. Also, as you know, courts have been extremely lenient in eviction cases. In those cases where it clearly appears to the court that ineligible tenants have made all reasonable efforts to find other satisfactory

housing and have been unable to do so, the courts have generaly granted a stay of any actual eviction.

With respect to the rejection of the so-called Fulton amendment prohibiting any discrimination in public-housing projects, I am informed that the leadership in the House of Representatives and the sponsors of H. R. 4009 considered this amendment as an attempt to defeat the urgently needed housing bill, and that a vote for the amendment would have been considered by many as a vote against the housing bill. In fact, the almost identical situation obtained when a similar amendment was offered in the Senate and was defeated by an overwelming vote.

Your continued interest in, and support of, progressive housing legislation is greatly appreciated and if, at any time, I can be of further assistance to you, please let me know.

Sincerely yours,

RAYMOND M. FOLEY,
Administrator.

Resolution by Dorothy Frooks, Counselor at Law, New York City

EXTENSION OF REMARKS
OF
HON. FREDERIC R. COUDERT, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 10, 1949

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks, I include a resolution expressing the views of a constituent as to how the United Nations can be made to function properly:

Whereas people are dependent upon the peaceful condition and international stability in the world, especially now that air progress and atomic uses can be made to annihilate time, distance, and people; and

Whereas many proposals such as Federal Union, United World Federalist, World Republic, United Nations Reform, and similar thoughts have been advanced by thinking people, all with a World Government as an ultimate goal; and

Whereas the core of world-security problems in the relationship between the East and West, particularly the United States as one powerful group and United Soviet Socialist Republic (another powerful group), wherein the rift has been noted; and

Whereas the United States has given privileges of travel throughout the United States to the United Soviet Socialist Republic and they have not reciprocated the same privileges to the United States of America; and

Whereas the fundamental difference between these two countries are shown in the interpretations of statements, made by its public officials, wherein the officials of Russia represent the policy of the Government while in the United States the officials do not represent the policy of the Government but are individual statements, and thus cause mistaken attitudes and misunderstandings; and

Whereas the United Nations has followed an active policy of strengthening the United Nations by creating an Interim Committee or Little Assembly and the General Assembly of the United Nations; and

Whereas the machinery of the United Nations reaching into all nations by means of interim committees or little assemblies to be on constant duty would improve understanding, interpretation, and international relationship: Therefore, be it

Resolved, That the people submit this resolution to the General Assembly of the United Nations, that an Interim Committee or Little Assembly such as was created November 13, 1947, in accordance with article 22 of the Charter of the United Nations, be established in every member nation, and thus discharge responsibilities along with administrative matters, social, economic, and human rights tasks for which each such Interim Committee or Little Assembly be solely responsible. By this method, all nations will have the open door, to give as well as receive, and solve local international problems before submitting problems to the General Assembly. Any member nation that would not cooperate in permitting the presence and continuous duty of the Interim Committee or Little Assembly within its domain is not worthy of membership in the United Nations and should be dealt with as a violating nation by sanctions and other means provided for in the Charter to preserve the peace and security of the world, prior to possible physical conflict; and, *be it further*

Resolved, That the Interim Committee or Little Assembly in each nation be composed of representatives that are qualified by training and language in that respective country thus widening the opportunities and interest in the objectives of the United Nations.

Resolutions of Iowa Department of AMVETS

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 10, 1949

Mr. LECOMPTE. Mr. Speaker, one of the great organizations of the veterans is known as the American Veterans of World War II, or popularly called the AMVETS. Recently a convention of the Iowa department of this great organization met in State convention at Ottumwa, Iowa, and on this occasion adopted a very significant set of resolutions. Under leave, to extend my remarks in the RECORD, I include a copy of these resolutions so that all Members of Congress may know the position of the AMVETS of Iowa relative to pending legislation and great national problems.

The resolutions adopted at Ottumwa, Iowa, on July 24, 1949, read as follows:

RESOLUTIONS ADOPTED BY THE FIFTH ANNUAL CONVENTION OF THE IOWA DEPARTMENT OF AMVETS AT OTTUMWA, IOWA, JULY 24, 1949

I. VOTE OF THANKS

Whereas all delegates and AMVETS members attending the State convention at Ottumwa, Iowa, July 22, 23, and 24, 1949, have reported an excellent time and a friendly reception: Be it

Resolved, That this convention expresses its heartfelt gratitude and appreciation both to the citizens of Ottumwa, Iowa, and the membership of the Ottumwa AMVETS Post, No. 20, and particularly to Ben Ellsworth, convention chairman, and his worthy staff.

Vote of thanks to past State officers

Whereas the State department of AMVETS has had an outstanding record for the year 1948–49 and has achieved great progress in all departments: Therefore be it

Resolved, That a vote of thanks be given to the State officers of Iowa AMVETS for their untiring efforts throughout the past year which has made AMVETS the best veterans' organization in the State of Iowa.

II. STRENGTHENING OF THE UNITED NATIONS

Resolved by the Iowa Department of AMVETS, That it should be a fundamental objective of the foreign policy of the United States to support and strengthen the United Nations and to seek its development into a world federation open to all nations with defined and limited powers adequate to preserve peace and prevent aggression through the enactment, interpretation, and enforcement of world law.

III. REHABILITATION FOR CRIPPLED AND HANDICAPPED CHILDREN

Whereas we AMVETS of World War II are vitally interested in the general welfare of all community activities, especially regarding children and adults who will make future citizens to further the American way of life, and whereas there unquestionably proves to be a definite need for the perpetuation of special services and consideration to the unfortunate who will repay the community and Nation threefold if given an opportunity.

Whereas we AMVETS are organized to perpetuate the American way of life feel it compulsory, we resolve to go on record as endorsing the program of rehabilitation for crippled and handicapped children as carried on by the Iowa Society for Crippled Children and Adults, and support the program of the organization.

IV. SERVICE OFFICERS CORRESPONDENCE COURSE

Whereas we in Iowa are most fortunate in having a national service officer who so industriously prepared the best service officer correspondence course known to any veterans' organization, and where we at this fifth annual State convention feel we should take action to aid in the erection of this program on a national level: Be it

Resolved, That we continue to promote this program in the State and request that national also adopt the course in order to extend an unparalleled training program with our organization on a national level.

V. CHILD WELFARE PLAN

Whereas Iowa during World War II lost 8,340 men, many of whom were married with from one to four children; and

Whereas we as Americans of World War II organized solely for the purpose of helping this Nation to prepetuate a better way of life, especially for those who sacrificed the most through the war; and

Whereas we as citizens of the United States realize our responsibility to the future and well-being of our Nation; and

Whereas we as an organization personally owe a debt of gratitude to those men who so faithfully forfeited their lives to create a better country in which to raise their children: Therefore be it

Resolved, That we adopt the Illinois Child Welfare plan which proclaims that:

1. Each post appoint a chairman who secures lists of children made fatherless by World War II.

2. One AMVET sponsors one child—visits the child each month, helps with benefits, and does other little things his dad would have done. Post welfare officers keep records of visits to child.

VI. HOUSING

The American Veterans of World War II (AMVETS) of the United States of America, meeting at the fifth annual State convention in Ottumwa this 24th day of July 1949, being acutely aware of the utter deplorable situation regarding shortage of housing for not

only the World War II veteran's families, but all American families as well, and that whereas the situation caused by the two past decades and the advent of World War II which strikes at the very roots of our American way of life; and

Whereas every American is entitled to a decent and respectable place in which to live, the Housing Committee for this State convention hereby offers these following ideas which it believes are the only practical solutions for World War II veterans to obtain decent housing at a fair price. The following resolutions are made by this committee:

1. We believe that the State legislative director of AMVETS should encourage legislation in the next Iowa General Assembly to pass legislation which will enable local authorities in Iowa to borrow Federal funds under the Housing Act of 1949.

2. We believe that each post should appoint a housing committee to offer advice and aid to veterans in regard to the Housing Act of 1949.

3. We believe that the general policy of rent control should be continued at this time.

4. We believe that the standardization of construction materials and other methods used in mass-production industries can lower cost and increase production.

VII. VETERANS DOMICILIARY CENTER

Be it resolved, That the Iowa Department of AMVETS express its deep and sincere gratitude to the Honorable HENRY O. TALLE, of Iowa, Senator WAYNE B. MORSE, of Oregon, and to the other Members of the Congress of the United States for the reopening of the former Schick General Hospital at Clinton, Iowa, as a veterans' domiciliary center; be it further

Resolved. That the Iowa Department of AMVETS assembled in Ottumwa, Iowa, during this, the 1949 State convention, go on record in strong support of expanding to its full capacity all the facilities available at the former Schick General Hospital now known as VA domiciliary center, and that a hospital unit be established according to the intent of the Congress; be it further

Resolved, That a copy of this resolution be forwarded to Gen. Carl R. Gray, Veterans' Administrator, to the Honorable HENRY O. TALLE, and Senator WAYNE B. MORSE.

VIII. INCOME-TAX EXEMPTION

Whereas veterans of all wars in which the United States has been a participant made sacrifices of a financial nature during that period of time when others were enjoying high earnings and profits of wartime economy; and

Whereas it has been the custom of the Government of the United States to reward war veterans for their service by granting special considerations, and in some instances, bonuses; Now, therefore, be it

Resolved, That the Congress of the United States amend the Federal income taxation laws to provide that every honorably discharged veteran be granted an annual exemption of $600 in addition to his normally allowed exemptions.

IX. PACIFIC PACT

Whereas the first objectives of AMVETS is to promote world peace; and

Whereas the principal threat to peace today is the spread of world communism; and

Whereas we are the veterans of World War II who fought our way through such jungle hell as Tarawa, Iwo Jima, Guadalcanal, because once before in history we paid too little attention to the Pacific area; and

Whereas the Truman doctrine, the Marshall plan, and now the Atlantic Pact have largely restrained the spread of communism in Europe; and

Whereas communism is a world problem—not confined only to Europe—and is at present rapidly spreading in the Far East; and

Whereas once again in the very area that ignited World War II a great nation, China, is being engulfed by a slave ideology: Therefore be it

Resolved, That AMVETS of Iowa demand that the United States try to reach an agreement with the free nations of the Pacific, toward the development of a defensive Pacific Pact along the line of the Atlantic Pact so that the spread of communism may be checked in that area of the world, as it has been largely assailed by a similar policy in Europe; be it further

Resolved, That the Iowa Department of AMVETS go upon record as recommending to the national convention of AMVETS the passage of a similar resolution.

X. ABSORPTION OF OTHER WORLD WAR II VETERANS' ORGANIZATIONS

Whereas considerable discussion has taken place regarding the absorption of other World War II veterans' organizations into AMVETS; and

Whereas it is deemed advisable to establish a policy in response to requests by these other World War II veterans' organizations; and

Whereas the best interests of all World War II veterans, their widows and orphans, would best be served through one strong united veterans organization with the high ideals as established by AMVETS: Be it therefore

Resolved, That the Iowa Department of AMVETS welcome and invite every eligible veteran of World War II into AMVETS; be it further

Resolved, That this resolution be forwarded to national headquarters of AMVETS for action at the national convention in September 1949.

China—Dishonest Reporting in the White Paper

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 10, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an editorial which appeared today in the Washington News:

DISHONEST REPORTING

The State Department appears to be guilty of some flagrant distortions of history in its efforts to discredit China's part in the war and to malign Chiang Kai-shek.

Chiang, according to Secretary of State Acheson, "saw an opportunity" to let up on the war effort against Japan as soon as the United States entered the war.

That doesn't seem reasonable. Hong Kong, Singapore, Rangoon, Bataan, and Corregidor all fell after that. The Japs moved on into New Guinea and the Solomons, bombed Port Darwin and cut the Burma Road, China's only overland supply line. There was nothing in this dismal chain of events to cause Chiang to relax, on any theory that Uncle Sam would do his fighting for him.

The famous Flying Tigers weren't reorganized as an American air force until 6 months after we entered the war. We had no other troops in China of a tactical or strategic importance until long after that. China in fact furnished the ground forces throughout the war.

To continue the fiction, Gen. Joseph W. Stilwell is quoted as saying on September 26, 1944, that "Chiang Kai-shek has no intention of making further efforts to prosecute the war." But the "whitewash" paper fails to add that "Vinegar Joe" wasn't a good prophet.

On November 3, Chiang's forces recaptured Lungling, key city on the Burma Road, and by late January had reopened that road to convoy traffic. That took some fighting.

Of course, these events occurred after General Stilwell had been relieved by General Wedemeyer. But the one-sided white paper ignores General Wedemeyer's estimate of Chiang while quoting General Stilwell, who failed in China where General Wedemeyer succeeded. General Wedemeyer has been quoted elsewhere as terming Chiang "our most faithful ally."

An answer to what had been wrong in China, not found in the State Department's brief for the defense, was given by General Odlum, Canada's ambassador to China, in an interview with Freda Utley. He said:

"Wedemeyer changed the spirit of everything. Whereas Stilwell and Gauss (our Ambassador) were inclined to build up both sides in China (the Communists as well as the Government forces) thereby weakening her and preventing her from ever becoming strong and united, Wedemeyer has given America a logical role and a consistent policy in line with American interests and the maintenance of world peace."

This is the testimony of an impartial witness who was on the scene during the period in question, as Mr. Acheson was not.

Unfortunately, when General Wedemeyer returned to the United States, the State Department reverted to its policy of double-dealing. This was climaxed by withdrawing all assistance from Chiang Kai-shek when he failed to make a deal with the Communists.

The deterioration of Nationalist China dates from that decision—made by Gen. George C. Marshall with the approval of President Truman.

Aircraft Collision

EXTENSION OF REMARKS
OF
HON. KARL STEFAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 10, 1949

Mr. STEFAN. Mr. Speaker, what are the plans of the CAA for the development of a positive warning device which will prevent collision in the air? As the total number of aircraft used in the air are increased, the collision rate will also increase under present methods. The tragedy of the Eastern Airlines in which 19 lives were lost by collision several days ago, and the collision of a Capital air liner over Milwaukee in which 6 feet of the Douglas air liner was torn off and the pilot of the other aircraft was killed, in addition to other accidents of similar types recently, makes some action mandatory. In addition to the loss of lives, other damages in this type of accident result in millions of dollars of loss. If such a device as the proximity fuze and the device used for locating minerals, oils, and so forth, can be perfected, then certainly some small, inexpensive, light electronic warning device can be devised

and its use made mandatory in all aircraft.

Why has not the CAA, the CAB, and our military air forces completed research, development, and use of some device which will prevent these air tragedies which are bound to increase as time goes on?

Writer Says Johnson Has Ordered the Navy Virtually Cut in Half

EXTENSION OF REMARKS
OF
HON. W. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 10, 1949

Mr. COLE of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence which appeared in the Washington Evening Star on August 9, 1949:

WRITER SAYS JOHNSON HAS ORDERED THE NAVY VIRTUALLY CUT IN HALF—ONLY FOUR MAJOR CLASS CARRIERS TO BE OPERATED UNDER NEW FISCAL PLANS

(By David Lawrence)

Secretary of Defense Louis Johnson has ordered the United States Navy virtually cut in half—to a size smaller than the prewar Japanese Navy. Actually the naval air arm is to be cut by 50 percent.

Only four of the major size aircraft carriers—two for each ocean—are to be maintained under the plans for the fiscal year beginning next July. This means that there would be only one carrier task force for naval operations in the seven seas, because at least four carriers are necessary for a task force.

But this doesn't mean economy. The same money—and perhaps more—is to be devoted to the United States Air Force, for which service Secretary Johnson has shown a distinct leaning as against the other armed services.

Orders have been quietly issued by the Secretary of Defense to begin planning next year's budget on the basis of a 50 percent cut in the Navy's air arm and a reduction in the other naval components. The damage to the morale of the Navy, however, will be done this year as word gets out that the United States has virtually abandoned carrier aviation after it had enabled this country to sweep 8,000 miles across the Pacific to win an unprecedented victory.

DETAILS OF DIRECTIVE

Although the new unification law contains certain safeguards forbidding the Secretary of Defense from altering the missions of the Navy or the other armed services, Mr. Johnson, by the simple device of cutting its budget, will now completely alter those same missions so far as the Navy is concerned. Here are the details of the new directive as revealed today in U. S. News and World Report:

1. Carriers of the major types to be cut from 8 to 4.
2. Carrier air groups to be cut from 14 to 6.
3. Smaller carriers to be cut from 10 to 8.
4. Marine Corps aviation squadrons to be cut from 23 to 12.
5. Antisubmarine air squadrons to be cut from 8 to 7.
6. Patrol squadrons to be cut from 30 to 20.
7. Cruisers to be cut from 18 to 12.
8. Destroyers to be cut from 162 to 140.
9. Submarines to be cut from 80 to 70.

This represents about a 50 percent cut over-all. Many of the reductions are below what the Navy considers the safe point. It is reported that even General Eisenhower did not go along with all these recommendations and felt that the Navy was cutting too much.

The cuts, of course, are part of a new plan of strategy—that is, to rely on strategic bombers to win the next war and to take a chance on keeping the sea lanes open.

This might be all right if the enemy didn't have any land-based long-range bombers or submarines to blast American ships as they try to carry fuel and supplies to European bases. Without sufficient fighter planes as a means of protecting itself against enemy bombers and submarines, the United States Navy will be as powerless as it was at Pearl Harbor in 1941.

MAGINOT LINE THINKING

The new concept resembles closely the thinking of the French general staff which relied on the Maginot line and the German general staff which relied on the Siegfried line. It provides for no unexpected contingencies. It assumes the next war will be fought in only one way and by one armed service—a land-based air force. Actually today there are only about 131 planes or about 4 groups of very heavy bombers which can bomb European targets from American shores. The other bombers and fighters of the United States Air Force must be flown from advanced bases overseas and are, therefore, dependent for their effective operation on sea lanes being kept open.

The British Navy, which has been cut down on the theory that the United States Navy would take care of its defense problems, will have to ask for more money now, and doubtless the new European arms plan discussion will include that subject.

The new orders to cut the Navy explain now not only why the large carrier *United States* was canceled but why Generals Bradley and Vandenberg voted against modernizing the existing carriers. They felt the money should not be spent for a fleet that was going into moth balls, anyway. As a matter of fact, so far as fighting strength is concerned, the whole Navy appears to be destined for moth balls. For without at least a task force of four carriers in each ocean, the Navy becomes a freight line that can't protect itself or its convoys against enemy submarines or long-range bombers.

Transportation of Alcoholic Beverages

EXTENSION OF REMARKS
OF
HON. GARDNER R. WITHROW
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 10, 1949

Mr. WITHROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following petition:

To Our Senators and Representatives in Congress:

We respectfully request that you use your influence and vote for the passage of a bill to prohibit the transportation of alcoholic-beverage advertising in interstate commerce and the broadcasting of alcoholic-beverage advertising over the radio. The most pernicious effect of this advertising is the constant invitation and enticement to drink. The American people spent $9,640,000,000 for alcoholic beverages in 1947, as compared with $7,770,000,000 in 1945. During the same period there was a corresponding increase each year in crime, juvenile delinquency, broken homes, deaths, and injuries due to intoxicated drivers, in the number of alcoholics, and also of habitual or heavy drinkers. There is every reason why this waste of money and of human values should not be increased but rather greatly decreased.

Lillie Gundersen, Mr. and Mrs. A. J. Holt, Annie Thompson, Mrs. George Ingwile, George A. Ingwile, Art Jacobson, E. Arling Jacobson, Mary Erickson, Blanchardville, Wis.; Donald Berg, Mr. and Mrs. Isaac Berg, Argyle, Wis.; Sherman Hermanson, Mrs. Sherman Hermanson, Mr. and Mrs. Andrew Ayers, G. M. Ingull, Mrs. C. E. Guldhang, Walter J. Robb, Thelma Emberson, Mrs. Philip Paulson, Phil Paulson, Roland Strommen, Harry Lien, Mrs. Harry Lien, Lois Disruid, Mrs. Theressa Martin, Mrs. H. A. Disrud, Mrs. O. H. Schindler, Mrs. William Robb, William H. Robb, Floyd Allen Hendrickson, Torgney Kleven, Lowell Kleven, Mrs. Arthur H. Hustad, Blanchardville, Wis.

Are You Opposed to 50 to 60 Cents Per Hour Minimum Wage for Producers of Food and Fibers?

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 9, 1949

Mr. MURRAY of Wisconsin. Mr. Speaker, the 19-year study by Dr. Wiley Goodsell of the Bureau of Agricultural Economics of the United States Department of Agriculture indicates that a 90 percent parity support price really means that it represents a minimum wage of 50 to 60 cents per hour for farm operators and hired farm labor. In southwestern wheat area this hourly wage may exceed this 50 to 60 cents per hour.

I refer you to the official table prepared by the Bureau of Agricultural Economics of the United States Department of Agriculture on page A3560 of the CONGRESSIONAL RECORD dated June 8, 1949. This table, as you can check, shows that in 1943 the hourly labor return was 73 cents per hour for southern Wisconsin on a typical, not average, dairy farm, and 56 cents per hour labor return for a typical central New York dairy farm. It should be noted that a subsidy was being paid at that time and that the product, milk, was selling not for 90 percent of parity but more than 100 percent of parity. You will also note that the hourly labor return for Black Prairie and Delta of Mississippi cotton growers was 46 cents per hour. This raises the question, "Are you opposed to have the American farmer receive a minimum wage of 50 to 60 cents per hour?"

On the basis of many years of observation, my personal opinion is that a support program should not cost the Federal Treasury much, if any, money. During the adjustment period it, of necessity, would require some public expenditure. The Marshall-plan funds have been used for shipping cotton, tobacco, wheat, rice and peanuts, thus removing an apparent

loss on these products, although the United States Treasury has been depleted just as much as if a subsidy had been paid. We must produce a little too much to be sure to have enough.

If any program is put in operation on a straight-across-the-board basis it might cost the American taxpayers many billions of dollars. During 1947 and 1948 the American farmers received around $30,000,000,000 for their products each year. Since the farmer receives 50 percent or less of the consumer's dollar, the consumer would pay $60,000,000,000 each year for their farm products. A 10 percent reduction in prices to the consumer would cost someone $6,000,000,000.

Present wartime excise taxes represent about $1,700,000,000 annually. Would you be willing to enact an additional excise tax or a processing tax to provide the billions necessary to operate the Brannan plan? Or, just how would one obtain these funds? Large percentages of our mail are requests to remove the wartime excise taxes.

Since no one has attempted to answer the question as to how a buy-low-sell-high program is to be financed, it is rather apparent that this is a most embarrassing question. However, one fact is quite evident, and that is that this is the first question without an answer by Washington. And, when politics and economics get mixed up together it appears that politics always seems to rise first to the top of the can. No one can deny that the straight-across-the-board program would cost between 5 and 10 billion dollars per year, according to present commodity prices, and how effectively the necessary reestablished OPA would operate. The only weakness in the present support program is its administration, as it cannot be politically administered without involving excessive costs.

There are certain facts that we must face, and I enumerate them as follows:

First. A support program cannot be economically administered unless the support is extended to only the commodities needed in the United States, and exported commodities must not enjoy export subsidies.

Second. A support program cannot be expected to be successful unless it places a control on the amounts of crops and commodities to be supported, and this control must be based on pounds, bushels, and tons and not on the number of acres. How much longer are funds to be wasted before recognizing this fact?

Third. Any support program will be unsuccessful unless it includes some control over competitive imports. This is more apparent each day.

Fourth. We are importing more pounds, bushels and tons of agricultural products than we export, and it is unfair to expect the taxpayers of this country to pay taxes to support the agricultural products of the whole world, as is the case in certain commodities today.

Fifth. The world price plus the present duties are less than the support price of many agricultural commodities. A duty based on parity should accompany a support program if the support program is to be based on a percentage of parity.

The Reds "Take" Shanghai

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 10, 1949

Mr. HORAN. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I am pleased to include the following article from last Sunday's New York Times:

COMMUNISTS RAISE LAND TAX A HUNDREDFOLD IN SHANGHAI

(By Henry R. Lieberman)

SHANGHAI, August 6.—Both Chinese and foreign owners of property in Shanghai, accustomed to paying their taxes in depreciated currency under the Kuomintang, are rubbing their eyes at whopping bills now being rendered for land tax by the Communist Government here.

The land tax has been set at 100 times the standard values originally fixed for 1949 last November while the Kuomintang still controlled Shanghai. In addition to presenting bills on this basis for the next 6 months, the Communists have in a number of cases claimed arrears from institutions whose property formerly was exempt from taxation.

Foreign-owned mission property is subject to taxation. Still unsettled is the question of property owned by foreign consulates whose legal status is not recognized by the Communists in the absence of formal diplomatic relations. The United States consulate, it is reported, has received bills for a house tax, but the bills have not yet been paid.

AMERICAN SCHOOL TO CLOSE

The Shanghai American School, heretofore exempt as an educational institution, was reported preparing to close today after having received a bill amounting to $76,000 (United States) to cover a land tax for the next 6 months plus alleged tax arrears.

British owners of the unused Shanghai race course, which did not reopen after VJ-day, are wondering what to do about their own tax bill amounting to about $180,000. The race course is located inside the city. The Nationalists, who frowned upon horse racing from the standpoint of austerity, exempted the property from taxation inasmuch as they kept the track from opening. Now, according to a spokesman, the Shanghai racing club operators have received a tax bill, including a tax assessment, of $25,000 for the next 6 months plus $160,000 for 3½ years of alleged arrears.

Another hard-hit institution is the Anglican Holy Trinity Cathedral whose tax bill is equivalent to $56,000.

"There must be some mistake," observed the Very Reverend A. C. S. Trivett, dean of the cathedral.

The regulations permit the exemption of private land on which the office of a benevolent or educational institutions is situated and a 50-percent reduction in the tax on private land used by schools or hospitals. There is also a provision for protest but the regulations require the payment of taxes on a specified date and call for a later readjustment if an exemption or reduction is granted.

The penalties are heavy for the nonpayment of taxes. They include interest of 3 percent on the entire tax for each day of delay, plus a 50 percent fine if the delay is more than 20 days.

REASONABLE IN NORMAL TIMES

A representative of a large foreign-owned real-estate company whose holdings are said to have been taxed at about $145,000 said this land tax would be reasonable enough if business conditions were normal in Shanghai. However, such taxes, he said, were difficult to pay under conditions of severe economic depression, disruption of trade by the Kuomintang blockade and undervaluation of foreign currency because of the lack of demand for foreign exchange.

Confronted with their own financial difficulties in administering a city of 6,000,000, the Communists appear to prefer an austerity retrenchment and taxes to the Kuomintang type of paper money inflation in meeting their budgetary problems.

The padded staffs of government organizations are being cut down and economies effected in all administrative branches. As an example of how taxes are being applied, it now costs $135 to register an automobile for 3 months. The price of gasoline is $2.72 a gallon, with the government getting an estimated two-thirds of this amount.

As a result, the number of automobiles in operation has been reduced more than 50 percent. According to the public utility bureau, 5,019 automobile owners have turned in their licenses. There is not as much traffic as there used to be, but to that extent the government is now able to conserve dwindling stocks of imported gasoline.

Government by Dictation—British Merchants Victims of Government Decree in Private Business

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 10, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including a news item bearing a London date line of August 10, which appeared in the Washington News for today and which indicates that a quarter million British small-business men are in revolt against the Government decree which compels them to reduce the price of clothing and shoes in their stores 5 percent. Here is the perfect example, Mr. Speaker, of what we can expect when Government takes over business and industry for political purposes. Mr. Speaker, it can happen here, also, and we are well on the way to that situation right now.

ANOTHER BRITISH CRISIS—RETAILERS REVOLT AGAINST CLOTHING-PRICE CUT

LONDON, August 10.—Some 250,000 British shopkeepers revolted today against a Government-ordered 5-percent cut in clothing and shoes.

Representatives of the shopkeepers urged all British retail merchants to ignore the Government order.

The shopkeepers voted to maintain their present prices unless the Government consulted them before the price-reduction order becomes effective next month.

The resolution accused the Labor Government of ordering the price reduction as a political maneuver at the sole expense of retail traders.

The protest, coming amid an increasingly aggressive Conservative Party election campaign charging the Labor Government with mismanagement, was certain to embarrass the Government even further.

Bernard Morgan, chairman of the National Chamber of Trade which organized the protest meeting was loudly cheered when he declared:

"We are witnesses to a disgraceful example of political expedience of the worst kind. The president (Board of Trade President Harold Wilson) has embarked on a course of action to meet the wishes of one section of the community at the expense of another."

The Government ordered the reductions July 28 without consulting the retailers. The reductions covered clothing, shoes, and textiles.

The shopkeepers overrode legal objections by leaders of the chamber of trade and voted down a milder protest against the order.

The milder protest asked the board of trade to reopen negotiations with representatives of the shopowners before implementing the order.

The shopkeepers' action came as the Conservative Party issued a pamphlet charging the Labor Government had lost more than $280,000,000 on nationalized industries in 2 years.

False Economy

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 10, 1949

Mr. MULTER. Mr. Speaker, FHA, with an unusually high type of personnel, headed by men who have been doing an excellent job, is one of the few Government agencies that have been operating at a profit ever since its organization. It is doing an important and a necessary job, yet it is hamstrung because of lack of funds with which to properly carry on. Despite diligent and intelligent attention to duty the men in the Federal Housing Administration cannot possibly keep up with the tremendous amount of work that falls to their lot. On the one hand Congress is enacting legislation to relieve the housing situation and on the other hand withholding the appropriations with which that goal can be properly accomplished. The following editorial which appeared in the Brooklyn Eagle of August 9, 1949, tells the story as it exists not only in the New York area but throughout the country.

LACK OF INSPECTORS IN FHA CAUSES DELAYS IN HOUSING—AND WORSE

Four years after the war, housing still remains one of the Nation's top problems. Families are still living in quarters too small for them or doubling up with relatives because homes of their own are unavailable or beyond their means. It is true the Government is helping to finance or insure a good many dwellings and that in a few months the multibillion-dollar housing program just authorized by Congress will get under way.

But a disquieting note is sounded by Thomas G. Grace, the Brooklynite who is New York State Administrator for the Federal Housing Administration. Congress, it seems, has been generous enough in appropriating funds for large-scale Government-underwritten housing, but it has been downright niggardly in giving money to administer the housing program. Mr. Grace states flatly that his office is hopelessly undermanned in all departments, including the important one of inspection. From all accounts, the same situation applies all over the country.

It has been reported in some cities that project after project is being built without essential inspection. Official files are said to show numerous instances in which builders have used material that does not meet FHA standards. The result is that higher maintenance costs are almost inevitable, with subsequent higher rents and repair bills for owners and occupants. Apparently inspection is being carried out in this area, but Mr. Grace frankly admits that proper inspection is being maintained at the expense of expediting cases. There is, he says, a heart-breaking delay in the processing of applications.

The small New York staff, numbering only 135 clerks, typists, examiners, inspectors, and so on, in the last 6 months processed nearly 26,000 dwelling units and nearly 18,000 apartment-house units throughout the metropolitan area. There are 24,000 more applications on hand, awaiting action instead of being available for the families that need housing so desperately.

As Mr. Grace points out, even with the best will in the world, FHA employees cannot do the impossible. Nor should they be asked to. Our legislators ought to realize that the job is not done when they have voted aye on appropriating funds. They also have to see that the disbursement of those funds is properly supervised. Otherwise, not only the Government will be cheated but also those of its citizens who look to it for relief from their housing dilemma.

Refunds of Dividends on National Service Life Insurance

EXTENSION OF REMARKS
OF
HON. GERALD R. FORD, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 10, 1949

Mr. FORD. Mr. Speaker, a great many citizens are disturbed because of the possible delay in the refunding of dividends to GI's on their National Service Life Insurance. I am including as a part of my remarks an editorial that appeared in the Columbus (Ohio) Evening Dispatch of August 1, 1949. It must be admitted that several of the statements in the editorial are a bit strong in denouncing the VA delay, but I certainly wish to join in condemning the failure of the leaders in the Democratic administration to remove the defunct War Assets Administration from the needed floor space so the VA could move in, do the job and get those dividends or refunds in the hands of the veterans.

AN OLD, SHABBY TRICK

There is no particular reason to doubt the charge leveled at the Truman administration by Representative KEATING, of New York, that the White House intends to manipulate the veterans' insurance refund for political purposes. The Republican Congressman says that the bulk of the beneficiaries of the $2,800,000,000 fund will be getting their checks around election day in 1950, just as * * * planned. Timing the release of Federal funds whenever possible in campaign years is an old standard—and shabby—New Deal-Fair Deal practice. It was worked to a fare-you-well in Presidential years during the Roosevelt tenure. Farmers, for example, needed no calendars. The gentle rain of AAA checks always swelled to a cloudburst just before the first Tuesday after the first Monday in November.

As Representative KEATING points out, the Government has had ample time to refund the money overcollected under the wartime servicemen's insurance program. It became apparent nearly 2 years ago that a huge surplus—totaling almost $3,000,000,000—would not be needed to pay death claims. But the administration dillied and dallied until June 1948 under pretext of obtaining Supreme Court sanction. That was granted in June 1948, since which date the Government has dallied some more, although an official statement at that time said the payments could be made within 6 months.

Now, the Veterans' Administration says that the application blanks will be ready August 29 and that President Truman has ordered the job completed by June 30, 1950. But it is significant that the VA has not as yet been able to locate floor space to start the refund process and seems in no particular hurry, although Representative KEATING states that the War Assets Administration has the space if the White House will ask for it.

It would seem that the Federal bureaucracy, with pay rolls at an all-time, peacetime high ought to be able to handle a routine job of taking applications, processing them and mailing checks—though there are 16,000,000 of them—in less than 3 or 4 years. Particularly since this is money to which the policyholders are entitled and which some may need rather badly. But that is not the Fair Deal way, even though it would have a private insurance company which operated with similar leisurely inefficiency in court before you could say Boss Pendergast.

Old-Age Assistance

EXTENSION OF REMARKS
OF
HON. NORRIS COTTON
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 10, 1949

Mr. COTTON. Mr. Speaker, long before coming to Congress I became concerned about the situation faced by needy old folks. As a county attorney I was constantly involved in the task of trying to arrange support of dependent elderly people by their children or other relatives and realized again and again the inadequacy of our laws to cope with this general problem. My interest in this subject has increased with the passing years. These years have been marked by changes in our economic and social order and each change has seemed to injure our senior citizens more than any other group. Though they live in the wealthiest nation on earth, time and events continue to make their life more burdensome. Yet the Congress continues to give them lip service and kind words and defers action upon the issue of old-age assistance or pensions.

There was a time when there was reason for this delay. That was when a great organized lobby was demanding the impractical Townsend plan or nothing. The old people suffered from that

insistence. That problem no longer exists, however, and the old people are awaiting some action by Congress for a reasonable provision for a group that has been sadly neglected. While they wait, Congress has passed the largest appropriations bills of any nation in history. These measures involve billions of the taxpayers' money for foreign aid, national defense, housing, farm price supports, veterans' benefits, and also pay raises for Cabinet officers, bureau heads, military personnel and others. In the meantime, Congress continues to shed tears over the plight of the aged but does nothing about it.

It is a striking fact that the trend in our national economy has placed the old people in greater jeopardy from year to year. Age limits for industrial employment are constantly declining, making it more difficult for the older men to get or hold a job. With machines replacing men more applicants compete for the jobs that are left. What chance has an elderly man or woman to earn a livelihood? The Census Bureau tells us that our population is increasing beyond all past estimates—that we now total about 150,000,000, a gain of 17,000,000 since 1940. That gain represents more than the population of all the New England States combined and the age group over 60 is the one that has increased most. There are more than 16,000,000 of these. Incidentally, my State of New Hampshire has the higher percentage of those over sixty in relation to its population than any other State of the Union, except Florida. Of the 16,000,000, it is estimated that 10,000,000 are dependent upon someone else for their living. Modern science has prolonged their lives but has not produced jobs for them. They find now they are too young to die and too old to live.

During the recent debate on the minimum wage bill we were told again and again that 75 cents an hour or $30 a week was hardly enough for an individual to live on. Yet there are 2,500,000 American citizens now on the old-age assistance rolls getting a pitiful sum of $10 a week, on an average.

Mr. Speaker, we have waited in vain for an opportunity to vote on legislation to remedy this situation. We are now marking time, waiting for the various administration proposals to come out of committees. Naturally Members are impatient as they see the summer passing without their being able to return to their homes and districts for a reasonable period. They regard it as a waste of valuable time. Let us remember that there is a great segment of our people to whom time has become infinitely more valuable than to most of us. They have comparatively little time left to live and each month and year that passes without action which will give them reasonable comfort in their old age and at the same time permit them to retain their self-respect, is a tragic waste of time. We have all come to accept a new viewpoint with reference to our duties to the rest of the world. Let us remember that the days of the pauper are past and waste no more time in facing this problem.

Foreign Imports of Crude Oil and Refined Petroleum Products Into the United States

EXTENSION OF REMARKS
OF
HON. KEN REGAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 10, 1949

Mr. REGAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

SPEED OIL CO.,
Houston, Tex., August 4, 1949.

Subject: Foreign imports of crude oil and refined petroleum products into the United States.

Hon. KEN REGAN,
House of Representatives,
Washington, D. C.

DEAR KEN: The writer was born at Corsicana, Tex., where his father has been producing crude oil continuously since 1898. A full lifetime has been spent in the domestic oil industry by the writer since maturity, with the exception of 6½ years spent in college. During the war, I served as Chief of Exploration Section, Reserves and Production Division, of the Petroleum Administration for War in Washington, D. C. Based on a lifetime in the business, plus my education as a geologist and independent oil producer, I wish to offer a brief summary of the dangers facing the independent oil man in the United States. Most of these dangers have a direct bearing on the military security of this Nation.

1. World War II proved that naval reserves such as Elk Hills in California have no value unless they are fully developed and connected to pipe lines which run to completed refineries capable of delivering ordnance materials required to prosecute a war.

2. Steel material, capable technologists, and skilled drilling labor were drained off to other industries and were scattered and not available for development of our set aside petroleum reserves in time to be of material assistance during World War II.

3. Some of our recent new discoveries in Texas are within 50 miles of the Lucas gusher in the Spindletop field—the first well in United States history to flow as an enormous gusher. This sharply focuses our attention on a fact known by all geologists and many practical oil men—that it takes a long time and large outlays of capital to discover and develop substantial reserves of petroleum.

4. What is the logical market for the vast oil reserves now being uncovered in Canada? If not imported into the United States, it will certainly compete with us elsewhere in foreign markets.

5. The international cartels who owe allegiance to no flag, used steel badly needed in this country to develop oil reserves that everyone knows Russia could take in a matter of hours and use against the United States in a third world war. This steel bought at regular prices forced the domestic independent industry to pay exorbitant black-market prices to stay in business.

6. The writer has recently been told of a 5-year contract to purchase Middle East crude which was recently executed in New York whereby the purchaser is to pay 15 cents per barrel under the average posted price of domestic crude laid down on the Eastern seaboard. This action constitutes dumping and is unfair competition.

7. The independent segment of the industry pays a huge tax bill, and this tax money buys oil for Europe from the Middle East while the domestic producer has his allowable cut and is not allowed to furnish petroleum to Europe.

8. International cartels (temporarily at least) sever all contacts and obligations with various falling governments, while the independent segment is married to the United States and exists or falls with this Government.

9. The ever increasing size of the oil trust can leave no doubt in anyone's mind but that the large units operate as a monopoly. The advantages of operating as an integrated company permit the integrated company to put the financial squeeze on independents who specialize in one end of the business. During World War II, the financial squeeze was on the independent producer. In the face of rising material and labor costs the price of raw crude was frozen. The large company fabricated war goods such as 100 octane, codimer, cumene and toluene, and other special war products for which they received as high as 50 cents per gallon. All of these products came from a frozen price basic raw material—crude petroleum. The small independent did not realize any profit from the high price special war products fabricated and sold from his cheap crude. Instead the independent was meeting manpower problems and being squeezed between rising labor and material prices while his money crop (crude oil) received no price raise at all.

10. The Legislature of the State of Texas has recently been seriously embarrassed as a result of cut-backs in the allowable of Texas crude production. It was necessary to cut back Texas crude production as Middle East crude had supplanted domestic crude. The State's decreased income from smaller crude oil allowables means that the entire program for the expansion and improvement of eleemosynary institutions must be revamped. The State is losing approximately $30,000,000 in taxes per year from lower crude oil runs.

11. Labor is losing heavily as oil labor and office personnel are being drastically reduced.

12. The greatest danger of all is that the United States may lose world war III because of a lack of excess productive capacity of crude petroleum which must be developed in peacetime when labor and materials are more readily available.

It is my belief that the proposed program of allowing 5 percent of our domestic consumption to be imported is a partial solution of the problem. In reality the domestic producers should be permitted to furnish part of Europe's requirements—at least that part that United States money is paying for.

It is my hope that I have helped to give you some facts and information relative to the importance of limiting foreign imports of crude oil and refined products. The small independent producers must have your help to survive.

Sincerely yours,

CARLETON D. SPEED, Jr.

Act Adopted by Legislature Authorizes Territory of Hawaii To Engage in Stevedoring Industry To Meet Crisis Presented by Strike of Longshoremen

EXTENSION OF REMARKS
OF
HON. JOSEPH R. FARRINGTON
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 9, 1949

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the text of the

act passed in a special session of the legislature and approved by the Governor of Hawaii on Saturday, August 6, authorizing the Territorial government to engage in the stevedoring industry in order to bring about a resumption of shipping operations between Hawaii and the mainland.

The text of the act is as follows:

[Act 2]

An act relating to the stevedoring industry and related facilities and services, including terminal services; declaring that strikes, lock-outs, stoppage, slow-downs, or retardation of services in said industry and said related facilities and services imperil the public health, safety, and welfare; declaring a public emergency arising from the present stevedoring strike; providing for the Territory of Hawaii to take possession of and take over and operate such stevedoring industry and such related facilities and services during the aforesaid emergency and other emergencies occurring thereafter; providing for injunctions against interference with the conduct of such operations by the Territory by strikes, other concerted activities, or other means; conferring certain powers and imposing certain duties upon the Governor of the Territory of Hawaii in regard to such industry, facilities, and services before and during such emergencies, including the power to make rules and regulations for carrying out the provisions of this act; providing penalties for violations of such rules and regulations; making an appropriation and providing other funds in connection herewith.

Be it enacted by the Legislature of the Territory of Hawaii:

SECTION 1. Findings and declarations of legislature: The legislature takes cognizance of the fact that a strike in the stevedoring industry of the Territory of Hawaii has been in effect since May 1, 1949; that the parties to said dispute have carried on extensive collective-bargaining negotiations over a period of more than 6 months and have failed to reach any agreement; that voluntary mediation by the Territory and by Federal agencies has failed; that the Governor has called an emergency board which after full hearings found the facts with respect to the dispute and made a recommendation, which recommendation was accepted on one side but rejected on the other; that the continuous furnishing of stevedoring services, together with all related facilities and services (including terminal services) necessary to the loading and unloading and arrival and departure of vessels at ports in the Territory of Hawaii is essential to the public health, safety, and welfare; that strikes, lock-outs, and stoppage, slow-down or retardation of services in such stevedoring industry, or in such related facilities and services, imperil the public health, safety, and welfare; that a public emergency now exists due to the aforesaid stevedoring strike; that in order to provide for the immediate resumption of services in the present emergency, in the most expeditious and practical manner, it is necessary that the Governor be authorized to take over and operate the stevedoring companies involved in the dispute, together with such related facilities and services as he may deem necessary to open and keep open to commerce the ports of the Territory of Hawaii.

In making these findings the legislature has taken into consideration, in addition to the foregoing, the geographical isolation of these islands and their dependence upon imports and exports for the necessities of life and the functioning of their essential economy, and the fact that continuous ocean shipping is a life line essential to the existence of the community.

SEC. 2. Definitions: As used in this act unless the context clearly indicates otherwise:

(a) The term "person" includes one or more individuals, labor organizations, partnerships, associations, corporations, legal representatives, trustees, or receivers.

(b) "Stevedoring industry" means the business of furnishing services for the loading and unloading of cargo transported or to be transported on vessels and other craft and the handling of lines of vessels and other craft, at any ports within the Territory of Hawaii. "Stevedoring services" means services for the loading and unloading of cargo transported or to be transported on vessels and other craft and the handling of lines of vessels and other craft, at any ports within the Territory of Hawaii.

(c) "Related services" means and includes all services, other than stevedoring services, ordinarily or necessarily performed in regard to cargo, goods, wares, and merchandise of every kind arriving at a terminal facility for shipment by or discharge from vessels and other craft; and "related facilities" means and includes all facilities in connection therewith.

(d) "Company" shall mean any person engaged in the stevedoring industry or related services as an employer.

(e) "Labor dispute" means any controversy concerning wages, hours, or other terms or conditions of employment, or concerning the association or representation of persons in negotiating, fixing, maintaining, changing or seeking to arrange wages, hours, or other terms or conditions of employment.

(f) "Dispute" means any labor dispute or other controversy between an employer and its employees.

(g) "Strike" means the temporary stoppage of work, slow-down, or retarding of production or operations by the concerted action of two or more employees as the result of a labor dispute, whether the labor dispute is between such employees and their employer or between any other persons.

(h) "Lock-out" means the refusal of an employer to furnish work to employees as the result of a labor dispute between such employer and its employees.

(i) "Labor organization" means any organization of employees which exists for the purpose, in whole or in part, of collective bargaining or of dealing with employers concerning wages, hours, and other terms and conditions of employment.

(j) "Bargaining unit" shall mean the unit appropriate for the purposes of collective bargaining as determined under the Federal Labor Management Relations Act, as amended from time to time.

SEC. 3. Government operations: (a) If, upon the taking effect of this act, the Governor finds that the emergency declared by the legislature in section 1 still continues, he shall issue a proclamation of such emergency. Such proclamation shall urge the parties to the dispute to forthwith resume work and operation in the public interest, and it shall state that if such work and operation is not resumed forthwith, he will, pursuant to the provisions of this act, take immediate possession of such stevedoring companies involved in the dispute, together with such related facilities and services as he shall find necessary to carry out the purposes of this act. Before or after such proclamation the Governor may make such preparations as he may deem necessary or proper to carry out the provisions of this act. After such proclamation and immediately upon the completion of such preparations the Governor shall take possession of the entire business, plant, and facilities, including related facilities, of each stevedoring company involved in the dispute, or so much thereof as the Governor may deem necessary, in order to carry out the purposes of this act, and shall operate the same. It is the intention of this act that such government operations shall be a temporary expedient to safeguard the public interest pending the settlement of the dispute by the parties.

(b) Such government operations may be conducted by the Governor through such department or agency of the Territory as he may designate, and he may delegate to such agency such of his powers as are necessary to conduct such operations.

(3) The Governor shall have such power and authority as shall be reasonably necessary to conduct such government operations in a manner consistent with the public health, safety, and welfare, including without limitation upon the generality of the foregoing the power to make such contracts and arrangements with shipowners, charterers, agents and operators, wharf and pier owners and operators, stevedoring companies, trucking operators, warehousemen, and other persons as may be required in order to provide stevedoring services and related services. The Governor shall have the power to make contracts without regard to the provisions of sections 351-363 of chapter 9, Revised Laws of Hawaii 1945, and, specifically, the certificate of the auditor as to the availability of an unexpended appropriation or balance of an appropriation to cover the amount required by any such contract, shall not be required.

(d) In operating each company the Governor, so far as possible, shall employ or engage the personnel, including employees on strike, employed by such company upon the taking of possession thereof or immediately prior to the beginning of the strike. Persons so employed or engaged by the Governor or otherwise employed or engaged by the Governor shall not by reason of such employment be or become entitled to civil service, retirement, vacation, or other benefits provided by law for other employees of the Territory, nor shall they be required to possess the qualifications of other government employees, and no person shall be ineligible for employment by reason of the fact that he is not a citizen of the United States or of the Territory: *Provided,* That, if it shall be necessary to employ persons who were not theretofore employed by the company, such persons shall possess the residence qualifications prescribed by section 451 of the Revised Laws of Hawaii 1945: *Provided, further,* That all citizens employed or engaged by the Governor under the provisions of this act shall subscribe to the oath or affirmation prescribed by the provisions of chapter 13, Revised Laws of Hawaii 1945, and all noncitizens shall subscribe to the following oath or affirmation:

"I, ------, do solemnly swear and declare, on oath, that I am not now, nor have I been at any time within the 5 years next preceding the taking of this oath, a Communist or a member of the Communist Party; that I have not at any time within the 5 years next preceding the taking of this oath held membership in, paid assessments, dues, or made contributions to any organization or any political party which advocates the overthrow of the constitutional form of government of the United States of America or any change in the Government of the United States of America, except as provided by its Constitution; that I take this obligation freely, without any mental reservation or purpose of evasion; so help me God."

Upon being satisfied as to the sincerity of any person claiming that he is unwilling to take the above-prescribed oath only because due to religious beliefs he is unwilling to be sworn, he may be permitted, in lieu of such oath, to make his solemn affirmation which shall be in the same form as the said oath except that the words "sincerely and truly affirm" shall be substituted for the word "swear," and the phrases "on oath" and "so help me God" shall be omitted.

The salaries and wage rates of the persons employed by the Territory shall not be higher than those which existed in the industry immediately prior to the beginning of the strike. There shall be no deductions from such salaries and wages except as authorized by law in the case of other Territorial employees. The hours of employment shall be the same as existed in the industry immediately prior to the beginning of the strike, and, insofar as possible, the other conditions of employment shall be the same as then existed, and neither the Governor nor the designated agency shall have authority to enter into negotiations with any such company or with any labor organization for a collective-bargaining contract with respect to wages, hours, and other terms and conditions of employment in the industry.

(e) There is hereby established in the treasury of the Territory a revolving fund to be known as the stevedoring revolving fund. The sum of $250,000 is hereby appropriated to said fund from the general revenues of the Territory and shall be deposited in said fund. The Governor may further augment said appropriation from his contingent fund, and in addition thereto may cause to be deposited in said revolving fund as a loan or loans from the general fund further amounts from time to time as required for the purposes of this act, but the amount of such further loans from the general fund, outstanding at any one time, shall not exceed $250,000. All revenues collected by the Governor shall be deposited in said revolving fund and are hereby appropriated for the purposes thereof. Expenditures may be made from said stevedoring revolving fund for any and all of the purposes of this act and the operations of the government under this act, including without limitation of the generality of the foregoing, the compensation of employees and for other personal services, other current expenses, insurance, taxes, and expenditures for the performance of any and all contracts and arrangements authorized by this act. Such expenditures may be made by the Governor or the Governor may allot any money in said fund to the designated agency for expenditure upon his or its own vouchers.

(f) Charges shall be made and collected for deposit in said revolving fund. Such charges so far as possible shall be based upon the rates prevailing in the industry immediately prior to the commencement of the strike, but due consideration shall be given to current conditions existing in the industry, including the expenses and other costs incurred or which may be incurred by the Territory under this act. Each company shall be operated by the government for the account of the company, and from time to time the Governor shall pay each such company from the revolving fund the revenues derived from the operations of the company under the provisions of this act, after deducting therefrom all of the costs and expenses of such operations of the company, including insurance and taxes, and after further deducting a fee computed in the amount of one quarter of 1 percent of the gross revenues of the company so operated by the Governor. Such fee shall be a realization of the Territory but shall remain in the revolving fund available for the purposes thereof: *Provided*, That each such company shall have the right to elect, by written notice filed with the Governor within 10 days after the taking of possession of the business, plant, or facilities of such company pursuant to paragraph (a), to waive all claims, under the preceding provisions, to the revenues of operations, and to receive in lieu thereof fair and reasonable compensation for the appropriation and use of its property, without allowance for prospective profits, for which compensation such company shall be entitled to sue the Territory in the manner provided in chapter 220, Revised Laws of Hawaii 1945, provided that such suit shall be instituted within 3 months after the termination of such appropriation.

SEC. 4. Termination of government operations: (a) Whenever any company, whose business, plant, or facilities have been taken over by the Territory, and its employees involved in the dispute shall jointly report in writing to the Governor that they have arrived at an agreement adjusting and terminating the dispute out of which the strike arose, and that they are in a position to immediately resume and continue without interruption their services and the operation of such company, the Governor shall forthwith terminate the government operation of and restore such business, plant, or facilities to such company.

(b) Whenever in the opinion of the Governor government operation of any such company is no longer necessary to preserve the public health, safety, and welfare he shall, without regard to the settlement or continuation of the dispute, forthwith terminate the government operation of and restore such business, plant, and facilities to such company.

(c) Whenever a majority of the employees engaged in stevedoring services in any bargaining unit report to the Governor in writing stating that they are in a position to and can and will resume operations and render normal stevedoring services for the company which employed them before the dispute on terms satisfactory to themselves and such company, and shall satisfy the Governor of the correctness of such statement and that all related services will also be available, the Governor shall forthwith terminate the government operation of and restore such business, plant, and facilities to such company. In the event that the Governor for any reason refuses to terminate government operation of such company, such employees shall have the right to have an order issued by the circuit judge at chambers in equity of the circuit in which such company is located to show cause why such government operation should not be terminated. Such order shall be served upon the attorney general of the Territory and shall be returnable in 10 days. The decision of such court shall be final as to the conditions then existing, but shall not be a bar to subsequent applications for such order to show cause. For the purposes of this paragraph one or more employees may be appointed by the court to represent the class of employees applying for the order to show cause.

(d) Whenever any company whose business, plant, or facilities have been taken over by the Territory reports to the Governor in writing stating that it is in a position to and can and will resume operations and render normal stevedoring services by its employees involved in the dispute on terms satisfactory to itself and such employees, and shall satisfy the Governor of the correctness of such statement and that all related services will also be available, the Governor shall forthwith terminate the government operation of and restore such business, plant, and facilities to such company. In the event that the Governor for any reason refuses to terminate government operation of such company, such company shall have the right to have an order issued by the circuit judge at chambers in equity of the circuit in which such company is located to show cause why such government operation should not be terminated. Such order shall be served upon the attorney general of the Territory and shall be returnable in 10 days. The decision of such court shall be final as to conditions then existing but shall not be a bar to subsequent applications for such order to show cause.

SEC. 5. Interference with government operations; injunctions. During any period of government operations as provided for by this act it shall be unlawful for any person or persons to engage in a strike or any other concerted activity interfering or threatening to interfere with the conduct of any such operations by the Territory, or to aid or encourage any such strike or other concerted activity by giving direction or guidance in the conduct thereof or by providing funds for the payment of strike, unemployment, or other benefits to persons participating therein. It shall be unlawful for any person or persons to engage in a strike or other concerted refusal to transport or otherwise handle any cargo loaded or unloaded or to be loaded or unloaded by the government, pursuant to the provisions of this act, or to engage in a strike or other concerted refusal to perform services on any vessel worked by the government, where an object of any such strike or concerted refusal is to force or require the employer of any such person or persons to cease doing business with the government as the operator of such business; or to aid or encourage any such strike or concerted activity by giving direction or guidance in the conduct thereof or by providing funds for the payment of strike, unemployment, or other benefits to persons participating therein. The provisions of this section shall be enforceable by injunction proceedings as herein provided.

The attorney general at his own instance or at the request of the governor or the designated agency, in the event any person shall be violating or failing to comply with the provisions of this section, or there shall be reasonable cause to believe that such person is about to violate or fail to comply with the provisions of this section, shall institute appropriate proceedings before a circuit judge at chambers in equity to enjoin the performance of any acts or practices forbidden by this section, or to require such person to comply with the provisions of this section. Jurisdiction to hear and dispose of all actions under this section is hereby conferred upon each circuit judge and each such judge shall have power to issue such orders and decrees by way of injunction, mandatory injunction or otherwise, as may be appropriate to enforce the provisions of this section. All such suits shall be brought in the name of the Territory by the attorney general, and may be brought against any association or labor organization under its common name, in which event process may be served on any officer, trustee or agent of such association or labor organization. In the event of a violation or failure to comply with any such order of the court compensatory or punitive damages may be awarded to the Territory, or such other proceedings may be had as the court may deem proper. The county attorney of each county shall at the request of the attorney general conduct on behalf of the Territory any proceeding provided for by this section.

SEC. 6. Employee need not work involuntarily. Nothing in this act shall be construed to require an individual employee to render labor or service without his consent, nor shall anything in this act be construed to make the quitting of his labor or service by an individual employee an illegal act.

SEC. 7. Law an exercise of police power. This act shall be deemed an exercise of the police power of the Territory for the protection of the public welfare, safety, prosperity, health and peace of the people; and all of the provisions of the act shall be liberally construed for the accomplishment of said purposes.

SEC. 8. Rules and regulations. For the purpose of carrying out the provisions of this act the Governor shall have the power to prescribe rules and regulations having the force and effect of law. The power to prescribe rules and regulations having the force and effect of law shall not be deemed in derogation of the power of the Governor to make orders for the enforcement of the ap-

propriate provisions of this act or the rules and regulations issued hereunder. Such rules and regulations may provide for the making of administrative findings by duly authorized representatives or agencies, or for the application of such rules or regulations by such representatives or agencies as the circumstances may require, and the issuance of orders therefor. Such rules and regulations may provide for maintenance, as part of the stevedoring revolving fund, of special bank accounts and cash funds, for drawing thereon by paymasters or other persons approved by the Governor or the designated agency, and for the manner of accounting therefor. Rules and regulations prescribed pursuant to the provisions of this act shall be promulgated by publishing the same in a newspaper of general circulation in the Territory, or, where only known persons are concerned, the same may be promulgated by service upon such persons by registered mail, or by personal service thereof. The provisions of sections 466 to 476, inclusive, Revised Laws of Hawaii, 1945, shall not be applicable to the rules and regulations prescribed under the provisions of this act. Any person violating any rule or regulation promulgated by the Governor under the provisions of this section shall be guilty of a misdemeanor and upon conviction thereof shall be punished by a fine of not more than $500 or by imprisonment for not more than 3 months, or both such fine and imprisonment.

SEC. 9. Future emergencies. Whenever, and as often as, after the termination of the emergency declared by section 1, a strike or lock-out in the stevedoring industry, or in any related facility or service, or any substantial part of such industry, facility, or service, is threatened or has occurred, and the Governor shall find that such threatened or actual strike or lock-out, if permitted to occur or to continue, will imperil the public health, safety, or welfare, he shall issue a proclamation to that effect declaring an emergency, and shall urge the parties to the dispute to refrain from a stoppage of work, or if such stoppage has occurred, to resume work and operation in the public interest. After the issuance of such proclamation and during the emergency thereby proclaimed, and in the event of an actual strike or lock-out (whether in existence at the time of issuance of such proclamation or occurring thereafter) which imperils or threatens to imperil the public health, safety, or welfare, the Governor is hereby authorized and empowered to exercise every power by this act conferred upon him in regard to the present emergency, including, without limitation of the generality of the foregoing, the power to take possession of and to operate any business, plant, or facility of the stevedoring industry, or of any related facility or service. In any such event every provision of this act shall apply. For the purposes of this section, the terms "strike" or "the strike," as used in sections 3 and 4 hereof, shall be deemed to include, in addition to a strike, a lock-out, and the term "employees on strike," as used in said sections, shall be deemed to include, in addition to employees on strike, employees who are locked out.

SEC. 10. Separability. If any section, sentence, clause, or phrase of this act, or its application to any employer, employee, person, or circumstances is for any reason held to be unconstitutional or invalid, the remaining portions of this act, or the application of this act to other employers, employees, persons, or circumstances shall not be affected. The legislature hereby declares that it would have passed this act and each section, sentence, clause, or phrase thereof, irrespective of the fact that any one or more other sections, sentences, clauses, or phrases be declared unconstitutional or invalid and irrespective of the fact that the application of this act to any one or more employers, employees, persons, or circumstances be declared unconstitutional or invadid.

SEC. 11. Powers in addition to other powers. The powers conferred by this act shall be in addition and supplemental to the powers conferred by any other law, and nothing contained herein shall be construed as limiting any other powers of the Governor.

SEC. 12. Exemption. The provisions of this act shall not be applicable with respect to any person subject to the Federal Railway Labor Act.

SEC. 13. Effective date; expiration. This act shall take effect upon its approval and shall expire 180 days from and after said effective date: *Provided,* That any violation or failure to comply with any rule, regulation, or court order, committed or occuring while this act is in force, may be prosecuted and punished or other appropriate proceedings thereon taken whether or not this act is in force at the time of such prosecution, punishment, or proceedings: *Provided, further,* That notwithstanding the expiration of this act, this act shall remain and continue in force for the enforcement of rights and liabilities which shall have accrued or attached on or before the date of expiration, hereinabove set forth, and for the expenditure of moneys to meet obligations incurred under the authority of this act prior to said date of expiration.

Approved this 6th day of August A. D. 1949.

Living or Just Existing

EXTENSION OF REMARKS
OF
HON. WALTER E. BREHM
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 10, 1949

Mr. BREHM. Mr. Speaker, some of the statements which have been made during the debate on this minimum-wage legislation would indeed be amusing if they did not call attention to a situation which in many respects is indeed tragic.

For instance, it has been repeatedly stated and no one so far has challenged the statement, that the $30 per week which would be received by those working 40 hours per week at a 75-cent minimum, is absolutely essential in order to provide the necessities of life for an average American family. Now, Mr. Speaker, I would like to contrast this statement with the fact that at present 2,801,556 aged people in this country are drawing an average pension of $43.33 per month, or approximately $10 per week. There are also 10,000,000 citizens of 60 years of age who are dependent on someone else for their existence.

These figures are from the Administrator of the Social Security Administration taken from the records and have not been plucked out of thin air.

Now, Mr. Speaker, it seems to me that there has been enough talk dealing with the ill-clothed, ill-housed, and ill-fed and that something more than talk should be done regarding those folks who are asked to keep soul and body together with the present high cost of living on a $10 weekly stipend. It is quite certain that there will not be much left out of the $30 which some families will receive under this proposed legislation with which to add additional comforts and necessities for their aged kin.

Federal Employee Survey May Help Solve Personnel Problems

EXTENSION OF REMARKS
OF
HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 9, 1949

Mr. HAGEN. Mr. Speaker, having been a member of the House Post Office and Civil Service Committee for some years now, I find that many civil service and personnel problems are presented to and considered by our committee in connection with employee legislation. I find that there is a great difference in opinions concerning many of these problems.

Therefore, it occurred to me that a survey of the employees themselves could be made and from their impartial and unprejudiced answers, as far as possible, we could develop a report which may be helpful in considering future legislation.

I have prepared a questionnaire which I expect to send out to a considerable number of Federal employees, both in Washington and elsewhere. It is my intention to send the questionnaire out with a return address card for the use of the employees, so that the answers to the questionnaire can be readily returned to me.

A number of Federal workers residing here in Washington have volunteered to compile and classify the answers to this questionnaire, and to prepare a report for the consideration and use of interested members of the House Post Office and Civil Service Committee. Chairman TOM MURRAY of our committee, has graciously offered me the assistance of one of the staff members in connection with the preparation of this questionnaire, and also in the final development of a report from the answers which may be received.

The report based on the answers received will be developed later this year or early next, and will be made available to all Members of Congress who may be interested.

The main questionnaire follows:

FEDERAL EMPLOYEE QUESTIONNAIRE

Name _____
Address _____
City _____, State _____
1. What is your grade or classification? ___
2. How many years' service in the Government? _____ years.
3. Are you married? Yes __ No __
4. Is your spouse employed? Yes __ No __
5. How many members of your family are dependent on you for support? _____
6. Do you own a home? Yes __ No __
7. Do you own an automobile? Yes __ No __
8. Amount of life insurance carried, if any? _____
9. Do you consider that there is a fair distribution of the work load in your division

among those of equal status or grade? Yes __ No __

10. Do you think your office or division is fully __, fairly __, or over __ staffed? Check your opinion.

11. Do you believe there is more wasted time in your office than would be in private employment? Yes __ No __

12. Are you required to put in any overtime without extra compensation or leave credit in order to keep your work up to date? Yes __ No __

13. Is your salary equal to that of corresponding work in private employment in your city, for similar work and responsibility? Yes __ No __

14. In answering the above, did you consider or evaluate the corresponding security or employment and sick and annual leave rights and retirement benefits? Yes __ No __

15. Are you participating in the Federal retirement plan? Yes __ No __

16. If you could retire with 30 years' service at age of 60, or under, without deduction, would you do so? Yes __ No __

17. What are your plans after retirement? Employment __, part-time employment __, travel __, take things easy __. Check one.

A special questionnaire will be sent out to retired Federal employees. This questionnaire follows:

A. Name _____

B. Address _____

City _____ State _____

C. Grade or class at retirement _____

1. Are you married? Yes __ No __

2. Is your spouse employed? Yes __ No __

3. How many members of your own family are dependent upon you for support? _____

4. Do you own a home? Yes __ No __

5. Do you own an automobile? Yes __ No __

6. Amount of life insurance carried, if any? _____

7. Annual retirement benefit received? _____

8. Is it necessary to supplement retirement benefits by regular private employment ____, by part-time private employment ____, or by drawing on savings _____. Check one.

9. Do you think your division was fully __, fairly __, or over __ staffed? Check one.

Let's Start Calling It the Profit and Loss System

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 27, 1949

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following advertisement from the Pittsburgh (Pa.) Sun-Telegraph of Wednesday, March 16, 1949:

LET'S START CALLING IT THE PROFIT AND LOSS SYSTEM

We have a way of misnaming things in this country—a habit that must afford great comfort to the enemies of our greatest virtues—both at home and abroad.

Let's take what we call the profit system. How they do love to shoot at that one. Of course, in part—it means what it says—that business in this country—all business, large medium, and small, is run, thank God, to make a profit.

And why not? Profits are the number one source out of which business provides itself with the means of progress. To quote a great labor leader: "The greatest crime against labor is a business that fails to make a profit." And any businessman worthy the name knows that the more the profits, the stronger the business, the better the prospect of bigger and better production, higher wages and greater security for workers, and of course, lower prices.

But profits don't come that easily. Not by a long shot.

There are what is known as risks and losses in business * * * that the critics have little to say about.

Such risks as the billions invested in plants, machinery, inventories, laboratories, and the years of human effort, all essential to business progress. For business cannot mark time and keep pace with the wants and needs of our people.

Such losses, for example, as the 129,679 bankruptcies in this country in the 5 years following the boom year of 1929. And in that one boom year more businesses lost money than made money.

Why should these facts be brought into the open? Why admit that this thing called American business is ever anything but a long road paved with gold?

There are two reasons:

First. There's a lot of shooting going on—a lot of loose talk about big profits. We want to straighten that out—and correct the mistaken impression that in business life is just a big bowl of profits.

Second. We'd like to answer a question the critics have very conveniently failed to ask:

Who in the end is the real boss of business and what does he have to do with whether business makes a profit or suffers a loss?

The name of this boss, believe it or not, is Mr. Average Consumer, and all those risks mentioned above are taken, first, to keep him working and earning the world's highest wages, second, to keep his changing and increasing wants supplied, and third, to make a profit and stay in business.

To do that and stay out of trouble with Mr. Consumer all business has to know, or be smart enough to guess, is that the product is of the right design, the right quality, at the right price, and be in the right place at the right time. The one thing businessmen know, and know well, is that the people who make business big will whittle it down to size if the product isn't right.

There are many ways in which business can lose.

Competition can retard sales overnight.

Technological progress, which business sponsors and pays for, can and does make present machinery and methods useless.

Shortages and price fluctuations in raw materials can throw business into a tailspin.

Inventories can be miscalculated.

Wrong pricing policies can be costly.

Improper marketing can bring heavy loss.

And the boss of this whole show, Mr. Average Consumer, can say: "Sorry, I don't like your product."

A profit system you call it? It had better be a profit system, if this Nation is to grow and progress and fortify itself. If the 60,000,000 now in jobs are to keep those jobs. If the billions for armament and foreign aid are to continue.

But let's quit calling it what it isn't and call it what it is—a profit and loss system. And thank our lucky stars that we have the brains and the know-how to run it and the guts to keep it just like it is.

FACTS NO AMERICAN SHOULD EVER FORGET

The average worker's weekly salary buys in Russia—

Seventeen pounds of sugar.

Five pounds of butter.

Twenty-five quarts of milk.

Twenty loaves of bread.

Twelve pounds of beef.

The average worker's weekly salary buys in Great Britain—

Two hundred and eighty-two pounds of sugar.

Eighty-four pounds of butter.[1]

One hundred and thirty-three quarts of milk.

One hundred and fifty-one loaves of bread.

Eighty-seven pounds of beef.[2]

The average worker's weekly salary buys in United States—

Five hundred pounds of sugar.

Sixty-eight pounds of butter.

Two hundred and seventy-six quarts of milk.

Four hundred loaves of bread.

Eighty-two pounds of beef.

This is No. 3 of a series of advertisements being published by the Standard Steel Spring Co. as a contribution to a better understanding of America's greatness.

The Standard Steel Spring Co., of Coraopolis, Pa., had its beginnings back in the days when the blacksmith shop was the automobile service station. On August 12, 1914, the company shipped its first order of 40 sets of wagon springs from a small plant employing less than 50 people. In good years and bad it has consistently plowed earnings and profits back into the business and its growth is a typical example of the exercise, by able management, of the free initiative, courage, and progressiveness possible only under the American business system.

China White Paper

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 9, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Christian Science Monitor of August 9, 1949:

WHITE PAPER AND A CLEAN SLATE

(By Neal Stanford)

WASHINGTON.—Nothing like the publication of the China white paper has happened in American diplomatic history. It tears the secrecy label off current diplomatic reporting. It does not wait a quarter of a century before exposing the diplomatic cables to public scrutiny. It presents them, relatively speaking, while still fresh from the decipher room.

Of course that never would have been done if the United States had not reluctantly concluded some time ago that the Chinese Nationalist regime was hopeless, that the moral degeneracy of the Chiang regime was complete, that the military cause of the Kuomintang was beyong salvation.

It is obvious that comparable revelations of current United States relations with other countries would be invaluable to the press and to the public in understanding affairs, in making intelligent judgment of current and future global policy.

But it also must be recognized that diplomatic reports would immediately suffer in frankness and detail were it to be the practice to make public property these daily cables. For it could not be expected that trusted diplomats would retain the confidences of their guest governments if it was known that what was said in private at the Quai d'Orsay or 10 Downing Street at 10

in the evening would be splashed all over the American press at 8 the next morning.

There is no doubt but that it would be both fascinating and a valuable background to discover the private cabled views of such American officials as Ambassador Harriman on Britain's steel nationalization program or Ambassador Kirk on Russia's war preparations. But these men would become persona non grata in no time if their private deductions were made public on receipt. Secrecy—or a certain amount of it—unfortunately is the price of frankness and trust.

That does not mean, however, that there are not gradations of confidences. It therefore becomes a matter of intuition and experience to know just how much to disclose and how to do it.

There is no question but that the State Department files are bulging with reports, studies, analyses of situations and conditions in every country in the world that could safely be made public without undermining governments, destroying individuals' diplomatic usefulness, or breaking confidences. But the task of sorting them out, deciding what has and what has not public interest, determining just where the shadowy line of secrecy must fall, is so formidable that it invariably goes by default.

Even this China white paper represents but a very small part of the official record of recent United States relations with China. There has had to be picking and choosing to make up these 1,000 pages. The full record would be so voluminous, repetitious, and frequently dull as to numb the most persevering.

The timing of the white paper makes it clear that the administration wants to start its search for a new China policy with a clean slate. It naturally makes out the best case it can for its past actions, particularly those twin decisions to pay Stalin's price for entering the Pacific war with Chinese real estate and to work for a coalition government with Communists participating. Events have proved the unwisdom of both of these, though it must be admitted that the administration makes out an interesting case for its past actions.

As for the first, it points to the military's insistence that Russia must be involved in the Japanese war to shorten it and save lives, and to the fact that the atom bomb's effectiveness was still an unknown quantity at Yalta. It ignores intelligence reports of that period that indicated Japan was about ready to cave in. It makes no mention of the several peace bids Japan had put out suggesting weakness and collapse.

On the coalition issue, which has now become crystal clear to Department officers, the white paper pins responsibility for its inception on Chiang himself, quoting a 1943 address of his as basis for all future efforts made to get a working political agreement between the Communists and the Kuomintang crowd. But if that was the Generalissimo's view in 1943, it was not his for long, though it was the State Department's for several years thereafter, as its efforts to get coalition governments in the Balkans and in Poland indicate. For many years it is apparent the Department itself believed political cooperation with the Communists was possible.

The white paper does not say exactly when the Department abandoned its faith in political coalition as a solution for Communist-Kuomintang troubles, but the white paper appendix contains a most revealing cable from Ambassador Stuart to Secretary Marshall just a year ago in which he recommends that the United States work "to prevent the formation of a coalition government." With the Balkans, Poland, and Czechoslovakia to draw from, he observes: "The history of the coalitions including Communists demonstrates all too clearly Communist ability by political means to take over complete control of the Government and in the process to acquire some kind of international recognition."

This view and his recommendation just a year ago that the United States work against rather than for a coalition measures the extent of America's awakening in two short years to the ideological facts of international life.

Says Pact Not Aimed at Reds Alone

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 10, 1949

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I wish to include a very timely editorial by the distinguished writer, Ernest K. Lindley, which appeared in the Worcester (Mass.) Evening Gazette of August 8, 1949.

The editorial follows:

SAYS PACT NOT AIMED AT REDS ALONE

(By Ernest K. Lindley)

WASHINGTON, August 8.—The theory has been advanced in certain unofficial quarters that the real reason for the military-assistance program is to enable France and our smaller continental allies to cope with Germany. In support of this thesis the argument is advanced that it would be impractical, if not impossible, to build up in Europe forces capable of stopping the Red Army.

When the Atlantic Pact was being debated, Senator JOHN FOSTER DULLES said that he thought insufficient attention had been paid to its usefulness in making possible agreement among the western allies on the future treatment of Germany. The pact would operate against any aggressor. If a revived and rearmed Germany should attack France, all the parties to the pact would be obliged to come to the assistance of France.

A FORCE FOR GERMANY

With that sort of backing, France can be, and already is, less fearful of the revival of Germany as a strong industrial nation. In due course, it might be willing to approve a small German, or west German armed force. There is no intention on the part of any of the western allies at the present time of permitting western Germany to rearm on a large scale. Any such policy would be likely to provoke war with Russia, even if it did not split open the North Atlantic alliance.

But eventually, Germany, or western Germany, will need, and almost certainly be allowed, a small lightly-armed force to protect itself against internal revolution.

SENSE OF SECURITY

A major part of the arms-aid now planned will go to France, Belgium, and the Netherlands. In strengthening their armed forces it will, like the Atlantic pact, give these nations a greater sense of security against Germany. This is a valuable byproduct of both the pact and of the proposed MAP. It is not, however, the primary reason for either of them. The only powerful aggressor today is the Soviet Union. MAP, just as much as the Atlantic pact, is designed to deter Soviet-Communist aggression.

There is no intention of trying to build up in western Europe armies equal in numbers to the Red Army, including its trained reserves, plus its satellite armies. This would be highly impractical, if not impossible, unless western Europe were turned into an armed camp and the manpower of Germany and Italy were armed.

At the present time, however, Soviet troops could march to the English Channel in a few weeks. Communists and pro-Soviet propagandists have long advanced the thesis that the American strategic air force could not paralyze the Russian war machine by dropping atom bombs on Russian factories, since the Kremlin could seize and use the immense productive facilities of western Europe. Sometimes they hint that we would drop atom bombs on our captive friends in western Europe, sometimes that we wouldn't.

DON'T WANT "LIBERATION"

In any event, the western Europeans don't want to be overrun. The prospect of eventual liberation does not reassure them, since they know the Russians and their Communist quislings would eradicate ruthlessly during the period of occupation all who had opposed them.

In the considered opinion of American and western European military experts, a force capable of checking the Russians at the Rhine can be built and equipped within 3 or 4 years. This would be much smaller than the Red Army. But defensive weapons on the ground have gained, relatively to offensive weapons, since the end of World War II. And if the air forces of the North Atlantic alliance were adequate, they could severely limit the number of divisions that the Russians could move westward.

BASIC REASONS

The real reason for MAP is exactly what all of our leading official spokesmen have said it is: to give our allies on the other side of the Atlantic a greater sense of security against Russian military aggression, a chance to fight for their lives, and eventually a good chance of stopping the Red Army on the ground.

While it will take a few years to reach the last goal, each addition to military strength of our European allies makes a quick Russian conquest of western Europe more expensive and therefore less tempting.

"State Is My Shepherd"

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 10, 1949

Mr. LECOMPTE. Mr. Speaker, the editorial column of the Oskaloosa (Iowa) Herald of July 28, 1949, contains a very timely article on the disastrous effect the welfare state of Great Britain is having on the spirit of the British people. This article should serve as a warning to our own people to stop, look, and listen before seriously considering exchanging our own heritage for an elusive utopian dream that the State alone can bring security and happiness.

Under leave to extend my remarks in the RECORD, I include the article from the Herald:

"STATE IS MY SHEPHERD"

After 5 weeks in Great Britain, we came home with new reverence for the faith of mankind that created America.

It is our conclusion that there is no hope, peace of mind, or real security for anyone in the belief that "the state is my shepherd, I shall not want." This is the real concept of the welfare state and it has done something to the British spirit. Nothing, not

even a free health service, is more important to a nation than the spirit of its people.

So far as the British health scheme is concerned, it is a major expression of the welfare-state idea, and as a health scheme, it is very similar to the plan President Truman has proposed for this Nation. It is too early to tell what it has accomplished for the health of the British people, but there are definite signs that it has done something to their faith in themselves. If this Nation of ours should ever adopt the same kind of a scheme, we must be prepared to accept the same increases in taxes and Government controls. But of much greater significance is the depressing effect upon the spirit of the people.

The Britons want security, but we do not think they have found it in the socialist idea that "the state is my shepherd." To the extent that any man accepts the doctrine that the state alone can bring him security and happiness, he will lose faith in himself. Nevertheless we must recognize that that false concept has a mesmeric appeal.

It is reassuring to know that America is founded upon radical faith in people, but we dare not be complacent. It is our immediate responsibility to see that no citizen is tempted to lose faith in himself. We must help and inspire each citizen to make himself a useful member of society, and thus achieve true security for himself and his family.—J. W. McPHERRIN in the American Druggist.

Gilbert Lame

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 10, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Lynn Telegram-News, Lynn, Mass., Monday, August 7, 1949:

RETIRED PEABODY GATE TENDER WRITES POEMS

(The following poems were written by Gilbert Lame, retired Boston & Maine Railroad crossing tender who became a Nation-wide figure when he was stationed at the West Peabody crossing on the Newburyport Turnpike. Gilbert's friendly wave and greeting to motorists caused him to become so well known that he was mentioned in several books and once appeared on the We, the People broadcast.)

MY PRAYER

Dear Lord, I do not pray for wealth of gems or gold,
Just give me strength to carry on,
And when my work is done and story told,
The world can truly say, "A friend is gone."

Though dark the night, and storms may fill the air,
And life seems hardly worth the fight,
I'll work 'til I am called from over there,
And ask that I may hold for Thee a light.

Lord, give me light that I may show for Thee,
Beauty, others pass without a thought,
So friends with mortal eyes may see
The world is full of wonders Thou hast wrought.

I thank Thee, Lord, for all these friends of mine,
Who greet me as a friend they love to know,
Make their lives brighter and their lights to shine,
So all will miss them when they are called to go.

I MISS YOU

I miss you dear friends of the Turnpike throng,
With your wave and smile as you roll along,
For the day is brighter for you and me,
For a wave and a smile when each other we see.

You miss me too, many tell me they do,
For my greetings to them and greetings to you,
Have found a warm spot in many hearts,
That will never grow cold till life departs.

The friendship gifts you have given me,
Are cherished now and ever will be,
As tokens of friendship pure and true,
For I love my friends and so do you.

Won't it be grand, dear sister and brother,
When our journey ends if we can greet each other,
With a wave and a smile as we used to do?
I'll watch for you there, and you'll look for me too.

MY OLD-FASHIONED HOME

Would you like to take a trip with me
To an old-fashioned home far away,
And see the log fire I used to see,
On the hearth at the close of day?
The neighbors came from winter's chill,
And there were apples and pop-corn too.

And I can seem to see those old folks still,
And I would like to be there, wouldn't you?
An old spinning wheel stood by the wall,
And the swifts and reel nearby,
But she who used them answered the call
And left them there with a sigh.

Would you like to live in an old-fashioned home
Far away from turmoil and strife,
By the log fire sit, no more to roam
With the friends who are dear as life?
That old-fashioned home is gone today
And those old-fashioned friends are too,
But their memories will never fade away,
For I love my old friends, don't you?

—*Gilbert E. Lame.*

WEST PEABODY, MASS.

Complete Discharge Petition No. 6 To Repeal Wartime Excise Taxes on Retail Sales

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 10, 1949

Mr. MULTER. Mr. Speaker, the following full-page advertisement appeared in New York Times of August 9, 1949. It is worthy of the attention of every Member of this House:

"NOTHING CAN BE DONE" HAS NEVER BEEN THE AMERICAN WAY

Mr. President, you have made the statement that nothing can be done to repeal the war excise sales tax during this session of Congress. We must respectfully disagree.

Congress was able to declare war on Japan in 24 hours. It need not take more than a week for Congress to declare war on unemployment. And these taxes are one of the main causes of growing unemployment now.

We cannot wait. Delay to January 1950 would be disastrous during the vital autumn and Christmas buying seasons of 1949. It would adversely affect the economy of the entire country. To quote the National Planning Association—a nonpartisan organization representative of business, labor, agriculture, and the professions:

"The present structure of excise taxes discriminates between producers of taxed and untaxed goods and many of those taxes weigh most heavily on low-income families."

We wish to call to your attention that the purpose of these taxes was to reduce civilian demand in time of war. That was necessary. They reduced demand then, but there is no reason why we should reduce demand and employment now. Furthermore, the repeal of these taxes would result in no substantial net loss of tax revenue.

At the time these taxes were put into effect, it was agreed that they would be removed 6 months after the end of the war. Four years have passed and nothing has been done.

The CIO at its constitutional convention, Portland, Oreg., November 1948, adopted the following resolution:

"*Resolved*, That all excise taxes not regulatory in character be repealed."

This statement on the excise tax by Beardsley Ruml is vital to every American. We suggest you read every word.

MURRAY BAY, QUEBEC, August 4, 1949.—Beardsley Ruml, former Chairman of the Federal Reserve Bank of New York (visiting here with Frank B. Common, K. C., of Montreal), stated that the wartime excise tax rates in the United States should and can be repealed by the 15th of August, this month, this year.

"The wartime excise rates," Mr. Ruml said, "are producing an ever-widening black depression in affected industries. If all business were equally depressed we would have between 10,000,000 and 12,000,000 unemployed at the present time. Excises applied on the cost of doing business, such as transportation and communication, are pyramided and raise costs and prices to the consumer of every article of commerce.

"The wartime excise tax rates were intended to reduce civilian demand selectively in time of war, and properly so. These wartime rates succeeded in reducing demands then, and they are reducing demand and employment selectively now. All wartime excise tax rates, except those on gasoline, tobacco, and alcohol, should be repealed at once.

"As far as the Government financial requirements are concerned, the wartime excise tax rates are both unnecessary and inappropriate.

"They are unnecessary because the repeal of the wartime excise tax rates would result in no substantial net loss of revenue. The net loss could hardly be greater than $600,000,000 and it might be as little as $200,000,000, or even less.

"This estimate is arrived at in the following way. The gross receipts from wartime excise rates in 1948 was $1,800,000,000. With sharply lower business, gross income from these tax rates in 1949 can be estimated at $1,400,000,000 or less. Offsetting this figure are losses from four important sources—losses in corporation income taxes at the manufacturing level, losses of tax receipts at the wholesale and retail level, losses from lower withholding tax receipts, and increased out-payment for unemployment benefits. Estimating these offsets at from $800,000,000 to $1,200,000,000 for the four sources combined, leaves a net loss as stated above from $600,000,000 to $200,000,000.

"The possible net loss from the repeal of war-time excises is not an important amount in a budget of over $40,000,000,000 in view of the issues involved and the selective unemployment produced.

"The wartime excise rates are not only unnecessary, they are also inappropriate. Not only are they selective and discriminatory, but they are being used to meet nonrecurring capital items in the budget which have nothing to do with ordinary recurring Fed-

eral expenditure. The most conspicuous item of this kind is over $2,000,000,000 to provide for refunds to veterans for excess premiums paid during 4 years of war for war life insurance. This is not an expense of operation of fiscal 1950. A reserve to care for these excess collections should have been set up at the time the collections were made; that is, prior to 1946. In 1946 we paid off some $26,000,000,000 of public debt. If we had set aside $2,000,000,000 as a reserve against these premiums, we still could have paid off $24,000,000,000. It is clear that as of today, the refund of these excess collections should be handled by debt management and not by current taxation producing unemployment.

"Last year's Federal budget on a cash consolidated basis did not show a deficit as is generally believed. On the contrary, there was a surplus larger than the estimated net loss from wartime excise tax repeal in fiscal 1950.

"No matter how you look at it, the wartime excise tax rates from a financial point of view are both unnecessary and inappropriate, and should be repealed forthwith.

"Improvised public works spending on roads, school buildings, housing, or the like cannot give employment to the fur industry, the leather industry, the jewelry industry, the appliance industry, or other industries depressed by wartime excises. On the contrary such spending will aggravate demand at the most active business spot. This is not a time for excess spending, but rather for tax reduction from wartime discriminatory rates.

"The time for a reduction of consumers taxes has always been recognized to be the summertime. That is when business is lightest and postponement of purchases waiting for tax reduction will do business the least harm. Delay to January 1950 for excise-tax reduction would be disastrous to many important industries during the vital autumn and Christmas buying seasons of 1949. The Governors* of Connecticut, Massachusetts, and Rhode Island have already asked for excise-tax relief now. They will doubtless be joined by the governors of other affected States.

"No halfway measures should be undertaken in repealing the wartime excise tax rates. Half measures wil only encourage delay in buying on the part of merchants and their customers.

"There is still plenty of time to get the wartime excise tax rates off by August 15. Senator GEORGE, Senator LUCAS, and other legislative leaders have said that only a signal from the White House is required. It has even happened in the past that tax legislation affecting the public interest has been passed over the President's veto.

"After all, Congress was able to declare war on Japan in 24 hours. It need not take more than a week for Congress to declare war on unemployment."

We ask that the war excise tax be repealed now.

This advertisement has been published in the interest of American business and labor by the following organizations: American Fur Merchants Association, Inc.; American National Retail Jewelers' Association; American Retail Federation; Associated Fur Manufacturers, Inc.; Association of Southern Farmers and Trappers; Gas Appliance Manufacturers Association, Inc.; Institute of Distribution, Inc.; Limited Price Variety Stores Association, Inc.; The Mail Order Association of America; Motion Picture Association of America; The National Association of Chain Drug Stores; The National Association of Credit Jewelers; The National Association of Music Merchants; National Association of Retail Clothiers and Furnishers; National Association of Shoe Chain Stores; National Retail Dry Goods Association; National Retail Furniture Association; National Retail Hardware Association; National Shoe Retailers' Association; National Wholesale Druggists Association; The Retail Credit Institute of America; South Western Furs, Inc.; Theater Owners of America; Toilet Goods Association, Inc.

Uncle's Bellyache

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 10, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wall Street Journal:

UNCLE'S BELLYACHE

The fellow with the biggest appetite around these parts is your Uncle Sam.

Last week he put away 10,000,000 pounds of butter, which gave him a total of some 20,000,000 pounds tucked away in his deep freeze. In just one day he took 2,000,000 pounds off the grocery shelves, and his official purchasing agents say he'll buy a lot more ere the year is out. "We are required by law to buy whatever is offered," said one official. And since Uncle pays 62 cents for it wholesale, which is more than we want to pay, that means he'll buy plenty.

Or take eggs. Since New Year's he's scooped up about 143,000,000 dozens. That's quite a supply of eggs—more than twice the total commercial storage stocks. It's a dozen for each man, woman, and infant.

Or there's corn. As of June 30 Uncle Sam had acquired 533,000,000 bushels of the 1948 crop under what he calls nonrecourse loans—that is, loans the farmer doesn't have to pay back unless he can sell his corn for more elsewhere, which right now he can't.

Much the same thing is happening to many other food items, from wheat to spuds. Uncle Sam is putting away so much of all of them that he's getting a bellyache.

The taxpayers, the economic doctors, and even the farmers are getting headaches.

You see, the purpose of all this buying was to keep the price of food up. It's succeeded in that, all right, by setting a minimum price for the supported commodities. Just for an instance, a few weeks ago, the wholesale price of butter averaged 59 cents a pound. Then Uncle offered 62 cents a pound, taking on all comers, and a number of folks decided not to sell their butter to anyone else for less.

Now, the first headache in all this is what you are paying for it. In the beginning you have to put up the money for Uncle to buy the butter to push the price up, and then you have to pay more as a result for the butter you buy at the store. A few people have begun to grumble, and that makes politicians' heads ache.

Then there's the problem of what to do with all the stuff Uncle buys. Burn it up? Let it rot? Give it to the Zulus? The expert planners forgot to plan for that; they just found the problem suddenly upon them in the form of a crisis.

And how do you stop it? With prices guaranteed no matter what, the hens have been laying overtime, the spuds have sprouted double, and the corn is pouring copiously into already bursting bins. If Uncle Sam has to keep swallowing all that, he's apt to come down with the worst case of indigestion in history.

The doctors are full of ideas. One suggests Uncle sell it to the consumers at a loss and let the taxpayers make up the deficit. Another suggests a way to relieve the taxpayers—keep the consumers' prices up by having planned scarcity and forbidding farmers to grow so much.

The only idea we haven't heard from Washington is to let us buy eggs as cheaply as the hens can lay them. That thought is shocking.

So we guess Uncle Sam will keep on buying, you will keep on paying, the planners will keep on thinking, and the aspirin makers will get rich.

California Shows Good Faith in Colorado River Controversy

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 9, 1949

Mr. DOYLE. Mr. Speaker, I am pleased to present to my colleagues the text of the very appropriate editorial which appeared in the Los Angeles Times, Sunday morning, July 31, 1949. One reason I do so is because said editorial makes public notice of deserved compliments to Representative HARRY SHEPPARD, of California, a Democrat.

Representative SHEPPARD is the distinguished chairman of the California delegation of Representatives in this Eighty-first Congress. It is to be noted that the California delegation is 100 percent behind Chairman SHEPPARD in the filing and support of the Chairman's vigorous endeavor to build interest by Members of the House in Resolution No. 3, which resolution was filed by Chairman SHEPPARD for the purpose of obtaining the approval of the United States Congress to submitting the controversy involved between the States of Arizona and California, to the decision of the United States Supreme Court.

Mr. Speaker, I am pleased that this editorial recognizes the vigorous activity of Chairman HARRY SHEPPARD, of the California delegation, in this matter which is so imperative to the deserts of both the State of California and State of Arizona.

We of California are willing and ready to have the highest court in our land determine and announce its considered opinion on a matter which can never be satisfactorily determined other than by Supreme Court decision.

Following is the editorial for your information:

CALIFORNIA SHOWS GOOD FAITH

In the bitter fight over Colorado River water, one of the stock accusations of Arizona has been that California was seeking to stall the issue by a phony attempt to get a Supreme Court ruling on the complicated issues. Arizona, in reality, has stalled the matter herself by using every political influence possible to bottle up in congressional committees the California resolutions for a Supreme Court settlement.

STYMIED IN COMMITTEE

Now Representative HARRY SHEPPARD, of California, a Democrat, has defied administration pressures and demanded that the matter be brought to the floor of Congress for a decision on California's plan. He has been compelled to invoke the difficult and seldom-used procedure of circulating a petition

among Members of Congress. It requires a majority of all the Members of the House to bring a bill out of committee to the floor.

Regardless of the success of the maneuver, it proves one thing. It shows the earnest and genuine desire of California to submit all the questions at issue to the only agency in the United States which can decide them—the Supreme Court. Arizona, knowing the weakness of her position, has fought desperately to block any such adjudication; she well knows that her over-all case is not sound.

ARIZONA'S STRATEGY

In fact, to seek to prevent a fair ruling and to obtain by political pressure the objective she could never attain legitimately, Arizona has sought at this session to force through Congress the astoundingly expensive and fantastic central Arizona project at a cost of at least $738,000,000 to the American taxpayer. She has sought to do this despite the fact that ownership of the water which would be utilized by the project is in dispute. She knows that her only chance to "put over" the uneconomic central Arizona scheme is to "bull it through" regardless of the ownership of water, the soundness of the proposal, or the cost elements involved.

Representative SHEPPARD's attempt, specifically, is to get the California measure for the Supreme Court determination out of the House Judiciary Committee, where it has been bottled up since the start of the session. All of California's congressional delegation introduced identical legislation, which has been blocked from reaching the floor. Representative SHEPPARD undoubtedly feels that the whole matter has been clarified to such an extent during the last few months that there would be a good chance of success for the Supreme Court bill if it could only be brought to a vote. He knows that, at last, the facts have begun to penetrate other Congressmen despite Arizona's attempts to becloud the issues.

Arizona's supposed "fears" of "long delays" if the matter should go before the Court are ridiculously transparent.

The California legislation specifically authorizes a suit in which the United States Government would participate, thus assuring a clear-cut and definite case and a speedy settlement. All the arguments have been in written form for a long time. The briefs could be submitted quickly to the High Court. If Arizona would quit stalling and join in the effort to get a court ruling, the whole issue could be decided speedily.

But does Arizona want a speedy settlement?

CREED OF CONFUSION

Her whole strategy has been devoted to the attempt to get a free ride by obtaining authorization of the $738,000,000 central Arizona project in advance of a determination of water rights. She has tried, too, to pretend that the acquisition of rights to certain main stream Colorado River water automatically would entitle her to go ahead with the $738,000,000 project whether it was feasible and whether she could pay for it or not. Her creed has been confusion. If that confusion is ended by a just and reasonable decision of Congress to submit the Colorado River issues to the Supreme Court, her whole fantastic scheme collapses.

That, in simple terms, is why Arizona has fought so bitterly to prevent any legal, common-sense, normal determination of this matter.

It is the best proof possible of the justness of the California cause. It is the best argument for the enactment of the authorization for the Supreme Court settlement.

Representative SHEPPARD deserves united support in his effort to get the question on the floor of Congress. Citizens here can help by writing to Members of Congress from other States and explaining why a Supreme Court settlement is the logical way to settle the basic controversy. If Congress will act wisely on this, justice can be done and years of futile additional struggling can be avoided.

Broadcast by Phelps Adams

EXTENSION OF REMARKS

OF

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 10, 1949

Mr. BROWN of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio broadcast by Phelps Adams:

Well, here in Washington today, the economic differences between President Truman and his own, Democratic Congress were coming rapidly to a boil. As you know, the President and Congress, so far, haven't been able to agree on much of anything; but there is probably no issue upon which they disagree so completely and so wholeheartedly as on the issue of Government spending.

In his economic message a couple of weeks ago, the President said that any cut in his foreign-aid program or in the national defense program was "unthinkable." But the Senate today went to work on the Marshall plan appropriation bill with a very obvious determination to cut at least 10 percent out of it. Then some time within the next week or two, it will take up the national defense appropriations from which one of its committees has already carved more than a billion dollars.

Adding fuel to these flames, President Truman today sent to the Capitol his long-awaited message asking for nearly a billion and a half dollars to be used during the next 2 years in arming the Atlantic Pact countries and other friendly nations.

The President, of course, did not include the cost of this program in his budget estimates last January, so—if approved by Congress—it would add just that much more to the heavy deficit that is already in prospect for the current year. So his arms program today collided instantly with a solid wall of opposition from the economy block in both Houses; and it appeared virtually certain that—when the battle is over—Congress will come up either with no military aid program at all; or at best, with one that has been whittled down to token size.

Then Senator HUBERT HUMPHREY—a left-wing Democrat from Minnesota who is one of the Presidents strongest supporters—filed a minority report denouncing a Senate resolution that would compel the President himself to cut expenses sufficiently to bring the Federal budget into balance. And so the war is on.

The President insists that the Government must spend more than ever in order to check the present recession. Most of the Members of Congress, on the other hand, are convinced that no government can go on forever, spending more than it takes in. Ultimately, they warn, it is bound to go "bust" just as you or I would under the same circumstances.

And there you have the issue. Can Congress cut the budget without crippling the Federal Government or wrecking the whole national economy. On the other hand, can Congress give the President all these extra billions without doing exactly the same thing?

Ladies and gentlemen, as I listen to our statesmen seriously debating those questions, I can't help wondering if we haven't lost all sense of perspective since we began to spend these astronomical sums that nobody can comprehend.

I have gone back over the records of the United States Treasury Department to gather a few very simple facts and figures showing how other Presidents of the United States have met some of the serious problems that confronted them, and how much money they had to spend to make this Nation the biggest, the strongest, and the wealthiest Nation in the world.

If there is one thing that the records of the United States Treasury Department show, it is that this Government of ours, in 160 years, has grown to be the world's most expensive luxury.

From George Washington's day right up to the beginning of World War II, we had 31 Presidents, and they had run this country pretty successfully for more than 152 years. During that time they had had to face—and to pay for—a great many very serious and expensive national emergencies. There was the War of 1812, the Mexican War, the Civil War, the Spanish-American War, and World War I—which was no slouch of a war as some of you may recall. Included in this period, too, were 8 years of Franklin D. Roosevelt—with the CWA and the PWA and the WPA and all the other alphabetical agencies that he created. Then, too, there were the heavy defense expenditures that Mr. Roosevelt had to make in anticipation of World War II. But all of these Presidents in all of these years—right up to July 1, 1941—with all these wars and preparations for wars—could not spend, and did not spend, as much money as Harry S. Truman has spent in only 4 years since the war.

Yes, that is the fact. Compared to Harry Truman, Franklin D. Roosevelt was a nickel-nursing tightwad—incredible as it seems. During his three terms in office, Mr. Roosevelt had to pay virtually the entire combat cost of World War II—and he spent $31,000,000,000 a year. That's billions with a capital B. But Harry Truman during his four, almost completely, postwar, peacetime years has spent one and a half times as much each year, as Mr. Roosevelt did.

Now let me make it clear that I am speaking of fiscal years because that is the way the Treasury keeps its records. Mr. Truman's first fiscal year began on July 1, 1945. On that date—as you know—the war in Europe had been over for nearly 2 months, and the war in Europe had been over for nearly 2 months, and the war with Japan had only about a month and a half to go, so it is entirely possible that not a single tank, plane, ship, gun or shell that was actually used in the war, was charged to Mr. Truman's fiscal administration.

And as for taxes—well that was where Mr. Roosevelt really performed at his best. If memory serves, he raised the tax rates on 16 different occasions during his administration and he brought them to the highest levels they had ever reached. He collected about $14,000,000,000 a year. Chicken feed—just chicken feed. Mr. Truman collects three times that much every year.

So let's go back and dig out a few simple and enlightening comparisons that ought to give us some idea of what really is happening to our Federal Budget. For example there was Calvin Coolidge. Some of us tonight are old enough to remember way back there when we did have a Republican in the White House. After all—it was only 20 years ago that Mr. Coolidge left office.

He served 6 years and spent $3,000,000,000 a year. That covered everything including national defense, veterans' pensions, and the interest on our World War I debt. But this year—in 1949—Mr. Truman will spend exactly that same amount of money on public works alone. You will recall that Senator PAUL

DOUGLAS, of Illinois, recently shocked his senatorial colleagues by referring to some of these very same public-works appropriations as pork-barrel legislation—and, as you know—Senator DOUGLAS is no carping conservative, or arch Republican. He is sincerely and honestly a liberal and one of the outstanding Democrats in the administration ranks in Congress. So what Mr. Coolidge spent 20 years ago to run the entire Government now goes for "pork"—to use Senator DOUGLAS' expression.

Further back, there was Abraham Lincoln who, in his four, unhappy years, had to bear the entire cost of the Civil War on the Union side. And that cost was fabulous. Not until the war days of Woodrow Wilson did any President of the United States ever again spend so much money per year as did Abraham Lincoln. But this coming year, President Truman will spend on the Department of Agriculture alone twice as much money as Lincoln spent in a year on the Civil War.

And so it goes, but for the most interesting comparison of all, let's look at George Washington's administration. He spent $4,000,000 a year—and that's millions with a very small "m." Now the country, of course, has grown enormously since George Washington took office 160 years ago. It has grown in size, in population, and in wealth; but believe you me, nothing about this country or its Government has grown so fast and so much as the United States Treasury.

Geographically the United States with all its possessions and territories is today about four times as big as it was in Washington's day. It has forty times as many people. And the combined income of all those people together—is 400 times what it was back there in 1789. But today the United States Treasury under Mr. Truman, is spending nearly 11,000 times as much as Washington did. That's a lot of times.

Suppose for a minute that instead of taking office when he did, George Washington had become President of the United States way back in the middle of what the anthropologists call the mesolithic period—back in the middle of the stone age. That would be at least 4,000 years before Adam and Eve had even made their appearance in the Garden of Eden, and about 9,000 years before the birth of Christ. And suppose, that—starting way back there—General Washington had begun plugging away, spending his $4,000,000 every year right down to the present day. Well, if that had happened, he would—by today—have drained the United States Treasury of exactly as much money as Mr. Truman spends in 1 year every year.

So, when you sit down some rainy day to fight with your own family budget, and you simply can't figure out where the money goes, you might just look in at the Treasury in Washington. It's probably there.

Today President Truman tells us he has cut his budget to the bone. Well, maybe so; but what's left is certainly the fattest skeleton this country has seen so far.

Morgenthau Plan Was Foolish Destruction

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 10 (legislative day of Thursday, June 2), 1949

Mr. LANGER. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article which appeared in the Fargo Forum, published at Fargo, N. Dak., entitled "Morgenthau Plan Was Foolish Destruction."

There being no objection, the editorial was ordered to be printed in the RECORD as follows:

MORGENTHAU PLAN WAS FOOLISH DESTRUCTION

(By George E. Sokolsky)

The British attack on the Morgenthau plan is late. Also Winston Churchill's contention that he had to accept the Morgenthau plan which advocated destroying much of German industry because Roosevelt wanted it, also is late and lame. Churchill seems to explain all his errors of historical judgment on the ground that he was dependent, as his country was, upon the bounty of Roosevelt and had to go along with him no matter how well he knew that Roosevelt was wrecking the world. It is too late, to say that, in private or in public.

Today destroyed German industry would be invaluable to us both as a peacetime productive and potential war agency. A good part of the money that the American taxpayer is pouring into the Marshall plan might have been saved were we able to utilize more effectively the German industrial base.

It was at the moment of Potsdam that the United States should have realized that unless Germany's industrial base could quickly and efficiently be restored, this country would be loaded down with the cost not only of supplying Germany but also those countries in Europe which had become dependent upon Germany for manufactured goods.

Two factors stood in the way of a rational approach to the problem:

The Morgenthau plan to which Roosevelt and Churchill had agreed at Quebec, without the knowledge of their cabinets.

An order issued by the Joint Chiefs of Staff for the occupation of Germany, based on the Morgenthau plan.

Herbert Hoover, in 1947, said of this order:

"We can keep Germany in these economic chains, but it will also keep Europe in rags.

"There is only one path to recovery in Europe, that is production. The whole economy of Europe is interlinked with German economy through the exchange of raw materials and manufactured goods. The productivity of Europe cannot be restored without the restoration of Germany as a contributor to that productivity."

No one can read the Morgenthau plan or his book, Germany Is Our Problem, without reaching the conclusion that his object was to aid Russia. Section 14 is definitely what the Russians have been clamoring for since Potsdam—namely that the United States get out of Germany and leave that country to Russian control.

In this connection, I call attention to an ECA report:

"It was the expressed intention in the Potsdam agreement that the four occupation zones of Germany were to be treated as a single economic unit. It has never been possible to obtain Soviet assent to the implementation of this intention."

We'll Keep the White House

EXTENSION OF REMARKS

OF

HON. FRANK B. KEEFE

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 10, 1949

Mr. KEEFE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Milwaukee Journal of August 7, 1949:

WE'LL KEEP THE WHITE HOUSE

The White House will not be torn down after all. It will be renovated throughout, but the old, familiar face will remain. This is the decision of the Commission named by Congress. It is a decision that, we believe, will get the overwhelming approval of the American people.

We are not a people that cling to old things, old buildings, and old traditions just for the sake of oldness. The spirit of change is strong in us. But some of the things that embody our history are precious.

The devotion to the simple structure at the end of Pennsylvania Avenue is not new. After British troops lit the flames that gutted the original building in 1814, voices urged a new, modern mansion for the Nation's President. The cry went unheeded then, as it has every other time when major remodeling or repairing was in order.

It has been said that the White House is the heartbeat of the Nation. There is much to that. The Capitol is cold and austere. Mount Vernon, Independence Hall, Faneuil Hall are impressive, but they are all history. The White House is impressive, too, but it has the added warmth that comes from being a part of the present—a thing still connected with life.

Washington watched the Presidential home go up. Jefferson was a boardwalk kibitzer. John and Abigail Adams were the first occupants. Jefferson added sheds to house horses and cows. The place was first painted white in the restoration that followed the War of 1812. Fillmore put in central heating and a bathtub. Hayes installed the first telephone. Chester A. Arthur removed the accumulated junk in the attic and had it sold at auction. Theodore Roosevelt had the whole building done over. Franklin Roosevelt put in a swimming pool.

There is history in every room. Here Jefferson worked out the route of Lewis and Clark. There James Monroe and John Quincy Adams phrased the Monroe Doctrine. In still other chambers, Lincoln wrote the Emancipation Proclamation and Wilson planned the League of Nations.

On the walls are some dark shadows. Harrison—"Old Tippecanoe"—died in the White House. The gaunt Lincoln wept over the bed of his dying son. Grant, and Harding later, slept fitfully because of scandals whirling about their administrations.

But there has been gaiety and joy, also, The stately levees of Dolly Madison. Andrew Jackson's "people of the West," in buckskin, marching through on inaugural day, raiding the pantries and spilling the punch. Cleveland's wedding to Frances Folsom. The children of Garfield and the Roosevelts scampering down the long corridors. Theodore Roosevelt, exponent of the "strenuous life," and his wrestlers, boxers, and jujitsu instructors.

Not only Presidents but First Ladies made history here—of the feminine kind. Pinch-nosed Abigail Adams hung her wash in the unfinished East Room and wrote about it. Dolly Madison cut Washington's portrait from the frame and carried it to safety ahead of the British troops. Peggy Eaton, the innkeeper's daughter, was welcome at the Jackson parties if not at other Washington affairs. Van Buren's daughter-in-law, with fancy ideas, sat on a dais at parties, attired in a purple velvet gown with a long train and three feathers in her hair. Zachary Taylor's wife, who didn't like the city of Washington, betook herself to an upper floor with her sewing and a corncob pipe. Mrs. Polk and Mrs. Hayes would serve no liquor and the wits called the latter "Lemonade Lucy."

Destroy forever the place that so mirrors the Nation's history and hoards the memories of its leaders, great and small? Certainly the Commission was right in finding it unthinkable.

United States White Paper Suppresses Directive in Marshall Mission

EXTENSION OF REMARKS

OF

HON. RALPH E. CHURCH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 10, 1949

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Times-Herald of August 10, 1949:

UNITED STATES WHITE PAPER SUPPRESSES DIRECTIVE IN MARSHALL MISSION—DOCUMENT SAID TO CONTRADICT ACHESON'S DEFENSE OF ADMINISTRATION ON CHINA

(By Walter Trohan)

The State Department has suppressed one of the most important documents on Chinese-American relations in its 1,054-page white-paper defense of the administration for the fall of China to communism.

The compilation of documents does not include the directive General Marshall, wartime Chief of Staff, was given when he undertook a mission to China with the rank of Ambassador late in 1945.

It was reported within the State Department that the directive was purposely omitted because it did not jibe with State Secretary Acheson's statement: "Nothing that this country did or could have done within the reasonable limits of its capabilities could have changed the result; nothing that was left undone by this country has contributed to it."

MARSHALL'S EFFORTS CRITICIZED

It has long been reported that the Marshall directive instructed the general to bring the Chinese Communists and Nationalists together, a project regarded as impossibly visionary.

Marshall's efforts to fulfill this directive have been blamed in China and the United States for the victory of the Communists in Asia. Observers hold that Marshall could have saved China had he not been prejudiced against Generalissimo Chiang Kai-shek and had he followed the advice of American military observers on the scene.

Marshall is credited with a hand in President Roosevelt's decision at Yalta secretly placing the control of Manchuria, the heart of China, under the Soviets, and also giving the Soviets the Kurile Islands, Dairen, Port Arthur, and the southern half of Sakhalin in return for entering the war against Japan.

MAC ARTHUR IGNORED

As Chief of Staff, Marshall advised Roosevelt it would take several years to defeat Japan without Soviet help. General MacArthur had reported Japan was ready to surrender and had advised against letting the Soviets in the Pacific war. Marshall disregarded MacArthur's advice, as did Roosevelt.

When Marshall went to China for 3 months late in 1945 and early in 1946, he was prejudiced against Chiang by the bitter reports of the late Gen. "Vinegar" Joe Stilwell.

American observers on the Chinese scene told Marshall that the issue was one of communism versus any other form of government.

MISSION A FAILURE

Ignoring this advice, Marshall worked to force the Communists and Nationalists together. This effort broke down when the Communists insisted on maintaining their own army. When Marshall returned with his mission a failure, he hit at both the Nationalists and Communists in a plague-on-both-your-houses report.

The white paper does contain the directive of Lieutenant General Wedemeyer, who undertook a special mission to China in 1947. Wedemeyer proposed a program of aid to China and warned that Sovietization of China was a grave danger to world peace. The inclusion of the Wedemeyer directive served to emphasize the suppression of the Marshall directive.

The Situation in China

EXTENSION OF REMARKS

OF

HON. KENNETH S. WHERRY

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 10 (legislative day of Thursday, June 2), 1949

Mr. WHERRY. Mr. President, in today's Washington Times-Herald is an editorial on the deplorable situation in China and developments that led to it. Since developments in China now make it imperative upon the United States to develop a forthright, clear policy, the information contained in this editorial should be helpful in appraising the situation. I ask unanimous consent for insertion of the editorial in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STUPIDITY OR BETRAYAL?

A few jarring notes in the State Department white paper on China suggest that Mr. Roosevelt and his agents made positive contributions to China's going Communist.

BLUNDER AT YALTA

One such allegation is made in the long suppressed report of Lt. Gen. Albert C. Wedemeyer, released in the white paper 2 years after he surveyed prospects in China for Mr. Truman. The general said, "Indirectly, the United States facilitated the Soviet program in the Far East by agreeing at the Yalta Conference to Russian reentry into Manchuria, and later by withholding aid from the national government."

Mr. Roosevelt, with Alger Hiss as adviser, made the deal with Stalin at Yalta, where preeminent interests of the Soviet Union in the Manchurian area were acknowledged as part of the price for bringing Russia into the war with Japan for a scant 6 days.

The white paper shows that the Yalta sellout of nationalist China in February 1945 was a product of Roosevelt's personal diplomacy. He and W. Averell Harriman, then Ambassador to Moscow, handled the details after Roosevelt had informed his Secretary of State, Edward R. Stettinius, that he need not concern himself.

INCREDIBLE ADMISSIONS

The white paper uses such vague phraseology in describing this deal as "from the available evidence." The origin and authorship of the reference to Russia's preeminent interests are said to be still obscure. These are certainly among the strangest admissions in diplomatic history.

The future of the United States, of China, and of the world were gravely altered by what was written and signed, but no one knows who wrote the terms.

The madness of this whole deal was enhanced by the fact that, 16 months before Yalta, Stalin had voluntarily pledged his word to Secretary of State Hull to enter the Japanese war for nothing. This pledge was made to Hull in Moscow on October 30, 1943. Hull states in his memoirs, "He made it emphatically, it was entirely unsolicited, and he asked nothing in return." There were, he added, "no strings attached to it."

ROOSEVELT'S BROKEN WORD

Thus, at Yalta, Roosevelt broke his Cairo pledge of December 1, 1943, that Manchuria, would be restored to China. That pledge, made to Chiang Kai-shek, the head of the Nationalist Government of China, had been given only a month after Roosevelt had learned from Hull that Stalin would fight Japan with no strings attached. This historic reversal is one of the major mysteries of recent history.

Any attempt at explanation involves a choice of theories. It may be argued that Roosevelt was simply stupid or that at Yalta he was scarcely competent.

It may be, as his former ambassador, William Bullitt, states, that he was panicked into a needless sell-out of China because General Marshall and the other chiefs of staff had made a totally wrong estimate of Japan's power of resistance.

It may also be that he was swayed by pro-Communist advice from the State Department, personified at Yalta by Hiss, later tried for perjury in connection with charges that he served Russia's espionage ring. The most direct explanation is that Roosevelt was out to communize the world.

Bullitt has testified to how thoroughly the State Department and other New Deal departments were infiltrated by clever young men willing to lie in favor of the Communist dictatorship and who, he says, became contemptible profiteers of American disaster.

THE MAJOR QUESTION

A. A. Berle, former Assistant Secretary of State, testifying before a congressional committee in the Hiss case, admitted that there was a pro-Russian faction in the State Department in 1944, the year leading up to Yalta, and that Alger Hiss took the pro-Russian point of view and wanted to appease Russia.

Mr. Berle added that the appointment of Hiss to a high and confidential position under Dean Acheson, now Secretary and then Assistant Secretary of State, worried him in his capacity as security officer for the Department.

The white book on China leaves the major question unanswered: Was China's delivery into Communist hands and into the Soviet orbit the result of stupidity or betrayal?

Antiquated Electoral College

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 10 (legislative day of Thursday, June 2), 1949

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Antiquated Electoral College," published in the Williams County Farmers Press, of Williston, N. Dak.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ANTIQUATED ELECTORAL COLLEGE

How different today's headlines would be if half of 1 percent of the voters for President Truman in California and Ohio had voted for Mr. Dewey instead. No, it wouldn't have

thrown the election to Mr. Dewey—it would have thrown it into the House.

There would have been banner headlines on every newspaper in the country from day to day and almost from hour to hour telling of the shifting prospects of the postelection struggle. Foreign news would have been secondary, for the United States would have been plunged into one of those dilemmas for which the founding fathers made inadequate provision a century and a half ago and which the twelfth amendment of 1804 did not settle.

Some of the biggest news stories deal with events that never happened. The academic observer is surprised today at how the Nation can graze a catastrophe and then not do very much, or anything, to prevent it from recurring.

It is hard to think of any incident that would have been more unsettling to American stability, in domestic or international affairs, than an indecisive presidential election.

The tension would have mounted from election day to the meeting of the new Congress. Would it be Mr. Dewey or Mr. Truman? Nobody could say. That is a situation that the United States has narrowly avoided.

The twelfth amendment was declared in effect September 25, 1804, after a deadlock between Jefferson and Burr. It took 35 ballots in the House of Representatives in 1800 before the choice fell to Jefferson. Under 1948 conditions, is might as easily have taken 35 ballots in the House to choose between Mr. Dewey and Mr. Truman.

The twelfth amendment requires members of the electoral college to vote separately for President and Vice President. It was thought that the problem was settled. But in 1825, when the electoral college failed to choose a President and Vice President, in 1837 when there was no popular choice for Vice President, and in 1876 in the Tilden-Hayes controversy, Congress had to intervene in elections again.

The Tilden-Hayes contest was finally decided by reference to a specially constituted commission composed of five Senators, five Representatives, and five Justices of the Supreme Court. Under their tutelage, the Presidency was awarded to Mr. Hayes by the margin of one electoral vote—185 to 184—although Mr. Tilden received a plurality of the popular vote.

It looked for an hour or two on that hectic election morning last November 3 as though we were going to have a new Tilden-Hayes situation.

If Mr. Dewey had carried the hairline States of California and Ohio, each with 25 votes, the electoral vote for the election would have been: Truman, 253; Dewey, 239; Thurmond, 39. No candidate would have received the 266 votes necessary for election. The election would have dropped into the House.

Suppose that had happened. Imagine the excitement mounting in Washington today as the time approaches for the new House to meet—January 3. By this time a feverish logrolling will have developed. Each State will have one vote under the procedure. The various State delegations in the House will caucus; that State's single vote for Mr. Truman or Mr. Dewey will be cast on the basis of the majority.

The confusion by now is incredible. The Nation has learned overnight the nuances of a complicated election game in the tumult of a bitter controversy. Three States, for example, Connecticut, Idaho, and Montana, have no vote to cast for President because their delegations are evenly divided between Republicans and Democrats. The fact that the popular vote in all three States went for Mr. Truman does not matter.

Then there are the Thurmond States: Alabama, Louisiana, Mississippi, and South Carolina—four votes. They are enough to decide the election, for otherwise the count stands Truman 21, Dewey 20, with 25 needed for election. There develops the greatest political auction in history, with unbelievable concessions promised the minority group.

Such a result would have been a perversion of democracy and an outrage. Yet that is what happened in 1876 and almost happened in 1948. Unless antiquated laws are changed by constitutional amendment, it may happen again at any time.

A Fight for the Consumer of Natural Gas

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 10, 1949

Mr. BOLLING. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial of the St. Louis Post-Dispatch of August 6, 1949. This editorial recounts another of the many battles fought on behalf of his constituents by one of Missouri's most distinguished Congressmen, Representative JOHN B. SULLIVAN, of St. Louis. Mr. SULLIVAN in his several terms in Congress has a record which makes completely clear his interest in the welfare of all the people whom he is privileged to represent.

Early in this session Mr. SULLIVAN recognized the threat to the consuming public in the proposed amendments to the Natural Gas Act. He made a thorough study of all of the implications of this proposed legislation, so that he might alert his colleagues to the dangers to the consuming public in the legislation. This timely action on the part of Mr. SULLIVAN, and others, resulted in a much closer vote on final passage than could have been expected. Mr. SULLIVAN, with others, made a radio broadcast which was heard in many sections of the country, in his effort to alert the people to the significance of this legislation, which in many areas was given virtually no publicity.

The St. Louis Post-Dispatch editorial follows:

AGAIN THE NATURAL-GAS GRAB

When Representative SULLIVAN, of St. Louis, rose in the House to attack a bill releasing natural-gas producers from Federal regulations, he was defending his constituents against legalized extortion. He was asserting that a monopoly like the natural-gas business can be tolerated only when the public retains effective control of its prices. He made his point in a striking example. Laclede Gas Light Co., which distributes gas in the St. Louis community, and the pipeline company that brings it here, are under public regulation. But for a time the third company, which supplies the gas at the field, was not regulated, and its price was then 8.31 cents per thousand cubic feet. The gas producers were brought under the Federal Power Commission, and the price fell to 4.66 cents—almost one-half.

If control is wrested from the FPC, the price will rise again. One of the ripper bill's prime movers, Senator KERR, a man with extensive oil and gas interests, admits it would put money in his pocket. The stakes are huge. It is estimated that a mere 5-percent price increase during the life of the gas deposits would enrich producers more than $1,500,000,000 in the Texas Panhandle alone.

The feeble pretext has been offered that the gas-producing States will keep the price fair if Federal control is lifted. But there is a powerful clamor in those States to nick the gas-consuming regions for all the traffic will bear, and several Southwestern utility commissions have shown long since that the oil and gas industry's wishes are their law. Even if the States wanted to play fair, Mr. SULLIVAN and other dissenters have warned that they cannot touch rates on interstate movements of gas. Thus, the intent of the pending bill is to free the producers from either Federal or State regulation—to give them a free hand on consumers' pocketbooks.

A milder version of this grab was defeated in a Senate committee last year, but the bolder 1949 attempt has cleared both the House and the Senate committees. Whatever else the sins of the Eightieth Congress were, this thing was too raw to swallow. What about the Eighty-first, the Congress elected to bring the people a fairer deal?

Whither the Good Neighbor Policy?

EXTENSION OF REMARKS
OF
HON. JACK Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 10, 1949

Mr. ANDERSON of California. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include the following rather startling communication from a businessman in Argentina. Here is a brief example of what the good-neighbor policy means to American business. What is our State Department doing about it?

BUENOS AIRES, *July 1, 1949.*

Subject: Galvanized barbed wire and market conditions.

JAMES S. BAKER CO.,
San Francisco, Calif., U. S. A.
(Attention of Mr. James S. Baker.)

DEAR MR. BAKER: This is to acknowledge receipt of your letter dated May 18 and on arrival of same the indicated quotations were submitted to the importing trade, but no orders could be obtained due to the refusal of the Argentine Central Bank to grant import permits and monetary dollar exchange for establishing confirmed and irrevocable letters of credit.

It is extremely regrettable to have to inform you, the optimistic information given to you in my letter No. 25 of May 13 pertaining to the favorable developments for the interchange of commerce, has again been displaced by the new trade agreement signed on June 27, in Buenos Aires, between Argentina and Great Britain, governing commercial and financial relations between their countries for the next 5 years, having a total turn-over for the indicated period will gross 1,253,175,600 pounds sterling to become effected today, which in all probability you have read about in the United States press.

The exchange under the terms of the agreement are as follows:

Argentina will supply Britain annually with—

Three hundred thousand tons of meat, with promises of more if possible.

Sixty thousand tons of pork, if available.

Fifty-three million one hundred thousand pounds sterling worth of foodstuffs, cereals, and forage.

Ten million pounds sterling worth of linseed oil.

Nineteen million pounds sterling worth of oilseed cake, quebracho extract, raw wool and miscellaneous goods.

Great Britain will make available annual shipments to Argentina—

One million eight hundred thousand tons of crude petroleum.

Three million seven hundred and fifty thousand tons of fuel oil.

One hundred and fifty thousand tons of petrol, kerosene and other byproducts.

One million five hundred thousand tons of coal.

Thirty thousand tons of tinplate.

One hundred thousand tons of iron and steel, as well as an unspecified quantity of other commodities, including products you have available for export.

The Marshall aid for the recovery of the 19 western European nations has become a real Santa Claus for Argentina to arrange such advantageous commercial treaties with a number of them to the detriment of the United States of America. It is extremely difficult to forecast where all this maneuvering would lead, ultimately the western European powers and the United States will work themselves into a difficult commercial snag, between the sterling and the dollar areas with Argentina an important element.

The established Argentine fixed dollar import quota for the United States of America will hold importations down to a comparatively low level, for the purpose to increase the supply of dollars, for Argentina to decrease the approximately $200,000,000 overdue account it owes the United States of America exporters, which will be liquidated on the declared basis of 20 percent payment of the dollars earned through future exports to United States of America and in consequence it will take quite some time to accomplish and will materially reduce granting import permits and monetary dollar exchange for establishing confirmed and irrevocable letters of credit to import commodities from United States of America.

At the present time the importers are only interested to obtain quotations from Great Britain, France, Italy, and western Germany for payment in the currency of the respective country, which will restrict me in the near future to obtain orders for the products you have available for export.

With kind regards I remain,

Yours sincerely.

W. D. CONE.

Pericles and the Brannan Farm Plan

EXTENSION OF REMARKS

OF

HON. LOUIS E. GRAHAM

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 10, 1949

Mr. GRAHAM. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the following article by Arthur Krock which appeared in the New York Times, August 9, 1949:

IN THE NATION

PERICLES AND THE BRANNAN FARM PLAN

(By Arthur Krock)

WASHINGTON, August 8.—When the Secretary of Agriculture, Mr. Brannan, was expounding his new farm plan before a committee of Congress recently, a member asked who would pay the costs (Mr. Brannan has declined to estimate these) of a support policy which would maintain floors under farm prices but let them find lower levels in consumers' markets. The Secretary, with candor unusual in Washington, replied, "Well, it comes out of the taxpayer."

This kind of incident always impels C. W. Dressler, associate editor of the Johnstown (Pa.) Tribune, to turn for precedents to the histories of ancient Greece and Rome. He proceeds on the sound theory that, especially in politics, there is nothing new under the sun, and that this can, almost invariably, be demonstrated in the records of early civilization. Bishop Thirlwall's standard History of Greece provided the parallel Mr. Dressler was sure he would find; it occurred in the time of Pericles and his Athenian new deal.

That statesman believed in plentiful benefices to the people, but he thought they should come from the state and not from the private wealth of the aristocracy. Some historians say that Pericles' motive for putting nearly everybody on the state pay roll was to acquire and hold power for himself and not, as other historians contend, to promote the enlightened purpose that all citizens take greater interest in the state. At any rate, his own purse was not sufficient to match the private funds distributed among the people.

An old, old device

"Accordingly," writes Aristotle (quoted in the Thirlwall history unearthed by Mr. Dressler), "he [Pericles] took the advice of Damonides of Oia * * * which was that, as he was beaten in the matter of private possessions, he should make presents to the people from their own property." In the Tribune Mr. Dressler commented on this and on Mr. Brannan's reply to the Member of Congress as follows:

"Since the American taxpayers will ultimately have to pay the [$250,000,000,000 national] debt, with interest, all of the benefits they have received have come out of their own property. And from now on it may be more painful. The big taxpayers cannot pay much more without loss of all incentive. Corporation taxes are simply concealed sales taxes, reflected in the prices consumers pay for their goods and services.

"Mr. Brannan is correct in saying that the cost of his farm plan would 'come out of the taxpayer.' One of the arts of politics is to conceal the fact, but it cannot be concealed much longer. For, as a political observer said some years ago, the Government has only two ways to get money. It can borrow or it can take. And the borrowing has almost reached its limit."

These simple truths, applied to the administration's new farm plan, and to the unwillingness of the Secretary even to venture a guess as to cost, blocked the proposed legislation. What was represented as something new under the sun was readily exposed as the same idea, old even when Pericles advanced it, of giving their own money to the people in the form of subsidies and then taking it back by taxation. But neither this exposure nor the lack of a cost estimate was what made the going so rough for the Brannan plan. Economic groups have been similarly favored by legislation which has easily gone through Congress on the argument that the graduated income tax would take from the prosperous few the money to pay for grants to the many.

An unusual combination of antis

The Brannan plan ran into trouble at the Capitol for three reasons which did not materialize against the prior Periclean projects. 1. For the first time representatives of the great majority of the farm population lined up with the economy bloc, and that is a larger voting group than can be mustered by the labor organizations and some consumers' spokesmen who favor the plan. 2. For the first time in recent memory realization seemed to spread in the constituencies of Congress that concealed taxes bring up the levies on the many much nearer than appears to the percentages assessed against the few; and that the more the Government spends, and the more its costs exceed its revenues, the harsher this fact will become. 3. For the first time the farm population rebelled powerfully against the Government regimentation that must accompany all support plans.

The Periclean political method, projected into the eras of the New Deal and the Fair Deal, has not lost favor as such. There is no evidence that the tax-the-wealth philosophy by which latter-day politicians have used everybody's earnings to perpetuate themselves in power is less popular than it was with the great American majority. The Brannan plan is merely too obvious an example; there is too much magic in its operation as expounded; and it runs into a fortuitous combination of unusual strength.

Determination to get what it recommends, even stubbornness in that quest, is, however, a leading characteristic of Mr. Truman and his administration. Almost never do they say die. Proposals are before Congress giving Mr. Brannan's project something of a trial run, which might save many faces, including the President's, for the time being. But if this trial run ever makes a political derby winner out of the Brannan plan the best judges of Congress will miss their guess.

Think of the Next Generation

EXTENSION OF REMARKS

OF

HON. CHRISTIAN A. HERTER

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 10, 1949

Mr. HERTER. Mr. Speaker, on the occasion of his seventy-fifth birthday, the Honorable Herbert Hoover made a notable address at Stanford University in California, which I should like to include here:

THINK OF THE NEXT GENERATION

My first duty is to acknowledge your generous reception and these most generous gifts to the library.

It is now 34 years since this Library on War, Revolution, and Peace was founded. Over these years friends of the library have contributed over $3,450,000 toward its support. And of priceless value have been the millions of documents and materials furnished freely by hundreds of individuals and three-score governments.

This institution is not a dead storage. It is a living thing which over the years will correct a vast amount of error in the history of these troubled times. It will also teach the stern lessons of how nations may avoid war and revolution.

Not being a Government institution, it has never received a dime from Government sources, and its scholars therefore can be as free as the Sierra winds in its use and in the expression of objective truth.

THE NEED FOR SOME NATIONAL THINKING

In the somber situation of the world I would be derelict if today I discussed the lighter side of life instead of the serious issues which weigh on my heart.

Some of you will know that during the past 2 years I have added somewhat to my previous knowledge of the currents of government in this Republic. Beyond the immediate problems of efficient organization of the Federal departments, there arise from these investigations some grave questions as to our whole future as a nation.

Now, as never before, we need thinking on some of these questions. If America is

to be run by the people, it is the people who must think. And we do not need to put on sackcloth and ashes to think. Nor should our minds work like a sundial which records only sunshine. Our thinking must square against some lessons of history, some principles of government and morals, if we would preserve the rights and dignity of men to which this Nation is dedicated.

The real test of our thinking is not so much the next election as it is the next generation.

I am not going to offer you solutions to our national ills. But I shall list some items for thought. Perhaps in Japanese-English a subhead would be "Bring feet from clouds into swamp where we now are."

THE GROWTH OF SPENDING

We must wish to maintain a dynamic progressive people. No nation can remain static and survive. But dynamic progress is not made with dynamite. And that dynamite today is the geometrical increase of spending by our governments—Federal, State, and local.

Perhaps I can visualize what this growth has been. Twenty years ago, all varieties of government, omitting Federal debt service, cost the average family less than $200 annually. Today, also omitting debt service, it costs an average family about $1,300 annually.

This is bad enough. But beyond this is the alarming fact that at this moment executives and legislatures are seriously proposing projects which if enacted would add one-third more annually to our spending. Add to these the debt service and the average family may be paying $1,900 yearly taxes. They may get a little back if they live to over 65 years of age.

THE GROWTH OF BUREAUCRACY

No doubt life was simpler about 147 years ago, when our Government got well under way. At that time there was less than one government employee, Federal, State, and local including the paid military, to each 120 of the population. Twenty years ago, there was one government employee to about 40 of the population. Today, there is one government employee to about every 22 of the population. Worse than this, there is today one government employee to about 8 of the working population.

THE GROWTH OF DEPENDENCY

Twenty years ago, persons directly or indirectly receiving regular moneys from the Government—that is, officials, soldiers, sailors, pensioners, subsidized persons and employees of contractors working exclusively for the Government—represented about 1 person in every 40 of the population.

Today about 1 person out of every 7 in the population is a regular recipient of Government moneys. If those of age are all married, they comprise about one-half the voters of the last Presidential election.

Think it over.

WORKING FOR THE GOVERNMENT

In the long run it is the average working citizen who pays by hidden and other taxes. I have made up a little table showing the number of days which this kind of citizen must work on average to pay the taxes.

	Days' work
Obligations from former wars	11
Defense and cold war	24
Other Federal expenditures	12
State and local expenditures	14
Total thus far	61

But beyond this the seriously proposed further spending now in process will take another 20 days' work from Mr. and Mrs. Average Citizen.

Taking out holidays, Sundays, and average vacations, there are about 235 working days in the year. Therefore, this total of 81 days work a year for taxes is about 1 week out of very month.

You might want to work for your family instead of paying for a gigantic bureaucracy.

Think it over.

CONFISCATION OF SAVINGS

To examine what we are doing, we must get away from such sunshine figures as the gross national income. We must reduce our problem to the possible savings of the people after a desirable standard of living. If we adopt the Federal Government's estimate of such a desirable standard, then, the actual, and the seriously proposed, national and local governmental spending will absorb between 75 percent to 85 percent of all the savings of the people. In practice it does not work evenly. The few will have some savings, but the many must reduce their standard of living to pay the tax collector.

And it is out of savings that the people must provide their individual and family security. From savings they must buy their homes, their farms, and their insurance. It is from their savings finding their way into investment that we sustain and stimulate progress in our productive system.

One end result of the actual and proposed spendings and taxes to meet them is that the Government becomes the major source of credit and capital to the economic system. At best the small-business man is starved in the capital he can find. Venture capital to develop new ideas tends to become confined to the large corporations and they grow bigger. Governments do not develop gadgets of improved living.

Another end result is to expose all our independent colleges and other privately supported institutions to the risk of becoming dependent upon the state. Then through politics we will undermine their independence which gives stimulus to Government-supported institutions.

No nation grows stronger by subtraction.

Think it over.

GOVERNMENT BORROWING

It is proposed that we can avoid these disasters by more Government borrowing. That is a device to load our extravagance and waste on to the next generation. But increasing Government debts can carry immediate punishment for that is the road to inflation. There is far more courage in reducing our debts than in increasing them. And that is a duty to our children.

INCREASING TAXES

And there is no room for this spending and taxes except to cut the standard of living of most of our people. It is easy to say increase corporation taxes. That is an illusion. The bulk of corporation taxes is passed on to the consumer—that is to every family. It is easy to say increase taxes on the higher personal income brackets. But if all incomes over $8,000 a year were confiscated, it would cover less than 10 percent of these actual and proposed spendings.

The main road is to reduce spending and waste and defer some desirable things for a while.

WE CANNOT HAVE EVERYTHING AT ONCE

There are many absolute necessities and there are many less urgent meritorious and desirable things that every individual family in the Nation would like to have but cannot afford. To spend for them or borrow money for them would endanger the family home and the family life. So it is with the national family.

So long as we must support the necessary national defense and cold war at a cost of 24 days work per year to Mr. Average W. Citizen there are many comforting things that should be deferred if we do not wish to go down this road to ruin of our national family life.

Think it over.

THE BACK ROAD TO COLLECTIVISM

Along this road of spending, the Government either takes over, which is socialism, or dictates institutional and economic life which is fascism.

The American mind is troubled by the growth of collectivism throughout the world.

We have a few hundred thousand Communists and their fellow travelers in this country. They cannot destroy the Republic. They are a nuisance and require attention. We also have the doctrinaire socialists who peacefully dream of their utopia.

But there is a considerable group of fuzzy-minded people who are engineering a compromise with all these European infections. They fail to realize that our American system has grown away from the systems of Europe for 250 years. They have the foolish notion that a collectivist economy can at the same time preserve personal liberty and constitutional government.

The steady lowering of the standard of living by this compromised collectivist system under the title "Austerity in England Should Be a Sufficient Spectacle." It aims at a fuller life but it ends in a ration.

Most Americans do not believe in these compromises with collectivism. But they do not realize that through governmental spending and taxes, our Nation is blissfully driving down the back road to it at top speed.

In the end these solutions of national problems by spending are always the same—power, more power, more centralization in the hands of the state.

We have not had a great socialization of property, but we are on the last mile to collectivism through governmental collection and spending of the savings of the people.

Think it over.

FOOLING THE PEOPLE'S THINKING

A device of these advocates of gigantic spending is the manipulation of words, phrases, and slogans to convey new meanings different from those we have long understood. These malign distortions, drug thinking. They drown it in emotion. We see Government borrowing and spending transferred into the soft phrase "deficit spending." The slogan of a "welfare state" has emerged as a disguise for the totalitarian state by the route of spending. Thomas Jefferson would not recognize this distortion of his simple word "welfare" in the Constitution. Jefferson's idea of the meaning of welfare lies in his statement, "To preserve our independence * * * we must make a choice between economy and liberty or profusion and servitude. * * * If we can prevent government from wresting the labors of the people under the pretense of caring for them we shall be happy."

Another of these distortions is by those who support such a state and call themselves liberals. John Morley would not recognize them.

Out of these slogans and phrases and new meanings of words come vague promises and misty mirages, such as "security from the cradle to the grave," which frustrate those basic human impulses to production which make a dynamic nation.

Think it over.

WHERE BLAME MUST BE PLACED

It is customary to blame the administrations or the legislatures for this gigantic increase in spending, these levies on the Nation's workdays, and this ride to a dead end of our unique and successful American system. A large cause of this growing confiscation of the work of the people by our various governments is the multitude of great pressure groups among our citizens. Also the State and municipal governments pressurize the Federal Government. And within the Federal Government are pressure groups building their own empires.

Aggression of groups and agencies against the people as a whole is not a process of

freemen. Special privilege either to business or groups is not liberty.

Many of these groups maintain paid lobbies in Washington or in the State capitols to press their claims upon the administrations or the legislatures.

Our representatives must run for election. They can be defeated by these pressure groups. Our officials are forced to think in terms of pressure groups, not in terms of need of the whole people.

Perhaps some of my listeners object to somebody else's pressure group. Perhaps you support one of your own. Perhaps some of you do not protest that your leaders are not acting with your authority.

Think it over.

IN CONCLUSION

And finally, may I say that thinking and debate on these questions must not be limited to legislative halls. We should debate them in every school. We should resort to the old cracker barrel debate in every corner grocery. There phrases and slogans can be dissolved in common sense and integrity.

A splendid storehouse of integrity and freedom has been bequeathed to us by our forefathers. In this day of confusion, of peril to liberty, our high duty is to see that this storehouse is not robbed of its contents.

We dare not see the birthright of posterity to individual independence, initiative, and freedom of choice bartered for a mess of a collectivist system.

My word to you, my fellow citizens, on this seventy-fifth birthday is this: The founding fathers dedicated the structure of our Government "to secure the blessings of liberty to ourselves and our posterity." We of this generation inherited this precious blessing. Yet as spendthrifts we are on our way to rob posterity of its inheritance.

The American people have solved many great crises in national life. The qualities of self-restraint, of integrity, of conscience and courage still live in our people. It is not too late to summon these qualities.

Herbert Hoover's Belated Popularity Is Proof That Right Will Prevail

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 9, 1949

Mr. SHAFER. Mr. Speaker, the only living ex-President of the United States—Herbert Hoover—is 75 years old today. Frank Kent, noted and highly regarded political reporter, has written that it is an event which justifies recalling certain facts and reflecting on certain things. Under leave to extend my remarks, I include an article by Mr. Kent which should be read by Democrats and Republicans alike:

FORMER PRESIDENT'S BELATED POPULARITY IS PROOF THAT RIGHT PREVAILS

(By Frank R. Kent)

Next Wednesday the only living ex-President of the United States—Herbert Hoover—will be 75 years old. It is an event which justifies recalling certain facts and reflecting upon certain things.

Too seldom in this troubled and imperfect world does the right prevail or do we live to see justice done. Particularly is this true in the case of our public men. Regularly, the cheap and flashy triumph over the solid and sincere. Far too infrequently does retribution overtake the selfish and shoddy, and usually appreciation comes too late to the truly great. The present high position of Mr. Hoover, indisputably our most distinguished private citizen, along with the great esteem and appreciation in which, regardless of party or class, he is held by the American people generally, is a thrilling demonstration that occasionally the right really does prevail and this appreciation comes before it is too late.

Sixteen years ago when he left the White House Mr. Hoover's popularity was so low as to be practically nonexistent. He had, of course, many devoted personal friends in the country but the masses of the people had been turned against him by a campaign of unprecedented malignity and unparalleled misrepresentation. This, under the direction of the late Charles Michelson, publicity director of the Democratic National Committee, had been going on for 3 years. The depression, for which no informed man believed Mr. Hoover even remotely responsible, gave the left-wing columnists their great opportunity to assail him from every quarter.

Disgracefully, this continued with increased malevolence in the Roosevelt administration and was enthusiastically joined in by the horde of smart alecks, cheap wits, crackpots and Soapy Sams whom Mr. Roosevelt brought to Washington. Mr. Roosevelt himself behaved with unbelievable smallness, carrying his personal vindictiveness to the point where, with his country at war and full knowledge of Mr. Hoover's desire to serve, he angrily refused to avail himself of his outstanding experience and ability in any capacity. By that time popular opinion had begun to turn toward Mr. Hoover, but in the first 8 years after his 1932 defeat the Roosevelt administration had made it more or less a popular pastime to disparage Mr. Hoover. It seemed for a while as if everybody was doing it. Even the suggestion of such a tribute as that paid Mr. Hoover last week in Congress would have horrified the White House during the Roosevelt regime. He was hissed in a New York theater and booed at a ball game. Even that incredible piece of Roosevelt spite in changing the name of Hoover Dam to Boulder Dam aroused no public protest, although the act of Congress in restoring the name in 1947 met with overwhelming public approval.

However, long before that the tide had begun to swing back to Mr. Hoover. Nothing could be done about it, but there was a deep public resentment over the failure to use his unique abilities while the struggle was on. Also the natural reaction of decent people to calumny and falsehood was beginning to make itself felt. In the last 4 years, of course, Mr. Truman has called upon Mr. Hoover for aid and counsel a number of times, and both the President and Congress asked him to take over the gigantic task of reorganizing the executive department. As head of that Commission, created by joint resolution of Congress, he has performed a monumental public service. He has shown the way to reduce the vast, swollen, sprawling, wasteful Federal bureaucracy to manageable proportions. He has shown the way to end wild extravagance and inefficiency by cutting out duplication and overlapping.

Against great odds, a considerable part of his recommendations have been adopted. If all are eventually accepted, the cost of the Federal machine will be reduced about $4,000,000,000 a year, its effectiveness vastly increased, and some sense and reason restored to a badly confused Government about to bog down under its own weight. However, long before this, recognition of Mr. Hoover as an unselfish patriot and statesman, whose services to the country and to the world were very great, had permeated public consciousness again. His prestige and reputation are higher now than before he became President.

Unscathed, he has survived a prolonged attack of almost incredible scurrility. As his seventy-fifth birthday approaches, out in his Palo Alto, Calif., home, serene, philosophical, untouched by hate or malice, physically and mentally fit, beloved by thousands of personal friends all over the country, respected and admired by the people generally, Mr. Hoover is today a larger and finer national figure than ever he has been in all his long and eventful career. One way or another, the anti-Hoover liars and slanderers have been silenced. The groups of detractors who still keep it up are discredited and ineffectual. Some few are ashamed. At last the right has prevailed. It was long overdue.

Reorganization Plan No. 1 and the AMA

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES

Thursday, August 11 (legislative day of Thursday, June 2), 1949

Mr. MURRAY. Mr. President, as all Senators are aware, the American Medical Association has directed all the force of its multimillion-dollar lobby against the President's Reorganization Plan No. 1 of 1949. They base this hysterical campaign on the fear that creation of a Department of Welfare will somehow promote the President's plan for national health insurance. Of course, it will do nothing of the kind. The only issue involved in Reorganization Plan No. 1 is effective reorganization of the Government in line with the Hoover Commission recommendations.

Probably no one is more vocal or more persuasive in opposition to national health insurance than Mrs. Agnes Meyer, a distinguished authority in the field of social welfare. At the same time, she is one of the strongest supporters of this plan to establish a Department of Welfare. As she points out with convincing logic in an article this morning in the Washington Post, the AMA, by opposing Reorganization Plan No. 1, is doing harm to the cause of organized medicine itself.

I ask unanimous consent that Mrs. Meyer's article be included in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DEPARTMENT OF WELFARE—REORGANIZATION PLAN NO. 1 AND THE STAND OF THE AMA

(By Agnes E. Meyer)

Reorganization Plan No. 1, which raises the office of the Federal Security Administrator to Cabinet status, should receive the approval of the Senate. Th creation of a Department of Welfare is long overdue, as President Truman pointed out when he sent to Congress his message on this proposal. In number of personnel and volume of expenditures the Federal Security Agency now exceeds several of the existing Cabinet departments. The range of its programs and their importance to our development as the world's most powerful democracy, demand that it be given a place in the highest rank of Federal organization.

The elevation of the Federal Security Administrator to Cabinet rank involves no costly expenditures. On the contrary, it

would bring about economies within the department itself, through improved services to the Nation and lower costs in achieving these services.

A Secretary of Welfare, instead of being in the anomalous position of the Federal Security Administrator, would become a focal point or clearing house of standards, methods, and practices for the various States and communities. And even though miracles of progress could not be accomplished by this new Cabinet official over night, the smallest of our cities, villages, and rural areas would immediately feel the stimulus of such clearly defined, clearly visible, and accessible Federal leadership.

The psychological effect upon the whole country would be of incalculable value. Federal aid to education, the various fundamental bills for better health services, and for the expansion of social security may all fail of passage during the present Congress. This would be a shattering disappointment to the millions of Americans who saw in President Truman's election the promise of greater social justice. If, however, the ardent desire of the people for national leadership in health, education, and welfare is realized by the passage of Reorganization Plan No. 1, a new wave of hope will pass through the country that something positive will be done to improve the social programs that most closely affect the daily lives of the people.

The creation of such a department has, moreover, received strong bipartisan support ever since the administration of President Harding. In the Eightieth Congress a bill to establish such a department was introduced by Senators TAFT and FULBRIGHT. During the hearings it received favorable support from veterans' organizations, labor unions, educators, women's clubs, religious groups, and leading public as well as private welfare administrators.

Reorganization Plan No. 1 "consolidates in the Secretary of Welfare the functions now vested in the various offices and units of the Federal Security Agency and authorizes him to delegate their performance to appropriate offices and units of the Department."

Some people fear that this transfer of powers would tend to overcentralize health, education, and welfare activities and thus accelerate the trend toward authoritarianism which exists in our society as its exists in all other nations.

Yet, this plan coincides with the Hoover report recommendation that department heads should control and have full responsibility for the conduct of their departments. It gives the Secretary of Welfare no more power than any other member of the Cabinet possesses. Those who oppose giving the same power to the Secretary of Welfare are chiefly concerned about the integrity of the United States Public Health Service. But this agency originated through an act of Congress which protects its functions and specifies that its administrator be a member of the medical profession.

Concern for the future of the United States Public Health Service is not the only reason for the vigorous opposition of the medical profession to Reorganization Plan No. 1. The apprehensions of the medical profession are the more acute, because the administration, especially President Truman and Mr. Oscar R. Ewing, the Federal Security Administrator, are ardent advocates of compulsory national health insurance, which typifies to many people in and out of the medical profession the most dangerous aspect of overcentralized administration, power, and control.

Various spokesmen have stated for the American Medical Association (a) that our health problems are so important as to merit a separate Cabinet position for health with a medical man as executive officer and (b) that if Oscar R. Ewing, now Federal Security Administrator, should be given the new job of Secretary of Welfare, he would use the added prestige of his Cabinet position to campaign for compulsory national health insurance. The hope of the medical profession for a Secretary of Health has also been fortified by the report of the Hoover Commission which recommends the transfer of the Public Health Service out of the Federal Security Agency and its incorporation under a united medical administration.

Our leading educators used to maintain that education also should have a separate Cabinet portfolio. It is clearly impossible to have three new Cabinet positions, one for health, one for education, and a third for social security. But even if it were possible, it would not be in the public interest. For the grouping of these social functions in separate agencies under professional administrators but subordinate to one layman of Cabinet rank has positive values of prime significance.

The improvement of our health, education and welfare facilities is not a series of separate problems. They are all three so closely related that they are one and the same problem as they impinge upon the individual, the family, and community life as a whole. That is why we need a comprehensive approach to the improvement of these services on a local, State, and Federal level. And what the Federal Security Administrator has been powerless to do, namely, to clarify the Federal, State, local and administrative relationships, a Cabinet officer with full responsibility for the conduct and organization of his department could bring about. The administrative efficiency he could achieve would facilitate the cooperation of State agencies, of voluntary welfare groups and of private citizens who have dealings with the Federal department.

Instead of encouraging authoritarianism and overcentralization, orderly procedure on the Federal level would encourage efficiency and independence in the States and local communities. It would emphasize with a new clarity that the relationship between the Federal Government, the States and the local communities is a two-way channel of give and take.

The American Medical Association should realize that this cooperative administrative relationship is of prime importance in achieving a national health plan by democratic means and policies. Medical leaders who try to resist the popular pressure for compulsory health insurance, by isolating themselves in a separate Federal department and blindly opposing every cooperative endeavor of related services and of the lay public, will lose the last remnant of prestige which they still have with the American people.

Fortunately the most progressive minds in the fields of medicine, public health, and hospital administration have demonstrated in various parts of the country that the extension of medical care to all of the people depends primarily upon the collective action of community and State health, educational and welfare agencies, whether public or private. One of the best known examples of State-wide cooperation for the extension of medical care is the Maryland health plan for the care of the indigent. This plan, which was initiated by some of the Nation's outstanding medical men, has achieved success only because it is based upon an understanding of community organization and the mobilization of the total community resources—the local health and welfare departments, the schools, the private practitioners and all voluntary health and welfare groups—for the better distribution of the State's medical resources.

Very few States have the resources, financial or professional, to develop a State-wide health plan without some assistance from the Federal Government. The Maryland health plan and the somewhat different plans in other States create efficient local administrative machinery whereby Federal aid could be given to States that need it, without the imposition of Federal control and the danger of Federal domination.

Why is the American Medical Association incapable of seeing the necessity for such Federal, State, local cooperation if the Nation is to be spared the disastrous and costly experiences of the British people with compulsory health insurance? Why is the AMA incapable of understanding that such cooperation between our health, educational, and welfare facilities is impossible without the close relationship of these services at the Federal level as well as in the States and the localities?

Instead of giving the new Secretary of Welfare an oppressive authority, Reorganization Plan No. 1 will increase his legal responsibility to the Chief Executive to fulfill the demands of the State authorities as to ways and means of increasing their own efficiency. Few States have thus far organized nor will they in future organize identical plans for solving their local health, education, and welfare problems. This diversity and the local initiative from which it issues, are the salvation of our democracy. But many of our social problems are now of such dimensions that they cannot be handled by local communities, States, or the Federal Government alone. They can only be solved through the harmonious efforts of all three government units working together for the common good.

What will assuredly bring about the so-called welfare state beginning with compulsory health insurance, is the social chaos and the human deprivation that now exist in many parts of our country. Driven to desperation through insecurity and the lack of adequate means for individual self-development, our citizens like those of Britain will clamor for an all-powerful central government.

We have no time to lose if we are going to strengthen our democracy by strengthening community organization. This is a moment in our national history when we must be courageous, creative, and socially imaginative. President Truman's Reorganization Plan No. 1 is purely an administrative reform. But we must keep our minds on the fact that the greater efficiency which the President seeks in the Federal Government is essential, as he puts it, to the conservation of our human resources. It is aimed at creating an orderly society where the individual can exercise both his rights and his duties as a citizen.

Under the leadership of a Secretary of Welfare a new vitality, a new zest for local initiative would result. The vitality of community life is the heart beat of democracy. Without it, we cannot possibly carry out our ever-mounting social responsibilities at home and abroad. But once aroused to action through more effective Government procedures, the initiative and independence of the American people can be counted upon to meet their own problems as well as the world problems imposed upon them by destiny.

Britain's Financial Predicament

EXTENSION OF REMARKS

OF

HON. JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Thursday, August 11 (legislative day of Thursday, June 2), 1949

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD an article on Britain's financial predicament, written by George Rothwell Brown and published in the Washington Times-Herald of August 11, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

POLITICAL PARADE

(By George Rothwell Brown)

On December 31, 1951, there will be added to the dollar gap of both Britain and France the millions of dollars necessary to pay the interest on the loans both countries have received since the war from the United States.

The Anglo-American loan agreement of 1946 requires Britain to begin on that date to repay both the principal and interest on that $3,750,000,000 loan, which was to have lasted until 1952, but which was wasted by the Attlee government in 22 months.

There is a clause which provides that if Britain's trade condition does not permit repayment she may be excused payment of the annual interest of 2 percent.

But there is no provision excusing her from starting the repayment of the principal, in 50 yearly installments.

Default on that requirement is staring the Socialist-Labor government in the face.

By no conceivable miracle can Great Britain, within the specified time, begin repaying in dollars, as provided by the terms of the agreement.

Obviously revision of the 1946 loan agreement will have to come up for discussion at the approaching September Cripps-Snyder conference in this city.

And equally obviously, in view of Britain's present difficulties, any agreement of any character must boil down eventually to the absolute cancellation of the entire debt.

Among the scores of plans which are being rumored in Washington, which Sir Stafford Cripps and Secretary Snyder may consider next month, may be further aid either in the form of a loan, or a scheme disguised as a loan.

It seems clear, however, that the British do not want another loan. This is confirmed by the prompt denial at the British embassy this week, of a statement by Senator WHERRY that in fact request for a $15,000,000,000 loan was already under consideration by the Truman Cabinet.

Request for a loan of that magnitude would not only outrage American public opinion, but would bring curses down on the head of the Attlee government by a bulk of the British people who are already unhappy about being so deeply obligated to Uncle Sam.

Moreover Sir Stafford Cripps must necessarily seek at the Washington Conference next month not a mere stopgap solution, but a long-term solution of the British economic problem.

What that solution will prove to be is anybody's guess at this moment.

The true answer was given in the Senate this week, when 24 Senators—exactly one-fourth of the entire United States Senate—voted for a motion by Senator KEM, of Missouri, to suspend a Senate rule that would bring to a vote his amendment to the ECA bill, to deny further American tax-money aid to European countries—meaning Great Britain—which continued the nationalization of their industries.

The Kem amendment was strongly bulwarked by testimony before the Senate Appropriations Committee by Administrator Hoffman, who admitted that British experiments in socialism were slowing down recovery.

The only permanent solution of Britain's financial predicament—her great and growing dollar gap—appears to be a change in the British Government, at the next general election.

Yet the United States Senate, by rejecting the Kem amendment, 50 to 21, which was only accomplished with the votes of 16 Republicans, in effect voted to use the prestige and wealth of American taxpayers to keep in power the British Socialist-Labor Government, which has no solution of the mess it has got Britain into save further appeal to the United States Treasury.

The Republican Party on this vote deliberately threw away one of the most popular political issues in this country today.

As long as its leaders in Congress continue to make it the tail of the New Deal kite the party will never win another presidential election—nor will it deserve to win.

Phemister Versus Pound

EXTENSION OF REMARKS

OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 11, 1949

Mr. PATTERSON. Mr. Speaker, since my insertion in the RECORD of my opposition to the award by the Library of Congress of $1,000 for the best poetry of 1948 to Ezra Pound, I have received many communications from interested persons throughout the country. There has been unanimity of opinion that the award was entirely unjustified, and that Pound's work had little resemblance to poetry as we, in America, know it.

Among those who were kind enough to comment was Benjamin F. Phemister, of Indianapolis, Ind., who is also known as the Bard of the Brandywine. Mr. Phemister has been kind enough to forward me a copy of one of his poetry works Wave, Old Glory, Wave! I believe the publication of this poem in the CONGRESSIONAL RECORD will demonstrate the difference between true poetry and the meanderings of the indicted traitor, Pound, who is anti-Semitic, anti-American, and anti-Christian. I am pleased, therefore, to include the work of a genuine American patriot who, though of advanced age and increased infirmity, has dedicated himself to the continuing glorification of our great country:

WAVE, OLD GLORY, WAVE!

(By the Bard of the Brandywine)

"So long as the flag shall bear aloft its glittering stars * * * so long, I trust, shall the rights of American citizens be preserved, safe and unimpaired * * * 'til discord shall wreck the spheres—the grand march of time shall cease—and not one of all creation's fragments be left to chafe the bosom of eternity's waves!" (Sam Houston, in the House of Representatives, May 7, 1831.)

1

From Plymouth Rock to Golden Gate,
From Lakes to Lone Star shore,
The Stars of Hope, and not of hate,
Shine on forevermore!
Afloat the willing, wooing breeze,
Above "our father's" [1] grave,
Where bend the Nations to the knees,
Behold Old Glory wave!

[1] Washington's Tomb.

2

A crown the dome in Washington,
'Mid stress, or strife, or gale;
'Bove Bunker Hill and Bennington,
Once sown with leaden hail:
O'er strong and weak, o'er rich and poor—
In palace, hut, or cave,
That spangled shield at ev'ry door—
There Glory wills to wave!

3

The harbinger of liberty,
In mine, in field, and shop;
Yea, on the highest masts at sea,
And on the mountain top!
Forever be the Stripes and Stars
The emblem of our brave,
The crimson trickled from their scars,
Where Glory had to wave!

4

O, shine from Glory's jeweled breast,
Each star a glowing sun!
For North and South, and East and West,
United, stand as one!
Aye, one in thought, and one in deed,
No one man's might, no kingly creed,
Old Glory's proud to wave!

5

Love-daring sons of Glory Land,
In calm or battle blast,
Strike down the wretch who lifts a hand
To mar that starlit mast!
Then wave, Old Glory, far and wide,
And let Gitoutski rave:
Defend we will, though death betide,
Wave on, Old Glory, wave!

Sweden Points Way to Permanent Forest Reserve

EXTENSION OF REMARKS

OF

HON. FOSTER FURCOLO

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 11, 1949

Mr. FURCOLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article:

SWEDEN POINTS WAY TO PERMANENT FOREST RESERVE

(By Robson Black, president emeritus, Canadian Forestry Association)

Walking down a forest trail in Sweden last summer, I said to the local ranger:

"What do you do when a fire breaks out?"

"Can't tell you," he replied, "I've only been here 25 years."

Sweden contains 10,000,000,000 trees and keeps them virtually fireproof. Last year only 2,500 acres were scorched in a wooded domain of 56,000,000 acres.

The United States has 10 times the timber area of Sweden with a tree count in the neighborhood of 500,000,000,000. Almost a quarter of the United States is covered by woodlands.

NEW FORESTS MAPPED

By Scandinavian standards the annual American bonfire looks atrocious—and it is. United States Forest Service gives the yearly loss as 853,000,000 board feet of saw timber and 3,800,000 cords of smaller-size wood, classed as "pole timber." If all this spoilage were turned to useful purposes, it would represent 57,000 five-room bungalows and enough newsprint paper to publish the Sunday edition of the New York Times for 91 years.

If every conflagration in Uncle Sam's woodlands were suppressed, it would still leave the

critical problem of keeping the forest domain self-perpetuating. Sweden has gone far to solve that problem by stern legislative command. Every acre of tree growth, whether owned by the state, farmer, lumberman, or papermaker, comes under jurisdiction of technical forest engineers and boards of public supervisors. You may cut liberal quantities from your acre, but only if you provide for a new forest to follow your cutting. This, of course, has to be by natural regeneration and not by planting rows of little trees. In general, and despite a temporary lapse in north Sweden, the country's capital stock of living woodlands is not being weakened by commercial exploitation. Why shouldn't the same scheme work in the United States?

Deep in the consciousness of the American people is the vanity of inexhaustible resources. They imbibed it from their schoolbooks and perpetuate it in patriotic songs. Who will dare add up Uncle Sam's 465,000,000 acres of commercial woodlands and suspect it of petering out? A dowry of such geographical magnificence is a natural for exploitation. Anyway, does not our hero worship focus on countless pioneers who "hewed down the forests" and turned America into an agricultural masterpiece? And then—look at the United States in the last 150 years, furnishing half the lumber that's been cut in the entire world. What she did once, she can do again.

NEED REVERSE RATIO

This is not the viewpoint of the Federal and State forest services, or of the wood-using industry, or technical foresters. While the Federal Forest Service seeks a measure of legally imposed controls on the use of privately owned forests, and is roundly opposed by the States and by commercial industry, no one in either camp questions the national forest situation as other than a critical and frightening emergency. They share the common objective of a permanent wood supply, the curbing of wasteful exploitation, the employment of trained foresters and, of course, the riddance of forest fires. Factional disagreement is mainly on methods and the source and degree of obligatory pressures.

In face of expanding population, the overall drain on Uncle Sam's saw-timber supply as compared to annual growth is in the ratio of 3 to 2. For national safety, the figures will have to be reversed and made 2 to 3. Before that can be done, literally millions of forest owners must be sold on good forestry as good business.

When you break down the national endowment of 465,000,000 acres of commercial forest, you assign the Federal Government 82,000,000, with 18,000,000 to the States and 9,000,000 to counties, cities, and towns, all these totals tending sharply upward year by year.

Private ownership, therefore, covers some 35,000,000 wooded acres. Who are these people? Three million are farmers and, in the opinion of the American Forestry Association's appraisal, not 1 in 10 knows or cares much about good management of his farm-forest. Another million is composed of nonfarmers, with 100,000,000 acres in parcels of 100 acres or less. And they're worse forest managers than the farmers.

INDUSTRY DOES BETTER

What about the big fellows—the industries and operators? The American Forestry Association claims that a fourth of industry's forests are well managed for continuous wood production and that one-half of industry's timber domain has fair to excellent standards of cutting and regenerative measures.

This hodgepodge of good, fair, and zero standards as applied to a highly essential raw material leaves a dismaying gap. In no quarter is the situation accepted as tolerable. The country's forest resources, taken as a whole, are like a fine machine idling its time away. Can the machine be legislated into doing what the public interest demands?

American Policy in China

EXTENSION OF REMARKS

OF

HON. HOMER FERGUSON

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Thursday, August 11 (legislative day of Thursday, June 2), 1949

Mr. FERGUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Ray Richards, of the Washington bureau of the Hearst newspapers, and published under date of August 10, 1949, telling how American mediation between Communists and Nationalists was the greatest factor in the events that conspired to give the Soviet puppets their present advantage in China. The article is the fourth of five articles dealing with the subject.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

(This is the fourth of five articles telling how American mediation between Communists and Nationalists was the biggest factor in the events that conspired to give the Soviet puppets their present advantage in China.)

(By Ray Richards)

WASHINGTON, August 10.—Chiang Kai-shek's acquiescence to American mediation proposals has been called his only big mistake.

He was clubbed into it—with no one but himself knowing with what mental and spiritual suffering—by his dependence on United States assistance in his vast dreams of industry, trade and public works for a glorious Chinese Republic after the long ordeal of warfare had become but a paragraph in history.

In every American suggestion that the Nationalists cease fire on the Communists, in every proposal that Chiang admit Communists to his government without the formality of their popular election, was implied the promise of help in works ranging from railway and airport construction to the colossal electrification and irrigation of middle China through the Yangtze Gorges project.

For the welfare of America and the world, concessions to the Communists were not China's need in this hour.

What China needed in 1945 was not a switch of governments or constitutional changes, but a period of peace to give the people a free flow of food, clothing and fuel, if only a minimum flow.

This would have been achieved had the United States concentrated on it while permitting the Nationalist armies to suppress the weak Communist fighting strength.

But mediation joined with the Yalta concessions to Russia to tear down the Nationalists and foster the Communists.

The start of Chiang's mistake was in agreeing to the American demand that he invite the Communists to a political consultative conference at Nanking in the middle of 1945.

This was the meeting at which, by United States request, the Nationalists and the Communists were to end all their differences and make China a happy family.

The No. 1 Communist of them all, Mao Tse-Tung, secretary general of the party in China, came in a supervisory capacity.

The official Communist negotiator, heading a large group, was Chou En-Lai.

Chou made proposals for Communist representation in the central government, and Chiang wryly acceded.

Chou raised his demands, and Chiang gave in again.

Chou again raised the price of peace, and again Chiang consented.

With no American protest against the Communist take-all tactics, this game went on until by autumn of 1945. Chou was demanding more than 900 of the 1,200 seats in the national assembly and most key cabinet posts.

By the accepted calculation at that time, not more than 1 percent of the Chinese people were professing Communists.

In high disgust at what was going on, Gen. Pat Hurley resigned as Ambassador on November 27, 1945.

On the same day the White House announced the appointment of Gen. George C. Marshall as special envoy to China.

On December 15 President Truman made United States coalition policy clear beyond doubt by a statement declaring all political parties must have representation in the Chinese Government, and that if this condition were met the United States would be prepared to assist the Nationalist Government in every reasonable way.

On January 10, 1946, the consultative conference announced that civil war hostilities would cease at once by truce, with General Marshall serving as top mediator toward establishment of permanent peace.

The China crisis was now at its peak. All else was to become prelude and aftermath.

American mediation legalized the Communists. It was the first formal recognition that there were two governments in China.

It came just in time to keep the Nationalists from completely disarming the Communists.

It lifted Nationalist blockades which allowed the Communists to flee to the shelter of Manchuria, by then almost solidly a Russian state by reason of the Yalta pacts.

Although effective Communist troop strength was only about 20,000, the truce allowed 70,000 civilian Communists to escape a pocket north of Hankow and trek to Manchuria. It freed 100,000 from the Canton area.

The Communist armed forces, now beginning to grow, started Communist attacks on Nationalist forces in the north. If the Nationalists retaliated, the Communists lodged a complaint with General Marshall, and the Nationalist Government would be compelled to issue a new order against fighting.

The Chinese Government lost great areas of land to the Communists because Chiang, his vision fixed on the greatness of a future peaceful China, restrained his forces.

Toward the summer of 1946 Communist violations of the truce had increased to the scale of full warfare, and eventually there was an explanation in a manifesto of the Shantung-Honan-Hopei Communist Party, captured by the Nationalists. It said:

"The correct strategy for us to employ from now on is large-scale warfare. The central headquarters of the Communist Party in China has ordered all members of the party to mobilize all resources to attack."

Even in the face of this the American mediators tried to restrain the Nationalists from moving on Kalgan, the Communist industrial center in north China, and Yenan, the Communist capital.

Civic Federation Given New Credo

EXTENSION OF REMARKS

OF

HON. J. FRANK WILSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 11, 1949

Mr. WILSON of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Dallas Morning News:

CIVIC FEDERATION GIVEN NEW CREDO

(By Harry C. Withers)

For more than 30 years the Civic Federation of Dallas has been a powerful influence in the cultural life of the community.

Organized in 1917 to sponsor and promote adult education, it has conducted institutes for adults and youths, public forums and young artists' competitions, established a library, and presented chamber music, art exhibits, and exceptional moving picture films.

Year after year it has brought to Dallas the recognized leaders in various fields of esthetic endeavor to stimulate constructive thinking and to inculcate a more authentic appreciation of the American way of life.

Although free enterprise has financed operations, substantially, it quite often has been the target of speakers who have come from afar to advocate security guaranteed by the Government. They have spoken their pieces without let or hindrance.

Monitoring the programs upon all occasions, often as moderator, has been that vigorous octogenarian, Elmer Scott, executive secretary of the federation and its intellectual father.

By his absorption and adjustment of diverse theories of right and wrong, of justice and equity, he has evolved a wholesome credo which he has just reduced to concrete terms.

Upon submission to the directors of the federation it was given enthusiastic approval by an overwhelming majority, thus becoming its official declaration of hopes and purposes.

Because of its virtue as a pattern for decent relations between humans as individuals, as groups, and as citizens of the world's most enlightened government it is presented here in full:

"We believe in individual personality and the right of every person to a good life, freedom of thought and action, and an occupation that satisfies his normal desires and lies within his abilities.

"We believe that in the attainment of personal satisfaction it shall not jeopardize the well-being and equivalent rights of others.

"We believe that individual conduct should contribute to amity and stability of home and state.

"We believe in the potential wholesomeness of democratic government in all areas, especially where its emphasis is on service to the people rather than as a ruling power.

"We believe that conflicting interests of capital and labor may be transformed to those of mutual advantage to both.

"We believe that the consumers, without whom capital and labor would be unemployed, deserve primary consideration and that their justifiable interests should be the basis for regulatory measures.

"We believe that representative government can operate efficiently when the electorate names its representatives with an intelligent understanding of the issues to be met and the qualifications required to weigh and act on those issues with wisdom and sound judgment.

"We believe that enforced conformity to political and religious conduct is contrary to the spirit and letter of the Constitution and Bill of Rights and that the guaranty of freedom in those respects is inviolable.

"We believe that while the American Revolution overthrew an intolerant oppression, any modification of our national life can best be attained through persuasion in the acceptance of new ideas and never by revolutionary overthrow.

"We believe in the cultivation of intelligence rather than an accumulation of knowledge. The former assures a competent citizenship, capable of self-government. The latter may mean only the possession of much learning but in a vacuum.

"We believe in the rule of reason rather than emotion. Reason may be the cooler of the two, but produces light; while mere unbridled emotion obscures issues by heat of passion.

"We believe in the hope that lies in the youth of the Nation but decry the attempt on the part of adults to seek absolution for their sins and pass on unsolved problems to posterity.

"We believe in the cultivation of a taste and appreciation of the arts, not as mere window dressing, but as contributing factors to the individual's richer life.

"We believe that adult learning is not to be construed as an accumulation to satisfy curiosity or to occupy one's time, but an attempt to comprehend ideas, facts, movements—local, national and international—to the end that with this new knowledge the individual himself may function as a competent citizen.

"We believe in the cultivation of loyalty to our national life and a devotion to our American civilization. A recognition of dangerous tendencies or faults in the governmental structure and an effort to correct them may well be a proof of loyalty and devotion.

"We believe that far-off people are now near neighbors and that we can no longer ignore their proximity and their effect upon our national life. However much we may differ from their traditions, their way of life and habits, their political and religious ideologies and their economic life, they are our near neighbors, immovable geographically, and it is our business to find a way to get along with them with reasonable amity and growing good will.

"Finally, we believe that correspondingly to our setting high in our regard the rights and contributing values of the individual, we pay deference to the community. This is the culture tube in which the germs of thought and behavior have their beginnings and ultimately affect our national life and international relations.

"It is with this thought that the Civic Federation of Dallas undertakes to play its part, not only in helping make Dallas a better place to live in, but to give some impetus to a growing sense of public responsibility on the part of the local citizenry."

Platitudes, you say? Only as the decalogue and the beatitudes are platitudes if you ignore them. Surely these are words to live by; words to live up to. Faithful adherence to their spirit will bring peace and freedom and happiness. If you approve them you might let their author know. You can address him at 2419 Maple Avenue or reach him by telephone, Riverside 4535.

Marshall Plan Assistance to Great Britain

EXTENSION OF REMARKS

OF

HON. JAMES P. KEM

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Thursday, August 11 (legislative day of Thursday, June 2), 1949

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Saving the Opposition," from the Houston Post of August 9, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SAVING THE OPPOSITION

It is ironic that the American capitalistic system should give billions upon billions of dollars for the support and upbuilding of the British Socialist Government, a system antagonistic to capitalistic free enterprise, because the British Socialist Government is unable to support itself. The irony is capped by the fact that the Marshall plan is intended to help nations strengthen their democratic bonds and preserve their freedom.

Nevertheless, if the United States authorities have promised that our Government would not interfere with the internal policies of Marshall aid nations, as Labor Party leaders say they did, that presumably settles it. It is not the first time that high officials of the Federal Government have committed the United States to matters of first importance without consulting the makers of our laws or the payers of our taxes.

Britain is a democratic nation, in that its people elect their governing heads in free elections. But as the Labor Government nationalizes more and more basic industries and businesses, the Labor Party in power gains more and more influence over more and more votes. It is just a question of degree as to how much further the Socialistic government must extend its bureaucratic power before it can control all elections.

Socialism is one of the several processes that lead naturally to totalitarianism, by various routes. Like fascism, communism, and nazism, it must keep on growing in size and strength until it reaches the point of absolutism. Britain has clamped Government ownership on railroads, coal mines, air lines, communications, the Bank of England, gas, and electricity. Steel, iron, and other industries are marked for nationalism. The Laborite aim is to control all basic industries and businesses.

A nationalized enterprise is not free; it must do what the Government orders. The abridgement of freedom radiates into the private lives of the people, and infiltrates into other endeavors. The logical culmination is dictatorship in all phases of economic and social life. That is what Soviet Russia and its satellite states now have. The latest reported example of its operation was the banning of marriage advertisements from Czechoslovakian newspapers because they made marriages capitalistic business transactions.

Such is the logical ultimate end of the British socialism which Marshall aid money is strengthening. And the current administration of the United States Government is trying to follow in its footsteps.

Federal Aid to Education

REMARKS

OF

HON. JOHN JENNINGS, JR.

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 11, 1949

Mr. JENNINGS. Mr. Speaker, within a few days this Congress will have voted and the President will have signed into law a measure appropriating more than $5,000,000,000 as a gift to people of foreign lands. This vast sum of money will be followed by another gift to our European allies for rearmament of not less than $900,000,000. We are told this is necessary to make us strong abroad.

Our real and dependable strength has always resided in, and now exists in, our own people. To be strong this Nation dare not be niggardly in the training, equipment, and education of our children.

It was written of old: He who provideth not for his own household has denied the faith and is worse than an infidel.

Both political parties in their national conventions in Philadelphia last year when they girded their loins for the congressional and Presidential battle promised the parents, the teachers, and the school children of this country Federal aid for education.

Let us turn to the record. I now give you the promise of the Republican platform. Here it is:

> We favor equality of educational opportunity for all and the promotion of education and educational facilities.

In the Senate, Senator ROBERT A. TAFT, on January 6, 1949, introduced a measure authorizing the appropriation of $300,000,000 annually to assist the States and Territories in financing a minimum foundation education program of public elementary and secondary schools. The Taft bill authorizes the appropriation for the fiscal year ending June 30, 1950, and for each fiscal year thereafter, the sum of $300,000,000 to be distributed among the States. The money made available by this act is to be administered by the public-school authorities in accordance with the laws of the respective States. The measure provides that in the use of said funds there shall be no discrimination against minority races.

In his usual forthright, able and fearless manner, Senator TAFT, in this measure translated the promise of the Republican platform to provide educational opportunity and facilities to all the children of this Nation into provisions of law so plain that a wayfaring man though a fool could not err therein. This measure passed the Senate on May 5 of this year and since May 9 has been in the hands of the House Committee on Education and Labor.

Now, let us turn to and read the promise to the parents, children, and teachers of this country made by the Democratic Party in its platform on which President Truman and the Democratic Members of the Congress were elected in November 1948. Here it is:

> We advocate Federal aid for education administered by and under the control of the States. We vigorously support the authorization which was so shockingly ignored by the Republican Eightieth Congress for the appropriation of $300,000,000 as a beginning of the Federal aid to the States to assist them in meeting the present education needs. We insist upon the right of every American child to obtain a good education.

In these vigorous words the Democrats made both a promise to the people and an attack upon the Eightieth Congress. When these words were written into the Democratic platform, the men who used this language had before them Senate bill 472, introduced by Senator TAFT and others on January 31, 1947. This bill in essence is the same as S. 246 and was reported in the Senate on July 3, 1947, Report No. 425. It passed the Senate on April 1, 1948. It then came over to the House and was referred to the Committee on Education and Labor on April 2, 1948.

There is no escaping the conclusion that when the Democrats in their Philadelphia Convention in 1948 used the words, "We vigorously support the authorization which was so shockingly ignored by the Republican Eightieth Congress for the appropriation of $300,000,000 as a beginning of the Federal aid to the States to assist them in meeting the present education needs," they placed upon the Democratic Members of this Congress the obligation to support the present Federal aid support measure introduced in the Senate by Senator TAFT in the Eighty-first Congress, passed by the Senate, as I have heretofore stated, and which has been gathering dust in the Democratic-controlled House Committee on Education and Labor since May 5, of this good year.

In their platform declaration, the makers of the Democratic national platform of 1948 were using brass knucks and a club in favor of Federal aid to education. Since that time they have been treading softly, armed with a feather duster and a powder puff.

We all know that the Democratic leadership of the House of Representatives is strong, able, and when it asserts itself, is powerful. The Democratic leadership in this House, backed with the announced and repeated declaration of support of this measure by President Truman, have the power to bring S. 246 to the floor of this House for a vote before adjournment.

The Members of this House, therefore, both Republicans and Democrats, have the declarations and the promises of both the Republican and Democratic platforms of 1948 on which to stand and as a commitment in favor of Federal aid to education.

In my support of Federal aid to education, I am in accord with the promises contained in each of these platforms. Both in the Eightieth and in this Congress I introduced in this House Federal-aid-to-education measures the same in terms as the measure that has twice passed the Senate.

When I find my Democratic colleagues, in a righteous cause, going my way, I go with them.

When their heart is as my heart, I say to them, "Give me your hand."

We can put the planks of these two platforms in favor of Federal aid to education side by side and stand upon them with a foot on each platform. Or, if we prefer, we can lay them one upon the top of the other, thus pyramiding their promises on this vital and supremely important program and stand upon them.

Both parties are in default on the solemn promises made to the people, children, and the teachers of this country.

The Democrats won on their promises. The people accepted their pledges. They gave full faith and credit to these commitments. The making of these promises in the Democratic platform and the action on them by the votes of the people, translated the promises into a solemn contract between the Democratic majority of this House and the people of this country.

And, in that connection, I submit the same is true with respect to the promises made by the Republicans in their platform. The commitment of the Republican platform of 1948 has been carried out in full by Senator TAFT and other Members of the other body.

Discharge Petition No. 9 on the Speaker's desk, if signed by a majority of the Members of this House, will bring before the House for consideration at this session S. 246, the Taft bill, authorizing the Congress for this fiscal year and each fiscal year hereafter to appropriate $300,000,000 for Federal aid to the elementary and secondary schools of this country, to be administered by the school authorities of each State to which this aid is extended.

The promises on this subject made by both political parties are in default. The discharge petition is a sight draft calling on those who are in arrears and delinquent in the discharge of this promise to make good their compact with the people.

Within the years 1949 to 1952, inclusive, more than 13,000,000 children of this country will enter the first grade, and the greater number of them will graduate from our elementary schools. Within that same period more than 6,000,000 will enter, and millions of them will graduate, from the high schools of this country.

The vast majority of these young people will receive no other schooling than what they receive in the elementary and high schools. It is, therefore, of supreme importance that the teachers in these schools be loyal, competent Americans, able and fully equipped to instill in the minds and hearts of these future American citizens the inspiring truths of our great history and the opportunities this land affords to these boys and girls. The future of this country will be in the hands of these young Americans. They are America to the extent of their ability to influence its destiny for weal or for woe.

The education of this Nation's boys and girls is of transcendent importance.

Adequate salaries for their teachers should not be denied by penny-pinching.

The Federal funds made available by this program are paid by the people of the States. The beneficiaries are citizens of our common country.

We spend billions that our youth may fight, and if need be die, all over the world. Why not spend $300,000,000 to teach them to live here at home.

The home is the unit of society. Man's greatest possession is his child. To rear, educate, and equip their children for the duties of life is the high calling of parents.

When the accounts of fathers and mothers are finally made up the greatest credit that will be given them will be the watch care, the sacrifice, and devotion they have lavished on their children.

The most that the average parents can give their children is an education. When the two political parties promised the fathers and mothers to give their children better schools, they appealed to the finest qualities of their minds and hearts. The leaders of no political party have the right to trifle with a parent's love for his or her child.

Next in character-forming influence in the lives of our children are the school teachers.

Someone is said to have asked Demosthenes why he made speeches instead of writing books. The great Grecian orator replied, "I would rather write upon the hearts of the living than upon the hides of dead sheep."

If anyone on this earth writes upon the hearts of the living, it is the school teacher. Standing within the schoolroom, where wells the fountain of perpetual youth, dealing with the plastic, impressionable, unfolding minds of boys and girls, the teacher weaves into the warp and woof of his pupils' lives the very fiber of their thoughts and being. There is no more powerful, no higher calling on this earth than that of the teacher, save perhaps the Christian ministry.

We must give school teaching the dignity, the security, the income, its importance deserves, and thus assure our boys and girls teachers of the highest ability and character.

The millions of young Americans now in our public schools, and who will pass through them within the next 4 years have the fate of America in their hands.

For 5 years as a teacher in the public schools of my home county, Campbell, in Tennessee, in my 2 years as county superintendent of public instruction and in my years of service on county and city school boards, and down to this good day, I have seen young America on the march. In the hands of this precious host, in their enthusiasm, their optimism, their boundless energy, and dauntless courage is the unfolding future of this Nation. They will meet our enemies in the gates. They will build, protect, and defend this Nation. The men and women who teach them are the staff sergeants, the commissioned officers who are training the youth in whose hands is the future of this Nation. They are the seed corn of the Nation. There is nothing too good for them. We must not fail them, nor break faith with them.

Remember that in dealing with the parents, the teachers of these boys and girls, you are dealing with men and women of character and intelligence. Shadow-boxing, shilly-shallying, breaking faith with them will be known from ocean shore to ocean shore.

Let us redeem the promises made to fathers and mothers, the teachers of these boys and girls, and to the boys and girls.

This Congress has the power to work its will and to make good the solemn pledges of both political parties. We can do it by signing petition No. 9 on the Speaker's desk. This I have done.

Congratulations to the Torrington Register on Its Diamond Anniversary

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 11, 1949

Mr. PATTERSON. Mr. Speaker, I take this occasion to offer salutations to the Torrington (Conn.) Register upon the attainment of its seventy-fifth birthday. Starting as a weekly, the Wolcottville Register on August 10, 1874, this paper, later published as a daily, has continuously served the growing city of Torrington and environs for these many years. To its publisher, managing editor, and to the entire staff who make possible this progressive, alert, and factual publication go my congratulations.

I include as a part of my remarks editorial comments from the August 10 issues of both the Waterbury Republican and the Ansonia Sentinel.

[From the Waterbury Republican]

STILL VIGOROUS AT 75

The Torrington Register marked on Monday of this week the seventy-fifth anniversary of its founding, and it gives us pleasure to salute such a hale and distinguished friend and competitor on such an occasion.

Newspapers which reach the fine, ripe age of threescore and fifteen are rare and growing rarer; and Torrington, which has grown with its fine newspaper, can congratulate itself on the measure of independence which goes with having its own daily journal.

At 75, the Torrington Register is as sprightly and forthright as ever, betraying none of the signs of accumulating years that three-quarters of a century might imply.

In particular, it is to be noted, the Register has avoided the circulatory ailments which are the bane of a newspaper's existence. The Register's health in this respect reflects the loyalty of the people of Torrington to a fine medium of news and advertising and stands as a monument to the credit of such able editors as the late Edward H. Hotchkiss, the late George W. Peterson, the late John H. Thompson and the present editor, Walter G. Gisselbrecht.

As a newspaper we're only 68, ourselves, and we look with both awe and admiration on our seniors. When we're 75 we hope somebody will tell us we're as lively and chipper as the Torrington Register.

[From the Ansonia Sentinel]

To the Torrington Register, which celebrated its seventy-fifth birthday on Monday of this week heartiest congratulations.

Founded as the Walcotville Register, a weekly, in 1874, it converted into a daily, the Torrington Register, in 1889. It has continued to flourish through the years as one of Connecticut's best dailies, doing a first-class job reporting the news of Torrington and its environs; giving its readers the ample coverage of State, national, and world events that AP membership makes possible and supporting and encouraging worth-while community endeavors.

Valley of the Dammed

EXTENSION OF REMARKS
OF
HON. WILLIAM LEMKE
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 11, 1949

Mr. LEMKE. Mr. Speaker, in my remarks today, I include part 13 of the Valley of the Dammed, by Bigelow Neal, of Garrison, N. Dak.

In part 13 Mr. Neal gives a picture of the desolation and devastation of homes in the Valley of the Dammed. It is not a pleasant picture, but a picture that too often happens, and must happen when great public improvements or projects are undertaken.

Mr. Neal's objection is not to the dam, but the manner in which the negotiators and the real estate division of the Army Engineer Corps have deprived these owners of their homes. Apparently the very attitude of these negotiators and the real estate division is "the home owners be damned." This un-American attitude, that is altogether too prevalent in the various departments of our Government, is justly and unmercifully exposed throughout Mr. Neal's series of articles entitled "Valley of the Dammed."

The letters I have received from many parts of the Nation, showing a similar abuse of governmental authority, convince me that Mr. Neal and the McLean County Independent are rendering a real service not only to the remaining families in the Valley of the Dammed, but to all the families throughout the Missouri River Basin.

Here is part 13:

VALLEY OF THE DAMMED

(By Bigelow Neal)

PART XIII. THE LAND RENTAL PROGRAM

Where in the land "purchase" program we have dealt with unbelievable injustice and cruelty, now we are to consider a program where the policy adds a stupidity that is sublime. I have studied the history of my country perhaps as much as the average man but nowhere in its pages have I found anything to equal this barbarous policy as we now follow it up to its climax.

And if you have any feeling that the word "barbarous," used in this connection, is the product of a hysterical mind, I believe you will find it fully justified as I go on. First some facts.

1. Until a very few months ago, the Government of the United States has been asking for more and more wheat for the consumption of starving peoples of other lands.

2. Even today there is a world shortage of meat and dairy products and the price of these items within the United States puts them largely beyond the reach of the families or laboring men and wholly beyond the means of people who can be classed as poor. It follows that anything done to unnecessarily curtail the production of these products is an act that is hostile to the economic interest of this country.

3. Colonel Seybold has stated to me clearly, first, that the continued occupation of these lands by their owners would have no detrimental effect whatever on the building of the Garrison Dam and also that he wanted these farmers to remain on their farms—provided they made arrangements for their buildings—until the water actually crowds them off.

Now I am going to prove to you that one of two things is true. Either the word of Colonel Seybold, swore on a stack of Bibles as high as the Bunker Hill Monument, wouldn't be worth a snowball plastered on the hinges of hell—or else—the real estate division of the Army Engineer Corps goes calmly on its cruel way, paying no attention whatever to the colonel. For my part I elect to believe that no honorable soldier would be associated with this program of his own free will. If I did not believe this, I could take no pride in the fact that I have been a soldier myself.

Now for the proof:

Eighteen families driven out

In the summer of 1947 there were living within 4 miles east of my home and 6 miles west 19 families. All of them wanted to stay on their land and in their homes.

Today 15 families are gone.

Two will go as soon as their crop is harvested.

One will go before cold weather sets in.

One will move to town and perhaps back in the spring to farm one more season.

One, and that is the undersigned, doesn't know what he is going to do or when he will do it.

There you have it. Eighteen families driven out in a year and a half and the country devoid of life. Somebody has done a terrible thing. The evidence of these blasted and empty homes is irrefutable.

Mind, I haven't told you of the hundreds and hundreds of families farther to the east and to the west. I am speaking only of those within sight of my own home.

Right here I want to clear these unfortunate "negotiators" of any additional blame. They have nothing whatever to do with the land rental program.

Now you want to know how it was done. Well—it was cleverly done. It was too clever to lay on to any one man or group of men. A policy as diabolical could only be affected through years of trial and error. But something tells me that this policy is riding for a fall. And whether I have been able to trip it or not, I'm certainly giving it what must be close to a final push.

First, when my neighbors realized that they had really lost their lands and began to consider renting it back again from its new owner, they couldn't get the figures. Sounds innocent enough, doesn't it? But this you will come to recognize as only the first move in the war of nerves. No; the Real Estate Division just couldn't make up its mind and those of us who asked could learn only one thing—we would have to pay a cash rent and that in advance, if they decided to rent it to us at all.

Fear of the unknown

You see—here's the element of doubt. For months we asked every man who came along, "Heard anything about the rent?" No; nobody had heard anything. It seemed there was some doubt. Could we stay here another winter? Possibly. Orders had to come from Washington. Maybe—maybe not. Who knows?

Then came a new note. Now there was a possibility that we could stay in our homes. But if so, the rent would be maybe 6 percent of what we were paid for our lands. Cash rent, you understand. Cash rent paid in advance. Six percent. Who could afford to pay it? Nobody. Well, then we'd have to move. Better move anyway. Lots of cheap lands in Wyoming. Better get out.

For more months the strain went on. Should we summerfallow? Better not. No can tell. Maybe you can't have the land another year. Real Estate Division won't talk.

Then nerves did begin to break. A few lost theirs and started hunting for them on the other side of the hill.

Next a smart lad over in the Real Estate Division offices, the second man not to know enough to let a sleeping dog lie. He sent me a bill for 5 percent of what the Government hadn't paid me.

Sal Hepatica to the rescue

I suggested gently to my attorney that it might be his turn to start something. Going into his lawbooks clear to the bridge of his nose, he came out with nothing. It seemed that the people who made the laws had forgotten something.

But that night he went to a dinner party and ate too much. Retiring with an acute attack of indigestion started his legal mind working in the general direction of Sal Hepatica. That was it. He had it. A petition for extraordinary relief.

Personally, I doubt if there ever was any such thing. And my reason for believing the judge agreed with me was that—in his judgment—wherever he referred to extraordinary relief, he put the "extraordinary" in quotation marks. If quotation marks mean in the United States district court what they mean in my profession, they imply: "You done it, I didn't—and, what's more, I won't take the blame for it."

A board of experts

Anyway the judge sent out some invitations for a very select gathering. The United States district attorney got one, so did Colonel Seybold and my attorney was not overlooked. The result was astonishing. It brought three able men before the judge, three men of great knowledge on most every subject, except agriculture. All three were there to hold forth in an expert way on a subject they knew very little about. Personally, in spite of my high admiration for all three in their own professions, I don't believe that all three together could tell a bin of barley from a bushel of spelts.

Even so that meeting knocked the pins out from under the 6-percent idea and the 5-percent theory went up the same flue. The whole thing simmered down to an agreement of $1.50 per acre for land under cultivation and 35 cents for pasture and hay land.

But the Real Estate Division of the Army Engineer Corps is a unique organization. Already disregarding the Congress of the United States and paying no attention to the Supreme Court thereof, why should it pay any attention to the United States district court of a backwoods community like North Dakota? Wouldn't such a course be beneath its dignity?

Let's see what it did. And back to the case of Melvin Engel for an illustration. Melvin had repurchased his buildings, so the Real Estate Division's sole interest was in 10 acres of pasture land and maybe an acre of garden upon which his buildings stood. They had told him he must pay $35 for the 11 acres. Now, under the court order, they cut it down to $25, believe it or not. You can easily judge the generosity displayed when you multiply 10 acres by 35 cents and 1 acre by $1.50 and add up to $5.

But if they'd done that, they would have been allowing the United States district court to dictate to them. Evidently they disliked the idea.

This last year, finding signs of smoke on their trail, they cut the amount to $15, only three times what it should be by order of the court. The smoke is still on their trail.

As for me, I still believe in the Congress of our country. I still think the United States Supreme Court is the greatest judicial tribunal in the world. I still believe the United States District Court of North Dakota is the defender of my neighbor's rights. But even if I didn't believe these things, it would take a braver man than I am to flaunt all of them.

Wait a minute. Do you think I'm overstating this? Let's borrow a few words from a lady. And a lady who knows what she's talking about. Mrs. Franklin D. Roosevelt in McCalls for June says:

"I felt very critical of civil-service officials at times. When they have been in any department a long time, they can make any change very difficult."

Or try this: A quotation from Hon. WILLIAM LEMKE, speaking in the House of Representatives on July 5, 1949:

"Until I had some experience with the Federal Government in the taking of private property for public use, I had been of the firm conviction that the Government would observe the constitutional mandate that private property shall not be taken for public use without just compensation.

"However, I soon learned that the Government, and especially the Real Estate Division of the Army Engineer Corps, did not understand what was meant by just compensation. In place of decency and justice, I discovered that they used the bulldozing and threat methods. Until I had some experience with the Real Estate Division of the Army Engineer Corps, I felt that the Government would be as fair and honest with its people as it expected them to be with it. Up to that time, I thought the constitutional provision "just compensation" protected the home owners, but, to my amazement, I discovered that that was not the case. I discovered that the Government is out to take, and take by threats and by using its great power in the courts if necessary."

And by way of showing how they disregard the law or how they make their own laws when Congress is too slow and how they have mired themselves in their own stupidity, listen to this:

Burdick says, "Don't sign those options"

Reading of Representative BURDICK'S speech last fall wherein he told our people along the river not to sign those options, I wrote him and asked him if I might quote him. Here's what he said:

"Sure, use anything I have said, I still advise signing no contract until we find out what authority Pick has above a pool of 17,000,000 acre-feet. I would chase the land agents off peacefully if I could but I would chase them. You are doing good work.

"Sincerely,

"USHER L. BURDICK."

Lawsuits for the next 50 years

Now if here isn't an interesting situation, what is? I have or had three kinds of land. Some of it was below the 1,830-foot level. Some of it lay between the 1,830 and the 1,850. Some of it lay above the 1,850.

They condemned my land. A jury in the United States district court paid me for all the land they could legally consider. But I claim they couldn't pay me for the land between 1,830 and 1,850 feet because Congress had not authorized them to take any land above the 1,830-foot level. So—I claim every foot of my land above the 1,830-foot level is still mine.

Right now they are trying to get Congress to pass a bill legalizing the operation of the Garrison Dam pool level to 1,850 feet. Fine,

But what if they do? Congress can't pass a retroactive law legalizing an illegal act. So, after they do, what if I claim the land still belongs to me? All they can do is to turn around and survey the land above the 1,830-foot level and condemn it all over again. Unable to show that the land was ever paid for, won't they have to pay me something? Believe me, whatever something is, I can use it.

The above idea may be true and it may not. It's original with me and I have been known to make mistakes. But my best reasoning tells me I am being forced by the implied threat of eviction to pay rent on a lot of land that belongs to me and pretty soon, I'm going after that rent. Red Skelton would say, "Ain't I a widdle devil?" I would say that I got that way dealing with the Real Estate Division of the Army Engineer Corps.

What is customary rent?

Going back to the matter of rent, you will remember that the board of experts agreed on $1.50 per acre as a fair rent for land under cultivation and 35 cents per acre for hay and pasture land. In reading over the judgment of the Court, I was struck by a statement therein to the effect that the rental terms should not be higher than was locally customary.

Thinking back over the period from 1900 to 1949, it occurred to me that I had no recollection of a cash rent being paid in this community. A trifle puzzled, I thought I'd consult with someone who might know more than I.

Miles Vreeland has been farming in this community since 1901 or 1902. He is an "elder statesman" among our farmers. Sooner or later we come around to ask Miles' opinion on such matters, not only because of his long experience as a farmer but because in some 30 years of service as a local official of the Federal Land Bank loan organization. Miles, by the way, has not been directly interested in the antics of the Real Estate Division. So I asked him:

"Miles, did you ever pay cash rent for farm land?"

"Never did."

"Did you ever collect a cash rent?"

"No."

"Did you ever heard of land in this community handled in that way?"

"Come to think of it, can't say I ever did."

"What is your opinion of these farmers who say they can't afford a cash-in-advance rent of $1.50 and are moving out because of it?"

"They are doing all they can do. Where we have to use so much land to make a living, $1.50 an acre runs into a lot of money maybe, $600 to $1,000. That means that when the crop is in, it represents an investment of $5 an acre. Fifteen hundred to several thousand dollars in all. It's too much of a risk. They can't take it."

Now it must be obvious to anyone that $1.50 per acre is very cheap, providing the Government is willing to guarantee a crop. Indeed these neighbors of mine might pay two or three times that amount and be happy about it if they knew there would be a crop to cut in the fall, but it is unreasonable and impossible for them to assume that liability in the face of possibly several years of poor crops.

But even so, a good many of these farmers would have remained on their lands, paying the cash rent as demanded, had they been told that they could stay on on more reasonable terms. Instead of that—they were told nothing. The only information they could get at all dealt with doubt as to the length of time they could occupy their lands and more doubt as to the amount to be charged in any succeeding year.

As an added grievance was the calculated policy of the Real Estate Division not to rent the land at all, until they had to. Where the land was rented to December 31, no man could go in during the fall and rent his land for the following year. Nor did I, for one and several others, I know of personally, have any better luck during the winter. They would accept no money and make no promises, thus making every man a trespasser on his farm throughout the winter. Do you blame any man for being afraid of the Real Estate Division?

Washington Reporting

EXTENSION OF REMARKS
OF

HON. HARRY. J. DAVENPORT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 11, 1949

Mr. DAVENPORT. Mr. Speaker, last week I discussed with you the work of the Hoover Commission. This Commission has studied means to overhaul the executive branch of our Government so that it would give us a dollar's worth of service for every dollar it spent. As I pointed out, the basic recommendations of the Hoover Commission would result in better quality service at a cost $4,000,000,000 less than currently considered necessary.

When we consider that the entire budget of the Federal Government ran only about $6,000,000,000 in the mid-thirties, we can get a pretty good idea of what $4,000,000,000 means to the American people. That $6,000,000,000 took care of our WPA, Army, Navy, CCC, agricultural commitments to farmers, NLRB, veterans' services, interest payments on the national debt, and all the other functions of Government. A good measure of the way things have changed is the fact that our annual spending in the ECA program is almost as much as the total Federal prewar budget.

Today we are talking about a $41,000,000,000 budget for a single year, or about seven times the prewar rate of spending. I have made a careful analysis of the budget dollar to find out how all this money is to be spent. Out of every single dollar the Government spends 13 cents goes for interest on the national debt; 13 cents for veterans' benefits; and 16 cents for our international relief and rehabilitation programs; and 34 cents for national defense.

Out of every Federal budget dollar then, 76 cents goes for veterans' care, public debt interest, European recovery, and national defense. All other Government services, therefore, have only 24 cents of each budget dollar. Out of this 24-cent share must come all the Federal Government's activities regarding health, security, welfare, and other public services.

Some Congressmen advocate a 5- or 10-percent cut in budget across the board. You can see what harm this would do to the essential 24-cent share which has purposely been held down in recent years so as not to jeopardize the national defense program. I am for economy in government as much as any present Member of Congress is. However, I see no point in wielding a battle-ax with my eyes blindfolded as some people would.

In the first place, more than $20,000,000,000 in the budget are fixed costs. They cannot be reduced without weakening the foundations of our Government. They cover three items: $9,000,000,000 interest on the debt; $6,500,000,000 for prior commitments and obligations of the Federal Government; and $5,000,000,000 for veterans' pensions, old-age insurance and pensions, and agricultural price supports.

This leaves about $20,500,000,000 which can possibly be curtailed. It is this amount that the Hoover Commission has examined minutely in order to recommend savings for the American people. Even in this sphere, extreme care had to be taken because this $20,500,000,000 included the national defense budget, ECA, and the budget for all Government agencies. That the Hoover Commission believes that $4,000,000,000 of the $20,500,000,000 can be cut and that we will achieve a better administrative organization for the functions involved deserves a banner headline.

Wisely, the Hoover Commission has given first attention to our national defense program because it is first our greatest single expenditure, and second, there have been recurrent stories of padding of expenditures there. The majority of the Commission favors a $1,000,000,000 cut, while the minority of the members believes the national defense program will operate more efficiently with a $3,000,000,000 cut. In either case, the savings to the taxpayer would be substantial. In the nonnational defense programs, the Commission has carefully refrained from curtailing functions considered essential by Congress and the American people.

Cancer

EXTENSION OF REMARKS
OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 11, 1949

Mr. RODINO. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to announce a citation that was awarded to the Nutley Sun, one of the leading newspapers in my congressional district. This citation was presented by the New Jersey division of the American Cancer Society, for its role in aiding the successful culmination of the recent drive for funds in the town of Nutley, N. J. The citation is signed by George E. Stringfellow, president of the New Jersey group, and Edgar H. Wilson, State campaign chairman. The text of the citation states:

In appreciation of the unselfish personal sacrifices made on behalf of suffering humanity and as a testimonial of the support given the American Society in the 1949, fifth national campaign.

The New Jersey press was lauded by Cancer Society Executive Director

Charles Hansbury for their outstanding cooperation. He pointed out that practically every newspaper in the State had devoted considerable lineage to carry the message brought by the cancer drive.

In conclusion, Mr. Hansbury said:

With your continued cooperation, the American Society, through the New Jersey division, and the various county chapters, will expand its program during the coming year so that ultimately our message will reach each and every resident of the State and enlist them in the fight against the ravages of cancer.

The Nutley campaign, under the chairmanship of Dr. Floyd E. Harshman, raised over $6,000 for the cancer fund.

The President's Appointments

EXTENSION OF REMARKS
OF
HON. JOHN R. WALSH
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 11, 1949

Mr. WALSH. Mr. Speaker, since the President's recent appointments of Tom Clark and HOWARD MCGRATH to the Supreme Court and to the position of Attorney General of the United States, our President has been unjustly criticized by some for the appointments. The chief complaint of many is that he remembers his friends and appoints them to high public office.

In the Friday, August 5 issue of the Marion News Herald, the editor and publisher therein, Mr. Paul Hillsamer very ably answered these critics of the President, and I include herein the article by Mr. Hillsamer, and wish to call it to the attention of the Members of the House:

WHOM SHOULD TRUMAN APPOINT—HIS BITTEREST ENEMIES?

On every occasion when death or resignation creates a vacancy in Harry Truman's official family—holders of policy appointive positions—a familiar refrain rises from the calloused throats of the syndicated columnists, that rare and spotted variety of garbage pickers who receive their pay per thousands of dollars rather than at the hourly rate of their more honest compatriots who haul the Nation's physical filth.

Burden of the plaint is that the President turns to his friends. The syndicated boys have, since the new appointments for Tom Clark and J. HOWARD MCGRATH, tagged this "government by crony."

It is hard to see how any honest man can be condemned for reserving his best appointments for his true and loyal friends. If he is honest and capable, the circle of friends he has made over the years are honest and capable. If, like Warren Harding, he is on the wavy line himself, so are his friends and/or appointments.

There is not and has never been, by any except the most biased, even rumors that Harry Truman is not personally honest and capable. Therefore, we believe, it is reasonable to assume that his friends (appointments) are the same.

Who, in America, was more deserving of appointment to the Court than Tom Clark? His qualifications are undeniable. Would, then, Truman's critics have him bypassed because he went out into the highways and byways last summer and fought an apparently hopeless fight for his Chief? Nonsense.

Who would these self-appointed keepers of the Nation's morals—whose virtue does not prevent them from paying unscrupulous aides in the top offices of Washington for tips—whom would they have had the President appoint? His bitter political enemy, Senator DONNELL of Missouri, perhaps? Or HARRY BYRD? Or, mayhap, Senator RUSSELL or BILL JENNER or CHARLIE HALLECK? Can we asume that Dewey—further assuming that he was big enough for the job—if elected President would have, to show his bigness, passed JOHN FOSTER DULLES to appoint Paul McNutt Secretary of State? Perhaps Thomas would have followed through by retaining Truman's friend, Clark, as Attorney General and replaced Justice Murphy with SCOTT LUCAS.

This is a subject which winds one up. If carried to its logical conclusion in everyday life—and the science of politics is the science of living—the farmer wouldn't choose a friendly hired man, he'd scour the township for his worst enemy. And the owner of a chain of groceries would, before appointing a Podunk manager ask himself: "Let's see, who was that splendid young fellow over at Harmony who got up in meeting and called me an old mossback?"

We'll even go further and state that we flatly agree with the President who got bitter at several key appointees and advisers, notably the late Mr. Forrestal and Bernard Baruch, because of their chilly reserve on the matters of making speeches or raising money in 1948.

The greatest of virtues is loyalty. The only reward for loyalty is—loyalty. From loyalty springs faith, hope, and charity, those three, just as the stalk, the blade, and the ear from the tiny grain of corn. Woe is the potion of the man, the woman, the owner, the manager, the pastor, or the public official who can neither command nor reciprocate loyalty. Woe is not, and not about to be, the potion of Harry S. Truman.

The Grave of Moses Austin

EXTENSION OF REMARKS
OF
HON. A. S. J. CARNAHAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 11, 1949

Mr. CARNAHAN. Mr. Speaker, under permission to extend my remarks in the RECORD, I include herewith an article from the St. Francois County Journal of Flat River, Mo., dated Tuesday, August 2, 1949, entitled "The Grave of Moses Austin." This article was collected by Adella Breckenridge Moore. This information about Moses Austin will be of interest to people widely scattered over the Nation.

I express appreciation to Mrs. Moore for the fine work she is doing in this regard.

THE GRAVE OF MOSES AUSTIN

(Collected by Adella Breckenridge Moore)

History of Washington, Jefferson, Franklin, Crawford, and Gasconade Counties (1888) by Goodspeed Publishing Co., Chicago, page 521.

"(Moses Austin) died at Tar Blue (Terre Blue), St. Francois County, Mo., June 10, 1821, where he was buried. His body was subsequently exhumed and moved to the old Presbyterian cemetery at Potosi, where it reposes now (1888) in a grave enclosed in a stone wall, and over which a wild cherry tree with two trunks 18 inches in diameter have since grown. After removing the body it was reported that it was petrified—had become a solid substance—and some unknown parties, with speculative intent, opened the grave and coffin also, and finding the report false did not further disturb it."

From Austin Papers (1922), by E. C. Barker, volume II, page 375:

On the above-cited page is a letter from Stephen F. Austin, at San Felipe (later State of Texas) dated May 16, 1830, to his sister, Mrs. James F. Perry at Potosi, Mo. Mr. Perry was at that time a prominent businessman in Potosi but had gone to Texas to consider moving there and had decided to do so. And Austin continues. "I have conversed with him relative to the removal of the bodies of our dear parents and I highly approve of their removal to a churchyard. I think the best place will be the churchyard at Ste. Genevieve. They were recognized under the Spanish Government as Catholics and there cannot be any objection to receiving them there, or should the yard there be thrown open and unenclosed, I should be in favor of taking them to St. Louis. Of this you and Mr. Perry must be the judges but I am not in favor of taking them to Potosi for the reason that the burying grounds there are all on private property and may some day become common field.

"I wish that you would consult Mr. Carr and Elias Bates on the subject and speak to F. Valle relative to their admission into the Catholic burying ground at Ste. Genevieve. If they are taken to St. Louis I should prefer the Catholic to any other but will leave that solely to you and Mr. Carr, to do as you think proper. I do not know in what burying ground uncle and aunt Elliot and Mrs. Carr (their daughter) were buried, and if they were taken to St. Louis I should wish, if possible, that they be placed by the side or near uncle and aunt Elliot and Mrs. Carr. I wish that a plain, decent tombstone be procured. If I should be in a situation to do it, I will some day have a handsome monument erected over their graves."

Next page:

" I wish, my dear sister, to show the rough draft on the other page to Mr. Carr, and get his opinion, and such alterations as he may deem proper. In fact I have only given the dates, etc., without giving it proper form. Mr. Perry can tell you that I have not even time to eat in quiet and I am now intruding on the hours of sleep to continue a little with you.

"Inscription for the tomb of Moses Austin and wife.

"This sacred to the memory of Moses Austin and Maria, his wife, who departed this life at Hazel Run, St. Francois County, Mo., the first on June 10, 1821, and the latter on January 8, 1824.

"Moses Austin was born at Durham, New Haven County, State of Connecticut, on October 4, 1765, and was the youngest child of the family of Elias Austin."

"Marie, his wife, was born in Sussex County, State of New Jersey, January 1, 1768, and was the eldest daughter of Abia Brown. They emigrated to upper Louisiana from Virginia in 1798 and settled the mine at Burton, now called Potosi. In 1821, he opened the door for settlement of Texas by North American emigrants. He was distinguished for enterprise, liberality, and an honorable character. She by all the virtue of an affectionate wife and mother." Signed "Stephen."

We are told that on June 7, 1831, James F. Perry and family left Potosi, Mo., for the province of Texas and arrived at San Felipe de Austin, the capital of Austin's colonies, on August 14, 1831.

From History of Washington and other counties, by Goodspeed, page 519:

"In the William Milan Cemetery (then the owner of the Austin grant) proposed to donate to the citizens of Potosi a lot between

Breton and High Streets for a cemetery, and a subscription was at once commenced to raise funds to clear and fence the lot. John S. Brickey (one of the first lawyers in Potosi), John C. Brickey (the first county clerk of Washington County), John Brickey, James F. Perry, A. Jones, and Alexander Taylor each subscribed $5; Abraham Brinker, $7; Smith and Glenn and J. B. Bruffey $3 each; Israel McGrady, A. Jett, George Edgar, and Reuben Bush, $2 each; Andrew Casey, G. W. Wallace, L. A. Edgar, Henry Shurlds, John Swan, S. H. McIlvaine, Daniel Lanius, Henry Pease, James B. McHenry, P. P. Brickey, R. P. Harrison, Philip Cole, H. R. Edgar, $1 each. William H. Banford, William Houston, and William Whaley, 50 cents each.

"On March 28, 1833, William Milan deeded to John Perry, Henry Pease, and Israel McCreary, commissioners appointed for the purpose of building a house of worship for the Presbyterian Church in the town of Potosi. The land was described as joining the town of Potosi on the south side beginning at the northeast corner of the graveyard and contained thirty-five one-hundredths of an acre. This was for a preacher's residence also.

"On the 29th of March 1842 a meeting of the subscribers was held at the house of Mr. Lewis Edgar; and John Brickey, George Edgar, John C. Brickey, and James Glenn, and John S. Brickey were elected trustees to receive and hold the deed from the donor thereof. The deed was obtained and the lot afterward cleared, fenced, and fitted up for a cemetery. It adjoins the Presbyterian Church and also the cemetery mentioned as belonging to the Masonic Hall Association."

From Wetmore's Gazetteer of the State of Missouri, 1837 (housed in the Missouri Historical Society Collections, Jefferson Memorial, St. Louis), page 235:

"There is one other circumstance which may be thought worthy of remark. A gentleman with whom I was well acquainted died in 1821, and was buried in the usual way at the Hazel Run Mines, in Ste. Genevieve County, on Big River. In 1828 (this date is questioned—A. B. M.), his friends at this place thought proper to disinter his remains at Hazel Run and bury him at Potosi. When the coffin was taken up it was found to be rotten, but, to the utter astonishment of all present, the body of the deceased was found to be in a state of perfect soundness, except the nose and some of the fingers; all of the features (except as above) remaining perfect and entire and having every appearance of petrification. Though no one present did anything more to the body than press it with their hands several who saw it have affirmed that it was as hard as wood if not stone; I merely mention the fact as being out of the ordinary course of nature. The body was accordingly brought to Potosi and buried. There are several persons now living here who were eyewitnesses to the fact related. The body appeared of a dark or black color. The gentleman I well know. He had lived an abstemious life, was inclined to corpulence, and died suddenly. I could and would give his name if necessary.

"JOHN S. BRICKEY.

"POTOSI, WASHINGTON COUNTY, *July 1836.*"

For, Efforts To Remove Moses Austin's Body to Texas, see Missouri Historical Review, April 1949.

Minimum Wage

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 11, 1949

Mr. VURSELL. Mr. Speaker, while I am against the policy of the Federal Government establishing any wage levels affecting any State or the entire Nation, yet that policy was established in the Fair Labor Standards Act of 1935 and a minimum wage floor of 40 cents per hour has been effective for the past several years.

It is now a policy of this Government for which I am not responsible. As a policy, of course, it will be continued, and we must deal with it in this legislation.

I should like to point out that when the 40 cents per hour minimum wage became effective in 1938 it was based on the purchasing power of the dollar, which was then 100 percent. In considering this legislation we must take into account that the purchasing power of the dollar in securing the necessities of life which make up the cost of living is now only 60 cents. It is evident that if this minimum-wage policy is to be continued, and it is, the minimum wage should be raised to 65 or 75 cents per hour.

It is apparent, therefore, if we are to maintain the American standard of living that there is justification for the support of this legislation in the interest of the lowest paid people in America who find it rather difficult to get along in this era of the high cost of living.

I am supporting the Lucas bill because it more clearly restricts and defines the power of those who will administer the act. The greatest danger in any minimum-wage bill we shall pass is that the Administrator will go further in the administration of the act than the Congress intends. The act has been badly administered ever since it was enacted. The Secretary of Labor cannot be trusted to administer the act with the powers given him under the Lesinski bill.

With the restriction of these powers and the clear, definite duty of the Administrator set out, the Lucas bill can be properly administered and is clearly preferable to the Lesinski bill.

Need for Arms Is Now

EXTENSION OF REMARKS
OF
HON. LAURIE C. BATTLE
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 11, 1949

Mr. BATTLE. Mr. Speaker, an excellent editorial appeared recently in the Birmingham Post entitled "Need for Arms Is Now." This is a timely and thought-provoking article. Under unanimous consent, I include it in the Appendix of the RECORD, so that all Members can read it:

NEED FOR ARMS IS NOW

Senator CAPEHART of Indiana voted for the the North Atlantic Pact but he says he probably will vote against giving arms to Europe.

He cites the matter of cost, as one of his objections to the arms proposal. He suggests that we operate our own defense bases "in north Africa and elsewhere" rather than give away arms.

In other words, furnish both the arms and the men. That doesn't make sense.

Fact is, our European friends are willing to defend themselves, if given arms to do it. If they can do that, it will help us. For this country to try to do the job alone would not be economy but extravagance, both in blood and money.

Arms are an essential part of the defense program, possibly the best bargain on the list, from our standpoint. Arms are insurance against war. The better prepared the free nations are to resist aggression, the less likely they are to be called upon to resort to force.

However, more serious objections have been raised to the arms program in its present form by Senators VANDENBERG, of Michigan, and DULLES, of New York, and their views demand particular consideration.

President Truman has requested an appropriation of $1,450,000,000 and he wants it now.

Senator VANDENBERG has proposed that a smaller sum be voted now as a stopgap proposition, the rest of the money to be provided after the nations in the North Atlantic defense group have agreed upon a common program. In supporting his Michigan colleague in this position, Senator DULLES said:

"If we stick closely to Atlantic Treaty procedures, we may be able to unite the 12 nations into a single defense program which will be economic and cohesive. If we start out on a large scale without awaiting the establishment of treaty procedures, we may end up with 12 independent military establishments, the cost of which will be crushing and the unity of which will not be assured."

This is not an answer to the immediate need for arms—which cannot be produced in a day and which cannot be ordered until the money is made available.

A single defense program is contemplated, and arrangements have been made for it, under a centralized command. But as for there being 12 independent military establishments, there are 12 now and there will be 12, with or without this appropriation. World government may be around a distant corner, but it isn't here.

Where the Vandenberg proposal may be regarded in good faith, Mr. DULLES' argument in support of it sounds like a filibuster.

It is true the President has complicated the situation by including with the funds for the North Atlantic states further requests for money for continuing programs in Greece, Turkey, Iran, and the Philippines, and he would add Korea to the list. Thus he has opened the whole field of American foreign policy to congressional review at a most inopportune time. But that is no excuse for the Republicans to revert to their 1920 position of isolationism.

We've got to be concerned about Russia.

Comparison of Principal Provisions in the Present Fair Labor Standards Act (Wage-and-Hour Law), the New Lesinski Bill (H. R. 5856), and the New Lucas Bill (H. R. 5894)

EXTENSION OF REMARKS
OF
HON. WINGATE H. LUCAS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 11, 1949

Mr. LUCAS. Mr. Speaker, this analysis was distributed for the personal attention of the Members on Monday evening, August 8, and was in their possession no later than Tuesday morning, August 9—2 days ago. It is the comparison of these bills which has been referred to during this debate.

Comparison of principal provisions in (a) the present Fair Labor Standards Act (wage-and-hour law), (b) the new Lesinski bill (H. R. 5856), and (c) the new Lucas bill (H. R. 5894)

		Present law	Lesinski bill, H. R. 5856	Lucas bill, H. R. 5894
I.	Coverage provisions	The wage-and-hour provisions are made applicable to every employee engaged in interstate commerce or in the production of goods for interstate commerce or in any process or occupation necessary to the production of goods for interstate commerce (secs. 6, 7, and 3 (j)).	Same as present law (secs. 6 and 7 and 3 (j)).	Same as present law except for one important difference. An employee may not be held engaged in the production of goods for interstate commerce unless he is producing the goods or is engaged in a closely related process or occupation indispensable to the production of the goods for interstate commerce (secs. 6 and 7 and 3 (j)). Under this bill the Administrator and the courts will no longer be able to hold subject to the act local retail and neighborhood businesses, selling and serving only customers within the State, on the ground that some of such customers are engaged in the production of goods for interstate commerce. For example, it will not be possible to hold under the act a local fertilizer company engaged in selling all of its fertilizer to local farmers within the State for use on land on which crops are produced for interstate commerce.
II.	(a) Exemptions, agriculture.	Employees in agriculture are completely exempt from wages and overtime (secs. 13 (a) (6) and 3 (f)).	Same as present law (secs. 13 (b) (3) and 3 (f)).	Same as present law (secs. 13 (a) (7) and 3 (f)).
	(b) Exemption from overtime for processing of agricultural commodities.	Year around exemption from overtime is granted to the following: first processing of milk, cream, skimmed milk or whey into dairy products; ginning and compressing of cotton; processing of cottonseed; and processing of sugar beets and sugarcane into sugar or sirup. 14-workweeks-per-year exemption from overtime is granted to the following: first processing, canning, or packing of fresh fruits or vegetables; first processing within the area of production of any agricultural or horticultural commodity; and handling, slaughtering or dressing poultry or livestock. In general these exemptions are self-operative and do not depend upon any action by the Administrator (sec. 7 (c). See also sec. 7 (b) (3)).	The present exemptions are greatly narrowed and limited. First processing of milk, etc., into dairy products; cotton ginning and compressing; processing of cottonseed: Present year around exemption from overtime granted by law is repealed and a 14-workweeks-per-year exemption is granted subject to the discretion of the Secretary of Labor. Sugarcane and sugar-beet processing: The present year around exemption from overtime granted by law is repealed. It is doubtful whether any exemption from overtime is granted to these processors except Louisiana processors who are given a complete exemption from both wages and overtime. No wage exemption is contained in the present law. Slaughtering and dressing poultry: The present 14-workweeks-per-year exemption from overtime granted by law is made subject to the discretion of the Secretary of Labor. Fruits and vegetable packing, canning, and first processing: The present 28-weeks-per-year exemption from overtime is repealed and a 20-weeks-per-year exemption is granted subject to the discretion of the Secretary of Labor (secs. 7 (b) (3) (b) and 13 (b) (12)).	Same as present law except that (1) the first processing of buttermilk is also granted a year around exemption from overtime and (2) the authority to define "area of production" is transferred to the Secretary of Agriculture (sec. 7 (c)).
	(c) Exemption from wages and overtime for handling, storing, and processing of agricultural commodities within the area of production.	Complete exemption from wages and overtime granted to any individual employed within the area of production (as defined by the Administrator), engaged in handling, packing, storing, ginning, compressing, pasteurizing, drying, preparing in their raw or natural state, or canning of agricultural or horticultural commodities for market or in making cheese or butter or other dairy products (sec 13 (a) (10)).	Same as present law (sec. 13 (b) (10))	Same as present law (sec. 13 (a) (11)).
	(d) Processing and canning of fish.	Completely exempt from both wages and overtime (sec. 13 (a) (5)).	The present exemption from both wages and overtime is greatly narrowed and limited. The wage exemption is eliminated entirely. The Secretary of Labor in his discretion may grant 14 workweeks per year exemption from overtime to the first processing or canning of fish (sec. 7 (b) (3) (b)). This exemption is entirely abolished	Same as present law (sec. 13 (a) (6)).
	(e) Local retailing	Complete exemption from both wages and overtime for any employee engaged in making retail sales or in performing work immediately incidental thereto. This includes all retail clerks and also those wrapping and delivering retail purchases (sec. 13 (a) (1)).		Same as present law (sec. 13 (a) (1)).
	(f) Retail and service establishment exemption.	Language of present law purports to exempt from both wages and overtime any employee of a retail or service establishment (sec. 13 (a) (2)). Because of the decision of the U. S. Supreme Court in the *Roland Electrical Co. case* (326 U. S. 657) and the enforcement policies of the Wage-Hour Division, however, it is doubtful whether the exemption is applicable to many retailers.	Denies the exemption to many large groups of retailers. This is done by denying the exemption to any retail or service establishment which sells more than 25 percent of its goods or services to customers who buy for business or nonpersonal or nonfamily uses (sec. 13 (a) (2)). The effect would be to write into the law expressly the rule laid down by the Supreme Court in the *Roland Electrical Co. case* (326 U. S. 657) that no sale is retail if made to a purchaser for a business use. See also *McComb* v. *Deibert* (E. D. Pa., 1949) 16 Labor Cases, par. 64982. This limitation upon the exemption would cause discrimination between many local establishments and employees performing similar or identical activities. Most retail and service establishments sell and serve both private household customers and local business customers. But under the limitation which this bill would create, the hardware store selling 75 percent of its hardware to private individuals for their personal or family use would be exempt, while the hardware store across the street selling over 25 percent of its hardware to contractors and other local businessmen for use in their businesses would not be exempt. The Ford automobile	Clarifies the wage and overtime exemption for retail and service establishments by stating precisely the conditions under which the exemption shall apply. These conditions are threefold; (*a*) over 50 percent of the sales of the establishment must be made within the State where it is located; (*b*) 75 percent of the sales must not be for resale, but rather to the ultimate consumer; and (*c*) 75 percent of the sales must be recognized as retail sales or services in the particular industry (sec. 13 (a) (2)). The discriminatory limitation on the exemption found in the Lesinski bill is eliminated. Any sale or service to a private consumer, businessman (who does not purchase to resell), or farmer will have to be treated by the Administrator and courts as a retail sale or service, so long as such sale or service is recognized in the particular industry as a retail sale or service. Thus the sale by a farm-implement dealer of farm machinery to a farmer will be retail irrespective of the fact that in some cases farm machinery may be sold to the farmer at a discount, if the sale is regarded as retail in such industry. So, too, sales by the hardware store, the paint store, the furniture store, the stationer, etc., whether made to private householders or to busi-

Comparison of principal provisions in (a) the present Fair Labor Standards Act (wage-and-hour law), (b) the new Lesinski bill (H. R. 5856), and (c) the new Lucas bill (H. R. 5894)—Continued

		Present law	Lesinski bill, H. R. 5856	Lucas bill, H. R. 5894
			dealer, 75 percent of whose business consisted of selling Ford passenger cars, would be exempt, while his competitor, the Chevrolet dealer, more than 25 percent of whose business consisted of selling Chevrolet trucks to various local enterprises such as grocery stores, butcher shops, or bakeries, would not be exempt. The furniture store selling 75 percent of its furniture to private individuals for personal or family use would be exempt, but the furniture store selling over 25 percent of its furniture to lawyers, doctors, and dentists for office use would not be exempt. The service station selling 75 percent of its gas and oil for use in passenger cars would be exempt while the service station selling over 25 percent of its gas and oil for use in trucks would not be exempt. While this bill purports to exempt the establishment selling to the farmer, it does not in fact exempt many such establishments. As the establishment is exempt only when it sells goods of the type and in quantities purchased by the ordinary farmer, any sale to a large farmer, who purchased in quantities greater than the average or who purchased machinery of sizes greater than the average, would be nonretail. This bill, however, does liberalize the exemption in one particular. It exempts the large mail-order house from the wage and overtime requirements of the act, since it places no limitation upon the amount of interstate selling a retail or service establishment may engage in.	ness users, will be retail, so long as they are not for resale and are regarded as retail sales or services in such trades. Likewise, the services of hotels, restaurants, repair garages, filling stations, and the like, whether rendered to private householders or to business customers, will be retail so long as they are regarded as retail services in such trades. An employer claiming exemption would have the burden of proving to the courts that in fact 75 percent of his sales or services are recognized as retail in his industry. This bill thus has the effect of confirming the exemption for the various local neighborhood businesses whom it was the original purpose of the existing law to exempt. Included among such businesses are the grocery stores, the hardware stores, the clothing stores, the dry goods stores, restaurants, hotels, stationery stores, farm implement dealers, automobile dealers, coal dealers, paint stores, furniture stores, and lumber dealers. Since almost any retail or service establishment does some selling which is not strictly regarded as retail, such as selling to purchasers who buy to resell, a 25-percent tolerance of nonretail activities is permitted by this bill. This is the same as the tolerance presently allowed by the Administrator and also proposed in the Lesinski bill. This bill does not exempt the mail-order houses, since it requires the retail or service establishment to make over 50 percent of its sales within the State.
II.	(g) Bakeries, ice plants, candy kitchens, ice cream parlors.	No exemption for employees engaged in making bakery products, ice, etc.	Same as present law	Complete exemption from wages and overtime granted to an establishment selling products which it makes if it satisfies the following conditions: (1) over 50 percent of its sales are made within the State where it is located; (2) 75 percent of its sales are not for resale; (3) 75 percent of its sales are recognized as retail sales in its industry; and (4) the establishment is recognized as a retail establishment in its industry (sec. 13 (a) (4)).
	(h) Laundries and establishments engaged in cleaning clothing and fabrics.	Probably not exempt from either wages or overtime if over 25 percent of the laundry's services are for barber or beauty shops, doctors' or dentists' offices, schools, restaurants or hotels or other business customers. See *Roland Electrical Co. case* (326 U. S. 657).	Same as present law (sec. 13 (a) (2))	Completely exempt from both wages and overtime if 75 percent of the laundry's services are for customers who are not engaged in a mining, manufacturing, transportation or communications business and if over 50 percent of the services are for customers within the State in which the laundry is located. Thus, a laundry, 75 percent of whose services were for customers such as housewives, hotels, restaurants, schools, hospitals, barber and beauty shops, and doctors' and dentists' offices, would be exempt. On the other hand, a laundry would not be exempt if over 25 percent of its business were with pullman trains or other railroad or bus companies or with such customers as factories or mines (sec. 13 (a) (3)).
	(i) Interstate motor carriers.	Complete exemption from overtime granted to loaders, mechanics, drivers, and drivers' helpers (sec. 13 (b) (1)).	Exemption from overtime for loaders, and mechanics is completely eliminated. Even drivers and drivers' helpers lose the exemption if they spend as much as 50 percent of their time in activities other than driving or helping to drive (sec. 13 (c) (1)).	Same as present law (sec. 13 (b) (1)).
	(j) Railroads, pipe-line companies, etc.	Complete exemption from overtime granted to employees of railroads, express companies, pipe-line companies, etc. (sec. 13 (b) (2)).	Exemption from overtime for employees of pipe-line companies is eliminated (sec. 13 (c) (2)).	Same as present law (sec. 13 (b) (2)).
	(k) Air-line employees	Complete exemption from wages and overtime granted to all employees of air carriers. (sec. 13 (a) (4)).	Wage exemption is eliminated for all air-carrier employees. Overtime exemption is granted only to flight personnel (sec. 13 (c) (3)).	Wage exemption is eliminated for all air-carrier employees. Complete overtime exemption, however, is granted to all such employees and not only flight personnel (sec. 13 (b) (3)).
	(l) Seamen	Complete exemption from wages and overtime granted to all seamen (sec. 13 (a) (3)).	Complete wage and overtime exemption granted to all seamen on vessels other than American vessels (sec. 13 (b) (9)). As for seamen on American vessels, they are subjected to the wage provisions but are completely exempted from overtime (sec. 13 (c) (4)).	Same as present law (sec. 13 (a) (5)).
	(m) Small weekly or semi-weekly newspapers.	Complete wage and overtime exemption granted to employees of weekly or semi-weekly newspapers with a circulation of less than 3,000, the major part of which is in the county where printed and published (sec. 13 (a) (8)).	Complete wage and overtime exemption granted to employees of weekly or semi-weekly newspapers with circulation of less than 5,000, the major part of which is in the county where printed and published or in contiguous counties. The exemption is denied, however, if the newspaper is produced by stencil, mimeograph, or hectograph process. Also the exemption is denied to shoppers' guides (sec. 13 (b) (5)).	Same as Lesinski bill except that the exemption may apply even if the newspaper is produced by stencil, mimeograph, or hectograph process. Also it may apply even to shoppers' guides (sec. 13 (a) (9)).
	(n) Switchboard operators in public telephone exchanges.	Complete exemption from wages and overtime if the exchange has less than 500 stations (sec. 13 (a) (11)).	Same as present law except that the number of stations the exchange may have is raised from 500 to 750 (sec. 13 (b) (6)).	Same as Lesinski bill (sec. 13 (a) (12)).

Comparison of principal provisions in (a) the present Fair Labor Standards Act (wage-and-hour law), (b) the new Lesinski bill (H. R. 5856), and (c) the new Lucas bill (H. R. 5894)—Continued

	Present law	Lesinski bill, H. R. 5856	Lucas bill, H. R. 5894
II. (o) Forestry and lumbering operations.	No exemption unless such operations are conducted by a farmer or on a farm as an incident to or in conjunction with farming operations (secs. 13 (a) (6) and 3 (f)).	Complete exemption from both wages and overtime for employees engaged in forestry or lumbering operations up to the point where the products are processed in a sawmill, if the number of employees employed by the employer in forestry or lumbering operations does not exceed 12. This exemption applies whether or not the operations are conducted by a farmer (sec. 13 (b) (13)).	Same as Lesinski bill (sec. 13 (a) (15)).
(p) Newspaper delivery boys.	No exemption	Complete exemption from wages and overtime for newsboys delivering newspapers to consumers (sec. 13 (a) (1)).	No exemption. (None is needed, for this bill does not bring newsboys under the coverage of the act in the first instance.)
(q) Nonprofit irrigation companies supplying and storing water for farmers.	do	Same as present law	Completely exempt from wages and overtime (sec. 13 (a) (16)).
III. Minimum wage	40 cents per hour (sec. 6). The term "wage" is defined as including the reasonable cost to the employer of furnishing the employee with board, lodging, or other facilities (sec. 3 (m)).	Establishes a rigid 75-cent minimum hourly rate (sec. 6). The term "wage" is redefined so that board, lodging, and other facilities furnished the employee may not be included in wages, if the facilities are an incident of and necessary to the employment and practically available only from the employer (sec. 3 (m)). This would require the payment of the minimum cash wage, in addition to the facilities, to such employees as seamen, meal service employees on common carriers, or employees in isolated lumber camps.	Establishes a minimum hourly rate of 65 cents up to Dec. 31, 1949. Thereafter the minimum wage is to go up or down each year in accordance with fluctuations in the Consumer Price Index determined by the Bureau of Labor Statistics. Any rate set under this formula is to stay in effect for a full calendar year. In no event can the minimum wage be set at less than 50 cents per hour (sec. 6). The term "wage" is defined as in the present law (sec. 3 (n)).
IV. Overtime: (a) Belo plan	The Supreme Court has approved as valid the Belo plan under which an employer may pay his employees who work different hours each week a fixed guaranteed weekly salary.	Imposes conditions upon the Belo plan which will make it virtually unusable (sec. 7 (c)).	Specifically validates Belo-type contracts if the duties of the employees necessitate irregular hours of work. The contracts may be made either individually with the employees or with unions, but must specify a regular rate of not less than the minimum provided in sec. 6 and compensation at not less than time and one-half such rate for all hours worked over 40 in a week. The contracts must also provide a weekly guaranty of pay for not more than 60 hours based on the rates so specified (sec. 7 (e)).
(b) Overtime on overtime.	Retroactively nullifies the effect of the Supreme Court's decision in the Bay Ridge case requiring payment of overtime on overtime. (*See* H. R. 858, Public Law 177, 81st Cong., 1st sess.)	Incorporates provisions of Public Law 177, which nullifies Supreme Court's decision in Bay Ridge case, but rescinds by implication the retroactive features of such Public Law 177 (secs. 7 (d) (6) and (7) and sec. 7 (f)).	Same as Public Law 177 (secs. 7 (d) (6) and (7) and sec. 7 (g). (*See also* sec. 3 (c) on p. 38 of this bill.)
(c) Bonuses, payments for vacations, illness, etc., profit-sharing plans, employer contributions to old-age, retirement, etc., funds.	Does not state which of such payments must be included in regular rate of pay for purposes of computing overtime.	Clarifies the question of which of such payments must be included in regular rate of pay for purposes of computing overtime (secs. 7 (d) (1), (2), (3), and (4)).	Same as Lesinski bill except that, unlike Lesinski bill, no authority is given the Administrator or Secretary of Labor to issue regulations dealing with profit-sharing plans or with talent fees paid to performers. Also bonuses are included in regular rate of pay only if paid pursuant to prior contract, agreement, or promise, while under the Lesinski bill they are also included in regular rate of pay if paid pursuant to a prior "arrangement, or a custom or practice" (sec. 7 (d) (1), (2), (3), and (4)).
V. Administrative power under the act.	In an independent Administrator (sec 4)	Transfers administrative power to the Secretary of Labor notwithstanding that the organic act establishing the Department of Labor states the purpose of the Department to be "to foster, promote, and develop the welfare of the wage earners of the United States, to improve their working conditions, and to advance their opportunities for profitable employment" (sec. 4). The Department of Labor is staffed with assistant secretaries recruited from organized labor. The Department moreover, takes the position that it is spokesman for labor in the President's official family.	Same as present law (Sec. 4).
VI. Rule-making power	No rule-making authority granted the Administrator except in limited areas, such as authority to define who shall constitute an executive employee (sec. 13 (a) (1)), authority to issue regulations concerning learners (sec. 14) etc.	Unlimited rule-making authority conferred upon the Secretary of Labor, and it is made unlawful and punishable criminally to violate any rule of the Secretary. The rule-making power includes authority to issue rules, regulations, determinations, and orders and to define any term used in the law. The Secretary may prescribe conditions, limitations, or standards, and he may clarify the meaning of terms and provisions and make more certain the scope of their application. This is the most widespread delegation of authority ever proposed in a peacetime statute. It would be an abandonment by Congress to the Secretary of the legislative function. Congress admits in this bill that it is unable to write the statute clearly, fairly, uniformly, or effectively; or to protect employers or employees; or to safeguard the fair labor standards established by the act; or prevent the circumvention or evasion of such standards. Consequently, it authorizes the Secretary to do all those things as he sees fit (secs. 11 (b) and 15 (a) (2)).	Same as present law.

Comparison of principal provisions in (a) the present Fair Labor Standards Act (wage-and-hour law), (b) the new Lesinski bill (H. R. 5856), and (c) the new Lucas bill (H. R. 5894)—Continued

	Present law	Lesinski bill, H. R. 5856	Lucas bill, H. R. 5894
VII. Right to sue for back wages due employees.	No such right conferred upon the Administrator. Employees alone may sue for back wages (sec. 16 (b)). Such right of suit is subject to the 2-year statute of limitations prescribed in sec. 6 (a) of the Portal-to-Portal Act.	The Secretary is authorized to bring suits to recover back pay due employees. In connection with such suits the employees waive their right to liquidated damages. Such suits by the Secretary are not limited by any statute of limitations and may go back to Oct. 24, 1938, the effective date of the original law. Moreover, the Secretary is also impliedly authorized to collect back pay in injunction suits he may bring under sec. 17 to restrain violations of the act in the future. (See proviso at end of sec. 16 (c) on p. 38 of this bill.) In connection with the injunction suits, there is no waiver by the employees of their right to liquidated damages. They may thereafter sue for same (sec. 16 (c)).	Same as present law (sec. 16 (b)).
VIII. Defense of employer who acts in good faith in conformity with regulations, orders, or interpretations of the Administrator.	Under Sec. 10 of the Portal Act this defense is available only if the employer relies upon the Administrator's regulations, etc., as well as acts in conformity with them.	Makes no change in the Portal Act on this point.	Modifies sec. 10 of the Portal Act so as to allow the defense where the employer simply acts in good faith in conformity with the Administrator's regulations, etc. There is no requirement that the employer actually rely upon such regulations. This is a desirable modification, since it is frequently difficult for an employer to prove actual reliance, as he may not in fact know about the myriad outstanding rulings. (Sec. 4 (e)).
IX. Portal Act	Such act is in full effect	Casts doubt upon whether such act, which is closely allied to the Fair Labor Standards Act, would remain in full effect, since the bill contains no savings clause leaving it in full effect.	Contains a savings clause leaving the Portal Act in full effect. (See Sec. 3 (d) on p. 38 of this bill.)
X. Child-labor provisions. (a) Coverage.	Prohibits shipment in commerce of goods produced in an establishment where child labor is employed (sec. 12 (a)).	Extends the child-labor provisions so as directly to forbid the employment of child labor in commerce or in the production of goods for commerce. The bill also forbids any employer engaged in commerce or in the production of goods for commerce to employ any child labor in connection with any enterprise where he is so engaged. Thus, the coverage is extended to all employees of an employer engaged in commerce or in the production of goods for commerce (sec. 12 (b)). A comparable extension of the wage-and-hour provisions, at one time proposed, has been dropped.	Extends the child-labor provision so as directly to forbid the employment of child labor in commerce or in the production of goods for commerce (sec. 12 (b)).
(b) Exemptions: (1) delivery of newspapers.	No exemption	Exemption for newsboys delivering newspapers to consumers (sec. 13 (a) (1)).	No exemption. (None is needed, for in this bill newsboys are not under the coverage of the child-labor provisions in the first instance.)

Report to My Constituents

EXTENSION OF REMARKS
OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 11, 1949

Mr. MILLER of Nebraska. Mr. Speaker, it has been my custom, near the end of each session to report to the people of my district on the work of Congress and on my activities for the session. While the first session of the Eighty-first Congress is not ended, the leadership in the House indicates that no more major legislation will be considered at this time.

The House of Representatives made up of 435 Members considers legislation for the whole country. The bills it considers do not have the same application in all districts. The interests of the people in the Fourth Congressional District of Nebraska are entirely different from those of the textile working districts of New York City. In making this report to my constituents and to you, I hope that the Representatives from other districts will understand the interests of the people in the Midwest.

It will be remembered that when this Eighty-first Congress came into session last January the President presented us with a program which he declared represented a mandate he had received from the people in the November election. The program was similar to the one he said the Republican Eightieth Congress could pass in 15 days when he called us back into special session last summer. It should be remembered that the President's party now has a majority of 92 in the House and 12 in the Senate.

PRESIDENT'S RECOMMENDATIONS

The President recommended that he be given power to establish limited price control with rationing, allocations, and authority to control all consumer and bank credits. It would be similar to the old OPA.

The President asked for an additional $4,000,000,000 in taxes, mainly on excess profits.

He wanted socialized medicine, Federal socialized housing, rent control, Federal aid to education, repeal of the Taft-Hartley Labor Act, civil-rights legislation, a wide extension of social security, and authority to build steel mills. He recommended the adoption, in part, of the Hoover Commission report.

He later recommended greatly increased foreign aid, the Brannan farm program, and the Atlantic Pact with arms to Europe. He now recommends deficit spending and a program of spending in order to raise the standards of living in backward countries all over the world.

This, Mr. Speaker, is in general the program this Congress was asked to consider. It was quite evident from the first that the majority of the Members of Congress did not feel that the election gave either the President or the Congress a mandate to place into law all of these radical socialized objectives. It is interesting to note that while he has a large majority in both Houses, there is a deep cleavage on principles, and his Congress and his administration are unable to pass on much legislation.

The House did pass a Rent Control Act which bore little resemblance to the one he recommended. The House passed a Federal Housing Act. There will be a revised farm program passed, but not the Brannan idea.

Mr. Speaker, of this vast program, I did support civil-rights legislation outlawing the poll tax, a moderate rise from 40 to 65 cents an hour in minimum wage, and the plan of former President Hoover to reorganize this vast growing and overlapping bureaucracy in order to establish efficiency in government. I supported a repeal of the war excise taxes, the reorganization of the military establishments and the full development of our natural resources.

Now let us take a look, in a little more detail, at some of the legislation considered. I want you and the people of my district to understand my thinking in connection with some of the proposed legislation, particularly as it affects my district.

LABOR LEGISLATION

The first major piece of legislation was the repeal of the Taft-Hartley Act. The President wanted a return to the old Wagner Act with some modifications. Both Houses passed a labor bill and while it resembled the old act there were 26 changes which both industry and labor

wanted. It was a far better labor bill than the one previously passed. It now becomes apparent that even though we had passed an improved labor relations act the President and the labor leaders are opposed to further consideration of the bill. They seem to prefer the present bill so they may attack it as a political issue in 1950 and 1952. A better bill would be hard to attack.

I do feel that the Taft-Hartley law, while not perfect, has been a great benefit to the public and the working man. I said, in debate on the floor of the House, that:

This present law is not bad legislation despite all the hue and cries from labor bosses that it was a slave-labor bill and labor was being given a death blow. I have taken several polls on this subject in my district and they indicate overwhelmingly their approval of the provisions of the Taft-Hartley law. My entire approach to the whole subject of labor-management relations has been on the grounds of what is best, first, for the public, and then for the man in the ranks of organized labor who must work and make a living for his wife and family.

Mr. Speaker, I am of the opinion that the American people care neither about a victory for industry, nor a victory for labor. They do care very much about better teamwork between the two and they are interested in a labor law that would produce those results. The people of the United States have a right to expect their President to represent all the people in this matter and not just the labor bosses. Labor unions are now raising millions to defeat those Congressmen who supported a better labor law. I am one of those they expect to eliminate. I have reintroduced the labor bill as passed by the House. It represents the best thinking of the Members of Congress as to the needed changes of the present bill.

FEDERAL PUBLIC HOUSING

Mr. Speaker, I opposed the passing of this socialized housing legislation because I believe it is a long step in the direction of the welfare state. It does commit our Government and the taxpayers to the eventual spending of between sixteen and twenty billion dollars. Every country that has tried socialized housing finds that it produces less and not more housing. Private industry is building almost a million housing units per year and Government competition, under this bill, will probably reduce this rate materially.

Under the bill only one out of seven families in the eligible income group can occupy public housing but all the people will bear the cost. In the matter of farm housing only 1 out of 30 families will get any benefit. State and local governments will be deprived of tax revenues.

The campaign to put over the legislation was based on misrepresentation and half-truths, and the Members of the House were subjected to the most vicious type of lobbying for and against the bill. The administration of the Housing Act opens a most fertile field for rebuilding political machines that had begun to languish in large cities. Politicians will dish out the benefits to those who vote right. This is one of the programs which Mr. James F. Byrnes, a former Cabinet member under Mr. Truman, must have had in mind when he warned that—

The individual, whether a farmer, worker, manufacturer, lawyer, or doctor soon will be an economic slave pulling an oar in the galley of the state.

Surely, Mr. Speaker, in the passing of this and other types of legislation recommended by the President we take a long step down the socialized-welfare road. It was not this road that made America great. Our country has become great because people had freedom, not only of expression but economic and political action. They were able to work, produce, save, and plan for the future. They did it themselves. If the time ever comes that the Federal Government does all the planning and directing then truly a great welfare state will be in operation. The administration should have learned from its experience under OPA, that there is just not enough police power in the country to regiment and control all the people in all things all the time. The people should be taught right principles and the road they ought to go, but they should be permitted to govern themselves.

FARM PROGRAM

Mr. Speaker, I opposed the efforts to enact the limited Brannan farm plan. My reasons were that it was conceived as a political trick to snare votes and launched mainly by labor politicians at Des Moines, Iowa. I believe it to be unsound. Mr. Brannan held out the promise of high rewards for the farmer and cheaper prices for the consumer. They would not or could not tell the people how much it would cost the taxpayers, nor to what extent it would regiment agriculture. It holds within it a further long step toward the welfare state. It places a ceiling on opportunity in agriculture and penalizes efficiency. The consumer would find that instead of cheap food, the Government would be putting one hand in his pocketbook or savings account to take out the money to pay the subsidies, plus administration charges, to support the program. I just do not like this sleight-of-hand performance and I am sure the farmers would not like the absolute controls that must go with the program.

The bill passed by the House was the same one which I introduced. It continues the 90-percent parity. The farmers understand this program. I do not believe they want to scuttle the present workable and understood plans for agriculture. While I do not believe the bill as passed by the House solves the farm problem, I did feel that in these troubled and uncertain times we cannot afford to gamble with untried and untested plans. We should not be making a political football out of farm production. We should not permit farm prices to sag under parity. I am firmly convinced that our national prosperity depends upon a prosperous agriculture.

I am convinced, Mr. Speaker, that the farmers of America must be protected by proper tariff laws if our farm economy is to remain sound. We cannot continue to bring farm products in from all over the world produced at low cost, and thus support the world markets at the high level needed at home. To do so means eventual bankruptcy.

The bill passed by the House must be acted on by the Senate and I am hopeful that in the conference the best possible legislation will be presented.

HOOVER COMMISSION REPORT

I have given my enthusiastic support to the recommendations of the President that the Hoover Commission report be adopted. I am not optimistic about much of it being adopted. The plan would cut the Federal budget about $4,000,000,000 and take four or five hundred thousand off the Federal pay roll. Bureaucracy does not operate that way. It is interesting to see that the heads of the departments affected, while they give lip service to the Hoover Commission report they object to any changes being made in their own departments.

Faced with this situation the leadership in the House has not pushed legislation to carry out these plans with any vigor. I want to solemnly warn the leadership of this Congress that the people are greatly concerned over the high cost of Government and are looking to this Congress to implement the recommendations of the Hoover Commission. Government has just become so big, intricate, and overlapping that the inefficiency, waste, and extravagance is appalling. The people are demanding action.

You will remember, Mr. Speaker, that I introduced a resolution asking that Congress be convened in special session on November 1, 1949, to take action on the recommendations of the Hoover Commission and such other action as may be necessary to eliminate unnecessary Government activities in order to bring expenditures of the Federal Government in balance with its income.

NATURAL RESOURCES

Mr. Speaker, I have always maintained that we must develop and use our natural resources wisely. We have great wealth in our country. It must be developed and used wisely so future generations may prosper. Nebraska is particularly blessed with many running streams, and the hills, like a sponge, hold millions of gallons of water. Our streams can and must be developed. Feasible irrigation projects would bring another million acres of fertile land under irrigation. Water in the western part of the State is the great limiting factor to good crops. There is no question that irrigation brings a backlog of safety, security, and a new wealth to the community and the Nation. The cost is eventually repaid in additional taxes. I hope to see the day when good soil conservation is practiced everywhere and our water is fully utilized.

RURAL ELECTRIFICATION

Nebraska has made great strides in the development of rural electrification. My colleagues should understand that this is not a gift to the farmers because every cent of money that is borrowed is paid back with interest. When REA

came to Nebraska in 1935 there were less than 10,000 homes which received electricity from a central power plant.

This year there are nearly 75,000 homes that are served by REA. This should be pushed until every home which desires electricity can be served. We can harness the Niobrara, the Loups, and the North Platte Rivers, and bring many benefits to our State. I shall continue to work for the proper development and harnessing of the rivers in the Dakotas, Wyoming, and Colorado in order that electrical energy can be produced, which in turn can be allotted through the public-power agencies in my State. I know of no other one thing that can bring more comfort and pleasures to the housewife than that of electrical energy and all the equipment that goes with this great development.

ARMS FOR EUROPE

Mr. Speaker, I am opposed to the continuing practice of pouring untold billions of the taxpayers' money into the bottomless pit of foreign aid. I have voted against appropriations for ECA, and shall vote against funds to rearm foreign nations, when this matter comes before the House.

The statements of Bernard Baruch and others who have recently returned from Europe warn us of our failure to accomplish the purpose we had in mind with the billions we have already thrown into the program. They emphasize the fact that these countries are not making the proper effort to bring about their own recovery, but are looking to us to continue to bail them out of their difficulties. Great Britain is an example of this practice. She has used the billions we gave her to support her government while it extended the socialization of its industries and services. Because so many of its large industries are under political control they cannot effect efficiency by improved methods or longer hours of work, and thus bring down the cost of production to meet competition. I am convinced there is a limit to giving away our resources without a promise of a fair return. This great Nation, while it is strong and can stand much rough economic waters, can reach a point where our dollar will no longer have the confidence of the American people.

There are increased signs of unemployment and falling national income. I would remind you, Mr. Speaker, that from 1933 through 1939, the average yearly unemployment was nearly 9,000,000 people. This continued with all the pump priming of the New Deal. It took a war to cure this disease. The policies followed by this administration could take us into another war. We should by all means try to balance our budget. The President, in his last message to Congress, recommended deficit spending. He seems to think that the way to prosperity is to spend more than you make. That, Mr. Speaker, must come as a shock to these staunch thrifty Americans who have always felt that they should save a little for a rainy day. They have always followed the pattern that, when their income falls, they stop buying the things they don't need. Indeed, we should adopt the thinking of the late Will Rogers, when he said:

> You should not spend money you don't have for the things you can't afford and don't need.

Mr. Speaker, as you know, I have consistently opposed the program of the President which calls for socialization. Socialized medicine, another OPA, socialized housing, Federal aid to education and other programs to regiment and control the American people. I have supported these constructive recommendations of the Hoover Commission, the reorganization of the Military Establishments, reduction of war excise taxes, and those programs to develop the resources of this country. I think this part of the program is sound and constructive.

Mr. Speaker, I do feel that the American people have not been told the truth. There is entirely too much propaganda on both domestic and international affairs. This was illustrated by Senator DULLES, when he stated, on the Senate floor recently:

> That the question of keeping America artificially alarmed and in a state of crisis over a possible Soviet attack was discussed at a recent meeting of the Western powers.

I am certain, Mr. Speaker, that the American people are tired and disgusted with this type of propaganda. They ought to be told the truth and when they know the truth, we need not worry about the action they will want us to take.

COMMUNISM

The people in my district want communism exposed in all of its nakedness. In my opinion this administration has been entirely too lenient with these Communist sympathizers, who, while they smile behind the mask of patriotism, seek to destroy our form of government.

Mr. Speaker, I have covered only a small part of the program which has been presented to Congress. It is not possible to go into much detail. I have only covered a small part of my activities. I have, on numerous occasions, expressed my views to the people of my district through a weekly newsletters and a weekly radio program. I have resorted to the use of polls to get an expression from the people I represent. I find that they are alarmed at the road we are taking toward a welfare state. They are worried over the fact that Government is getting bigger and bigger while you and I as individuals are getting smaller and smaller. They feel that government should be merely an umpire, guaranteeing fair play, but the race should be between individuals, and the reward, if any, should come through individual effort. They are tired of the scare tactics that are constantly employed in the prosecution of the cold war. They are fed up with the threats of industrial strife. They are getting weary of carrying the world on their backs while the people of other countries shirk their responsibilities and constantly demand more and more help. They want to see their Government living within its means. They are not ready to accept the imported idea that one can spend himself into prosperity. Deficit spending reminds them of those foolish individuals who wind up their affairs in bankruptcy. I am in accord with their views.

When this Congress starts its 3-day recesses, I expect to go home where the people live close to the soil and the sun and have a visit with them. They have a clear understanding of what makes America tick. I recommend to you, my colleagues, that you go home, close to the grass roots, away from the pressure and the propaganda of Washington and get a fresh viewpoint from those you represent.

Security Can Destroy Us

EXTENSION OF REMARKS

OF

HON. RALPH HARVEY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 11, 1949

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Muncie (Ind.) Star:

SECURITY CAN DESTROY US

Historical parallels are not always exact. But we ought to be able to learn enough lessons from history to help us avoid the pitfalls and delusions of other civilizations which brought them down to destruction and decay. Recently Associate Justice of the Supreme Court William O. Douglas was quoted as saying to a labor-union meeting: "The human-welfare state is the greatest invention of the twentieth century." We are inclined to believe that if Mr. Douglas were steeped in the history of ancient Rome he would never have made that statement. The welfare state is neither new nor is it great. It destroyed the liberty, the security, and the power of the once-glorious Roman Empire.

In a speech to the graduating class of Northwestern University, President Franklin B. Snyder warned that Americans must learn the lesson of the collapse of the Roman Empire. "Rome," he said, "was quite literally the mistress of the world (as the United States is today). The Roman citizen, like you and me * * * enjoyed freedom within the law of his own making * * * and Rome maintained peace wherever her eagles gleamed in the sun. * * *

"And then, not swiftly but steadily, inexorably, as darkness wraps itself around the earth after sunset, the Empire crumbled." Why? Rome still had the strongest armies and navies in the world. Rome had unsurpassed military genius to call upon. But Rome still fell "because a hardy race succumbed to the insidious poison of the idea that 'government will do it'; because rulers bought power at home and favor abroad by gifts of treasure and food." Roman politicians gave their citizens "bread and circuses."

That's how politicians stayed in power. That's how Caesar became Emperor over a corrupted people weakened by flattery, by "economic security," by false promises. This is why a dictatorship, though led by strong men, is always weak within because the people are weak and will-less.

Will America follow the disastrous course of Rome? Will the people of America become weak because their selfishness is greater than their love of freedom? American liberty was not won because the American people had economic security. It was won through hardship, poverty, and revolution. Washington did not offer the welfare

state; he offered only liberty or death, as Patrick Henry put it. "We are not to expect," said Thomas Jefferson, "to be translated from despotism to liberty in a feather bed."

A feather bed is what the politicians in Washington are offering us today. The price is our own freedom to gain our own security and to control our own affairs. The Fair Deal in offering the welfare state is following closely the precepts of the Roman politician Quintus Cicero who said, "All men prefer a false promise to a flat refusal." We are being promised cheaper homes for which we will pay in taxes. We are promised high prices for farmers and low prices for consumers, but we will also pay the difference in taxes. We are promised free medical care for which we will pay more taxes. We are promised more social security for which we will pay more taxes. We are being offered $46,000,000,000 worth of false security, but we have to pay for it ourselves. That is what the welfare state never explains to the people—they pay for it.

Government cannot give a people anything without first taking something away. It can only give money it collects in taxes. It can only give economic security to all by first taking away economic liberty. It cannot guarantee us anything we are not willing or able to guarantee for ourselves.

America will never fall to the Communists or to the Fascists by force of arms. We will only fall from internal decay, from a developing weakness and fright within our people. We should never forget what Lincoln said some years before the War Between the States: "All the armies of Europe, Asia, and Africa combined with all the treasure on earth * * * could not by force take a drink from the Ohio or make a track on the Blue Ridge, in a trial of a thousand years. * * * If destruction be our lot, we must ourselves be its author and finisher. As a Nation of freemen, we must live through all time, or die by suicide." Rome died by suicide. Will America?

Hoover Plan for Government Reorganization

EXTENSION OF REMARKS

OF

HON. LAURIE C. BATTLE

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 11, 1949

Mr. BATTLE. Mr. Speaker, Civitan International is an organization that is known throughout the world for its accomplishments in civic affairs. Civitan International was brought to life in Birmingham, Ala., by Dr. Courtney Shropshire, its first president; Mr. Frank Butler; Dr. P. Y. Whitman; Mr. Claude Hogan, and others. I am proud of the work this great organization is doing, especially its endeavors toward better government. Mr. G. T. Kay, governor, Alabama district, sent me the following resolution which deserves the attention of every Member of Congress. Therefore, under unanimous consent to extend and revise my remarks, I include it in the Appendix of the RECORD:

RESOLUTION UNANIMOUSLY ADOPTED BY DELEGATES AT THE TWENTY-NINTH ANNUAL CONVENTION OF CIVITAN INTERNATIONAL IN SESSION AT WASHINGTON, D. C., JUNE 24, 1949

Whereas Civitan, by virtue of its motto "Builders of Good Citizenship," has, since its founding, stood for good government in all its forms; and

Whereas Civitan should and does take the lead among civic clubs in all matters pertaining to good government; and

Whereas Civitan believes that the Hoover plan for Government reorganization will reduce the cost of the various branches of our Federal Government without impairing their efficient operation, thereby creating a real savings to our people.

Now, therefore, Civitan International and its members in convention assembled, hereby resolves to go on record as being in complete accord with, and as giving unqualified support to the Hoover plan for Government reorganization; that copies of this resolution be furnished to the following individuals: the President of the United States; the Speaker of the House of Representatives; the President of the United States Senate; and all Members of the United States Congress.

Separation of Church and State

EXTENSION OF REMARKS

OF

HON. TOM STEED

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 11, 1949

Mr. STEED. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include an editorial from the Daily Oklahoman on Monday, August 8, 1949, under the title "And Such Language." I think this is a timely warning to the Members of this Congress at this particular time, and I urge its careful reading. I call this to the attention of the Members in the hope it will help them understand what we are inviting in the way of internal strife and turmoil if we delay settlement of the Federal-aid-to-education issue.

The editorial follows:

AND SUCH LANGUAGE

Have you ever noticed the alacrity with which various and numerous religionists become vocal when any sectarian issue of a controversial nature is raised? And have you noticed the intemperate character of the language the aroused religionists always employ? So have we.

It is easy to understand the spontaneity of the reaction to the raising of any religious or quasi-religious issue. For in its very nature a religious emotion is the last word in intensity. There is nothing more ardent than a religious emotion and there is nothing more uncompromising than a religious conviction. Hence, when a religionist rushes to the defense of a principle he considers sacred, he throws himself into the contest body and soul.

But that hardly explains the harsh and bitter language the aroused religionist almost invariably employs. Maybe it is because he regards his opponent as a representative of antichrist and therefore entitled to immersion in Hadean fire. But whatever the reason, the aroused religionist usually culls an array of epithets and lets loose upon his antagonist a blast of invectives that might startle a barroom or a bordello.

In the immediate past the printed page has been marked (to say nothing of being marred) by a wholesale discussion of the court's opinion in the McCollum case, the publication of an unusually provocative book on ecclesiastical relations, and the issue of Federal aid to parochial schools.

Each of those issues has evoked a spate of spirited letters from the people. And most of those letters have fairly sizzled with harsh and opprobrious terms. In a single issue of Friday afternoon's paper we note such words as "rabble rouser," "bullheaded," "dogmatic," "hypocritical," "bigoted," "hogwash," etc. No matter which side of the issue the contributor supports, he invariably charges the supporters of the other side with bigotry. Apparently a bigot is just anybody who differs from you.

And the most amazing feature of this freshet of billingsgate is that every one of these virulent participants professes to be a saved and consecrated follower of Mary's forgiving Son. Evidently they have forgotten His counsel to speak no evil and to judge not. Certainly they have forgotten the words of His dying prayer, "Father forgive them for they know not what they do." While claiming to be the accepted children of the meek and lowly Nazarene they employ epithets that are only slightly removed from unrefined blackguardism.

It all goes to prove the wisdom of the founding fathers when they placed the State in one niche and the church in another niche and commanded each of them to stay in its own special territory. Every time either invades the domain of the other damage is done to both church and state. And in all the history of political slime there is nothing quite so unclean as a clerical vestment that has been dragged through a political cesspool.

Public Recreational Facilities in the District of Columbia

EXTENSION OF REMARKS

OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 11, 1949

Mr. POULSON. Mr. Speaker, the investigation of the manner in which the Interior Department has run the golf courses has revealed a case of bungling in its highest form. Furthermore, the Interior Department in attempting to cover up this bungling started negotiations with the District Recreation Board to turn over all public recreational facilities in the District. The result of that is very aptly reported in this editorial in the Evening Star of August 2 entitled "Progress—The Wrong Way" and which I desire to have printed in the Appendix of the RECORD:

PROGRESS—THE WRONG WAY

Delay in reaching an agreement between the Interior Department and the District Recreation Board, under which the latter would operate all public recreation facilities in the District, is best explained by a brief review of recent events.

Secretary Krug closed the Anacostia pool on June 29. Ugly incidents precipitated by organized young demonstrators attempting to put into practice the Interior Department's theoretical policy of nonsegregated operation of the pool, caused Mr. Krug to act.

On the heels of his closing order he called the Commissioners and Chairman Harry Wender, of the Recreation Board, into conference on July 1. He made it plain the Interior Department was anxious to turn over all District recreation to the board and that the board would establish its own administrative policies without further interference from the Interior Department. This

was the arrangement contemplated in the 1942 law creating the Recreation Board.

In return, the Recreation Board was requested to make some changes in its bylaws. References to segregated operation would be removed. A policy statement to the effect that every possible and realistic effort would be made by the board to remove racial segregation, in such sequence and at such rate of progression as may be consistent with the public interest would be inserted in the bylaws.

After some difficulty in the board, these changes were approved unanimously and were accepted as satisfactory by Mr. Krug. But in the meantime the Interior Department ran out on its own set of conditions. It reversed itself. Apparently it is taking the position that only on the promise of continued nonsegregation in some, if not all, of the pools will the Department release its recreation facilities to the local board.

That is the way the business stands now, which is just about where it began. What happened was that Mr. Krug got scared. He got scared the first time when he saw where the Interior Department's bull-in-a-china-shop handling of a delicate issue was leading him and his fellow politicians. He got scared again when, after he had solved the problem of mixed swimming by closing the swimming pool, the pressure groups got busy, accused him of repudiating the President's civil-rights program and made him eat his words to the recreation board.

The Interior Department has indicated its belief that if the recreation board operates the pools on a segregated basis, after the Interior Department had announced they would be nonsegregated, a backward step will have been taken in race relationships. The argument is not realistic. The swimming pools have never been operated on a nonsegregated basis. The first attempt to operate them that way has closed the Anacostia pool, in the hottest summer in over a decade, and the McKinley pool has changed from white to colored, with so large a reduction in attendance that the pool is operated at a loss that mounts every day. That may be progress. But it does not seem to be progress in the right direction.

Unless the Interior Department is willing to leave to a local board the right to make its own policies in recreation, the board would be foolish to assume administrative responsibility. It is patently absurd for a sprawling department of the Federal Government to get itself involved in neighborhood rules and regulations or recreation. But that is what the Interior Department politicians insisted on doing and in the process are revealing themselves to be not merely inept but disingenuous as well.

The sometimes delicate problems of race relationships in Washington are going to be solved, in the long run, by men of wisdom and understanding in both races, drawn together by good will and mutual trust. The Interior Department's bunglers are more of a hindrance than a help.

Why I Voted for the Lucas Substitute

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 11, 1949

Mr. SABATH. Mr. Speaker, I voted for this bill because it provides for a minimum wage of 75 cents per hour.

Unfortunately, many of the exemptions contained in this bill do not meet with my approval and it is to be regretted that the House has seen fit to adopt them. However, I feel that when the bill is taken up in conference many of these unjustified exclusions—taking many individuals out of the scope of the present law—will be restored as provided for in the first bill, H. R. 3190, and in the committee bill, H. R. 5856. I hope such a restoration will aid the underpaid wage earners throughout our country.

Firmly believing that this procedure will be followed in conference, I voted for the Lucas substitute.

Why Not Statehood for Alaska and Hawaii Now?

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 11, 1949

Mr. POULSON. Mr. Speaker, while we are worrying so much about what happens in Europe as far as Russia is concerned—or should I say what happens across the street—why should we not be more concerned about what happens in our back yard, which is so much closer? We are spending billions over there but we have an opportunity to accomplish the same thing over here without spending billions. I refer to Alaska. Alaska immediately adjoins Russia, and in the Ural Mountains Russia has established industrial centers from which she can directly attack the United States and Alaska.

To get the full development of Alaska we should immediately grant her statehood. This bill is tied up in the Rules Committee and we should get action. Alaska must be fully developed and that can only be accomplished under statehood. At present Alaska is nothing but one big bureaucracy, namely the Department of the Interior.

In 1943 I called the attention of the Navy to Oil Reserve No. 4 around Point Barrow, and I have a letter in my file from the Navy stating that there was no great need for the development of this field. Even the Alaskan Delegate at that time stated on the floor that it was in such an isolated spot that it was problematical whether the oil reserve could be developed or not. By persistence, through the efforts of outside oil experts, I kept after the Navy until they finally decided to send up their Seabees and explore the matter. This is all of record and the Navy cannot deny it. The undeveloped resources of Alaska are unbelievable. They can only be developed by people, and people will go there only if they know it is a State wherein they have their full rights.

Now, the same applies to Hawaii. The statement that Hawaii is under the control of Bridges and the Communists is a fallacy which was proven the other day when the legislature overwhelmingly voted to take on Harry Bridges and his Communists through their attempt to break the strike. What we need now is action, not words.

Stonington, Conn.

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 11, 1949

Mr. SADLAK. Mr. Speaker, in 1649 Stonington, Conn., became a foothold of this Nation in its fight for freedom. All through the colonial times, Revolutionary War, and still today the citizens of this seaport town are waging war against those who tend to upheave the principles on which this country was founded.

For the past 300 years Stonington has become the home of founders, patriots, and stanch sons of this great Republic and I want to pay especial tribute to its fishing industry and the gallant sons of the sea who contribute so much to the lifeline of America.

The opening event of the celebration which continues throughout this month is interestingly described in an editorial in the Hartford (Conn.) Times of August 9, which I ask be here reproduced. The editorial further provides historical data of which Stonington is rightfully proud.

The editorial follows:

STONINGTON REFLECTS AT 300

Tercentenaries have been more or less common in Connecticut since 1936 when the State observed its own. Stonington at the week end joined the venerable galaxy.

Quite appropriately, the opening event of the anniversary exercises was a church service. Persons whose Stonington ancestry went back more than two centuries were numerous among the worshipers.

They arrived in modern automobiles along the old Pequot Trail which their forebears had traveled on ox-drawn carts. A descriptive paragraph in the news states that:

"Scattered among the worshipers in pew-boxes of this white wooden church were women wearing costumes more than 150 years old. During the sermon, delivered by a descendant of the first minister here, the tithing warden, clad in velvet breeches and ruffled shirt, paced the aisle. He carried an old tithing rod with a feather at one end and a knob at the other, used in olden days to rouse sleepers.

"This was a Yankee prayer meeting. Men and women sat upright in the straight-backed pews. They sang, with great vigor. 'A Mighty Fortress Is Our God.' Sand in a pulpit hourglass slipped to the bottom and the temperature of the rectangular room passed 90 degrees but the congregation sat silent and intent on the words from the pulpit."

Some count Stonington a very interesting town to go "through." More deem it a community well worth a bit of staying and observing. Its colorful early history is fascinating reading.

It was important in the early days in both shipbuilding and ship sailing. Palmer Land, in the Antarctic, recalls the discovery by one of its sons. Many fine old homes of its ship captains and shipbuilders will be open for inspection during the celebration. It was an active port in whaling days and when steam navigation came it had one of the early Sound steamboat lines, which endured for many years.

Stonington's crowning incident of glory was its resistance to attack in the War of 1812, when, with two cannon, the citizen defenders and hastily summoned militia held at bay and finally drove off a British fleet which—

"* * * killed a goose,
They killed a hen,
Three hogs they wounded in a pen—
They dashed away—and pray what then?
This was not taking Stonington."

Its citizens are a combination of the old and the new. Less cosmopolitan than some towns, Stonington is a fair cross section of rural Connecticut. Its name suggests some of its topography but also its stability. It will still be very much in its place after another 300 years. Its present citizens will help see to that.

Excise Taxes Are Causing Unemployment

EXTENSION OF REMARKS
OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 11, 1949

Mr. KEATING. Mr. Speaker, administration leaders have indicated that it is not possible at this session to touch the subject of reduction or elimination in excise taxes. I must enter a most vigorous protest.

These levies, which are in reality Federal sales taxes, were imposed during wartime, in many instances for the purpose of reducing civilian demand for the products. It simply makes no sense to continue them at a time like the present when our efforts should be directed toward stimulating, rather than curtailing, consumption.

On March 4, 1949, I introduced a bill to reduce some of these taxes and do away entirely with others. The distinguished minority leader has done likewise, as have many other Members. Despite our repeated and insistent requests, however, we have not even been granted a hearing on these measures. The majority leadership is determined to oppose any relief and to continue a policy which is daily becoming more serious for the businessman, most of all the small-business man, and is leading each week to an increase in lay-offs with all the attendant hardship and suffering.

On July 12, 1949, I addressed the House regarding the effect of these Federal sales taxes on the photographic industry. While this represents the highest levy of its kind and probably the most discriminatory, it is only one of several large industries adversely affected by the continuance of this unjust and oppressive exaction.

The National Planning Association, a nonpartisan organization representative of business, labor, agriculture and the professions, has said:

The present structure of excise taxes discriminates between producers of taxed and untaxed goods and many of those taxes weigh most heavily on low-income families.

A few of these taxes may properly be said to be imposed on luxuries. Most of them, however, add to the cost of the necessities of life. I pointed out in my remarks on July 12 the situation with regard to photographic supplies. It is ridiculous to claim that a lady's pocketbook, or baby oil, or foot powder, or electric-light bulbs are luxuries. The tax on telephone communication or transportation, besides hitting the small user of these services, adds substantially to the costs of every manufactured item.

Aside from the breach of faith with the American people who were told that these taxes would be removed 6 months after the war was over; aside from their adverse effect on our entire national economy through stifling business and throwing thousands out of work on the street, there is very serious question whether, even from the dollars-and-cents standpoint, they add 1 cent more to the Federal Treasury than it would gain if most of them were eliminated. The increased income taxes which corporations and individuals, both employers and employees, would pay, through the spur to business activity at all levels which would ensue from their elimination, seem to be completely lost to view in the planning of the administration leaders who so vigorously insist upon continuing these sales taxes.

Under leave to extend my remarks I include two editorials on this subject from the Rochester Times-Union.

Also, I include a rather significant editorial from the Rochester Sun, normally a stanch administration supporter, whose editor finds himself unable to sanction the short-sighted and disastrous policy now pursued by those who control the scheduling of tax legislation.

[From the Rochester (N. Y.) Times-Union of August 1, 1949]

CAMERA TAX HITS ROCHESTER HOMES

During the war the armed services needed every camera and every bit of photographic equipment the industry could produce. To discourage consumer buying and to free manpower and plans for war work, Congress in 1942 imposed a 25-percent tax on photographic goods.

Then Congress forgot about it, although, as Senator GEORGE recalls, Congress promised to repeal this and other retail purchase taxes 6 months after the end of the war.

Results:

While general trade was down 5 percent in the first quarter of 1949, photographic retail sales were off 22 percent.

One New York company which had prospered for 16 years is now in receivership. Another, part of whose business was cameras, has discontinued the line.

A camera company in a neighboring State, successful for 10 years, is in serious financial difficulty.

A number of newer, smaller companies have disappeared.

All these affect Rochester jobs because a half dozen Rochester industries supplied them with lenses, shutters, and parts. But there are more direct effects.

An officer of a Rochester photographic company says that 5,000 jobs have been lost in Rochester's photographic and allied industries. Many thousands more have smaller take-home pay through reduction in hours of work.

Congress simply forgot us.

It can scarcely be argued at this late date that photography is a luxurious hobby. Sixty-three percent of the industry's output fills vital needs of business, government, health, law enforcement, scientific and educational agencies.

It can scarcely be argued that this is a tax for revenue. It never was. But receipts from this tax dwindled 41 percent below 1948 by March 1. They are still going down. The law of diminishing returns has definitely set in.

Other wartime consumer supertaxes of 20 percent on furs, jewelry, cosmetics, women's handbags, luggage, and the like are nuisances everywhere. The 25 percent camera tax is hitting Rochester homes and families.

The remedy is passed by this Congress at this session of House bill 3905, as reported by the Senate Finance Committee with the Johnson amendment that will provide the relief so vital to Rochester.

The wartime need to discourage consumer buying no longer exists. The tax, far from producing revenue, is costing Government more than it produces through losses of personal and corporate income taxes.

A mere statement of the facts should make evident the importance to every man, woman, and child in Rochester of repealing the tax that Congress forgot.

[From the Rochester (N. Y.) Times-Union of August 2, 1949]

SHELVING OF EXCISE REPEAL DEPLORABLE

Word from Washington is that the administration will oppose repeal of wartime increases in excise taxes. It therefore becomes even more necessary to bring to the attention of every Member of Congress what these taxes are doing to jobs and business.

Their effect on Rochester industries was discussed in this space yesterday—5,000 jobs lost in photographic and allied industries, thousands more curtailed in hours of work.

For the most part these taxes are superpurchase taxes—like the 20 percent on women's handbags and cosmetics.

But manufacturers are made the collectors of the 25-percent tax on cameras and photographic supplies. (It is easier for the tax gatherer to call on a few manufacturers than on every dealer.)

The administration's argument is that it cannot forego the revenue from these taxes. Really it can't afford not to.

Many of these taxes have reached the point of diminishing returns. The photographic excise revenue was off 41 percent by March 1. It is still falling.

These taxes are spreading unemployment. In place of receiving income tax from earning employees, government is paying out unemployment allowances to those displaced.

The revenue argument won't stand up.

Secretary of the Treasury Snyder in both 1947 and 1948 testified before congressional committees that the whole position of excise taxes in our revenue structure should be reviewed and fitted into peacetime requirements.

The Treasury has an ample number of skilled advisory committees to make this review. Yet administration leaders in Congress appear too tired to open up the tax question.

It is a penny-wise pound-foolish policy that permits personal incomes and corporation revenues to decline and unemployment payments to mount by clinging to taxes that already have passed the point of diminishing returns.

Despite the administration's decision, House bill 3905, with the Johnson amendment as reported by the Senate Finance Committee, should be passed at this session. Trade and employment should be encouraged, not handicapped by laggard government.

[From the Rochester (N. Y.) Sun]

EXCISE LEVIES ARE HURTING BUSINESS; SHOULD BE AXED

We've been against hidden, furtive taxes—at the local, State or national level—from our first date of publication.

That's why we believe it is time to add our voice to the growing protest against the war-inspired excise taxes that infest the purchase of things, ranging from cameras to travel tickets.

Advocates of these taxes argue that the Federal budget faces a certain deficit this coming year.

That's true. But the remedy lies not so much in maintaining ruinous taxes as in reducing unwise expenditures.

If we must continue to buy guns instead of butter with our tax dollars—whether the guns be for Europe or ourselves—we will have to continue placing an unwise and confiscatory burden upon purchasers and businessmen of the Nation.

Suppose we take a look at the effect of some of these continuing wartime taxes.

An apt example is the doubled burden upon admission to movies, concerts, and other places of amusement. True, the man who can afford an evening at the Stork Club doesn't mind the tax.

But the ordinary citizen who enjoys an evening of good music, or the wholesome entertainment of a movie simply cannot afford the 20 percent added impost.

Just as apt is the 15-percent bit on travel tickets, for the family that worked all through the war and now wants to take a brief travel vacation.

Rochester has a special interest in the excise tax on cameras. And in television sets. Thousands of our citizens make their living on the companies that manufacture these articles.

There is no doubt that the crushing tax placed upon these articles keeps them just out of the price range of millions of people.

It is argued that, if these taxes were dropped, the Government would not be able to replace the revenue.

But it is merely simple mathematics to estimate that, if sales of such articles boomed, more people would be working and at longer hours. Thus, they would be earning more money and paying more income tax. The manufacturers would be paying a greater tax on profits.

It may be seriously doubted that the net result would mean any loss in gross revenue for the Government.

Likewise there is no doubt at all that business would be greatly stimulated, that prices on scores of now-taxed articles would be greatly increased; that employment would rise in many industries; and that purchasing power would climb.

In wartime, a government that is forced to spend almost countless billions for arms, much reach everywhere for revenue. The businesses now being hurt are busy making munitions and therefore don't need any stimulus to their normal production.

But, in time of peace, all possible restraints to the free flow of commerce, should be lifted.

Let's drop these excise taxes—now.

Minimum-Wage Bill

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 11, 1949

Mr. KENNEDY. Mr. Speaker, I want to take this opportunity to record myself in favor of H. R. 5856 as amended on the floor of the House yesterday.

While I think it extremely regrettable that so many workers are excluded under the bill as amended, at a time when what is needed is a coverage for more workers of the Nation, I nevertheless am in favor of the amended bill's extending the minimum wage from 40 cents to 75 cents.

I support this measure because I feel that if it is recommitted chances for any minimum-wage legislation in this session of Congress are in all probability dead.

I support H. R. 5856 as amended with the high hope that a more complete coverage bill will be forthcoming from the Senate, and that a much improved compromise will come out of the conference committee. Also, I feel and hope that with the passage of this legislation the first necessary step in raising the minimum wage scale will have been taken and further steps will be taken at the next session of Congress to extend its coverage.

What Hourly Farm Labor Return Is Provided in the Steagall, Hope, and Gore Bills?

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 11, 1949

Mr. MURRAY of Wisconsin. Mr. Speaker, on page A3560 of the CONGRESSIONAL RECORD dated June 8, 1949, is a detailed report complete with tables covering a 19-year study of hourly wage returns received in the various types of American agriculture as compiled by Dr. Wiley Goodsell of the Bureau of Agricultural Economics, United States Department of Agriculture. This study, among other facts, showed that the American farmer worked for a labor return of from 0 to 15 cents per hour in order to feed and clothe the people of the United States during the 1930's, and that Government did not do it.

Take the year of 1939 for example, the seventh year of the more abundant life, on the southern plain, Black Prairie, and Delta of Mississippi cotton farms you will note that the hourly labor returns were 25, 24, and 21 cents, respectively. The support price on cotton for the same year was 58 percent of parity.

In 1943 the hourly labor return was 64 cents on the southern-plain cotton farms, 46 cents on the Black Prairie, and the Delta of Mississippi cotton farms, and the support price on cotton for that year was 99 percent of parity. In the period of 1946 to 1949 the hourly labor returns were from 50 cents to $1.09, and the support price on cotton was as high as 118 percent of parity.

This 19-year study indicates that a 90-percent-of-parity support price provides a 50 to 60 cent hourly labor return, which provision is in the Steagall, Hope, and Gore bills. This applies to all of the types of agriculture that were studied.

If anyone wishes to check on this they can check with Dr. Goodsell. And, if one wishes to be convinced beyond a question, he can buy a farm, pay 50 to 60 cents per hour for farm labor, sell his products for 90 percent of parity—the support price—and then see how his finances are at the end of the year.

The fact that the agricultural producer received an hourly return of 50 to 60 cents should be considered in minimum-wage legislation. And, if the Government provides an hourly return of 50 to 60 cents to the producer, the farm laborer is entitled to a comparable minimum wage.

Scientific and Professional Color Line Has Been Withdrawn?

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 11, 1949

Mr. DINGELL. Mr. Speaker, on Tuesday, August 9, the Evening Star of Washington, D. C., carried an article by the Associated Press which originated at Detroit and which bears upon an invitation extended by the American Medical Association, the membership of which consists exclusively of men and women engaged in the medical profession who are of the Caucasian race. The invitation was tendered to the National Medical Association, an organization which because of the intolerant attitude and exclusiveness of the American Medical Association forced the complete segregation and confinement of Negro doctors within their own professional and scientific society. It is interesting to note that the American Medical Association, through Dr. Lull, belatedly extends the invitation to Negro doctors to attend the clinical sessions of the AMA which are to be held at Washington, D. C., on December 6 to 9. Assurance is given "that your membership in the National Medical Association will admit you to all clinical sessions of the AMA's midwinter meeting," and further, "It will be honored on the same basis as a fellowship card in the AMA."

It was announced also that the eminent Dr. Peter H. Murray, past president of the NMA, the Negro body, had been named to the policy-making body of the AMA. It is proper for me to stress, Mr. Speaker, that this was the first time a Negro had ever been chosen for that group. The reason for this belated generosity or liberality on the part of the AMA toward the professional association of Negro doctors is disclosed in this same dispatch and reference is made to a quotation from a prepared speech by Dr. Elmer L. Henderson, the president-elect of the AMA and which was read by Dr. Lull. Its purpose is clear and unmistakable. He states:

Truly these are times when doctors must stand together on issues that affect the medical welfare of all the American people.

Then he asserts:

We must act to prevent adoption of political medicine in the form of national compulsory health insurance. This scheme has failed in every large country where it has been attempted.

The proffer of this belated recognition of the Negro doctor is as hypocritical and false as is the latter part of this quotation which states that the "scheme," presumably the health-insurance plan, which bears my name and the endorsement of the Truman administration, has been tried and failed in other countries. This is either a deliberate misstatement or the expression of one who has no knowledge whatever regarding the subject which he presumes to discuss as an authority.

Health insurance of the type and kind which is proposed under the Wagner-Murray-Dingell plan has never been tried, to my knowledge, in any country. Most foreign plans have been either socialized, subsidized, or a composite of both. The American plan which is so grossly libeled by scurrilous and contemptible propaganda of the American Medical Association is a pure insurance plan, the premium on which is paid equally by the insured and by his employer. There is no subsidy; there is no socialization, and there is no interference with any basic concept of medical practice, or that of insurance.

The hard core of the American Medical Association, however, in its desperation to defeat the popular will supporting health insurance, has gone so far on this score as to prostitute their own bigoted conscience and exclusive membership which heretofore denied scientific and professional recognition to the ethical Negro practitioner, refused until now the lowering of the bar against Negro doctors. Betrayal of the people of the Negro race who, as a class, unfortunately are in the lowest classification of our national economy and who, on the average, need medical insurance even more than the white citizens of America, is the stipulated price of such recognition. It is a known fact that Negroes, both professional and laymen, in the greatest proportion, favor health insurance and it is recognized that the Negro element of our citizens constitute a tremendous force in the social advancement made in this country in recent years.

It is unbelievable that the Negro doctors would desert their people in what is infinitely more important. That is, the preservation of their own self respect and the health of the race in order to gain this belatedly deserved standing in the American Medical Association. As I judge the character and caliber of the Negro doctors of this country, I would say that this hypocritical move will be cast aside and, if need be, the National Medical Association will remain segregated until first the needs of the people are met through health insurance and the justice of membership within the AMA is recognized on the basis of ability, character, and ethical practice of the members of the profession. I believe that the Negro doctors will be satisfied to wait just a little longer while the tottering bigotry and intolerance within the American Medical Association crumbles and falls.

Mr. Speaker, if the health-insurance advocates have done nothing else, they have focused the attention of the American public upon the arrogance and dictatorship within the American Medical Association which heretofore has always sought to ruin, if it could not rule. This policy applied to its own membership or to anyone else in disagreement with its narrow viewpoint and objectives. The AMA has made a number of shady deals and alliances with respectable organizations, but always to defeat health insurance at a price. Not so long ago a deal bearing upon the sufficiency of hospital facilities for veterans was made with the American Legion, and the price set by the AMA was the demand for opposition to health insurance on the part of the high command of this great veterans' organization. That disclosure filtered through and became public when the AMA tried to run out on the agreement and was forcefully reminded by the American Legion that unless the AMA adhered to the understanding that the Legion, in the interest of the people, would feel free to support health insurance. This is a high price which the average Legionnaire is called upon to pay in order to safeguard his own welfare when he is obliged to work against the best interests of his own brothers and sisters and all other American citizens who, unfortunately, are not veterans.

In addition to these attempts, the American Medical Association has made other reprehensible and unholy alliances against health insurance which would bring, as intended, great blessing and comfort to millions of American citizens as a final and important amendment to the social-security system.

I attach herewith the article which appeared in the Evening Star:

NEGRO DOCTORS INVITED TO VISIT AMA CLINIC HERE THIS WINTER

DETROIT, August 9.—The American Medical Association today invited Negro doctors generally to attend clinical sessions at its midwinter meeting at Washington, D. C., December 6 to 9.

The invitation was extended to Negro physicians attending the annual convention of their National Medical Association. It came from Dr. George F. Lull, secretary and general manager of the AMA.

Dr. Lull told the doctors that "your membership in the National Medical Association will admit you to all clinical sessions of the AMA's midwinter meeting.

"It will be honored on the same basis as a fellowship card in the AMA," he said.

NEGRO TO HELP SHAPE POLICY

Earlier, it was announced that Dr. Peter H. Murray, a past president of the NMA, had been named to the policy-making body of the AMA. It was the first time a Negro had ever been chosen for that group.

Dr. Murray, director of the department of gynecology at Harlem Hospital, New York, was elected by the New York State Medical Society. He is a native of New Orleans, La.

A speech prepared by Dr. Elmer L. Henderson, president-elect of the AMA, but read by Dr. Lull, declared:

"Truly these are times when doctors must stand together on issues that affect the medical welfare of all the American people."

BUDGET EDUCATION URGED

"We must act," he asserted, "to prevent adoption of political medicine in the form of national compulsory health insurance. This scheme has failed in every large country where it has been attempted.

"Voluntary health insurance," he said, "is one answer to the needs of those who require budget-basis medical care. Another answer is educating our patients to give medical care a higher priority in the family budget • • • Many of our patients spend more for tobacco, motion pictures, and alcoholic beverages than they would have to spend for important medical care in any one year."

The Gold Standard: What It Is

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 9, 1949

Mr. WHITE of Idaho. Mr. Speaker, with so many countries off the gold standard and with so much confusion in the public mind concerning money and managed-currency systems, it might be well to consider what the gold standard is. In a recent issue of the Empire Trust Letter, Mr. Joseph Stagg Lawrence gives us his definition of the gold standard, which is inserted herewith:

WHAT IS A GOLD STANDARD?

Before testing the restraining influence of the gold standard, let's define it. A country is on the gold standard when the unit of value is defined as a prescribed quantity of gold of specific fineness. In fact, most currencies had their origin in a definite weight of some metal. The pound sterling at the time of the Norman invasion was actually a pound of silver 92.5 percent fine. The American dollar up to the time of the Roosevelt administration was defined by statute as 25.8 grains of gold nine-tenths fine.

It is necessary to emphasize the fact that the monetary standard, in order to be gold, must be a specific weight of gold, and that it is this quantity of gold and not some pale, remote claim upon the metal which constituter the gold standard.

"The first rule of the gold standard," said the late Benjamin M. Anderson, "is to pay out gold on demand." This is precisely what the Gold Standard Act of 1934 forbids. Under section 6 the act states categorically: "No currency of the United States shall be redeemed in gold."

This applies without exception to any citizen of the United States. Should he be so misguided as to contrive in some fashion to convert a part of his folding money into gold he could be punished under one prescribed penalty by the loss of all the gold involved plus an added amount equal to twice this value. Under another penalty he might suffer a fine of $10,000 and 10 years' imprisonment.

Professor Kemmerer, probably the foremost authority on the gold standard and until the time of his death active in the affairs of the Economists' National Committee on Monetary Policy, had this to say about the gold standard: "Although there are many types of the gold standard, the gold standard may be said to exist in any country in which prices of goods and the obligations of debtors are usually expressed in terms of the value of a monetary unit consisting of a fixed quantity of gold in a free market. The gold standard exists whenever the value of gold in a free market is the actual standard, regardless of the machinery by which the standard is maintained and regardless of whether this machinery operates automatically or is managed."

In other words, the best of the gold standard is the ability of the individual unconditionally and without penalty to convert his currency into gold and then do anything with that gold he chooses, i. e., take it out of the country, hoard it, convert it into ornaments, or chuck it into the sea.

The best definition of the gold standard is contained in our Federal law found in the United States Code, section 314, which provides:

The dollar consisting of $25^{8}/_{10}$ grains of gold nine-tenths fine shall be the standard unit of value and all forms of money issued or coined by the United States shall be maintained at a parity of value with this standard, and it shall be the duty of the Secretary of the Treasury to maintain such parity.

Nothing is money unless it has been made legal tender by law. Section 457 of the United States Code provides:

The gold coins of the United States shall be legal tender in all payments at their nominal value when not below standard weight and limit of tolerance provided by law for the single piece, and, when reduced in weight below such standard and tolerance, shall be legal tender at valuation in proportion to the actual weight.

The amount of gold in the United States dollar was reduced by the President's Proclamation No. 2072, issued January 31, 1934, under the authority of the Thomas amendment to the law passed May 12, 1933, when it was proclaimed:

Now, therefore, be it known that I, Franklin D. Roosevelt, President of the United States, by virtue of the authority vested in me by section 43, title III of said act of May 12, 1933, as amended, and by virtue of all other authority vested in me do hereby proclaim, order, direct, declare and fix the weight of the gold dollar to be $15\frac{5}{21}$ grains, nine-tenths fine, from and after the date and hour of this proclamation.

The monetary system of the United States was taken off the gold standard by the passage of the Gold Reserve Act of January 30, 1934, which provided in section 5:

No gold shall hereafter be coined and no gold coins shall hereafter be paid out or delivered by the United States. * * * All gold coin of the United States shall be withdrawn from circulation.

Section 6 further provides:

No currency of the United States shall be redeemed in gold.

By making it unlawful for anyone in the United States to have gold in their possession except in an infinitesimal amount, gold was demonetized as effectively by the passage of the Gold Reserve Act of 1934 as was silver in 1873.

A Grave Problem Arises in Germany

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 11, 1949

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I wish to include a very timely editorial, which appeared in the August 10, 1949, issue of the Worcester (Mass.) Evening Gazette.

The article follows:

A GRAVE PROBLEM ARISES IN GERMANY

Reports from Hamburg, Germany, that the prestige of Britain in its occupation zone has fallen dangerously low, and that of the United States is ebbing in almost as marked a degree, should not surprise anyone. The trend of events in Germany, coupled with the attitude of the people, has indicated that just such a point would be reached sooner or later.

Only this last week end the Associated Press reported statements of two German officials which should indicate the feeling among the Germans. Dr. Konrad Adenauer, chairman of the Christian Democrats termed denazification "ridiculous" and demanded an end of "libelous attacks against honest members of the Wehrmacht." Dr. Kurt Schumacher, Socialist leader, charged that the Allies had relied mainly on former Nazis to run German affairs.

The German feeling toward the British comes about understandably. First, dismantling of industry, though an Allied project, is carried out in the British zone primarily and undoubtedly many Germans think it is a device of the British. The present wave of nationalism, directed primarily against the British, has been on the increase since the Germans first picked themselves up out of the rubble of their defeated country. A lack of facilities for the British to give out information is another contributing factor. Unlike the Americans, the British do not have a newspaper to defend their actions.

When the British military government in northern Westphalia reports that there is some sort of economic general staff existing among the Germans, that is a danger sign which should be heeded by all Western Powers.

It must be remembered that responsibility for police has been turned back to the Germans, which means that the Allies have to some extent lost control of the police.

Perhaps Britain, France, and the United States have, in their heavy concentration on what the Russians and German Communists are doing in Germany, neglected to keep themselves properly informed about the rest of the German people.

The Late Hon. William Washington Larsen

EXTENSION OF REMARKS
OF
HON. CARL VINSON
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 11, 1949

Mr. VINSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

IN TRIBUTE TO WILLIAM WASHINGTON LARSEN (WASH LARSEN), UNITED STATES HOUSE OF REPRESENTATIVES, 1916–32

(By Thelma E. Williams (secretary); Mattie Richards Tyler, Registrar's office, Treasury Department)

Since no man lives unto himself alone—
Your life, well spent, is still a beacon light
Beyond the grave, aloof from sod and stone,
A banner left unfurled against the night.
Your strong, kind hands that sowed such worthy seeds
Now harvest them, in some ethereal place;
And yet your influence lives on through deeds
Of righteousness, of charity, and grace.
Your courage through the storms, your joyous laughter
And optimistic faith, the dauntless way
You fought for human rights, survive long after
You walk no more with us. We know, today,
That those we truly love are ours forever
Through bonds too strong for even death to sever.

NOTE.—Congressman Larsen was born August 12, 1871, and died January 5, 1938.

What Makes New England Go?

EXTENSION OF REMARKS
OF
HON. FOSTER FURCOLO
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 11, 1949

Mr. FURCOLO. Mr. Speaker, I wish to call the attention of Members to an article in the August Harper's magazine entitled "What Makes New England Go?"

While the article is of particular interest to Members from New England, I think all Members would probably be interested in reading it.

Bennington College Commencement Address by Hon. Hubert H. Humphrey, of Minnesota

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, August 12 (legislative day of Thursday, June 2), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a commencement address delivered by me at Bennington College, Bennington, Vt., on July 1, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Dr. Burkhardt, members of the faculty, members of the graduating class, and friends, it is a pleasure to be here at Bennington College, a great institution for progressive education, a great institution for democracy, for the building of an America free from the confines of rigid tradition and the corrosive discipline of regimented thought. It is also a pleasure to be here in Vermont, a privilege seldom afforded to a Democrat, and one for which I am grateful. It is not often that I have an opportunity to make an address at a college commencement exercise. Many is the time, however, as a student and as a professor, that I had the opportunity to listen to commencement addresses. I therefore had ample opportunity to realize how dispensable many of them are. I therefore stand before you today with no illusions.

I do feel strongly, however, the importance of education in the democratic process. As such, I deplore the cynicism which often prevails in institutions of learning about

that educational process. I think it is regrettable to hear a lecture described, for example, as the process by which the notes of the professor pass to the pupil without passing through the brains of either of them. I know that such a description does not characterize Bennington College. And I would hardly share the jesting skepticism of the late President Lowell, of Harvard, when he said: "There must be a great deal of knowledge in our universities because the freshman always bring a little bit in, and the seniors seldom take any of it out."

As I look at you this evening, I know that is not the case with this graduating class or with this college. Nor do I agree with Stephen Leacock's idea for education: If I were founding a university I would found first a smoking room; then a dormitory. Then, when I had a little money in hand, I would establish a decent reading room and a library. After that, if I still had some money I couldn't use, I would get some textbooks and hire a professor.

Education does have a vital role to play in the development of our democratic processes and the strengthening of the fiber of our society. The object of education is to excite the minds of the young and stir their intellect. I know that objective is being fulfilled by this great institution of learning.

It is said of a mythical Greek hero that by extraordinary physical skill he was able to jump the surface of the earth to the planets and after accumulating the wisdom of his visit, returned to the earth to be worshipped as a god for his superior knowledge. Those we honor today have been able, not by virtue of great physical strength, but by virtue of inquiring minds and intellectual attainment, to lift themselves in the course of the past 4 years from the surface of the earth and explore the mysteries of the universe. We honor them and we honor this great institution of learning just as the ancients have throughout the centuries honored achievements of the mind.

It is the thinkers of the world who represent the real strength of mankind. The pages of history demonstrate beyond question that it is the idea, the creative idea, that survives through the ages, and not merely the creative idea, but the new idea—the nonconformist idea. Who today remembers, except with contempt, the judges who condemned Galileo, while the name of Galileo rings down through the centuries. Who today remembers the stodgy, conservatives who hounded Byron out of England for his unconventional ideas, while Byron, the poet, sings his songs to all the succeeding generations. Who today remembers the vicious attacks on Thomas Paine, while Thomas Paine even more securely becomes enhanced among the great men of our history. And even in more recent times, how seriously do we take those who slandered and libeled and traduced the character of Woodrow Wilson, of Franklin D. Roosevelt, while it is difficult already to remember the names of even their most prominent critics.

It is the nonconformist and creative idea that we need. We are faced in our times with grave new problems. Few of the old answers any longer suffice—we have to find new answers, and that is why we have to encourage bold new thinking by every means. Those who are behind the current wave of anti-Communist hysteria are in reality aiming not only at the real Communist menace which exists, but which is relatively speaking insignificant, but are aiming at every manifestation of independent, critical thought. They are aiming directly at precisely the kind of nonconformist, creative thinking that is our country's greatest need today.

Nonconformist, imaginative, creative thinking is needed in politics, in the press, and, above all, in our educational institutions. Education's chief function is to stimulate such thinking and to open the road to intellectual experimentation and discovery. The continuation and extension of this growth by our academic institutions is crucial to the survival of our democracy. Only by such uninhibited freedom and liberty of education can our society gain the insight and the wisdom and the achievement which the mind has within its grasp to produce for human society.

It is for that reason that it is necessary for those of us who are concerned with the preservation and extension of a democratic society to take note of the evidences of hysteria which are all around us. There is something dangerous and unhealthy in the activities of some individuals and groups who are trying to whip up mass psychosis.

It is true that the symptoms I have described have cause. They can easily be explained. The policy of the Soviet Union since the end of the Second World War, the seizure by Communists of control of the satellite states, the revelations made here in the United States in trials and investigations—all these show that there is a real attack on western civilization and that some part of that attack is affecting our own country. No wonder some people are worried.

When a nation begins to worry, however, it behaves, as the New York Times recently said, somewhat like a neurotic patient who exaggerates the seriousness of his ailments, and perhaps invents ailments he really does not have. There are signs that some in this country are losing their sense of proportion.

In the hustle and stir of Federal and State un-American activities committees, they act as if there were suspicious characters on every street corner, and an attacker under every bed; we see evidence of anxiety and hysteria in the scores of loyalty investigations that are taking place in the purge of schools and colleges, in witch hunting and censorship, in attempts to censor schoolbooks, and in hundreds of other manifestations, governmental and popular.

It is not easy to suggest a remedy. We cannot pat a large part of the public on the head and tell it to be calm. What we can do, however, is to make people understand that political, illegal acts can be treated like any other illegal acts. When a crime wave occurs in any city, we do not conclude that the country is going to the dogs. Instead we urge better police protection and perhaps prompter and sterner court action. But we preserve due process of law. The same principle can be applied to illegal disloyalty. We investigate it by orderly means, taking great care to protect the innocent. We can punish it when it is clearly proved.

More than that, however, it is important for the preservation of our liberties that we do not overemphasize the problem of disloyalty. This Republic has endured for more than a century and a half. It has survived the great Civil War and enormous social and economic disturbances. Its people are intelligent and well read. There is no danger that they will sell themselves into slavery.

Never before in our history have the American people shown themselves to be as united as in the last decade. As Prof. Henry Steele Commager said, it was not always thus. During the course of the Revolutionary War only about a third of the American people were for the Revolution, a third for the King and a third neutral. During the War of 1812 a large number of our people bitterly opposed the war and actively sabotaged it. During the Mexican War opposition to the war was widespread and ardent in the North. The internal dissension of the Civil War has still not been forgotten. Yet it is an interesting fact that we fought all these wars without sedition acts or loyalty oaths.

Today we are a country incomparably the strongest, the richest, and the best protected in the world. Our Nation and our Constitution have withstood the vicissitudes of 160 years. Our people are intelligent and they are moral. They are devoted to freedom. The real danger we face is that a spirit of fear will produce an atmosphere of timidity and suspicion that will discourage independence of thought, original investigation and association. The real danger we face is that a program of suppression will seriously endanger effective operation of our democracy; will lower the morals of the civil service by putting a premium on conformity and will discourage men and women of real ability from entering Government service.

The real danger we face is that a spirit of hysteria will endanger the morale of American science by putting a premium on mediocrity in a field requiring independence, originality, and full freedom of inquiry and communication.

The real danger we face is that a society gripped by fear strengthens the hand of the military in areas traditionally and wisely entrusted to civilian control.

The real danger we face is that freedom of teaching will be imperiled by requiring conformity to standards, by introducing the grave peril of censorship in textbooks and ideas and drive away from the teaching profession men and women of independent minds. We must guard lest it create an atmosphere in which teachers find safety not in orthodox ideas, for they will never know fully which ideas are orthodox, but safety in no ideas.

In the end this can produce a generation taught by teachers who are afraid of ideas. Such people cannot grow up into wise and competent and democratic citizens.

Yes; the real danger we face is that the right and necessity of criticism is threatened.

No government can operate successfully without criticism and no government which censors its critics can get the criticism that it needs. Finally, the real danger we face is that the hysteria we are confronted with strikes at one of the most precious of all rights, one essential to the effective operation of democracy, the right of association. As Professor Commager well points out, the practice of voluntary association is a peculiarly English and American practice. The Pilgrim Fathers associated themselves into a compact and since that time Americans have customarily operated around hundreds of voluntary associations: political parties, parent-teacher, Federal, business, fraternity, philanthropic, recreational, learned, and others. It is in these associations that the average American has found the training for government and real democracy to take the place of the town meeting. Any policy which discourages or crushes voluntary associations will totally dry up the very roots of American democracy.

Our security lies not in secrecy but in the preservation of peace and in the encouragement of free inquiry; our real long-term security lies in perfecting our own democracy. Even as our society now exists, it is the freest in the world and confers the most benefits on the humblest of citizens. We must make sure that it is kept free and flexible.

Jefferson, in his first inaugural address, said: "If there be any among us who wish to dissolve the Union or change its republican form, let them stand undisturbed as monuments of the safety with which error of opinion may be tolerated where reason is left free to combat it."

The American system is strong enough to stand competition of communism or any other ism. The American people are intelligent enough to resist subversive doctrines.

It may be that we cannot wholly live up to Jefferson's observations, but we can maintain a society in which the activities of those who would be disloyal will be rather an annoyance than a deadly menace. That is where our real security lies.

For our security lies in the democratic philosophy, the democratic way of life and the democratic idea. That is our historical role; that is our historical mission.

Article By Thomas L. Stokes on Address by Herbert Hoover

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Friday, August 12 (legislative day of Thursday, June 2), 1949

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able article entitled "Doleful Keynote," written by the distinguished columnist, Thomas L. Stokes, and published in the Washington Evening Star of August 12, 1949. I think it will be very useful reading.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DOLEFUL KEYNOTE—"LAST MILE TO COLLECTIVISM" STATEMENT RECALLS DAYS OF HOOVER ADMINISTRATION

(By Thomas L. Stokes)

It is perhaps lese majeste to challenge our elder statesman, Herbert Hoover, on the doleful keynote of his seventy-fifth birthday address that "we are on the last mile to collectivism through governmental collection and spending of the savings of the people."

But a new generation has come along and it is only fair to point out some of the things they never knew and that some of the rest of us have forgotten.

Some of us who were around here in the dark days of 1932 and 1933 when Mr. Hoover was President thought then that we were "on the last mile," what with unemployment, bread lines, banks crashing, mortgages foreclosed on farms and city homes.

BLAMED CRUELLY AT TIME

This is not to blame Mr. Hoover for that, as he was blamed cruelly and unfairly at the time. He was a victim of a previous decade of management of our affairs in which too little account was taken of the needs of our people, with the result that our economy got out of balance and almost collapsed. He entered the White House to meet the crash head-on.

The amount of shoring-up that was necessary to get the roof back over our heads shows in what terrible shape we were. Mr. Hoover manfully started this, himself, among other ways, with creation of the Reconstruction Finance Corporation, that giant venture in state capitalism which still is with us. That represented an attempt to bolster up the tottering structure by loans to business and industry in the hope it would bring revival, which it didn't. Unemployment increased. So he went to a big public building program and finally acquiesced in $300,000,000 in loans to States to feed people, still resisting direct Federal relief.

Franklin D. Roosevelt, when he took over, had to resort finally to that. Along with that he conducted salvage operations for banks, homes, farms, and investments. Later he added such protections as the agricultural program, social security, Wages and Hours Act, collective bargaining, among others, to spread purchasing power and get the economy back in balance as well as cushions for the future so the citizen could protect himself.

COLLECTIVISM NOT VISIBLE

When you look about today, in contrast to 1932–33, there is a great difference in the condition of our people. And if there is any collectivism, it is not visible to the naked eye. We still have private enterprise and it is flourishing as never before, with profits at an all-time peak.

Mr. Hoover is due credit for an analysis of Government spending which points up factors often overlooked. In a dramatic way he treated the Federal budget, which is $41,858,000,000 this year, and of which 76.5 percent, or $31,923,000,000, is for the cost of past wars and protection against future wars—military establishment, veterans' care, public debt interest, and European recovery program and other foreign aid.

Without using those figures, he broke down the cost of both Federal and State and local government into the number of days we must work to pay taxes for it, a total of 61 yearly, of which 35 go for obligations from former wars, defense, and the "cold war"; 12 for other functions of Federal Government and 14 for State and local government.

Since Mr. Hoover has not quarreled seriously with the bulk of Government costs for defense, veterans, "cold war," his quarrel must lie in this area of domestic government services. He, like others, does not specify what he would eliminate here.

Red Triumph in Asia Means Third World War

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 8, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the last broadcast of H. R. Knickerbocker, Pulitzer prize foreign correspondent. It was written in Singapore, recorded in Batavia, Java, and aired a few days after the plane carrying Mr. Knickerbocker and 16 other correspondents crashed near Bombay, India. This broadcast was the last of a series entitled "Can Communism Conquer Asia?" A terse picture of the greatest battlefront of the not-so-cold war, this broadcast—and especially its prophetic conclusion which only wishful thinkers like those in the State Department can question—is a fitting farewell address to his countrymen by one of our finest reporters.

The broadcast is reprinted from the New Leader of August 6, 1949:

"RED TRIUMPH IN ASIA MEANS THIRD WORLD WAR"—KNICKERBOCKER'S LAST BROADCAST

(By H. R. Knickerbocker)

From Singapore, world war III looks inevitable unless the United States throws its whole weight against the advance of communism in Asia. Communism is moving so fast that within a few years Moscow may feel itself strong enough to challenge the power of the United States. We have checked Russia in Europe but the manpower and resources of Asia would weight the balance against us. At these crossroads of the Far East the sense of impending doom bears heavily on an observer who has watched the shadow of Moscow creep across the globe. Molotov, Soviet High Commissar for Asia, has good reason to report to the Great Khan: Asia is going Communist.

Every anxiety over the mounting successes of communism in Asia is heightened here in the watchtower of Singapore. From here one can look out and see in China the Communist armies of Mao Tse-tung sweeping toward southeast Asia; in Indochina the Communist troops of Ho Chi Minh defying the French; in Burma the contending bands of Communists ravaging the country; in Malay a handful of Communist jungle fighters losing but only losing to the best troops in the British Army; and in Thailand (Siam) the frightened government compelled to tolerate a monster Soviet Embassy from which issue Molotov's directives.

Foremost among the questions here is what will happen when the Chinese Communist armies reach the borders of Tonkin, the northernmost province of Indochina. The French last April installed the young Emperor of Annam, Bao Dai, to head the independent state of Viet Nam, comprising Tonkin, Annam, and Cochin China. Bao Dai, 35 years old, is an irresponsible type of playboy, more at home in France than in Indochina. The French hope was that Bao Dai would attract the non-Communist natives who had supported the Communist leader Ho Chi Minh, under the banner of nationalism, for a free Indochina. The French have not succeeded. It is a race now in Indochina to see which side can kill the most before the Chinese Communist armies get there.

The French have 118,000 colonial troops and Foreign Legionnaires, plus 92,000 native Indochinese troops, making a total of well over 200,000 in the field against Ho Chi Minh. Ho Chi Minh is a veteran Moscow Communist. He is assisted by a young Indochinese, named Giap, pronounced Jap, 32 years old, and fresh from the Kremlin's school for oriental Politbureau chieftains. Stalin trusts Ho Chi Minh, of course, but he has Giap there to watch him.

The grizzled Ho Chi Minh has 80,000 regular, well-armed troops, plus an incalculable number, possibly several hundred thousand, guerrillas. They make their own arms, in part, in jungle blacksmith shops, turning out rifles and hand grenades, chiefly in Tonkin, where they are strongest.

The French control the cities of Indochina. Ho Chi Minh controls the countryside, and most of the coast. From their Tonkin strongholds they move freely back and forth over the border of China where the warlords of the provinces of Yunnan and Kwangsi await the coming of the Chinese Communists under Mao Tse-tung.

If Mao Tse-tung, when he gets to the Indochinese border wants to go on, Molotov will want to tell him what to do. The Chinese Communist armies would be strong enough, in all probability, to be able to go right on into Indochina. France would fight; make it a formal war; appeal to the United Nations.

China could then do what Russia has done. Stalin has appealed whenever he could to the principle that anything that ever belonged to Russia in the past belongs to Russia now. On that principle he laid claim to much of the territory he has conquered in Europe, as the Baltic states, part of Poland, and Rumania. In the same way China could claim Indochina, Malaya, Siam, and Burma, for all these states at one time or another in the last several thousand years have belonged to, or been claimed by, the Chinese Empire.

But Communist China may not be prepared to go so far at this moment, and may not need to. Once the armies of Mao Tse-tung are in contact with the armies of Ho Chi Minh, the Communist forces of China and of Indochina will be effectively linked, and few observers have any hope that the French could hold out much longer.

Force has not succeeded against Communist force in Indochina for one reason only. There is not enough of it. The French have not the forces both to hold the cities and to deliver the striking offensives which could destroy Ho Chi Minh. Indochina is not an example of the failure of anti-Communist force to defeat Communist force. On the contrary it is a lesson in the fact that only more force wins.

More force is winning in British Malaya. Malaya is vital to the economy of Great Britain. Its rubber and tin furnish about half of all the dollars Britain gets from the entire Commonwealth. When the Communists in Malaya broke out in a planned campaign to destroy the rubber plantations and tin mines, and terrorize and drive out the British and seize power for Moscow, last year, the British responded with effective force and money. They are spending today $150,000 a day for the crushing of communism in Malaya.

But they also responded with the promise of eventual political independence for Malaya: Malaya for the Malayans. Since the Communists in Malaya are nearly all Chinese, and the Malayans hate the Chinese, this has made the Malays loyal supporters of the British against the Communists.

Communism here is nakedly a foreign movement. Ninety percent of the jungle fighters are Chinese. And this points up the fact that already the Chinese Communists are assuming the leading position among the Soviet shock troops of world revolution. They are doing the job in Asia that Russia did in Europe. There is no comfort for the West in speculating on whether China is going to be subordinate to Moscow, or equal with Moscow, or antagonistic to Moscow, as Communist China will in no case be anything but hostile to the West.

Against this foreign Communist threat, the British sent to Malaya some of their most celebrated soldiers—from the Grenadier and Coldstream Guards; from Winston Churchill's old regiment, the Fourth Hussars; and from the Gurkhas—which with battalions of British Army Malays totaled 20,000 troops. To these were added 50,000 combat constabulary, exclusively Malay volunteers. This made a total of 70,000 troops.

But such is the nature of the jungle that it took these 70,000 picked men to combat the Chinese Communist guerrillas, who were estimated at their height at 10,000, but have been whittled down by death, capture, and desertion to a force of two or three thousand now. British success is certified by the fact that the rubber plantations and tin mines continue to run and produce; whereas nothing runs or produces in the troubled areas of Indochina, Burma, and Indonesia.

British victory would have been impossible without the fortitude and courage of the British plantation and mine managers who strapped on their pistols and stayed at their perilous jobs. It was helped, too, by the issuance of identification cards to the entire population. This measure, involving the photographing for the first time of 5,000,000 inhabitants, millions of whom in jungle villages had never seen a camera before, was unprecedented in the East. The 1,000,000 inhabitants of the Crown Colony of Singapore were likewise issued identity cards, the first time anything like that had ever been tried in a great city of the Far East. The results were spectacular. Not only has communism as an organized force disappeared in Singapore, but common crime has decreased to such an extent that Singapore is the most orderly city in the Orient today.

Thus, the British by force have established order, not perfect, but enough to secure the lives and property of their citizens. And this is one of the few places in southeast Asia where life and property is at all secure.

But this security in Singapore, and what little security there is elsewhere in southeast Asia, is about to be jeopardized by the Governments of the United States and Great Britain. These two Governments show signs of seriously considering the recognition of the Chinese Communist Government. If they do recognize Communist China it will have disastrous effects on the effort to stop communism anywhere else in Asia

There are 10,000,000 Chinese in southeast Asia, and nearly everywhere they lead in business. They are envied, hated and they are indispensable. Because they are businessmen they fear communism, but because they are Chinese they are bound to whatever government rules China. Today they are torn between loyalties. Many have taken down pictures of Chiang Kai-shek but almost none have put up pictures of Mao Tse-tung. If, however, the United States and Great Britain recognize the Chinese Communist Government, these 10,000,000 Chinese in southeast Asia will feel that resistance to communism is not only useless but dangerous. The Chinese Communist Government will send diplomatic and consular missions throughout southeast Aia. Then what becomes of the struggle against communism?

Here in Singapore the issue is especially acute because Singapore's 1,000,000 inhabitants are nearly all Chinese. Out of Thailand's sixteen million, two and a half million are Chinese. And though, among Indonesia's population of seventy million, another 2,000,000 Chinese seem a tiny minority, they dominate trade—the richest men in Batavia are not Dutchmen, but Chinese.

If American and British recognition of the Chinese Communist Government drives these 10,000,000 rich and influential Chinese of southeast Asia into collaborating with the Communists, it will go far to nullify what efforts have so far been made to stop communism in Asia.

But these efforts have been timorous, halfhearted, and for the most part in vain. While Stalin appoints Molotov, his strongest lieutenant, to direct the campaign for Asia, the most the Western World has done to coordinate its forces has been for Britain to appoint Malcolm MacDonald High Commissioner for southeast Asia. He is doing a good job. But the United States has not even appointed any such official for information purposes, much less to act. To appoint such a United States High Commissioner for Asia would be the least we could do.

We can still stop communism in Asia, but to do it will require a greater effort on the part of the United States than we have exerted to stop communism in Europe.

It will take a Truman doctrine in Asia, and a MacArthur plan for economic aid to Asia, and a Pacific pact like the Atlantic Pact, and an over-all armaments plan to aid the free peoples of Asia to arm and defend themselves under American guidance.

The stake of the United States in Asia is simple enough. It is survival. If we stop communism in Asia we may look forward to a time when the inevitable superiority of production in the free Western World over production in the collectivist world of the Soviet Empire will cause the threat of war to recede. If we don't stop communism in Asia, the time will come, in our lifetime, when Moscow will be able to estimate its forces as strong enough to risk war with the West. They will not win that war, even then. But not all of us will survive.

Four Hundred Stayed Home

EXTENSION OF REMARKS

OF

HON. CHRISTOPHER C. McGRATH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 12, 1949

Mr. McGRATH. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include the following article appearing in the Catholic Monitor under date of July 31, 1949, entitled, "Four Hundred Stayed Home," written by Joseph M. Marchiselli:

FOUR HUNDRED STAYED HOME

(By Joseph M. Marchiselli)

Recently I received a letter from a relative of mine in the little town of Accettura, Province of Matera. This town is in the southernmost tip of the Italian peninsula.

He tells me that, after two Christian-Democratic administrations in that municipality, in the elections held on April 12 of this year, the entire Communist ticket was elected by 200 votes. He says further that an analysis of the election result showed that 400 qualified voters, all Christian-Democrats, failed to turn out at the polls.

Whether it was plain laziness or indifference, the fact is that the failure of those 400 voters to show up at the polls enslaved themselves and the rest of the people in that town. They are just as responsible for the election of the Communist regime as those who voted for it.

The truth brought home to us from the election in that little town is that though the Communists gained control of the government they do not represent the majority of the people any more than they represent the majority of the people in other parts of the world, where they control the government of entire nations.

The factor that determined the election of that little town is common in all democratic countries, where free elections are enjoyed. Time and again governments have been elected by a majority of the vote cast, not the majority of all the qualified voters. If those eligible voters who stayed home on election day would have cast their votes, many election results would have been different right here in the United States. Thus the paradox of how the Communists get elected to office when the majority of the people are against them, is not hard to explain. The Communists make use of each and every one of their votes, while those opposed to them do not, as typified in the election of Accettura.

Democracy is government of and by the people, meaning the majority of all the eligible voters. A democracy in which a government is elected by a majority of only a portion of the qualified voters is only a quasi-democracy, and certainly no democracy at all if the Communists should sneak in by reason of the stayer-at-home on election day.

Democracy is man's most cherished form of government. Those nations which are blessed with a democratic government, acquired it only after years of struggle and much bloodshed. Like anything else that is good, it is appreciated only after it is lost. And democracy can be lost if the citizens of a democracy do not exercise their right of franchise. The fact that democracy has endured in this land over 150 years is no assurance that it can't be lost. These are not the times when we should be lulled to sleep by a sense of security and indulge in sweet dreams that all is well.

The Communists are an articulate and militant force and are wasting no time. They are working day and night and are profiting on the vote-slackers. If you are a vote-slacker, you are unwittingly helping the Communist cause.

The duty and obligation of voting should be uppermost in the minds of all democracy-loving citizens. Our duty to vote should be as sacred as our religion, for we have reached a stage in world history when voting is a defense of our homes, our freedoms and our right to worship God according to our conscience. Our failure to vote amounts to forging the chains of slavery around our necks.

The attitude that my vote will not make much difference is wrong and dangerous, for if you multiply that by the thousands that think that way, it is very possible that one day it may make the difference between freedom and slavery, as it happened in that little town of Accettura in Italy.

A Man of Action, the Rapid-Firing Louis Johnson, Is Putting Into Practice Economy Measures That Congress Talks About but Apparently Did Not Have the Courage To Order

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 12, 1949

Mr. BOYKIN. Mr. Speaker, the words which I have just spoken are from an editorial published in the Omaha (Nebr.) World-Herald, sent to me by a business friend. I ask unanimous consent to reprint it in the RECORD in order to stimulate discussion here on the floor.

Mr. Speaker, on March 28 last Louis Johnson took his oath of office as Secretary of the National Defense Establishment in the courtyard of the great Pentagon. I, among other Members of Congress, was present on that occasion.

Except for the accomplishments of President Roosevelt in restoring the Nation's economy in the early thirties, this Nation has never seen any administrative official who so quickly wrought such a multitude of long-sought objectives in handling his departmental affairs. Neither has it ever seen one who effected more economies in Government and in such a brief period than Secretary Johnson has brought about in the last 4 months.

The Omaha World-Herald article was published August 2. Yesterday President Truman signed the Unification Act. This act—belatedly passed by Congress—gave to Louis Johnson, Secretary of Defense, the power which he sought to reorganize and unify the Defense Establishment along lines which he laid down before the Armed Services Committees of the several Houses and as supported by the recommendations of President Hoover's Committee on Reorganization of the Executive Departments.

The specific authority which Louis Johnson requested was because he, above all others, knew how the job had to be done. This complemented his innate business organizational and administrative abilities and the knowledge gained through personal experience as the Assistant Secretary of War.

In entering upon his new office—that of Secretary of Defense—he had the courage to tell the Congress, "If I am to run a military WPA, I don't want the job." Therefore, he sought with determination, not the mere authority to shuffle papers, personnel, departmental files, financial balances, and other window dressings, in order to effect the mere semblance of reorganization.

He made it perfectly plain to all that he did not want to confine his programs to one of consolidations. The powers which he requested were powers actually to abolish and abate many existing boards, commissions, duplications of efforts and activities in the armed services and other defense establishments, regardless of political implications.

As a result of his continuing program for the maximum reduction in expenditures which he has already instituted and has under way, upward of 200,000 pay-rollers now being carried on the tax rolls of the Federal Government will go back into productive private enterprise, with a resultant savings of a billion dollars annually to the taxpayers of the Nation.

Mr. Speaker, ponder on a project not to spend $3,000,000 but actually to save $3,000,000 a day every day in the year.

As Secretary of the National Military Establishment, he has already succeeded in bringing about unification with respect to public information, recruiting, procurement of material, as well as personnel, medical services, and a veritable catalog of other pertinent activities.

That the American people are conscious of and approve the great work that is being done by Secretary Johnson is evidenced by the following editorial:

THE RAPID-FIRING SECRETARY

Mr. Louis Johnson, the Defense Secretary, is a man of action.

He is putting into practice some of the economy measures that Congress talks about but apparently does not have the courage to order. Right now, Mr. Johnson is pruning the roster of civilian employees in all the armed services.

When he took 13,000 nonuniformed Navy people off the Federal pay roll last month, there was a sharp reaction. Boston's Mayor Curley hit the ceiling when thousands were fired at the navy yard in his city. Said Mr. Johnson: "If I'm to run a military WPA I don't want the job." Mr. Truman backed his Defense Secretary and Mr. Curley turned to Congress where he apparently got a more sympathetic reception than his case warranted.

However, Mr. Johnson also does pretty well at keeping up his congressional fences and is reportedly in no immediate danger of being stopped by Congress. He has let it be known that Army and Air Force civilian jobs will also be cut.

When the Air Force asked to set up its own cryptography division duplicating those of the Army and Navy, Mr. Johnson combined all three and cut personnel from 10,000 to 5,000. Both the State Department and the Central Intelligence Agency complained but the Defense Secretary was upheld. Now Mr. Johnson is busy with his plans to reorganize Intelligence.

How long this can go on without some counter stroke by the military bureaucracy is a matter of speculation. Mr. Johnson moves so fast that the jobholders rarely have time to get set for the blow. But it is too much to hope that the Secretary can get away with his pruning without some concerted effort to stop him. He has said he will fry a billion dollar's worth of fat and inefficiency out of the armed services and he has made a convincing beginning. He deserves the support of Congress and the people in this effort.

Removal of Industries From New England

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1949

Mr. LODGE. Mr. Speaker, the movement of industries from Connecticut and other parts of New England to the South is a cause for growing concern. It is also a substantial factor in the growing unemployment in the New England area. In the city of Bridgeport there are today some 24,000 unemployed. Out of this number seven to eight thousand are unemployed because of the Government-sponsored removal of the Chance Vought Division of United Aircraft Corp. from Stratford, Conn., to Dallas, Tex.

One of the prime factors in the migration of industry from North to South is the tax exemptions frequently granted by certain southern States as an inducement to northern business.

To those who believe in our free competitive system this can hardly be described as fair competition. Frequently, the New England States are taxed to subsidize southern communities which are said to be in need of Federal funds. While, of course, ability to pay has been a criterion of our taxation system for many years it can hardly be said that States which grant tax exemptions as inducement to industry should receive tax subsidies from sections of the country which are suffering from the current business recession.

In this connection I am inserting an interesting editorial which appeared in the Bridgeport Post on August 9 regarding some remarks made by our distinguished colleague the Honorable JAMES T. PATTERSON on the floor of the House a short time ago:

DIRTY WORK AT THE CROSSROADS

It was a tremendously important point made by Congressman JAMES T. PATTERSON of this State, on the floor of the House the other day, when he objected to giving subsidies out of the Federal Treasury to the "poor" States in the South and Southwest, then permitting these same States to turn around and offer tax exemptions to Connecticut industry to entice firms out of our own State.

As he pointed out, the high taxpaying rate in Connecticut means that the citizens of our State in the first place pay more than their fair share of these Federal subsidies. Then—after a "poor" State has been bailed out by the Federal Treasury—to have it turn around and advertise to northern industry, "Locate down here and you won't have to pay any taxes," is adding insult to injury.

The citizens of Texarkania—to invent a mythical State—are working both ends of the street. First they claim to be too poor to pay for their own roads, schools, charities, health, and similar programs, and they seek a fat subsidy from the Federal Treasury. Having thus removed from their own backs much of the burden borne by the local taxpayers in other communities, they can say to industry:

"You needn't pay local taxes down here. Uncle Sam pays them for us."

The Eagle Lock Co. of Perryville—principal industry in that town for more than a century—is now considering a move to the

Southwest, said to be based solely on the fact that the company is guaranteed 10 years' freedom from taxes.

How a State can, at one and the same time, be so poor as always to have its hands in Uncle Sam's pockets and at the same time be so rich as to be able to afford tax exemptions to industry, is a congressional mystery which we can explain in two words.

Dirty politics.

Reorganization Plan No. 2

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Friday, August 12 (legislative day of Thursday, June 2), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD, an editorial entitled "Reorganization No. 2," which appeared in the Washington Post, Thursday, August 11, 1949.

There being no objection, the editorial was ordered to be printed as follows:

REORGANIZATION NO. 2

Reorganization Plan No. 2, now before Congress, would shift the Bureau of Employment Security from the Federal Security Agency to the Department of Labor. This is in accordance with a recommendation of the Hoover Commission and appears to us to be on balance, the best resolution of an issue admittedly difficult and open to rational disputation. The Bureau of Employment Security embraces the former Division of Unemployment Compensation which has always been in the Federal Security Agency and logically belongs there and the former United States Employment Service which used to be in the Department of Labor and logically belongs there. The one aspect of this issue on which there appears to be universal agreement is that the twain now joined together in the Bureau of Employment Security should not be put asunder.

The Federal Security Administrator has endorsed the request of the Secretary of Labor that the Bureau be transferred to the Labor Department, although this would take from FSA one of its insurance operations. This position seems to us to be supported by the special interest of workers in the Bureau and the special devotion of the Department of Labor to the workers' interest. In this connection, the charge so commonly made by opponents of the transfer that the Department of Labor is biased in favor of labor strikes us as altogether nonsensical. Of course the Department is engaged, as it was intended to be under the law establishing it, in advancing the legitimate interests of labor as a contribution to the general welfare. For just this reason, the Department, which has been seriously weakened in recent years, now needs strengthening.

The Bureau of Employment Security will be closely allied to the Bureau of Labor Statistics and other operations of the Department and will enable it to do a better rounded and more comprehensive job. We hope that the House, which is scheduled to vote on the issue today, will uphold the President's reorganization order effecting the transfer and that the Senate will follow suit next week, overriding the adverse report of its Committee on Expenditures in the Executive Departments.

Freedom From Fear

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES

Friday, August 12 (legislative day of Thursday, June 2), 1949

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address of mine entitled "Freedom From Fear," which was broadcast over radio station KSL, Salt Lake City, Utah, August 10, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FREEDOM FROM FEAR

In the beginning of the war when discussion of the "four freedoms" was on the minds of all, freedom from fear seemed not only to be obtainable if we could crush our enemies but possible for the average man if we could make his life secure. All of our enemies are crushed. We have a world organization. The world is more alerted than it ever was to the fact that we must find a substitute for war. Our country is recognized by the world as the strongest country on earth. What, therefore, have we to fear?

There is evidence to show that we are suffering from fear more than we have ever suffered in the history of our country. Why is this so? Likely because we have so much compared with what others have. Still our willingness to share, even if it is done in self-interest, should bring us friends full of gratitude and make allies for us; thus removing fear. But fear does not go.

The more an individual has the more he is afraid of losing that which he has obtained. The more a nation has the more that nation is fearful it might lose what it has. Shall we become wholly fatalistic and decide that nothing constructive can be done about this situation? Shall we allow ourselves to disintegrate to the place where we have nothing that anyone else wants and thereby live without fear?

Since the War of 1812 our American defense program has rested upon the notion that if we have to go to war we must keep the enemy from our own shores and cities. That is the way we have fought. That is the way we have planned our defense. All felt secure in having oceans between us and a probable enemy. In fighting the last two wars we turned our defense into an offense and carried the wars to the enemies' shores.

We invented the atomic bomb. The only two we dropped we dropped on the other side of the Pacific; thus proving that if we persist in attempting to keep the enemy from our own shores we must be prepared to destroy him on his own ground. Our line of defense today is a circle which surrounds nearly all of Asia and the eastern part of Europe. The President's recommendations for arms extend from Korea through Japan to the Philippines, from Persia to Turkey to Greece, and then to all of western Europe. The farther we project ourselves in offense, therefore, the farther we must project ourselves in defense. How startled our country was when Roosevelt announced that our first line of defense was the Rhine. As long as men put their trust in weapons and governments are built upon the foundation of force this seems inevitable. You cannot be second best in war.

We are trying a great experiment based upon mutuality. If we find ourselves in another war America wants friends in that war. In more than one way the last war was a world-wide war. At one time on the Italian front there were troops representing over 20 nationalities. They were all under an American commander. We were successful in that campaign. Through this action old military science was shattered and national loyalties did submit to a single command. Now in Europe, we have the joint defense plans of England and the nations of the Lowlands, our arms aid to Europe, and the North Atlantic Pact.

Growing side by side with this great defensive effort on the part of the nations of Europe and America are suggestions for implementing and making stronger world organization. Five or six different resolutions have been presented to the Senate calling for the strengthening of the United Nations. I have been appointed chairman of a subcommittee of the Foreign Relations Committee to consider these. We shall hold hearings on these resolutions and try to work out a feasible plan to make stronger and more universal the United Nations, and attempt to overcome the power of the veto.

It is thoughtless for us to assume that the existence of the veto power is the root of the trouble that keeps the United Nations from being more effective. It was the American delegation itself and the fear that delegation had of an overpowering sentiment in the world against us that caused them to insist upon the veto. This has boomeranged against us. That Russia has used the veto instead of us is beside the point. She has the right just as any one of the five great nations has. It is not the veto power; it is the fear of Russia's aims that disturbs us.

Three weeks before the opening of the Second World War we could not convince the Foreign Relations Committee of the United States Senate that we should have a fear of Germany and Hitler. The interesting thing today is that the very men who did not want to unite against Germany in her first aggression are the ones now who have the greatest fear of Russia. What I want is a unity of effort of nonaggressive nations against the actions of an aggressor. I want that unity to show itself in economic strength, in well-trained men and women, in the development of our resources in joint cooperation so as to build our strength primarily on what is called the secondary defense, and then unite our manpower in spirit and action in defense of a righteous cause. But the world still puts its faith in bayonets and sabers. That faith we are forced to recognize. The men upon whom we have to depend if an emergency comes are men who honestly believe that safety rests behind great armies, mighty navies, swift airplanes, powerful submarines, and atomic bombs. When someone says that Russia has 5,000,000 men under arms those people who fear Russia believe we can be strong ourselves only if we are stronger than 5,000,000 men.

Fear is a state of mind and is tremendously contagious. The only way to get it out of our national system is to make world organization more important. A positive approach to a problem is always more constructive and productive of good than a negative one. If fear dominates the minds and actions of men and nations, both men and nations can be destroyed by that fear quite as easily as through the processes of war. Once we start an armaments race, our way of life is endangered.

Our democracy is a private-property system based upon a dollar economy—a dollar, too, that has to maintain its comparative constant value or it will destroy our whole credit system. Our debts are great and while we are indebted to ourselves still we owe ourselves in definite units of value. By that I mean that if we have a $100 bond we expect $100 for it the day it becomes due.

Therefore, we call that $100 wealth and we say it is ours individually. Russia in theory has no private property. All her people own all her property and all her money. Stalin can increase the value of a ruble or decrease it any time without hurting anyone. A democratic government is deemed hard to maintain because it depends on the will of the people to persist, and the will of the people is always hard to determine. Just so is a dollar democracy hard to maintain because such government has no wealth and exists because of its taxing power. If we destroy wealth by putting all oversurplus in waste armaments, we soon destroy our taxing power. Thus, Russia can outlast in a cold war. But common sense will some day dawn on both peoples and each will see that a world existing wholly on fear will be a world without happiness.

Freedom from fear is the greatest of all freedoms because social life itself will disintegrate where there is no trust. The fear I want America to avoid is the fear of the great responsibility we now have. When Alexander had practically conquered the then-known world, when no enemies were left unconquered, it was then that real fear entered his soul. It was then that he offered libations to the gods that they would remove from him the fear of his new responsibilities—the fear that comes of worry and anxiety. The only way we can be free from that fear is through faith in the right and knowledge that no man will come to our aid if our objectives are not righteous and have not righteous ends. If we act through fear rather than through faith in ourselves and America's way of life, that fear can be our own destruction. America needs to renew her faith in herself and the great fundamental principles which moved our founding fathers to action.

World Federation of Governments

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Friday, August 12 (legislative day of Thursday, June 2), 1949

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement issued by me on August 8 in regard to a world federation of governments.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF HON. CLAUDE PEPPER, OF FLORIDA, ON A WORLD FEDERATION OF GOVERNMENTS

When I became a cosponsor of the world-federation resolution, Senate Concurrent Resolution 56, introduced in the Senate July 26, I did so on the basis of a deep conviction and under the impetus of an impressive mandate from the people of Florida.

The Legislature of Florida this year has passed two resolutions that look toward world federation. One resolution puts a world-federation question on the ballot at the next general election, thus submitting this crucial matter to the test of a popular referendum. The other resolution applies to Congress to convene a constitutional convention with the purpose of proposing an amendment that would enable the United States to negotiate with other nations to strengthen the United States into a world federation.

The people of Florida are not alone in this support of a strengthened United Nations. They are joined by 21 other States that have passed world-federation resolutions of one type or another.

This legislative action at the State level is indicative of a rapidly expanding popular demand that we reaffirm our faith in the United Nations and move forward to build that organization into a structure capable of preserving the peace.

The world-federation resolution receives my wholehearted support because it contemplates a federation open to all nations. We do not seek to further divide the world by a partial federation. We propose to work with patience and fortitude to unite the world under a United Nations capable of enacting, interpreting, and enforcing world law.

Too many people belittle the accomplishments of the United Nations; too many are blind to the great potential of that organization. The UN is a bridgehead. It must be defended and expanded. True, it will be a gradual process but if we accept this role of moral leadership, the cause of freedom and justice throughout the world will be strengthened. Those that propose such immediate changes in the UN as the elimination of the veto power advocate a dangerous policy. Such precipitant action might destroy the UN and bring us perilously near an atomic war. We must move with caution, but I am sure as we forge ahead, the overpowering logic and force of our position will establish before the world the irrefutable fact that the hope for world peace lies in a strengthened United Nations.

Our Atlantic Pact and the other elements of the preparedness program are certainly necessary measures. But we must recognize that they are no final solution. We cannot put our entire faith in a precarious balance of power and the armaments race on which such a balance always depends.

We will only be able to lift the burden of arms preparations from our people when we develop the United Nations into a federation that is capable of maintaining peace. The people of Florida have expressed the hope that we will dedicate ourselves to reinforcing the UN. The world-federation resolution is a commitment to that end.

If we take the lead and proceed with tact and faith, I am sure that we will make great strides, strides that will bring a frightened world into the light of international security with great promise for a plentiful, peaceful tomorrow.

Monopoly Control

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Friday, August 12 (legislative day of Thursday, June 2), 1949

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address entitled "Monopoly Control," which I delivered over the NBC network on August 7, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Today monopoly is our most serious domestic problem. Perhaps the true picture of the extent to which monopoly dominates our country is best revealed by a finding of the Temporary National Economic Committee: the committee found that, if a product is picked at random, there is a better than 1 to 1 chance that the four largest producers of that product account for 75 percent or more of its production. Think of that—just look around you and pick any product at random. There is a better than even chance that the four largest companies producing that product account for 75 percent or more of its output.

It is thus apparent that the country is to a very large extent under the control of monopoly. But is this anything to be worried about—is monopoly actually dangerous to the American free-enterprise system? I say very definitely that it is. The most important objections to monopoly can be quite simply stated since most of them are well known and are generally recognized:

1. Monopoly eliminates the incentive to increase efficiency, reduce costs, introduce new and better products, and contribute generally to economic progress. Monopoly tends to retard the introduction of new improvements and inventions, since a monopolist is generally reluctant to make use of his improvements if they compel him to scrap existing equipment or in any way impair the value of his existing investment.

2. Monopoly tends to result in lower production in employment than would prevail under competition, since monopolies tend to restrict production in employment in order to maintain prices. There is no greater danger to the economy today than the very real possibility that, if we do have a down-swing, monopolists will curtail production, throwing millions of workers out of their jobs, in order to maintain their prices.

3. Monopoly retards the normal economic growth of our great underdeveloped regions, such as the South and the West, since monopolies tend to hold back the growth of few regional industries which might compete with their own investments, while at the same time using these areas only for the purpose of exploiting irreplaceable raw materials.

4. Monopoly leads to big labor on the one hand and big government on the other, and the substitution of Government control for the free play of competitive sources as the regulator of economic activity. Monopoly inevitably leads to Government regulation and ultimately to socialization. With the exception of the United States—which alone possesses antitrust laws—every industrialized nation in the world which has some under the control of monopoly has undertaken a program of socialization.

5. Finally and perhaps most important, monopoly blights the opportunity for economic independence—particularly for young people—by taking over one industry after another and thus gradually narrowing the field in which small business is permitted to exist. In this connection, the War Department, toward the end of the last World War, conducted a survey of the postwar plans of servicemen. It found that more than 700,000 servicemen had definite plans to reenter or establish businesses of their own. In addition, 400,000 servicemen had tentative plans for businesses of their own, making a total of 1,100,000 servicemen who had definite or tenative plans when the war was over to establish their own small businesses. I do not know what proportion of these servicemen have been able to make their dreams come true, but I imagine that it is very small since the only industries which monopoly has not taken over are such fields as pressing establishments, frozen custard stands, and service stations—areas in which monopolies haven't as yet become interested.

Thus far I have endeavored to point out first that monopoly exists and secondly, the ways in which it exerts harmful effects upon the country.

To this, the question obviously is raised as to what, if anything, the Congress is doing about the problem. In answer I can only state that it is making some progress, but must make a great deal more if the problem is to be adequately met. Among the specific steps which have been taken by this Congress in order to curb monopoly and to promote small business are the following:

1. The House Judiciary Committee last week ordered out favorably a bill introduced in the Senate by Senator O'MAHONEY and myself and in the House by Congressman CELLER, which would plug one of the outstanding loopholes in the antitrust laws. This bill would amend section 7 of the Clayton Act, which, when passed in 1914, was intended to prohibit monopolistic mergers that "would substantially lessen competition or tend to create a monopoly." Unfortunately, however, the law as it now stands contains a fatal loophole, since it applies only to monopolistic mergers which take place through the purchase of stock, and permits those which occur through the acquisition of assets. As a result, the law has become a dead letter. The bill, as reported out by the committee, would remedy this outstanding defect in our antitrust laws.

2. It appears that this Congress will grant the antitrust agencies, the Antitrust Division of the Department of Justice and the Federal Trade Commission, the largest appropriation for antitrust enforcement in history. In the Senate I was fortunate enough to have the opportunity to make a motion, that incidentally was unanimously adopted, of increasing the appropriations for this vital function. We still have a long way to go in order to make the enforcement of the antitrust laws adequately effective. But at least this Congress is moving in the right direction.

3. A subcommittee of the House Judiciary Committee, under the chairmanship of Congressman EMANUEL CELLER, has started a comprehensive investigation of the problem of monopoly power, looking toward specific legislation proposals for the consideration of Congress. It has already taken testimony from a number of the country's most distinguished students of the problem. I understand that very shortly it will issue a progress report, presenting a résumé and digest of the testimony taken to date. I would suggest that anyone who is interested in this vital problem of monopoly might do well to secure a copy of this forthcoming progress report of the House Judiciary Committee.

4. Finally, in the Senate Senator JOSEPH C. O'MAHONEY, of Wyoming, one of the most distinguished Members of Congress, is launching an investigation into the problem and the difficulties facing small business in securing adequate capital and credit. Senator O'MAHONEY will endeavor, in his investigation, to find out whether or not the sources of capital in this country have become largely closed to small business; and if so, the reasons behind such an alarming development.

I do think that these are steps in the right direction, but a great deal more needs to be done. And I am confident that when this Congress returns after adjournment, after having disposed of such immediate problems as legislation on international matters, appropriation bills, and other pressing legislation, it will turn its attention to the whole problem of monopoly and enact legislation of far-reaching consequence designed to protect the small-business men and preserve the free competitive economy and all that is meant by the phrase "our American way of life."

American Policy in China

EXTENSION OF REMARKS

OF

HON. HOMER FERGUSON

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Friday, August 12 (legislative day of Thursday, June 2), 1949

Mr. FERGUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the fifth and last article of a series telling how Communist conspiracy, American mediation, and the American arms embargo fostered the Chinese Communists to sufficient strength to threaten the end of the Chinese Republic. The article was written by Ray Richards of the Washington Bureau of the Hearst Newspapers, and published on August 11, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WASHINGTON, August 11.—Companion to the American mediation effort, which in itself was enough to tie the hands of the Chinese Nationalists while the Communists acted at will, was Gen. George C. Marshall's deadly embargo on arms to the Chinese Government in early 1945.

This was excused to the public as a measure to lessen the civil fighting.

It was lauded by the Communist press in the United States and by the Russian press.

Throughout the 2 years of its existence the embargo ignored the fact that all the arms the Japanese Kwantung Army had surrendered to the Russians in Manchuria had been turned over to Chinese Communists as they mobilized in that land, and that the Japanese arsenals in Manchuria were kept in full blast to replenish those arms.

That persistent foe of Nationalist China, John Carter Vincent, at about the same time delivered another blow, this one at the Nationalist economic front.

Giving it as a State Department policy, he said to the Foreign Trade Council at New York City:

"It is unsound to invest private or public capital in China."

Thereafter China's application for a $500,000,000 export-import bank loan was allowed to die.

Pending commercial contracts lapsed.

Confessing complete failure of his mission, Marshall came home in early 1947, and a stirring of American public alarm caused an order to lift the arms embargo in the summer of that year.

But it was lifted in name only. With arms export licenses controlled by the State Department, all that China could buy was 130,000,000 rounds of ammunition made especially for the Chinese Army Generalissimo rifle and good for no other weapon.

Public awareness of what was going on in the China case continued to rise, and in April 1948, a Republican Congress took the bit in its teeth and passed a bill making $400,000,000 available to China, $125,000,000 of it for military aid.

The State Department's arms export control functioned again, and only 600 tons of military supplies were ever delivered to the Nationalists.

President Truman started the Greco-Turkish aid program against communism. He ordered the expulsion of proved Communists from the American Government.

Yet American policy continued to demand that Communists be admitted to the Chinese Government.

For years the Nationalist Government had been setting dates for the meeting of a constitutional convention, but the conflict with the northern war lords, the Japanese war, and the Communist civil war had compelled postponements.

The convention was finally held in November 1946, and a constitution was adopted.

General Marshall approved it as entirely democratic, but did not rebuke the Communists when they said they would destroy it.

The China situation got further out of hand for the State Department when Gen. Albert C. Wedemeyer was dispatched from Washington on a fact-finding tour in August 1947.

Although his report was suppressed, General Wedemeyer crossed up the State Department manipulators by recommending real aid for the Nationalists for the preservation of democracy in the Far East.

Two missions authorized by Congress, one headed by former Ambassador William C. Bullitt and the other by former Senator D. Worth Clark, recommended immediate steps to help the Nationalists.

But the State Department remained abdurate and the military fat was in the fire in China, threatening to start a conflagration in which the United States might find itself faced by huge Asiatic armies regimented by Moscow.

The Communists in north China started all-out offensives with arms from Manchuria, and in Manchuria Communist columns launched drives out of Russian-dominated territory toward such centers as Changchun and Mukden in Chinese territory.

The beginning of big-scale Communist victory started in September 1948 when the key city of Tsinan in Shangtung Province fell to the Soviet puppets.

This was followed within 2 months by the fall of Changchun and Mukden, and, in a succession of advances, the Red armies surged through central China to the Yangtze River, drove the Nationalist Government to Canton and Formosa, took Nanking and Shanghai.

The millions and millions of Chinese through which the Communist columns marched did not know what it was all about at first, and were helpless when they learned.

Mao Tse-Tung and the Communist top commander, Gen. Chu Teh, met Nationalist offers of peace talks with an impossible demand for the death of all nationalist leaders.

Mao then confessed that communism had merely been fooling all these years.

The Chinese Communists, he said, were not just harmless agrarian reformers after all, but real Communists in the Russian style, ready to fight with Russia, determined on the ruin of all western imperialism, chiefly the United States.

Mao and Chu joined in a statement thanking Russia for her help.

Atlantic Union Resolution

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Friday, August 12 (legislative day of Thursday, June 2), 1949

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Atlantic Union Resolution,"

published in the Meriden Daily Journal, of Meriden, Conn., of recent date.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ATLANTIC UNION RESOLUTION

The Atlantic Union Committee, headed by former Supreme Court Justice Owen J. Roberts, has at last succeeded in bringing to the attention of both Houses of Congress a resolution preparing the ground for a far-reaching international project. The resolution, carefully timed by its sponsors to follow the ratification of the North Atlantic Pact, would ask the President to call a federal convention of delegates from the seven democracies including the United States, which initially sponsored the pact. Purpose of the convention would be to explore the possibilities of uniting these democracies in an Atlantic Federal Union of the Free. If deemed advisable, the convention would invite participation by delegates from the other democracies.

This is the program long urged by Clarence K. Streit and his followers in Federal Union, Inc. It is a program replete with possibilities deserving careful study, not only by Congress but by the public at large. If the resolution is brought to debate, information about the plan will be widely disseminated throughout the Nation.

There are numerous formulas for world union, but Streit's original plan has kept its shape and stood up well among the contenders—and it now appears to have a chance to receive serious consideration. That is the most its adherents can ask for it at present.

Among the supporters of Atlantic Federal Union of the Free are men who have occupied high posts in our Government, and who are known as influential leaders of opinion. They would not have embraced unthinkingly a program in which they could not wholly believe. They like it especially because it follows so closely the scheme on which our own Federal Union was founded. The Atlantic Union Committee, in soliciting support for its objectives in this state, remind us that back in 1787, when men were distraught and almost hopeless that our thirteen sovereign States could ever really unite, it was through the inspired, courageous foresight of these great Connecticut citizens Roger Sherman, Oliver Ellsworth, and William Johnson, that the seemingly insoluble was solved by adoption of the Connecticut Compromise, thus rendering possible our own great Federal Union with its profound influence on later world history.

Practicable or not, the project brought forward through the Atlantic Union resolution should have an unbiased hearing in Congress. Its history gives it that right, at least, for it is no inconsequential proposal, brought up overnight. It is the product of intelligent thought and disinterested devotion to an ideal: the ideal of permanent world peace to be attained through a harmoniously working government of democratic states which believe in the fundamental rights and liberties of man.

Shadow of the A-Bomb

EXTENSION OF REMARKS

OF

HON. BRIEN McMAHON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Friday, August 12 (legislative day of Thursday, June 2), 1949

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Shadow of the A-Bomb," from the Hartford Courant of August 9, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SHADOW OF THE A-BOMB

The shadow of the atomic bomb hangs over our age. Since President Truman announced that a bomb with "more power than 20,000 tons of TNT" had been dropped at Hiroshima, we have had to live in that shadow. And the periodic reports by the Atomic Energy Commission that newer and more powerful types of A-bombs have been developed offer only a perverse sort of comfort.

The Commission's sixth semiannual report to Congress has just been made public. Its 200 pages tell a good deal of what has been learned about atomic radiation and related subjects. But more vital for the whole human race is what the report does not tell. That is what the bomb's effect on heredity will be, over a period of years. It is no censorship that keeps the AEC from giving that information. Science simply does not yet know.

Bits and pieces of information are being constantly put into place in the A-bomb jigsaw puzzle. We are learning more about how atomic power can heal man as well as harm him. But the Commission estimates it may be 25 years before we can expect a reliable summary of information on the bomb's delayed hereditary effects.

What effects have been established to date are generally encouraging. As yet, no significant delayed effects have been discovered among the casualties of the atomic bomb attacks on Hiroshima and Nagasaki. But scientists intend to keep a close watch over the survivors, and particularly on their children, for years to come.

If the atomic bomb is a new horror unloosed upon the world the peaceful uses of the same basic power may prove equal blessings. Radioactive iodine, cobalt, and phosphorus, and isotopes of various kinds have already been pressed into active medical service, with results that offer untold hope for the future.

The good and the evil that splitting the atom has brought into the world cannot yet be weighed on any scales. Very likely we shall not attain a final answer during the lifetime of anyone now on earth. And obviously man himself will make the ultimate decision by the use to which he puts his growing knowledge of atomic energy. Four years after Hiroshima all we can be sure of is that we have entered a new and radically different age than man has known before. There can be no return now to the days when atom-splitting devices were the monopoly of the science fiction magazines. For better or for worse, the world will have to live with, and try to tame, the monster it has created.

Borrower's Rights

EXTENSION OF REMARKS

OF

HON. JAMES P. KEM

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Friday, August 12 (legislative day of Thursday, June 2), 1949

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Borrower's Rights," written by Ralph Hendershot, financial editor, and published in the New York World-Telegram of August 11, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BORROWER'S RIGHTS—NATIONS NOT VERY CONSISTENT IN APPROACH TO LOAN AND GIFT PROBLEMS

(By Ralph Hendershot)

Senator JAMES P. KEM, Republican of Missouri, sought recently to prohibit the use of Marshall plan money in any country which nationalized any basic industry in the future. The amendment was voted down in Congress apparently on the grounds that we should not attempt to interfere with the use to which any funds we advance are put.

As a matter of fact, recipients of Marshall-plan aid have made a strong point of our not interfering in their affairs, contending it would be an infringement of their sovereignty. We have rigidly respected their wishes, even though the funds must come out of the pockets of American taxpayers.

But these nations were not very consistent in making these demands and our representatives were equally inconsistent in accepting them. To appreciate that fact, one has but to study the conditions under which the International Bank grants loans. This bank, it will be recalled, was created by the governments of a great many nations, including those which are now receiving Marshall plan aid.

LEAVES NOTHING TO CHANCE

The International Bank leaves nothing to chance. It will not trust the people of any nation. For instance, when it grants a loan it does not turn over the proceeds to the borrower; it uses this money to pay the bills of the borrower and those bills had better include only those items covered in the loan agreement.

Nor is it satisfied to take the borrower's word even for that. Its own representatives must check the items purchased and they also make certain that those items are used only for the purpose for which they were intended under the loan agreement. Moreover, the items must measure up to specifications.

These rigid specifications are not the result of so-called dollar diplomacy. They are specifications which were laid down by the creators of the World Bank. And they did not come into existence through accident. They were created to avoid the misuse of funds advanced to the bank by the governments of member nations.

EVEN BRITISH MUST COMPLY

Even the British Government is being obliged to comply with these conditions, although they are proving difficult pills to swallow. Her representatives have raised the question of sovereign rights, but they apparently are taking cover, realizing that the International Bank was originally sponsored by the late Lord Keynes, one of Britain's own financial experts.

One of the British Government subsidiaries has applied for an International Bank loan. The loan has been approved, with the usual provisions. From all indications it will go through and be accepted.

Why should an Internation Bank loan differ so greatly from a Marshall plan gift, other than the fact that it will be repaid? Why all the fuss over sovereign rights?

Communism's Appeal Is in "Land for the Landless"

EXTENSION OF REMARKS
OF

HON. USHER L. BURDICK
OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 12, 1949

Mr. BURDICK. Mr. Speaker, we are about to appropriate $5,800,000,000 to restore Europe and in a few days we will be called upon to vote $1,500,000,000 to arm our friends in the Atlantic Pact. How much more will be called for no one can guess.

The real purpose in trying to reestablish Europe is to stop the spread of communism in that quarter, and thus prevent that ism from reaching our shores. The whole purpose of the Marshall plan is to stop the spread of communism. The way we have gone at the matter clearly indicates that the State Department does not know how to spend money so that this purpose can be accomplished.

It would occur to me that the best way to diagnose the case would be to find out what power is behind the Communist movement in Europe and Asia. What makes it attractive to the people in such countries as Poland, Czechoslovakia, Bulgaria, Yugoslavia, Hungary, and what makes this ism strong in France, Italy, Greece, and China? There must be a reason why the people in some of these countries have embraced the doctrines without question, and in other countries the movement is growing. With one-third of Italy now communistic as the recent vote showed, it seems we could and should find out what is behind this trend.

As I read what the conditions were for centuries and what the conditions are in those countries now it seems to be perfectly clear that the land question is what is agitating the people of those nations, and until the policy of these governments is changed to solve the land question any money we put in will have no effect, and may, as in China, pass into the hands of the very elements we seek to isolate. We have not very much to show for our two billion thrown into the China whirlpool. The only obvious result is that our money has helped to build a great modern communistic Chinese army. What we have poured into Greece has not settled anything and will not unless the land policy of that country is radically changed. What we have poured into Indonesia has not settled a thing and the inhabitants are on the march for land. Have we settled anything in Italy? The answer must be "No." Have we quelled the communistic movement in France? Not at all.

The pressure of population has made the inhabitants of the world conscious of the land question. The people in every country want land, for from the soil people can live. Private holdings of large estates in these countries, which exclude the ordinary people from even using the land, has started the people on a march for soil on which they may live and survive. The instinct of self-preservation is strong throughout the human race and all their feelings of discontent have been crystallized because so many are landless. No amount of money spent in those countries can arrest this now fanatical desire for land. Their temporary needs may be satisfied, but the fires kindled for landownership cannot be arrested.
